The argument has been raging these last ten years in the American social science literature (see Braybrooke and Lindblom, 1963 and Meyerson and Bonfield, 1955), and I think it is fair to say that the stronger case is being made against, rather than in favor of, the presumption. Very briefly stated, the argument has been directed against the idea of planning regarded as an abstract and entirely rational method of establishing the appropriate means to given ends. It has done so, first on the grounds that planning is directly affected by the sociopolitical context within which it takes place and that this context does not operate on purely rational principles. The second line of argument points out that man's capacity for problem solving is very limited, the information at his disposal inadequate to his needs, the variables involved in social affairs indeterminate, and so on. It concludes that rationality is, in Herbert Simon's term, "bounded" and it is, accordingly, somewhat sceptical of excessive claims on the part of social scientists to be able to predict and control human behavior.

I find myself in broad sympathy with this conclusion. One certainly does not wish to let premature and entirely a priori suppositions stand in the way of the development of a predictive social science; but one is obliged to hazard a guess, as open-mindedly as possible, as to what is reasonable to expect of the social sciences, given the nature of human behavior. Though there are clearly regularities in social conduct (which it is the function of sociology to elicit and explain, and which give grounds

for hoping that prediction is possible), I think that the circumstances affecting their validation and use are so different from those operative in the physical sciences that I do not share the hope that sociology might become a predictive science in any comparable sense. My reasons for this are the following. First of all, it is not possible to establish by *direct experiment* the conditions under which social regularities obtain. We must fall back, accordingly, upon sleight of hand like the *ceteribus paribus* clause in economics or upon what we might call "mental experiments," which though important and useful, establish proof a good deal less convincingly than can be done in the truly experimental sciences. Second, the particular future circumstances in which a sociological generalization may be applied are likely to differ, in highly relevant respects whose significance may not at first be appreciated, from the conditions originally postulated for it to be valid. Third, the fact that human beings can know what social scientists find out about their behavior makes it possible for them in some degree to control that behavior and even to succeed in invalidating the propositions thus made. In other words, I consider that human life, unlike natural phenomena, is for most purposes best regarded dialectically, as a constant interaction between an objectively and a subjectively defined reality (see Berger and Luckman, 1966).

I conclude, therefore, that social behavior, though in many respects susceptible of limited prediction, does not permit the sociologist to claim for his predictions the same degree of assurance that the physical scientist is commonly believed to have in his. It is inevitably indeterminate and it is more reasonable to accept this fact, as Weeks and Koenigsberger have done, and to revise our ideas about the nature of planning accordingly, than to continue to work upon the assumption that sociology, for example, can by some uncanny magic really make it possible for the planner to produce absolute blueprints for our future well-being.

PLANNING IN A NEW CONTEXT OF THEORY

To argue like this is, in effect, to propose a changed view of the place of the person in the planning process. John Friedmann (unpub.) has noted that the blueprint model of planning raises the problem of how to get the subjects of planning to act in accordance with the blueprint; people are viewed simply as objects which have to be made to conform to the plan. A planning theory which acknowledges social indeterminacy, on the other hand, while in no way denying the importance of determining in advance

what it is possible to anticipate, also requires the planner to allow for and adapt sympathetically to new contingencies that arise unpremeditatedly within a society, among which perhaps the most important are the social initiatives which develop within a community through civic action.

This view is consistent with the dialectical conception of human existence which I mentioned a few minutes ago and which I must now spell out a little more carefully. Consider marriage, for example. Clearly, a good deal can be predicted about its course. We can estimate things like the probable number of children that will be born, the likelihood of the death of one partner or the other in any particular year, and so on. Actuarial practice depends upon a knowledge of such probabilities.

But it would be impossible to predict what specific quality of human relationships, what flowering or deadening of the human personality might follow from the development of that family; or—what I find particularly interesting—what potential it might release among its members which otherwise would have lain dormant or taken, perhaps, a very different course. Such characteristics, though not predictable, are nevertheless viable and objective social facts which need to be comprehended in any valid sociology and which, in my view, must also be incorporated into any theory of social planning.

A brief review of one current issue in planning theory will point out what I mean. We appear to be accepting the view that only a town with a population of, perhaps, more than 250,000 can provide adequate social and cultural facilities. The recent plan of the Paris region, for example, states that only new urban centers, serving between 300,000 and 1,000,000 people can sustain a cultural center, a theater or a concert hall (see Premier Ministre, 1965: 67).

Of course, a minimum clientele is needed for a theater to be economically viable. Planners, however, ignore the fact that theaters have recently been built and flourish in places like Guildford with a population of only 50,000 or Chichester with 20,000; the reason they do so is that professionally, they think only of such gross physical characteristics and have no occasion to consider the significance of the social resources that have made such developments possible. It is true that the major contributions to the physical development of towns are made by statutory and commercial agencies which provide, on the one hand, what is statutorily obligatory and, on the other hand, what is profitable. But many other desirable contributions are made by civic initiative and it is these initiatives, which are usually impossible to anticipate very far in advance, which are the concern of that kind of planning which has to do with social development.

Social development is in this sense likely, in my opinion, to become more and more important in the urban planning of the future. A society which is increasingly based upon an advanced technology inevitably requires greater centralization of power; this would seem likely to decrease the degree of autonomous activity at the level of the local community. This, however, has not been the case so far. For an advanced technology also demands a higher level of education and a greater degree of responsibility among the labor force. This is usually thought of in economic terms, as an aspect of manpower planning. But it also has a major effect on the community since it is now well established that initiative and social participation in community activities increase with social status and education (see Broady, 1966b). It is the expansion of this more articulate stratum in our own society, at a time when the growing centralization of political and economic power puts the ordinary citizen increasingly at the mercy of these vast oligarchies of our time, which accounts for the very rapid growth of consumer societies and civic groups which, since the war, has given the lie to the view that voluntary civic action would be made redundant by the establishment of the welfare state (see Broady, 1964).

Now it is pretty clear that the planning profession is in something of a quandary in adapting to such groups. On the one hand, planners often hark back to the view—more characteristic of the early utopian than of the present day, bureaucratized phase of planning—that "planning is for people" and that they should be actively associated with the development of their own communities. This doctrine now finds pragmatic support in the belief that the participation of the citizen will make planning more effective and planners less despised (Broady, forthcoming). Against this, there is the hard fact that planning is now part of the machinery of government, and thus is influenced by the administrator's characteristic assumption that the ideal situation is one in which the public authorities provide such a satisfactory service that the citizen is content to allow the officials to conduct their affairs without interference—an ideal in which the best testimony to administrative efficiency would be a completely passive citizenry.

This kind of assumption was appropriate enough in the early nineteenth century when our present system of local government was set up in response to the urban problems thrown up by the early phases of capitalist entrepreneurship. It had three major characteristics. First of all, it was chiefly responsible for providing tangible things like streets, sewers, lighting, and the maintenance of law and order. Second, there was a great disparity of status between the members and officials of local councils and

those for whom municipal services were provided. Third, the latter were effectively a lumpenproletariat uneducated, not yet enfranchised, and subject to long hours of routine, manual employment. In such circumstances, it is not surprising that government should have been conceived as the provision by a strong executive of services needed by a largely—indeed, ideally—passive and deferential population.[10]

These assumptions, however appropriate they might have been in the heyday of the steamtechnology of the last century, are less well adapted to the conditions set up by the scientific and technological revolution[11] in which we now find ourselves. Government, for one thing, is now responsible for services like education, which not only affect the personal life of the citizen more directly than did the provision of the streets, but which require for their efficient prosecution his witting concurrence, if not active collaboration.

Such services are likely to become increasingly important in the future.[12] Furthermore, the status disparity between the citizen and those who control the public services is now diminishing, if it is not in many places completely eliminated; while the citizen himself is less disposed to accept the passive and acquiescent role to which, on earlier assumptions, he was relegated. Our governmental system, as I see it, is operating in the twentieth century with a set of attitudes towards the public which largely derive from the nineteenth. The tension to which this leads is felt throughout the system; but I think it is felt particularly in the planning departments; partly because of their very rapid rise in importance since 1947; partly because planning, which, in any event, sounds suspect and even dictatorial, so tangibly affects people's private affairs; and partly because, being the most important recent addition to our governmental structures and manned by a profession still rather unsure about its credentials, they are more than usually sensitive to their public relations.

CITIZEN PARTICIPATION

Structural tensions such as these make themselves felt in the public arena in the form of issues—in this case, citizens' participation. Interest in this idea grows chiefly out of the planners' concern to overcome the "suspicion tinged with contempt" which Colin Buchanan (1964: 268) identified as the public's attitude towards his profession. Citizens' participation, therefore, has been placed in the rather limited context of professional self-interest rather than in a broader framework of social theory.

Consequently, it is typically regarded as a technique for getting people to comply with planning proposals more easily. In Max Lock's (1965: 397) recent exposition, for instance, it was put forward as if it were a kind of wonder soap powder containing magic new ingredients which would guarantee, as he himself put it, "surprisingly quick results."

Such an approach is bound to be inadequate, as a review of the many papers on this theme, which the Town Planning Institute has published these last few years, will show.[13] The major defects derive from the fact that the idea has been taken over as a kind of gimmick from American practice, with far too little consideration of the more general issues involved and virtually no study of the relevant American literature. Let me deal briefly with these two points.

The main theoretical consideration which is at issue here is that American planning administration, like the American political system as a whole, is fractured and diffuse, while our own is centralized and highly coordinated. In Britain, the local planning departments are agents of national policy, embodied in statutes and regulations, which impose upon them obligations backed by the authority of the state. In the United States, on the other hand, planning is done by innumerable differently constituted and variously financed public and semipublic agencies. Effective local action thus depends upon the negotiation of a consensus among such agencies in support of initiatives that must originate within the local community. As a result, some kind of participation by civic groups is expected in the American setting—indeed demanded—if the local political system is ever to do anything; whereas in Britain, such civic involvement is neither expected nor encouraged, nor is it quite so requisite for the operation of the system.

A study of the relevant American literature throws light upon the qualifications which must be borne in mind in any assessment of the American practice of citizen participation. In the first place, the term, "citizen," with its very favorable connotation, can be used to cover the participation not only of indigenous community associations or Leagues of Women Voters; but also of the economically powerful and usually conservative organizations of big business, which often dominate American city politics. Citizen participation, in short, may be no more than a cover for the exploitation of economic self-interest. In such circumstances, the citizen may get merely the form, rather than the reality of participation. Aaron Levine (1960), for instance, has noted that "too frequently it consists of a limited discussion of only a portion of the planning commission's completed work by a group carefully selected by a mayor or chamber of

commerce official." Furthermore, there is a good deal of evidence that American planners, despite all the rather glib talk about its value, try to defend their activities against what they regard as unjustified civic participation. Thus, the comparative effectiveness of urban redevelopment in Newark, New Jersey, was due to the housing authority's being able to win for itself such a large measure of political independence that it had no need to conciliate grass-roots organizations (see Kaplan, 1963). In Chicago, important though civic initiative was in setting city planning in motion, its subsequent role was limited to forming a favorable public opinion rather than to determining actual planning (Rossi and Dentler, 1961). Even in Philadelphia, where Ed Bacon's interest in citizen participation is well known, the original idea of developing plans by a process of group discussion proved disappointing, while the Planning Commission's enthusiasm for involving citizens actively in the planning process was tempered by the planners' claims to professional autonomy (Row, 1960). This kind of evidence surely supports us in the view that professional prerogatives and judgments need to be defended against the excesses of citizen enthusiasm.

The tenants' association in Glasgow was challenging the whole fabric of political authority by *demanding* that the corporation provide a bowling green in its part of the Pollock estate, and by threatening that its members would withhold paying their rates if the demand were not met on the grounds that "we've been paying taxes for same for years." But how well defended our officials are, compared with American officials who operate so much more directly under public observation and who are dogged by the populist assumption of American government, which takes it for granted that the ordinary citizen has a right—indeed, a sacred duty—to interfere in the day-to-day conduct of public affairs (Banfield, 1961: 69). The British teacher can afford to snub the parent-teacher association; the American cannot. By the same token, it seemed to me that the American planner always has to be looking over his shoulder to see who will be shooting at him next, requiring a public examination of his conduct. His British counterpart, on the contrary, is protected from public scrutiny by the aristocratic-derivative conventions of our structure of government, and in particular, by the formal separation of politics and administration. That surely means that the British planner can negotiate with citizen groups from strength and that, one might have hoped, would have made the relationship so much more viable.[14]

The official, however, almost invariably thinks that such groups are merely hostile and critical, unless, of course, they can be turned to use and support through citizen participation techniques. It is often argued that

they are ill informed and merely negative; but this cannot be said of the more recent manifestations of civic action in relation to planning. A more viable argument is that they are merely (note the pejorative tone) a sectional interest. Clearly, this may well be the case. The proposals being advanced by the Barnsbury Association in Islington to restore the early Victorian terraces around Gibson Square as a middle-class, professional enclave is bound to be regarded with hostility by their long-established, working-class neighbors, living in dank and decrepit dwellings, who see in the demolition of this older property their only hope of getting a new council house. The function of a council is to make decisions about the balance of public interest involved in cases of this kind. That having been agreed, however, we must go on to say that not all decisions of every council are—beyond question and public enquiry—in the public interest. Nor is every sectional interest necessarily opposed to some notion of public well-being which is vouchsaved to the local council. On the contrary, civic art collections and adult education classes, for example, are catering in fact to only a small minority of town's citizens, but they are thought nonetheless to be a proper object of public subsidy. What is more to the point, the vitality of a town depends on the activity of sectional interests, such as the local chambers of commerce or the drama society; very often desirable social facilities, such as family planning clinics and marriage guidance centers, are provided only because a group of citizens get together to make sure that the need is met. Citizen participation, accordingly, is not only adjunct to planning in a purely technical sense. Viewed in a broader theoretical context, it can be seen to have an important and positive part to play in the democratic social development of urban areas which a comprehensive planning policy would surely seek to foster.

SOCIAL PLANNING: AN INTEGRAL PART OF URBAN DEVELOPMENT

The degree of acceptance which such a proposition is likely to secure will depend upon how planning is conceived. One approach considers the purpose of planning as being to "rationalize" the activities on which it is imposed: to make subject to calculation what was previously left to chance, to organize what was previously unorganized, to replace spontaneous adjustment with deliberate control (Eckstein, 1964: 262). Such a view of urban planning is plausible enough, to the extent that planning has

grown out of the desire to control by rational means the adverse consequences of uncontrolled development. The danger is that it is too rational by far: proponents of this approach are inclined to suppose that spontaneous, unorganized, chance activities *need* to be brought under rational control, thus allowing a concern for order and regularity to blind them to the significance of such activities in a vigorous social life. Jane Jacob's (1964) attack upon the injection of "cataclysmic money" into massive and deadening redevelopment projects and her delicate analysis of the Greenwich Village sidewalk, Christopher Alexander's (1967) critique of a rigidly hierarchical approach to urban design: these indicate an appreciation of the value of spontaneity and variety in urban organization which is complemented in the drabber atmosphere of British planning by the greater flexibility which the Planning Advisory Group (1965) report enjoined and which one might hope to see spread over into our thinking about the specifically social aspects of urban development.

The kind of social planning which is here envisaged is very different from the technical, objective process of trying to predict schedules of the accommodation for physical design with which began this account. It is something like an educational process, in which the community planner enters into a direct and active engagement with a developing social structure. Karl Mannheim (1965: 106) spoke, in this sense, of engaging in "an experimental process of common endeavor." In a rather more specific context, Roland Warren (unpub.), the professor of community theory at Brandeis University, has described the object of social planning as the mobilization of effort in order to improve situations which are perceived as social problems. This kind of work is essentially a process of social interaction in which the planner is not primarily concerned with physical provision as such, but rather seeks to encourage social initiatives within the community so that its members may contribute more fully to its development. The relevant techniques are being fashioned, particularly in the United States, in the community action programs that are being developed under the Economic Opportunity Act in the slum areas of great cities such as Pittsburgh, and right at the other extreme, in the social design of new towns such as Columbia to which I have already referred (Broady, 1967c). Here in Britain, it is being worked out in the practice of several community development officers and neighborhood workers up and down the country, while my own approach has been to make use of the techniques of liberal adult education to make it possible, for example, for voluntary associations in Basingstoke, Maidstone, Southampton, and now also in South Buckinghamshire and Farnham, to work out reports on particular

local problems, which gives a stimulus and a direction to subsequent social initiatives (see Broady, 1966a, 1967a).

This rather experimental work in applied sociology is calling in to question the static conception of social planning which we have again inherited from the 1930's. The problems with which social planning is presently concerned are the problems of the interwar council housing estates: how to provide social facilities other than houses; how to relate them to the growth of population; how to foster a sense of belonging in new housing areas; and how to encourage leadership within the community. The publication of the Housing Advisory Committee's report (Ministry of Housing, 1967) on the needs of new communities shows that the problems of social provision have at last received official acknowledgment, even though practice still lags far behind our understanding of the needs (Pritchard, 1967). However important physical provision may be, we may well find in 20 years' time that we have recognized it just at the time when we should have been thinking with equal seriousness about the neglected fourth item of concern that grew out of the 1930's—how to encourage an indigenous leadership. Except that now, in the 1960's—and even more so in the seventies and eighties if my analysis is valid—there is not going to be a lack of civic leadership so much as a lack of intelligent collaboration with it on the part of our public authorities, and a lack of the ability to devise organizational patterns to match new opportunities. You can see what I mean in the fact that so few projects have matured to take advantage of the £4 per head of population which, since 1963, it has been possible to levy for social development projects in the new towns. For the option has fallen foul of the inability of the development corporations, local authorities, and voluntary associations to find formulae for cooperation and finance (Pritchard, 1967: 28). A good town is not only a well-designed town. It is also one in which problems of social organization of this kind can be resolved, and civic initiatives liberated. That, as I see it, is the function which this new concept of social planning has to fulfil.

"A Government is to be judged by its action upon men, and by its action upon things; by what it makes of the citizens, and what it does with them," wrote Mill (1946: 129). Written with idealistic prescience, six years before the Reform Act of 1867, Mill—as it seems to me—is speaking directly to our condition. For the new scientific-cum-technological civilization into which we are rapidly moving demands a population which is increasingly inclined to organize in order to promote civic initiatives. This is occuring at a time when the growing centralization of control, which is equally a product of technological development, makes such active citizen-

ship even more needful and desirable for the well-being of our democracy. In underdeveloped countries, such as India (see Clinard and Chatterjee, 1962), as well as in technologically advanced societies like the United States, the importance of associating human resources with physical and economic development is being accepted and a practice of doing so worked out. This is the issue which will face us more and more as our urban areas develop into the future. The indeterminacy which we have come to acknowledge, and the greater flexibility in planning which this acknowledgment has engendered, are favorable conditions for its solutions. The practical development of these ideas, however, is presently inhibited by our regarding planning as a matter of land use and economics. Planning in Britain also has to be thought of as a process for encouraging and making it possible for the *human* resources of a town to contribute to more effectively to its social development. This point of view is not easily assimilated in a society which, in so many ways, has shown itself unwilling or unable to foster the potential of its people. It is one, however, which a conference such as this, looking as it is towards the future of urbanism, might perhaps be disposed to consider sympathetically.

NOTES

1. In 1956, the number of professional sociologists in Britain was 90 at the most, at a time when the number of corporate members of the Town Planning Institute was about 2,800. In the last ten years, the number of full members of the British Sociological Association (this is not a professional institute) has risen to 750. In contrast, the Town Planning Institute presently has a corporate membership of 3,900.

2. The distinction is discussed by Professor G. P. Henderson (1968).

3. Several papers by Robert Gutman (1965, and three unpublished papers, listed in the references section, of which manuscript copies can be obtained from the Librarian, Urban Studies Center, Rutgers, The State University, 137 Church Street, New Brunswick, New Jersey 08903) deal with the relationship between sociologists and architects. The problem of value judgments has recently been discussed in Gouldner (1963), Taylor (1967), and Emmett (1966). Professor L. Rosenmayr (1963) of Vienna has also argued, "I see no reason why the sociologist should not also undertake this function of advising in the light of his own personal ideals, provided that it is expressly stated that just these valuations have influenced his scientific findings."

4. For a slightly different view, see Gutman (1966).

5. On the idealism of planners, see J. Friedmann (1966). As Professor Gutman notes, "Architecture is today one of the few fields which keeps alive the utopian tradition of social thought" (1965-1966: 54-55).

6. The only counter-arguments to my paper are in a footnote in Arena: Architectural Association Journal vol. 82 no. 908 (January, 1967: 178) in which Professor Amos Rapoport of Berkeley quotes articles by Mintz and Maslow (1956) showing that "the effects of 'beautiful' and 'ugly' rooms to have been very significant in many ways without a clear *conscious* awareness of the design quality of the rooms." Ezra Ehrenkrantz of Building Systems Development also made the interesting comment that the flexible social use of classrooms in California had been found to be hampered by the physical fact that the leverage required to draw back the sliding partitions in the school rooms was too great for a teacher wearing high-heeled shoes to exert.

7. For a brief review, see Etzioni (1964: chs. 3, 4).

8. The remarkable growth of sociology is indicated by the fact that the number of universities which had established chairs in the subject has grown from three in 1960 to 31 in 1968.

9. An Austrian study by Michaela Allen quoted in Rosenmayr (1963: 248) and other evidence referred to in Gutman (1965-1966: 70).

10. Cf. a recent broadcast by Edward Heath, *The Listener*, February 2, 1967.

11. The concept of scientific-technological revolution is being advanced by Czech scholars as constituting a radical departure from earlier stages of technical development. Its basic law is "the absolute priority of science over technique and technique over direct production" (Richta, 1966).

12. This is particularly evident in the greater importance coming to be placed upon education in technologically advanced countries.

13. The latest, and perhaps the most intelligent is Grove and Procter (1966).

14. "The fostering of grass-roots democratic movements is a good thing only where there already exists a strong general adherence to peaceful and constitutional methods of settling disputes between citizens, or government and governed" (Mack, 1966).

READINESS TO SUCCEED
Mobility Aspirations and Modernism Among the Poor

LEONARD REISSMAN

WITH painful slowness, the recognition is beginning to develop on the American scene that urban poverty is more an institutional condition than a result of personal failures. After the first surge of national effort failed to produce dramatic results in diminishing poverty, we have had to consider that the problems of poverty lie close to the core of American society and some of its prime values. Even so, there is still a strong reluctance to acknowledge the fact that the social mobility mechanisms that seemed to work a half-century or so ago for a number of ethnic groups in America have been working less effectively today for those in the lowest classes. Many Americans still are convinced that the poor are where they are because they lack ambition or are otherwise psychologically incapacitated. When this rigid stance is slightly modified to support programs for educational improvement or job training, for example, there is still a strong tendency to return to the original position that people only get what they deserve.

AUTHOR'S NOTE: *I am pleased to acknowledge financial support from the Stern Family Fund for this study. Acknowledgement is also due to Michael Halstead, George Hoag, Manual Carballo, and James Bruce for their assistance. The views expressed, of course, are my own.*

El Paso Area Organizes Regional Planning Commission

The City of El Paso, the County of El Paso, and other local governmental units have organized a regional planning commission entitled the El Paso Council of Governments. The by-laws stipulate the Council's objective is "to encourage and permit local units of government to join and cooperate with one another to improve the health, safety, and general welfare of their citizens and to plan for the future development of the region."

Associate members include: El Paso District Office, Texas Highway Department; United States Section, International Boundary and Water Commission; El Paso City-County Health Unit; Rio Grande Project, Bureau of Reclamation; Director of Planning, City of El Paso; El Paso County Hospital District; and Chairmen of the El Paso City Plan Commission, El Paso City Park and Recreation Board, El Paso County Park Board, and El Paso County Plan Commission. Associate members are eligible to participate in all Council meetings, but are not entitled to vote.

Affiliate members include: El Paso Electric Company; Southern Union Gas Company; Western Gas Service Company; El Paso Natural Gas Company; and El Paso Office, Mountain States Telephone Company. Affiliate members are eligible to participate in all Council meetings, but are not entitled to vote.

The Council's address is Electric Building, Suite 600, El Paso, Texas 79901.

Professor Wright Designs Plan for Dublin

Approximately 750,000 of Ireland's population of 2.9 million live in Dublin City and County and the proportion of total population living in the capital area is increasing. This has created a number of problems in the field of physical planning where there are fifteen separate planning authorities of varying size and importance.

In April, 1964, the Minister for Local Government commissioned Professor Myles Wright of Liverpool University to prepare an outline development plan for the Dublin region and advise the Minister on the exercise of his coordinating powers under the Local Government Act, 1963.

Professor Wright made a preliminary report in April, 1965, and released his "Final Report and Advisory Plan" in April, 1967. The Report distinguishes between the Dublin Region—which includes Dublin City and the four adjacent counties of Dublin, Kildare, Meath and Wicklow—and Metropolitan Dublin which is defined as the area within a radius of fifteen miles of the city center.

Considerable attention is given in the Report to the preservation of what it terms Dublin's "great inheritance"—the streets and squares of central Dublin which give the city its unique eighteenth century character—and not Georgian Dublin alone, but buildings of a later and sometimes earlier time which go to form the city's treasury of urban architecture.

Forecasts indicate a population increase in the region of more than 300,000 by 1985: from 906,000 in 1961 and 988,000 in 1967 to over 1,200,000 in 1985. The greater part of this growth—280,000—is expected to occur in metropolitan Dublin.

To accommodate this growth, the Report recommends the creation of four new towns, at an estimated expenditure of three billion dollars in the period to 1985. The greater part of this growth—280,000—is expected to occur in metro-Blanchardstown. Each town would be self-contained as far as possible with its own employment opportunities, shops, schools, and other facilities. The aim is both to contain the City and to limit the growth of dormitory towns at its periphery with their attendant social and traffic problems. Development of new towns on the lines recommended would, the Report says, stablize the situation in metropolitan Dublin for perhaps 50 to 100 years and there would be no need to build up a single major counter-attraction to Dublin City within the region.

The Report advises, for a number of reasons, against direct assumption by the Minister for Local Government of responsibility for implementing the suggested plan, and recommends instead the formation of a Regional Planning Agency with an independent chairman and a membership comprising two representatives of the central government, one elected member from each of the six major local authorities, and the four County Managers, one of whom is also Dublin's City Manager.

FOR IMMEDIATE RELEASE

Urban America Inc. has broadened its support of nonprofit groups seeking to meet the housing needs of lower-income families in their communities.

Executive Vice President William L. Slayton announced establishment of a Nonprofit Housing Center by Urban America and the addition of four housing experts to its staff.

The Center replaces Urban America's Local Development Services division. Its activities will be financed under a Ford Foundation grant extended to the division two years ago and renewed last fall.

James P. Twomey, who headed the division, will be Director of the new Center. The division's advisory committee will be continued in the Center under the chairmanship of Chicago mortgage banker Ferd Kramer.

(more)

Appointed to the Center's staff were the following:

Milton P. Webster, an attorney active in slum clearance and redevelopment in Chicago, as deputy director for development funds and housing development corporations;

Tom Lord, a former housing analyst in the Legislative Reference Bureau of the Library of Congress, as an assistant director, working under Mr. Webster;

George J. Feltovich, formerly a specialist in urban renewal and moderate cost housing development in Boston, as the Center's assistant director for the West Coast;

Lawrence M. Upton, an authority on church-sponsored nonprofit housing and former member of the national staff of the United Church of Christ, as assistant director for the Midwest.

The functions of the Center will be twofold, according to Slayton:

1. It will guide religious organizations, labor unions, fraternal groups, and other nonprofit sponsors of low- and moderate-income housing through the complexities of government assistance programs;

2. It will help local civic leaders form development funds, which are nonprofit, privately subscribed investment pools established to give initial impetus to housing construction.

Nonprofit Housing: Six Seminars

Year End Report: 1967

Urban America Inc. is an independent nonprofit organization concerned with stimulating those public policies and private actions necessary to improve the quality of life in the nation's cities. It was established in January, 1965, as an extension of the American Planning and Civic Association, and in December, 1965, merged with the Action Council for Better Cities. This report covers Urban America's accomplishments for the year 1967, and was prepared for the Board of Trustees by William L. Slayton, the organization's executive vice president and former commissioner of the U. S. Urban Renewal Administration.

Urban America's president is James W. Rouse of the Rouse Company, Baltimore, and the chairman of its Board of Trustees is Andrew Heiskell of Time Inc., New York. Its programs are carried out by four centers:

The Urban Policy Center undertakes research and issues reports on matters of public policy relating to American cities, with special emphasis on those that involve the relationship between government and business. Its director is Allan Talbot, a political scientist and former special assistant to Mayor Richard Lee of New Haven, Conn.

The Urban Design Center is concerned with the impact of physical improvements on the appearance and workings of the city, and consults with both public and private clients on the design and planning process. Its director is James N. Kise, planner and architect of Philadelphia.

The Nonprofit Housing Center provides technical and professional assistance to nonprofit sponsors of low- and moderate-income housing, and to business and citizens' organizations in formation of development funds and corporations. Its director is

James P. Twomey, who formerly headed the Community Renewal Foundation of Chicago.

The Urban Information Center produces Urban America's publications, including the bi-monthly magazine CITY, and maintains a reference service for the press and the 80 local citizens' organizations affiliated with Urban America. Its director is Donald Canty, former managing editor of the Architectural Forum.

The Architectural Forum is sponsored by Urban America and published from its offices in New York.

Year End Report: 1967

This report conveys a sense of tragedy as well as accomplishment; the loss of Stephen R. Currier in January continues to be deeply felt. But the extent of accomplishment reflects the firmness of the foundation which Stephen Currier laid for Urban America and the determination of the officers, trustees, and staff to carry on what he began.

Conferences. Urban America's year began with a highly successful Development Forum in Boca Raton, Fla., attended by some 120 national leaders from both the public and private sectors. The theme was "Business Innovation and the Urban Revolution," and the discussion represented the opening of a business-government dialogue on urban problems that grew in scale and significance as the year went on.

The annual meeting in April used Montreal not just as a site but as a laboratory. Delegates toured the city's downtown core and heard the story of its development from its planners, designers, and builders. A similar format is planned for future an-

nual meetings and was used for the fall session of the Executive Committee in Dallas. Mayor Erik Jonsson, other officials, and community leaders met with committee members and staff to explain the city's plans and programs.

More than 1,400 persons participated in six regional seminars conducted during 1967 by the Nonprofit Housing Center in cooperation with the Federal Housing Administration. The Nonprofit Housing Center also joined the Urban Training Center of Chicago in sponsoring three one-week-long workshops for staff members of churches and other nonprofit organizations concerned with low-income housing. The center's conference year ended in November with a national session on development funds and nonprofit development corporations, two increasingly important tools for pooling private capital for housing and other urban improvement efforts. Held in Chicago, this meeting attracted some 300 persons.

A blue-ribbon panel of architects and planners assembled in our board room in early October for a one-day seminar on design plans for cities, sponsored by the Urban Design Center. The seminar involved 30 of the leading figures in urban design—Lynch, Crane, Candilis, Bacon, Buchanan, Rudolph, etc.—and concerned the strategies by which American cities can improve both their appearance and their functioning. The results will be published in booklet form and will form the basis of a center study on urban design strategies.

The Urban Coalition. The idea of an Urban Coalition was first advanced by Mr. Currier in 1966, just after election of the 90th Congress. The U.S. Conference of Mayors and

National League of Cities joined the effort, and staff work was started in early 1967 at Urban America under Ron M. Linton, director of special projects. By summer two meetings of mayors had been held, and at a third the Coalition's second segment, the business community, was enlisted.

The emergency meeting July 31 in our board room, at which the full Coalition came into being, was organized in less than a week by Urban America, the Conference of Mayors, and Potomac Institute. Urban America also played a major role in the next three weeks in bringing about the Emergency Convocation of August 24. The Finance and Administrative Services Division, under David Dawson, literally worked day and night on arrangements for the Convocation. The Urban Information Center was in charge of the Coalition's press relations through the Convocation and the weeks thereafter. Urban America also was responsible for invitations to business leaders. Largely through the efforts of Chairman Andrew Heiskell, they accounted for the largest attendance of any segment invited to the Convocation.

Following the Convocation, direct responsibility for the Coalition passed to its own pro-tem staff, of which Ron M. Linton served as co-coordinator. Urban America continues to provide support and assistance, however. We hope that the Coalition will be only the first instance in which Urban America originates an activity that takes on a life, a mission, and an importance of its own.

Local assistance. During 1967, the Nonprofit Housing Center provided direct technical assistance to 31 low- and moderate-income housing projects in 14 states. Its

first groundbreakings will be celebrated this month. The center also assisted with the creation of development funds and non-profit housing development corporations in Houston and Corpus Christi, Tex.; Buffalo and Elmira, N.Y.; Detroit and Pontiac, Mich.; Stamford, Conn., and Indianapolis, Ind. Through the Appalachian Commission, the center assembled a team of three consultants to undertake feasibility studies of statewide housing development corporations in Kentucky and West Virginia. These studies were delivered to the governors of the two states in December.

As an experiment in local assistance of another kind, Urban America contracted with the City of New York in mid-year to undertake the programming and design of a multi-purpose neighborhood center in the Hunts Point area of the Bronx. The center, bringing together and coordinating a battery of social and other services to neighborhood residents, will be a prototype for others to be built throughout the city. The project team is headed by architect Kenneth Simmons of San Francisco, and the four center directors and I sit as a review board on the project.

The Urban Design Center was in contact with the cities of Cincinnati, Boston, New York, Philadelphia, Washington, and Dallas at the end of the year to discuss the possibility of assembling a market of at least five cities for a coordinated system of street hardware.

Publications and information services. The Architectural Forum enjoyed a steady gain in advertising revenue during 1967, particularly in the last quarter. An independent survey convincingly showed the Forum to be the nation's best-read journal in the

fields of architecture and urban design.

The first issue of CITY was published in April, as Urban America's annual report, and three others followed on a bi-monthly basis. CITY's reception has been excellent, and its circulation is steadily increasing. In addition to the regular issues, a special supplement was published in October on the Urban Coalition and its Emergency Convocation. The supplement is now in its second printing.

Other 1967 publications included Wilfred Owens' colorful Fable on urban transportation; The Necessary Revolution in Housing Finance by John Heimann; Systems in Cities by John Rubel; and the first in a series of Urban America posters. A revised edition of the popular Chart Book of urban statistics also was produced in 1967. An interesting assignment came in the fall from the League of Women Voters of the U.S., which asked Urban America to produce a substantial booklet for distribution to its membership. The subject is nothing less than the full range of urban problems, plus proposed solutions. Content has been developed through a series of staff seminars attended by League representatives, and editorial work is now in process.

The reference services of the Urban Information Center were reorganized in the fall according to a "matrix" of urban issues of current concern. The objective is to make these services more immediately useful to the press and to Urban America's local affiliate organizations, as well as to the others who call on us for information in substantial and increasing numbers. On issues of common interest to the 80-plus local affiliates, information "kits" will be assembled and sent to them periodically.

The first kit is on the subject of highway design and location.

Invitations have been sent to some 500 newspapermen around the country to join the Urban Writers' Society, for which the Urban Information Center will act as secretariat. The society's purpose is to increase and inform the interest of the nation's newspapers in urban problems. Its chairmen are Donald Canty; Grady Clay, writer, editor, and consultant to the Urban Journalism Center of Northwestern University; George McCue of the St. Louis Post-Dispatch; and Wolf Von Eckardt of the Washington Post.

In December, Urban America agreed to sponsor and seek funds for a two-phase national Advertising Council campaign on urban problems. The campaign will emphasize the urgency and seriousness of these problems and urge a variety of responses on citizens, including the joining or formation of local urban coalitions. One phase will be carried on through the general national media of newspapers, magazines, and network radio and television. The second phase will involve business and industry publications and would be co-sponsored by the Business Press of America Inc.

Research and policy studies. This is the one major program area at Urban America that is not yet beyond the planning phase, simply because the Urban Policy Center was not staffed until fall. However, Allan Talbot by year's end had developed a series of designs for policy studies which we have every hope of implementing in 1968. Major fields of emphasis in Talbot's program include involvement of the private sector in urban improvement; development of a

national urbanization policy to deal with future population growth; transportation planning, with emphasis on recommendations for the 1972 federal highway program; and racial-residential patterns in metropolitan areas.

Other activities. The generality of this heading reflects the fact that many requests made of Urban America and its staff cannot be classified under formal programs. Almost daily we are called upon to give informal advice to a city, an organization, or an individual at work on urban problems.

During 1967, I gave 20 public addresses around the country on behalf of Urban America, and was invited to testify before Congressional committees on metropolitan problems, private involvement in urban affairs, and urban highway planning and design.

In addition, I serve as chairman of HUD's Advisory Committee on Urban Development and a member of Mayor Washington's Task Force on Economic Development for the District of Columbia. James Twomey has served on the executive committee and board of trustees of the National Association of Housing and Redevelopment Officials. Allan Talbot has worked with the Advisory Commission on Intergovernmental Relations' new towns study, and is a member of HUD's professional advisory committee on the model cities program. James Kise has conferred with the Metropolitan Boston Transportation Authority on the systemwide design of graphics and station renovation in its subway design program, the city of Camden, N. J., on its renewal activities, and the San Francisco planning department on the drafting of an urban design plan. He has served as a member of

Panel B of the Nonrail Transit Vehicle Study, which was initiated by the National Academy of Engineering and the National Research Council in response to HUD.

Summary. There is a simple test to apply in evaluating Urban America's year: What difference would it have made to the nation and its cities if there had been no Urban America? Without Urban America there would have been no Urban Coalition, no similar alliance incorporating private industry to such a significant degree. Certainly the nonprofit organizations seeking to improve urban housing, and the sources of private capital seeking involvement in urban problems through development funds and corporations, would have been at a loss for technical and professional assistance on how to proceed.

I believe, too, that the voice of Urban America would have been missed in the national debate over urban problems and policies, although its impact is impossible to measure precisely. It is my conviction that we have made a solid beginning in establishing Urban America as an independent and authoritative commentator and source of information on urban affairs. That is the heart of the purposes for which Urban America was first formed.

ARTHUR RUBLOFF SUCCEEDS LEWIS KITCHEN AS CHAIRMAN OF GOVERNING COMMITTEE; MEMBERS FOR 1966-67 NAMED

Lewis E. Kitchen, a founder of the Division and Chairman of the Governing Committee since its inception in 1963, retired as chairman at the annual meeting of Urban America, Inc. in New Orleans May 15-17. The Trustees of Urban America have chosen Arthur Rubloff to succeed him.

Kitchen, who is President of City Reconstruction Corporation of Kansas City, Missouri, will remain on the Committee. The company has urban redevelopment projects planned or underway in Pittsburgh, St. Louis, Los Angeles and other cities.

Rubloff is Chairman of the Board of Arthur Rubloff and Co., Chicago. He is the developer of "Carl Sandburg Village", an urban redevelopment project containing 4000 dwelling units at a projected total cost of

THE NEW YORK TIMES, TUESDAY, JUNE 21, 1966.

Protestants Unite on Drive for Low-Rent Housing

Protestants Unite For Housing Drive

By EDWARD B. FISKE

Several large Protestant denominations and secular groups have agreed to pool their resources in a multimillion-dollar effort to stimulate the construction of low-rent housing throughout the nation.

The new project, the first of its scope in the housing field to involve both religious and secular agencies, has been announced by Urban America, Inc., a private, nonprofit urban planning group here that will administer the program. Its purpose will be to encourage the formation of nonprofit corporations to sponsor low-rent housing by offering such groups enabling funds and technical assistance.

The United Church of Christ is already committed to the program, and approval is expected soon from the United Presbyterian Church in the U.S.A., the Protestant Episcopal Church and the Methodist Church. The American Baptist Convention is also considering participation.

In announcing the project, Stephen R. Currier, president of Urban America, said the program would use an annual operating budget of approximately $1-million to release "hundreds of millions more" in federally insured mortgages and interest and rent subsidies.

Under Federal housing legislation — principally Section 221(d)(3) of the Housing Act of 1961 — nonprofit organizations, including church-related groups, are eligible to receive Government assistance for the construction and rehabilitation of low-rent family housing. Such assistance comes in the form of mortgage insurance and subsidized interest payments.

Additional funds will also be available to nonprofit groups through the recently passed rent supplement program. Under this program, tenants would pay 25 per cent of their income for rent and the Federal Government would pay the remainder required to keep the housing project solvent and in good repair.

Mr. Currier said the Urban America program could reach the point where it would be assisting in the construction of from 20,000 to 30,000 units annually. Low-rent housing is currently being constructed under the Housing Act provision at about half this rate.

The New York Times

Stephen R. Currier, president of Urban America.

The Urban America staff will seek to stimulate interest in the sponsorship of housing by local churches and other nonprofit groups, provide "seed" or enabling funds on a revolving-loan basis, and also technical, legal and other assistance at all stages in the development of the corporation.

It is prohibited under an agreement from acting as a sponsor or owning properties itself. In some cases it may charge nominal fees and interest for its services and loans.

The new program will be implemented in the form of an expansion of the present activities of Urban America's Local Development Services Division. Since February, 1965, this division, working under a Ford Foundation grant of $575,000, has provided technical services to nonprofit groups involved in the construction of approximately 3,000 units.

Urban America, Inc., is the result of a merger last December of the Action Council for Better Cities, a national organization of civil leaders concerned with urban planning, and Urban America, Inc., a planning group previously known as the American Planning and Civic Association.

In addition to the Local Development Services Division, Urban America publishes the monthly magazine Architectural Forum and operates design and information centers. These activities are supported by the Taconic Foundation and industrial concerns. The chairman of the board of trustees of Urban America is Andrew Heiskell, chairman of the board of Time, Inc.

Church interest in the technical services project stems from the large numbers of requests for help received by national church agencies from local churches and church-related groups interested in doing something about housing problems in their areas.

Under its agreement, which must be renewed after two years, Urban America will provide administrative staff and facilities and direct the program.

SLAYTON SUCCEEDS LASH AS EXECUTIVE VICE PRESIDENT OF URBAN AMERICA, INC.; OFFICES TO MOVE TO WASHINGTON

The Executive Committee of Urban America, Inc., has appointed William L. Slayton as Executive Vice President of Urban America, Inc., to succeed James E. Lash, who has resigned. In another action the Committee also decided to move the headquarters of Urban America to Washington, D. C.

Slayton, former Urban Renewal Commissioner, has been Director of the Urban Policy Center of Urban America. Lash had been Executive Vice President of the ACTION Council for Better Cities prior to its merger with Urban America in December, 1965.

The offices of the Executive Vice President and the Redevelopment Division are now located at 1717 Massachusetts Avenue, N. W., Washington, D. C., 20036 (phone (202) 265-2224). Other components of Urban America will move to or be established at that address over the summer.

"...We will strive unceasingly to quicken the public sense of public duty; that thus... we will hand on this city, not only not less, but greater, better, and more beautiful than it was given to us."

"NEW SYSTEMS FOR URBAN DEVELOPMENT"

G. T. Bogard
Division General Manager
General Electric Company

When I was invited to attend this forum on urban development, it was accompanied by the suggestion that a few members of the Board of Trustees would like to know about General Electric's plans to help solve urban problems. Certainly, that seemed innocuous and not overly taxing, even for someone striving to organize a new business to undertake community development.

But then I received a copy of the agenda from Urban America headquarters and discovered that I was the lead-off speaker whose remarks were to be commented upon by gentlemen whose knowledge, experience and credentials in respect to the subject were far greater than mine!

Along with this useful information came a note from our esteemed Executive Vice President, saying: "We would be particularly interested in how General Electric's plans compare with John H. Rubel's suggested approach to building cities and - an explanation of how G. E. plans to work without government assistance, as reported in the Wall Street Journal."

Perhaps it might be well to satisfy Mr. Slayton's curiosity at the outset by stating:

1. General Electric is embarked upon a course which somewhat parallels that recommended by Mr. Rubel in his very perceptive proposal on how government and the private sector can work toward creating better cities, but with one difference: General Electric's program is being initiated without government contract and without a quasi-public corporation supplying capital funds;

2. Never believe everything you read in the newspapers! Government is today, and will continue to be, a most powerful and pervasive force in moulding the shape of urban communities. A failure to relate our efforts to the ingenious programs originating at Federal and local levels would unnecessarily deter the evolution in the building process which we are dedicated to seek.

General Electric Objectives

It is time for me to proceed to my task, which is to explain the interests and objectives of General Electric in undertaking a systems approach to solving the problems of city construction. Major business enterprise is no less concerned than government, universities, planners and the public, to find workable solutions to many common problems shared by cities of every size. I hardly need repeat them to this audience . . . they are all too familiar:

Air Pollution
Water Pollution
Unsatisfactory waste and sewage disposal
Traffic congestion

Inadequate public transportation
Overcrowded and ill-equipped schools
Inadequate health and medical facilities
Ever-rising cost of land and housing
Inflexible planning, zoning, codes and regulations (which somehow never result in what was well-intended)
Outdated construction practices

. . . and this is only a partial list of the many problems.

Creating better living environment through the present process of development and construction has failed to keep pace with a highly industrialized society in a climate of rapidly changing technology and a steadily expanding economy.

When it is contemplated that our population, family formations, spendable incomes and volume of construction will double in the next 35 to 40 years - and the quality of our urban environments are steadily deteriorating - it is a challenge to everyone, not just the building industry, not just governments.

As a matter of fact, we in General Electric are very much concerned about the future and growth of building. It is the only major industry failing to participate in the greatest economic boom the world has ever known. It will come as no news when I remind you that building has been on a long term plateau for more than a decade, constructing 1.5 million housing units annually, plus or minus 100,000 (that was before tight money and higher interest rates).

The two things that continue to rise are the cost of developed land and cost of construction. Increased values, at least in the eyes of

never-more-prosperous potential customers, just have not materialized. Thus, housing's share of consumer spendable income continues to lose out to more attractive goods and services.

The concern of citizens, government or business corporations, extends to include such problems as:

1. the rapidly growing crime rate (500% faster than population gains);
2. inefficient and unsatisfactory municipal services;
3. inadequate health, sanitation and medical facilities to serve a rapidly expanding population now living longer than ever;
4. inability of our educational system to keep pace with explosive demands;
5. breakdown in public transportation and circulation within cities;
6. cultural and recreational opportunities not keeping pace with increased leisure time and growing affluence;
7. steadily accelerating per capita taxes to provide community services;
8. rapidly skyrocketing costs of all amenities, services and construction;
9. wasteful and ineffective land use;
10. failure of the building process to progress into the 20th Century along with other major industries (it is still largely a handicraft industry in an otherwise industrialized society with little cost control, little innovation and a signal lack of progress).

Let me state here and now: We are not among those who believe that the Federal government should assume all responsibility for meeting these challenges; or that the problems are too monumental for private enterprise to tackle; or that either can find the solutions alone. There is strong

evidence that the thousands of relatively small entrepreneurs engaged in building and developing cannot bring about an evolution in the building process or the creation of vastly better environmental values . . . not because they would not like to! They simply have not the resources to do so.

A year-long study has led General Electric to consider a new role in the building and development field. After a careful observation and investigation into the lack of progress in meeting the problems of building and development, it became clear that progress was essentially blocked by the interaction of restrictive, inflexible planning and zoning regulations; archaic; non-uniform conflicting codes and inspection practices; union work rules and limitations; the highly fragmented character of the construction industry (thousands of firms, with limited financial capacity and unequal bargaining power); plus the unwillingness of mortgage lenders to support builders who might want to innovate and experiment. In other words - the cards are effectively stacked to discourage innovation, experimentation and development of new systems and techniques.

The problems were not difficult to identify, but what to do about the roadblocks to progress is something else! In considering alternative solutions which could be developed, a conclusion was finally reached that a large, diversified, financially strong enterprise, with broad interests running throughout the entire fabric of a city, might contribute importantly

to the development of new prototype communities which offered more human values, greater living satisfaction . . . at less investment cost and lower per capita operating costs than existing cities presently afford.

Here, it seems, is an excellent opportunity to serve society, assist government in meeting its goals, move the building industry toward transition and growth -- while demonstrating that major industrial companies can have an important role in the quality of urban life.

From past experience in production and distribution of power, in attaining far-reaching objectives in aero-space and weaponry, it is convincingly evident that a systems approach to complex problems is time conserving, economical and effective. Rapidly advancing computer technology is helping to solve complex problems, do mathematical modeling and perform simulation programs at a feasible cost in both time and money.

If we can only establish and define the end results we seek in a city environment, or putting it another way - create performance specifications - then a kind of reverse Critical Path can be mapped out which identifies necessary input and the desired sequences of application required to reach the end objectives. Therefore, if we can identify what constitutes a better community and know what values to end up with, it should be possible to create the kind of city people would really like to have, and at costs they can afford to pay.

Using systems analysis and program phasing as a guide to development and construction will certainly bring about savings in building and developing planned communities just as it has when applied to other complex problems. We believe a large diversified enterprise such as General Electric, has the resources to tackle the challenge of building new cities, if we correctly assess the nine crucial factors for success, which are:

First and foremost - the financial staying power to undertake a 15 - 20 year development program of prototype communities numbering 100,000 people or more;

Second - systems experience and a wide range of technologies and engineering capabilities which can be focused on development and construction problems;

Third - facilities and organization to undertake broad scale research;

Fourth - the ability to enlist and integrate the inputs of multi-disciplined professionals who have important contributions to make;

Fifth - a product manufacturing capability which embraces almost the complete spectrum of community services, including --

a) power production and distribution;
b) water management;
c) waste, trash and sewage disposal;
d) transportation systems and traffic control;
e) communications - educational, entertainment and security;
f) information accumulation, processing and control;
g) educational systems - print and electronics;
h) medical electronics systems
i) indoor climate control;
j) environmental lighting;
k) building materials;
l) household service functions;
m) financing - conditional sales, mortgages and leasing;
n) electric product service and maintenance.

Sixth - highly developed marketing and servicing skills to permit identifying and satisfying people's needs and expectations;

Seventh - ability to create a job base and the knowledge of what makes attractive plant locations for a variety of businesses, hopefully, to be attracted to a well-developed industrial park;

Eighth - integrity and responsibility which the public recognizes and accepts;

Ninth - management accustomed to undertaking large and complex projects uninhibited by long experience with the fixed patterns of the building industry.

Although General Electric has had only limited experience in community development, having operated the town of Hanford, Washington for the AEC, and it with a population of less than 20,000, we believe that we have the management skills; the scientific, engineering, manufacturing, marketing and financial resources; to create prototype communities on a large enough scale . . .

. . .to provide thousands of homes and apartments in a community characterized by a diversity of incomes, occupations, cultures, age groups and interests;

. . .to create basic employment for the majority of residents and provide commutation to a wide variety of jobs;

. . .to provide for the full cycle of life with a wide range of educational, recreational, entertainment and cultural opportunities;

. . .to provide better answers to the problems of air and water pollution; waste and sewage disposal; transportation and circulation within the community;

. . .to add a high order of beauty and aesthetic appeal to structures and to public and private lands;

. . .to improve municipal services and efficiencies, and at a lower per capita operating cost. (Consider, for example, an information utility performing essential functions for municipal operations and sharing time on its computer with commerce, industry, schools and hospitals.)

The kind of planned, multi-functional community being envisioned means more than just physical and aesthetic planning . . . it must incorporate economic and social planning to make it a viable, self-defined, self-sufficient community.

Thus far, most of the so-called new towns are a collection of physically designed neighborhoods or subdivisions. Most lack economic planning and are not very sophisticated in their approach to human or social problems.

This is an area where builder-developers and manufacturers have the least knowledge and expertise. We must look to experienced planners, sociologists, anthropologists and psychologists for guidance. I am sure that no one has all the answers, but by a process of trial and (I hope) not too many errors, we should be able to achieve many large scale improvements.

In reaching our objective to create a better urban life, there are important by-products to be achieved along the way. What is badly needed is to accelerate an evolution in the building process comparable to that which has been under way in other major industries. Without added product features which appeal to customers; without cost reduction programs which result in lower prices and higher values; the building industry is pricing itself out of business at a rate which has stymied growth in volume for a period of more than ten years.

Working with the Institute for Applied Technology; trade unions; contractors; architects; and consulting engineers; we believe that General Electric can develop a modular concept of components in electro-mechanical systems which will reduce in-place cost of all essential services provided in new construction. If a transition can be made from material specifications to performance specifications, it will greatly accelerate the introduction of new materials and construction techniques into building.

Although we have confidence that much can be accomplished, there is a large element of risk in community building projects extending over a long number of years. To expose General Electric shareholders to minimum risk and optimum opportunity for long range gains, we will attempt to locate our new planned communities in those areas with the most rapid growth of population and capital formations. Ideally, they will be within one hour commuting time of metropolitan centers of at least a million population; within thirty minutes of a jet port; have excellent access by freeway, rail and water.

To provide maximum market appeal there will be green space; good circulation planning; excellent schools; medical, church and recreational facilities; a college or university; a determined effort to provide a cultural climate which enriches community life.

General Electric will control the land (10,000 acres or more); establish master planning; maintain architectural and design supervision; install

necessary utilities, amenities; and retain ownership of key commercial properties. It will in no way be a Company town, even though a new plant expansion may be located there to seed the job base. Builders and individual owners will be invited to purchase improved land for construction. Planned diversity and variety is the objective with pleasant and beautiful surroundings paramount.

We envision an integrated community with a wide range of housing types appealing to all income levels except the very lowest (no developer can yet afford to provide such without substantial subsidies). Experiments will be initiated in land planning; innovations will be introduced into off-site and on-site improvements which, hopefully, will result in substantial cost savings. New approaches to municipal services will be initiated to reduce cost and improve operations. But, we will not attempt to build the town of tomorrow! We expect improvements to come by evolution rather than revolution. People are very conservative about what kind of housing they buy, regardless of how much interest they show in the home of the future.

General Electric may not be able to undertake the number of planned communities it would like, and other developers may also be stymied in their efforts, due largely to one major obstacle: Unavailability of well located land at an affordable price. When a study is made of realistic selling prices of housing, commercial and industrial properties; and taking into account the costs of improvements, amenities and public facilities; our computer programs and feasibility studies indicate a ceiling of about $2000

per acre for raw land is all a developer can afford to pay. Don't forget that building a city will probably require 20 years or more and carrying charges will approximate 8 percent including interest and taxes.

I submit that the Federal program for 50 percent loans to developers on large land purchases is of questionable value and will not accelerate successful new town development to any degree.

If a development proposition is sound, as Messrs. Rouse, Simon and Hunt have demonstrated, insurance companies or pension trusts will make investment funds available. Land acquisition is only one problem . . . marketing at a very demanding schedule is a far greater one . . . and more difficult to solve.

A more helpful program of government participation would be one now used for urban redevelopment: Exercise the right of eminent domain to acquire strategically located tracts which would minimize public service expense for transportation, schools and services; utilize large capital investments in existing highways, railways and water ways. Then, re-sell to private developers having the capabilities to develop new cities on a takedown schedule geared to the market absorption rate.

Another suggestion (by Philip M. Klutznick, the only developer I know who has completed a new town of 35,000) is certainly worthy of consideration: "Government to provide capital without interest to build public facilities; i.e., city hall, police and fire stations, parks, schools, arterial roads, water and sewer facilities." This would insure quality of

services from the outset and multiply chances of successful urban development at the most accelerated pace.

As we proceed toward developing prototype communities, we hope to involve the more progressive architects; planners; social scientists; consulting engineers; contractors and builders; in helping to create better environmental values than now exist . . . at a cost within the reach of more American families and . . . at an accelerating pace which will serve to spark a resurgence in new construction that is already long overdue.

THE NECESSARY REVOLUTION IN HOUSING FINANCE

ADDRESS BY
JOHN G. HEIMANN, VICE PRESIDENT,
E. M. WARBURG & CO., INC.
AT
URBAN AMERICA, INC. DEVELOPMENT FORUM
BOCA RATON, FLORIDA

JANUARY 17, 1967

Some six months ago the Secretary of the Department of Housing and Urban Development asked if I would be willing to undertake a study of housing and the private capital markets for him. Of course, I was honored and challenged by this assignment and, subsequently, spent over three months considering some of the fundamental problems of housing finance. I admit to accepting this responsibility with at least one overwhelming and continuing personal prejudice -- I believe that decent housing is a fundamental requirement for the health, welfare, and prosperity of our citizens. It is a foundation upon which we can continue to build a proud and responsive nation.

Obviously, satisfactory housing conditions are not enough. They must be coupled with a broad variety of private and public services necessary to satisfy the human requirement of our complicated age. Nevertheless, all of the benefits of an enlightened society will have a depreciated value if the recipient of these services must return each evening to a vile and stinking slum tenement which, under the most generous of terms, is unfit for human habitation.

I did not join the Secretary because I felt concern for the housing industry. I joined him because of the concern he has for the

people of this nation now deprived of decent living conditions, -- the customers, if you will, of the housing industry.

Today, I would like to share with you some of my observations. This is not a rehash or a precis of my report to the Secretary. Rather, it represents my personal and private view of what is wrong with housing finance in this country with particular emphasis on the urban needs of moderate- and low-income families.

The problem is well-known to all of you. The flow of funds into housing has been discussed and documented in a thousand ways by almost as many interested parties. There is no shortage of statistical studies though not all of it is as revealing as we might like. There is no dearth of printed material on the subjects of What Is Wrong and What Should Be Done About It, though most of these studies have been prepared by special interest groups. There is no lack of information as to the investment patterns and practices of those financial institutions which supply funds for housing. As a matter of fact, how could there be a shortage of paper in an industry with so many different lobbies swamping the Congress with information and ideas!

For all of this information flow, however, the industry is beset with recurring similar financial crises. And these crises are bound to plague us again and again until some fundamental change in the ways by which we channel savings into the creation of dwelling units is brought about. As Santayana so wisely noted, "He who does not remember the past is condemned to repeat it." I think the industry remembers the past: the question is whether there is the determination to bring about change.

We are aware of the magnitude of the need which is directly translatable into dollar requirements. As the Secretary noted in his speech

to the Mortgage Bankers last November, the next decade will require sums in excess of $300 billion if we are to create a balanced housing supply in this nation. That is $30 billion plus a year which must be available for mortgages, -- quite a target, even though one which has been reached in the past.

It is obvious to me that the financial solutions must combine private resources with public assistance. It is equally obvious that both monetary and fiscal policies have an overwhelming influence on the ability of the private sector to provide the required units. Accordingly, this raises the question of national priorities and possibly even direct federal allocation of resources. However, since the over-all allocation of resources has traditionally been, and still is, the province of the private sector, we must consider a program which will make the financial needs of housing more competitive in the search for funds. At the present time, this search is an unequal competition with the housing industry representing the most unequal participant and moderate- to low-income needs the most unequal participants in an unequal industry. (The question of allocation with attendant national policy set to provide a given minimum number of units per year is left to another discussion.)

The housing industry, in all its parts, is a vast network of product and services, distinguished in American industry by its fragmentation. It is one of the few remaining industries which is dominated by the small, independent entrepreneur. In many ways, it is inefficient, high-cost, and woefully under-capitalized. The finished product is the result of the activities of many parties, large and small, all of whom presumably find their participation in the process profitable.

The housing industry, more than any other, is beset by problems which can best be described as "political." The entrepreneur must consider building codes, zoning regulations, work rules of the local trade unions, as well as the market for the product he produces. It is the pattern to consider each project as an individual entity, whether it be a small subdivision or a large multi-family project. The entrepreneur works project by project; 1/ the laborer is employed project by project; the material is ordered project by project; and the financial institutions lend project by project. Fragmentation is the best phrase to describe the entire process.

1/ The project by project concept will have to be revised if we ever hope to create a balanced housing supply. A dramatic change of thinking is required by both the public and private participants in this process. For example, forecasts may indicate the need for a certain income level of housing in a given area over the next 5-10 years. Yet, the entrepreneur will only build that which hopefully will be rented immediately upon completion; FHA will only approve a project it feels will be economically viable (fully rented) upon completion; and the financial institutions will follow suit.

The rationalization for revision must be interwoven with the concept of the socio-economics of the urban area. This obviously leads to consideration of the rather controversial area of Federal-State fiscal relationships. We must review the entire structure of tax in-flow and out-flow in respect to public needs. Local governments do not have the tax base to support public programs and it is becoming quite apparent that they shall increasingly rely upon the tax-gathering capability of the Federal Government. How this is to be accomplished is the subject of considerable discussion. A variety of plans have been proposed ranging from the Negative Income Tax to the Heller-Pechman concept of "block grants" to the States.

Once again, we are faced with the need of redirecting the flow of funds. Over the next decade, our economy should be sufficiently strong and productive to produce the funds necessary for the public improvements we seek. Not only do we need the will to accomplish these improvements but we must also devise the techniques by which the available funds can service the needs of the people at the lowest possible cost.

Within the industry, there is a multitude of special interest groups, each favoring a single process, service, or component. The cross-activities of these groups have led, I believe, to maintenance of the status quo. Lobbies representing these groups are strong and, in many cases, singularly potent. It is important to note, however, that there is no lobby concerned with the problems of the creation of housing in all its parts. The lobbies, like the industry, are fragmented.

It is inconceivable to me that this giant structure, splintered as it is, cannot be changed, shifted, and modernized.

The financial system developed to service the housing industry is also specialized and fragmented. The local nature of real estate has required local lending. As there is little mass production of housing, there is also little mass lending. Private capital does not flow freely, on a nationwide basis, into real estate. Only certain investing institutions are geared to purchase mortgages as the impedimentia of real estate documentation requires trained staff. In times of tight money, the available investment flow dries up rapidly as there are no alternative techniques available by which capital can be attracted to the mortgage. When money is plentiful, there tends to be an oversufficiency of mortgage funds, often leading to a relaxation of standards and therefore more future problems.

Even when the financial system is supplying funds, it does so largely to areas in which our problems are not of a pressing nature. Investment funds find their way into single-family homes, upper-moderate-income and luxury dwelling units and commercial properties. Precious few dollars find their way into properties serving the moderate- and low-income families.

Repeated experience has shown us that this financial system ceases to function effectively when it is most needed.

The capital required for this vast industry should be divided into two categories: (1) variable-income capital (equity) which earns a variable return dependent upon the success of the investment plus the values created by the available tax benefits; and (2) fixed-income capital which receives a fixed return, a repayment of principal upon a specified maturity, and represents a senior lien on the property. The requirements of these two classes of capital are quite different but they bear an important relationship to each other.

When the industry talks about the availability of capital, more often than not, it is referring to the fixed-income sector. Yet the availability of equity and the quality of that equity is equally important to the long-run health and stability of the housing industry. Within this broad generalization, there are differing classes of need. For example, the equity requirements for single-family homes present a different problem than the needs of multi-family units in urban areas.

There is every indication that sufficient equity has been available for the relatively modest programs of moderate- and low-income housing constructed to date. This may not be true, however, of any greatly expanded program, as this present supply of equity is limited, not only quantitatively, but also because it is broadly spread in relatively modest amounts. In addition, the bulk of this equity is "one-shot;" i.e. capital which is not committed to a continuing program of investment. This type of equity flows irregularly and is more a creation of the tax laws than it is of pure investment opportunity.

If we are to be successful in our goal of rebuilding the urban areas, we will need equity dollars for the task. I feel that it is incumbent to attract not only sufficient equity but also the type of equity best equipped to serve the ends we have in mind. This equity -- let's call it "quality" equity -- is available, under certain conditions.

Basically, we should be seeking equity which will remain "in;" in other words, an application of the concept of retained earnings, used for on-going programs both in respect of the creation of units and research and development for a better product. Such a goal might well produce more housing at lower costs. A collateral benefit would be the building of financial stability, a necessity prior to the development of fundamental institutional changes.

There is every indication that a number of large corporations are interested in urban redevelopment and would welcome the chance to participate in these programs. Some have, in fact, already been involved, though it is apparent that their experiences have been less than satisfactory. The inherent profitability (a combination of limited-return, land write-downs, tax benefits, possible product development, etc.) of real estate is well recognized by these entities. Successful development can combine both product and profit motivation with social motivation.

Their reluctance, therefore, does <u>not</u> come from the belief that the activity would be unprofitable. Rather, their reluctance stems from the experience to date indicating that their efforts will be subjected to a myriad of time-consuming "bureaucratic" and political delays, the end result of which may be complete frustration.

Corporations are willing to assume the product risk (marketing); they are willing to accept any normal business risk; but they are <u>not</u>

willing to subject themselves to the bureaucratic/political risks. Why? Most importantly, it is a case of corporate posture, responsibility, and, if you will, image. The corporation will not "walk away" from a commitment, often the case with the real estate entrepreneur.

I believe that we must encourage the participation of "quality" equity. The Department should encourage this development, not just by words, but by deed. For example, delays in processing should be drastically reduced. Redesigning standards so that if the equity investor wishes to assume a greater risk than the studies of the Department feel warranted, let him do it; but in the process increase his exposure to loss. Finally, when competition for a project is heated, try to create a competition amongst "equals;" i.e. make certain that the winner has sufficient capital at hazard so that he must complete (in many cases, begin) that for which he has assumed responsibility.

Over-All Impact of Mortgage Debt on the National Economy

The following facts might give us some perspective as to the magnitude of the role of real estate mortgages within our economy:

1. Home mortgage debt approximates 62% of total personal debt.

2. The annual increase in home mortgage debt approximated 3.9% or less of disposable income for several years. In 1965, it was only 3.3% but in 1955, a year of heavy, over-all investment, it was 4.6%.

3. Individual and non-corporate mortgage debt approximated 23% of all net public and private debt and was exceeded only by corporate debt which includes short-term liabilities.

4. For the past ten years, non-farm housing and commercial mortgage demands have used, on average, 53.1% of all long-term funds

available, and 31.5% of all funds. Of this amount, 1-4 family homes accounted for 37.6% of all long-term funds and 22.2% of all funds.

From the foregoing it is apparent that the industry is (1) the major consumer (utilizer) of the long-term savings generated by the American people and (2) accounts for substantial proportion of total debt which is, in effect, a call upon future savings.

Over-all economic and monetary policy is established in light of a broad variety of national factors. These policies set the pace of the economy. However, considering the magnitude of the end results of these policies, the industry and HUD can and should participate in the determination of that which takes place prior to policy implementation. In other words, if a balanced housing supply is ever to be created in this nation, HUD must be permitted a direct voice in the monetary affairs of the nation. The housing industry should take it upon itself to become more actively involved with the fundamental economic concerns of the nation prior to the continuing crises which beset this area of activity. Two thoughts come to mind in this respect:

1. In August of 1966, the President called a meeting to discuss the economy of the nation. Among those included were the Secretary of the Treasury, the Secretary of Labor, the Secretary of Commerce, Mr. Ackley of the Council of Economic Advisors, the President of the Federal Home Loan Bank, and others. But where was the Secretary of Housing and Urban Development? Is he not the one individual in the United States charged with the over-all responsibility for all housing conditions all over the nation? Neither he nor his representatives were there! Why? I can only assume that it was because the role of housing does not receive

nor ever has received its proper place beneath the economic sun. The National Housing Act of 1949 has and does play second fiddle to the Full Employment Act of 1946.

2. The lobbies of the housing industry only become vociferous during periods of crisis. For example, we would all agree that over-lending on the part of certain savings institutions in times of plentiful funds is not healthy for the industry. But it is hard to find a record of the industry condemning these practices. In the past, industry concern has been concentrated on short-range problems. (I believe that this might well change in the future as there is every indication of a new wave of industry interest in the long-term. Urban America is a fine example of forward motion.)

There is another financial oddity in the housing picture. As noted before, the President invited the President of the Federal Home Loan Bank to his meeting on the economic condition of the nation. It is fact that the Federal Home Loan Bank Board is the primary government agency solely concerned with the supply of resources (savings) for housing. It is an independent agency. Its constituency has been, for the most part, the savings and loan associations which are (1) primarily concerned with financing of single-family homes; (2) service an income level of the community which does not include the urban needs of the moderate- and low-income family; and (3) geographically concentrated in the Western States. This independence of the Federal Home Loan Bank Board does not seem at all prudent. I am fully aware of the political motivation which brought this condition about. But, even so, does that mean we do not ever have a chance to reconsider what appears to be a mistake of the past?

If the savings and loans are to be restricted to the mortgage financing field, as they have in the past, the FHLB becomes a potent arm of national housing policy. If, on the other hand, the savings and loans are permitted to broaden their lending charter to include certain categories of consumer loans, their function becomes less oriented toward housing and somewhat more akin to the commercial banking function. Perhaps, the savings and loans will become to the family what the commercial bank has become to the business community.

In either case, the question of relationship is raised. If the Federal Home Loan Bank is to be a financial institution servicing the housing industry, in all its phases, then should it be amalgamated with the secondary market operations of FNMA, with the merged institution acting in a capacity similar to that of the Federal Reserve Board except that it would not create credit? If the Federal Home Loan Bank is to continue servicing primarily the savings and loans and they, in turn, are permitted only mortgage investment, then should the Federal Home Loan Bank become more directly influenced by national housing policy through that department of the Executive branch of the government charged with this responsibility -- HUD? If the savings and loans are permitted an expansion of loaning power to include consumer loans, then should the Federal Home Loan Bank Board come under the control of the banking authorities?

Some rationalization in the structure is urgently needed. The political considerations would indicate that it is unrealistic to expect any drastic changes. However, much more time and thought must be given to this if we can ever hope to achieve a logical financial system for housing in the United States.

Financial Institutions and the Flow of Funds

Much has been written on the sources of mortgage money for residential construction. A brief review, however, might be helpful and the following table capsulizes the present situation:

Non-Farm Residential Mortgage Holdings by Various Investing Institutions
As of 12/31/65

	Non-Farm Residential Mortgages Held (billions of dollars)	Mortgages as a % of Total Assets	Total Growth in Assets Last 5 Years
Savings & Loan Associations	$110.2	85.1%	57.6%
Life Insurance Companies	55.2	34.7	25.1
Mutual Savings Banks	40.1	68.9	35.9
Commercial Banks (Time Deposits)	32.4	22.0	77.7
Retirement Funds	8.9	9.8	53.2

These institutions can be divided into two categories:

Deposit Thrift Institutions - Savings and Loan Associations
Mutual Savings Banks
Commercial Banks (time deposits)

Contract Thrift Institutions - Life Insurance Companies
Retirement Funds

It is obvious from the figures and from the literature of the field that the housing industry has depended upon the deposit thrift institutions as its prime financial source.

A word should be said about the rate of growth in the assets of these institutions. Most rapidly growing (commercial bank time deposits) is a relatively temporary phenomena based upon the newly permitted ability

of the banks to compete for savings. This has now begun to level off. Savings and loans, in the second slot, are the direct result of Federal policy to "force" savings into a specific area. This advantage has been diminished by permitting the commercial banks to compete. Retirement funds will continue to grow rapidly. Insurance companies also will continue to grow but their pace of expansion has slowed down over the years and this trend should continue. Mutual Savings Banks need geographic expansion for dramatic growth.

The savings and loan associations are geographically concentrated in the western United States. The recent shake-up in these institutions was an indication of some of the slipshod past practices which were once supportable due to the rising real estate market, demand for housing, and the like. Savings and loans attracted their flow of funds through rate advantage and they, more than any other financial institution in the United States, made the American saver aware of rate. In addition, the insured feature of the deposit has satisfied the saver's traditional demand for dollar-certain liquidity.

The mutual savings banks were the original domestic thrift institutions. Management of these institutions has been more conservative than that of the savings and loans and, in addition, they enjoy greater portfolio flexibility. The savings banks operate in only 18 States, though there is legislation pending to broaden their penetration to the remaining 32 States.

The commercial banks are relatively new to the field of substantial mortgage accumulation. This activity was the result of the relaxation of Regulation Q. The basic constituency of the commercial bank, is, however,

the business community. Banks are not mortgage-oriented except in respect to the profitable construction loan activity. Their interest should continue in this area (though not necessarily in the magnitude of the past three years) because (1) the foreseeing continued competition for savings requires higher earnings on portfolio and mortgages help to provide these earnings; and (2) they have accumulated organizations to service and select mortgages which they will not disband.

The life insurance companies have considerable flexibility in fixed-income investment. Management of these institutions is, for the most part, quite sophisticated and this factor, combined with their flexibility, gives the life companies wide latitude in the selection of investments. Mortgages will continue to be a major portion of their portfolio but mortgage purchases need not be on a regularized basis. To some degree, the life companies always permit a certain minimum flow to enter the housing market in order to support their staff or their correspondents. The important factor is, however, that this flow is not continuous.

The retirement funds are the most flexible of all investment institutions. Continued rapid growth of new money is assured for the next 10-15 years. The management of these funds is, for the most part, through trust companies or individuals who are oriented toward bond and stock markets. Mortgages do account for a greater percentage of state and local fund portfolios than the private non-insured funds. The reasons for this are two-fold: (1) State and local funds have been restricted in the percentage of equity permitted in the portfolio, hence they are yield conscious in their fixed income portfolio, and (2) state and local funds

have a basic political orientation which favors the investment of assets in local real estate. This latter factor, however, does constrict the over-all flow of funds as political considerations dictate investment selection.

As previously mentioned, reliance for funds has been directed toward the deposit thrift institutions which, with the exception of the commercial banks, suffer the greatest relative loss of funds during periods of tight money. Fundamental changes are occurring within our domestic financial structure and, if mortgage funds are to be placed in a competitive stance, further understanding of these changes are a necessity. Among them are:

1. For the foreseeable future, there will be a world-wide shortage of capital. Hence, the long-term trend of interest rates is up. Within this upward bias, we can expect a continuation of periods during which short-term money rates will exceed long-term rates.

2. We should expect a continuation of the competition for savings between the deposit institutions and the commercial banks. As long as savings flow into S&L's and savings banks, a substantial portion will be available for housing (though not necessarily moderate- and low-income housing). However, that portion of the flow which is attracted to the commercial banks will, more likely than not, be destined for business activity, especially during periods of tight money.

3. An additional competitor for savings has dramatically appeared upon the scene; namely, high-rate U. S. Government and Agency paper. This should continue as long as interest rates are in the ascendancy.

4. The deposit thrift institutions have used short-term funds (deposits) to finance a long-term investment (mortgages). This has been possible because it has been based upon proven actuarial principles. However, as the saver becomes more sophisticated and his choices are such as to provide safety of principal, we should expect an increasing pattern of shifting savings. If this pattern develops size, the actuarial principles referred to above may become antiquated, causing severe readjustments in the investment practices of the deposit institutions.

5. In fact, why do people save at all? In days gone by, people saved to save. They put funds aside against "a rainy day," so that they would not have to spend their declining years in the poor house. The private retirement systems which now cover a substantial portion of the American people and governmental plans such as Social Security and Medicare may make many of the past savings patterns outdated. More and more, people save to spend. They accumulate funds for some major expenditure which eventually requires withdrawal of funds from a savings institution.

The problem of the effect of retirement funds upon savings patterns has not been studied yet. Since it has only been during the past decade that the American citizen has come to realize that he is protected, we are not sure what effect this realization will have upon savings patterns. One fact is apparent however: namely, that the American saver does not now store his excess funds for the same reasons he did in the past. The problem for the deposit institutions is what will be the size of this shift.

It should also be pointed out that if a saver withdraws his funds from a deposit-thrift institution for other investment, it is not now possible for him to select a vehicle which, in turn, supports the mortgage

market. The only exception would be if he should invest in the short-term obligations of FNMA or the FHLB. Most likely, he will be purchasing a long-term government or corporate fixed-income security.

The problem then becomes to (1) increase the funds available to the deposit-thrift institutions and (2) attract those funds which do not, now, invest in mortgages. Some attempt should be made to increase the total amount of savings since it can be assumed that housing will continue to receive its share of any increased flow. Though there is no absolute proof, there is enough evidence on hand indicating that increased savings competition, on a local basis, does increase total savings. Therefore, the passage of H.R. 11508 (Federal Charter of Mutual Savings Banks), which would permit mutual savings banks to operate in those States in which the saver is currently served by only the savings and loan institutions, should be actively supported.

It also might be advisable to permit the deposit-thrift institutions broader insurance powers on the deposits of tax-exempt funds (primarily, the retirement funds). Why not permit the deposit institutions the right to sell participations or notes to tax-exempt funds? The paper could be guaranteed by the insurance corporation with no changes in the existing law; i.e. it would require only administrative action on the part of the Federal Home Loan Bank in respect of their membership, or why not allow tax-exempt funds to make deposits which would be fully insurable in both savings and loans and savings banks? The insurance limitation would be applied to the aggregate number of beneficiaries covered by that fund rather than to the fund itself.

In addition to the above, it is necessary to design a security

which will be attractive to that sector of savings not now directly investing in mortgages; i.e. individuals and pension funds. For purpose of allocation, this might be designed to favor a particular area of housing activity -- moderate- to low-income rental housing for example. The security would be a mortgage bond, serialized to absorb amortization, issued in $1,000 segments with both a fixed maturity and a fixed coupon. If enough volume of this type of paper were to be issued the creation of a national market would be a logical development. Title VII of the National Housing Act of 1949 was designed to permit the issuance of mortgage bonds on rental housing. Changes will have to be made in this title since the restrictions make it inoperable at the present time. However, the concept, at least, has been accepted by the Congress, which could make the task of change somewhat less difficult.

Two of the major stumbling blocks for broad investment in mortgages are (1) the lack of a viable secondary market and (2) the investment form of the mortgage. In both instances, FNMA may hold the key to further partial satisfaction of these problems, at least in respect of government-insured programs.

FNMA is something of a hybrid. One of its functions, the secondary market operation, is quasi-public. That is, the common stock of the association is owned by private investors. This secondary market operation was designed eventually to be turned over to private ownership and management.

The other operations of FNMA, the Special Assistance function and the Management and Liquidating function, are public in nature and designed to accomplish broad governmental housing and budgetary policies.

Theoretically, therefore, in secondary market operations the Association is responsible to stockholders; whereas in Special Assistance and Management and Liquidating, the Association is responsible to the Executive Branch of the government. In fact, all three operations are responsible to the needs of the government. The interests of the stockholder in the secondary market operation are of secondary consideration.

To illustrate the above, if the secondary market function were to be operated for the stockholder, there would be no lag in the adjustment of prices. Any lag in adjustment means either a failure to minimize loss or maximize profitability. Yet, lags in pricing occur and the lags are of sufficient magnitude as to considerably reduce the profitability of the Association. In practice, the secondary market operation is supportive of the market and does not respond directly to money market conditions. Its supportive function has been considered to be in the national interest. If this is so, and I believe conceptually that it is, then the stockholders of FNMA are not being fairly treated.

As noted previously, one of the major problems confronting many investors when purchasing large blocks of government-insured mortgages is the lack of marketability. It is often claimed that the instruments are, indeed, marketable. It is pointed out that because of standard documentation and guarantee that the buyer/seller is thoroughly familiar with the merchandise, and, hence, these instruments should be freely traded. This is not the case. There is no effective market for FHA-insured paper. Each purchase and sale must be negotiated separately. Delivery of the loan lags considerably behind commitment date. Before delivery, considerable checking of the documentation on each loan must be

undertaken. Presumably, it was hoped that the mortgage bankers could create an on-going market such as the investment bankers do in corporate debt securities. But this has not been the case since mortgage bankers are both localized and under-capitalized.

Any organization making a market must also act as a principal. There are but few investing institutions who could possibly fulfill this category, including the savings banks, the savings and loan associations, the commercial banks and the life insurance companies. In none of these instances is a market function a realistic possibility.

Only FNMA is left as an instrument which could create and maintain an on-going market for insured mortgages. If FNMA were required to maintain such a market, the end result would be to make insured loans more responsive to interest rate changes and money market conditions. This would also provide investing institutions with the possibility of liquidity for their mortgage portfolios.

At any one time, it may be in the national interest for FNMA to act in a supportive function on one side of the market. However, if the spread between the bid and the offer is realistic, the supportive function will provide flexibility. The beneficial end result of this would be to diminish the extent of the supportive function of FNMA when such support becomes unrealistic and out of kilter with market conditions.

Accordingly, it might be prudent to change the function of the secondary market operation to resemble more closely the activities of the open market committee of the Federal Reserve Board. In other words, FNMA would establish prices on mortgages, on both sides of the market, on a periodic basis and stand ready to deliver or receive in quantities

mortgages at the quoted prices. FNMA's acceptance or refusal would be based upon a number of variables including over-all credit policy of the federal government; credit needs of housing in specific localities; over-extension of credit for housing in other localities; and the desire to increase or decrease the mortgage dollars available for various classes of loans in the private market.

This would be an auction market. Frequency need not be established at this time and is subject to further study. But the principle needs to be established if a market is to be created. It would be logical to expect the development of a private market around this new FNMA facility.

A recent analysis of participation certificates sales indicates that over 60% were purchased for retirement fund accounts. This points the way, once again, to this particularly attractive market. Retirement funds have not been inclined to buy mortgages directly. They do purchase, however, bonds if the quality and rate of return is such as to satisfy portfolio needs.

If it is our goal to broaden the market for mortgages, we must re-design, when possible, the form of the instrument so that it would attract new buyers. Mortgage bonds referred to previously are one technique. The participation certificates are another. It is worth considering the sale of participation certificates from the secondary market portfolio. Obviously, that portion of the portfolio used in this fashion could not also be used as general collateral for FNMA debentures. As in the Special Assistance portfolio, the mortgages participated would be segregated and collateralized.

If FNMA sold these participations to the final investor on the mortgages purchased it would save the intermediate steps of short-term

financing. The buyers of FNMA short securities are not the same buyers who purchased the participation certificates. The machinery is available; the techniques of design have been tried and proven effective; and the distributive organization has sufficient experience to warrant a successful placement.

It should be noted, however, that any change in FNMA's secondary market operation will require re-evaluation of the structure of FNMA, particularly as it affects the private stockholder.

I believe that FNMA should revert to public (governmental) ownership and that the fiction of private ownership be done away with.

The fixed interest rate (coupon) on government-insured and guaranteed mortgages has been a subject of considerable controversy for many years. It is my opinion that the fixed coupon tends to discourage private fixed-income capital when interest rates are in the ascendancy, usually when capital is most needed. A free rate would do much towards unrestricting the flow of capital into the mortgage market. I recognize, however, that the political facts of life do not promise any dramatic change in this area. Even so, we have a responsibility to point out to Congress the fallacies of the present theory in the hopes that this will bring about the changes we seek, now or in the future.

The fixed coupon leads directly to the problem of the discount which usually penalizes most those people who can afford it least; those people for whom the entire system was designed to serve. Surely, this is illogical and could not be the intent of Congress.

It just so happens that the Congress has requested discussion on the discount problem. Here is an opportunity for the industry to present

a reasoned and logical discourse on the problems caused by the fixed coupon. My personal belief is that we should design a formulized floating rate, pegged to direct obligations of the United States. Such a technique would not eliminate but rather reduce the magnitude of discounts. Admittedly, this is only a partial solution but it is workable and may well be politically acceptable.

Within the broad, over-all framework of this presentation there are many areas which have not been touched upon. The financing of new towns, a new and important field, needs considerable thought and the development of new financing techniques. Some serious question should be raised concerning the tendency, if not favoritism, regarding the sponsorship of middle- and low-income housing by non-profit organizations. While such a policy might have considerable immediate political appeal, more thought should be given to the ultimate consequences of non-profit sponsorship. Housing is long-term in nature and that which is constructed today may well be with us 50 to 100 years. If these properties are to be maintained and improved, we should seek sponsorship which is also long-term in nature. There is no better assurance of this than that of the profit motivation.

How can the financing problems of rehabilitation of owner-occupied units be handled on a mass basis? What changes in amortization policies can be applied to take into account the unique land values in urban areas? Can the concept of the blanket mortgage be applied in rehabilitation areas? These and other questions need exploration and comment.

I realize that I have thrown out a grab-bag of ideas. Not any one of them will solve the problems of housing finance. But all of them

together plus other concepts, many not as yet developed, might help us to get on with the business of providing decent shelter for all people.

I am convinced that institutional changes are needed. These can be designed by the industry. If it is not willing to consider the needs objectively, regardless of how it affects current status, then the changes will, in all probability, be imposed by the government. My philosophy leads me sincerely to urge the industry to take command for, after all, it is the industry that has the experience, the knowledge and the profit motivation to bring about a successful program. The time for another package of short-term solutions to long-term problems is past, for in housing this is an overworked technique. The need for change is now; the time for change is now; the atmosphere of change is in the air; in other words, the opportunity for leadership is here. It is the responsibility of the industry to seize that opportunity, so that it can serve this nation and, thereby, serve itself.

SYSTEMS APPROACH—NEW FINANCING METHODS FOR REALTY INDUSTRY

BUILDING, REBUILDING CITIES

By ARNOLD WORKMAN

URBAN AMERICA, INC., sponsored a two day conference the middle of last month in Boca Raton, Fla., to explore the theme of "Business Innovation and the Urban Revolution."

Held in the plush surroundings of the Boca Raton Hotel and Club, the mid-winter forum stressed two current aspects of the urban realty market: application of systems analysis as a new technique for overcoming problems of our cities, and development of new financing techniques.

Despite the generally cloudy weather, the conference attracted over 100 of the top urban redevelopment men, most with their wives, as well as representatives of many large product corporations which have a major stake —direct and indirect—in urban development activity.

There was a note of contrast between the tropical setting—tall palm trees and rich, varied gardens—and the urban problems stressed by the main speakers and the panel members as well as the audience in the question and answer periods. It was noted that despite the attractions of the golf course, of fishing and of other recreational facilities, the seminars were rather well attended.

THIS TYPE OF CONFERENCE IS NEEDED

Stephen R. Currier, the late, youthful president of Urban America, Inc., (See Box) was one of the first speakers. He noted that there were many new faces among the audience in the Cloister Lounge as well as those with which he was familiar.

Our theme is "Business Innovation and the Urban Revolution," Mr. Currier observed, and there is no need to cite the statistics on urban growth to support the need for this type of conference.

We are living through a period of innovation and technological change that has had a profound influence on our urban development, Mr. Currier said, and he cited an article by one of the morning's panelists, John P. Eberhard, who named the development of the telephone, the skyscraper, the electric light, the elevator, the subway and the automobile as having significantly changed man's environment.

One of the points that a recitation of these innovations makes clear is that in the earlier part of this century those improvements that did not lend themselves to exploitation by private industry did not develop as rapidly and did not have the broad influence of innovations that could be used by private industry.

Subway Illustration

Take the subway, Mr. Currier explained, and it becomes plain that this improvement did not gain wide acceptance in this country because it was too big for any company to go around developing and selling; and there was no immediate market for it.

The subway required large amounts of capital and a good deal of planning by governments. American business shied from this type of venture. Most of all, Mr. Currier maintained, a subway had to be planned and the other innovations could just be produced and sold. The subway needed stops and these stations, of course, would significantly influence land values in their vicinity and somebody had to make this complex and profitable decision.

"Now the feeling is growing that there should be more planning, that there should be a link between the developer and the planner, Mr. Currier reported. He cited Reston as an example of the increasing professional and business planning going into urban development.

He indicated that the previous growth of American cities was uneconomical in terms of locating facilities apart from the users, and of requiring vast transportation systems that might have been avoided if some planning had been done.

The Urban America president said the problems today were in the hands of the experts and they had to come up with the answers.

Seminar Technique

After Mr. Currier delivered his opening remarks, Louis R. Perini, Jr., took over as moderator and explained that after the main speaker, George T. Bogard, general manager of the Community Systems Development Division of the General Electric Company, had finished, the panel of experts would have a chance to question him and comment on his remarks. After that, the audience was to have its turn, if there was time.

In addition to Mr. Perini, who played devil's advocate as well as moderator, the panel consisted of John P. Eberhard, of the National Bureau of Standards, James Rouse, of the Rouse Company, William K. Wittausch, Stanford Research Institute. Mr. Perini is president of the Perini Corporation, which deals in construction and land development on a worldwide basis. He also serves as president of Perini Land and Development Company, a wholly owned subsidiary.

PLANS TO APPLY MASS PRODUCTION TO HOUSING INDUSTRY

One of the points made by Mr. Bogard is that the application of mass production techniques utilized by America's great and large corporations will give us more for less money. This prompted an observer to wonder if this was necessarily better.

Mr. Bogard said his job was to explain the interests and objectives of General Electric in undertaking a systems approach to solving the problems of city construction.

"Attempts to create better living environment through the present process of development and construction have failed to keep pace with a highly industrialized society in a climate of rapidly changing technology and a steadily expanding economy," Mr. Bogard declared and this was a major point because it expressed an attitude of a big corporation toward a fragmented industry. Also significant from Mr. Bogard's viewpoint is the possibility that if a transition can be made from "material specifications to performance specifications," it will greatly accelerate the introduction of new materials and construction techniques into building.

"Working with the Institute for Applied Technology, trade unions, contractors, architects, and consulting engineers, we believe that General Electric can develop a modular concept of components in electro-mechanical systems which will reduce in-place cost of all essential services provided in new construction," Mr. Bogard asserted.

Builders on a Plateau

He said the building industry is "the only major industry failing to participate in the greatest economic boom the world has ever known. It will come as no news when I remind you that building has been on a long term plateau for more than a decade, constructing 1.5 million housing units annually, plus or minus 100,000 (that

was before tight money and higher interest rates).

"The two things that continue to rise are the cost of developed land and cost of construction. Increased values just have not materialized," Mr. Bogard believes.

General Electric has had only limited experience in community development, having operated the town of Hanford, Washington for the AEC, and it with a population of less than 20,000, Mr. Bogard acknowledged. Nevetheless, we have the management skills; the scientific, engineering, manufacturing, marketing and financial resources; to create prototype communities on a large enough scale, he said. Here is what G.E. proposes to do:

- "Provide thousands of homes and apartments in a community characterized by a diversity of incomes, occupations, cultures, age groups and interests;
- "Create basic employment for the majority of residents and provide commutation to a wide variety of jobs;
- "Provide for the full cycle of life with a wide range of educational, recreational, entertainment and cultural opportunities;
- "Provide better answers to the problems of air and water pollution; waste and sewage disposal; transportation and circulation within the community;
- "Improve municipal services and efficiencies, and at a lower per capita operating cost. (Consider, for example, an information utility performing essential functions for municipal operations and sharing time on its computer with commerce, industry, schools and hospitals.)"

To reduce G.E.'s risk, the locations of the planned new communities, ideally, will be within one hour commuting time of metropolitan centers of at least a million population; within thirty minutes of a jet port; have excellent access by freeway, rail and water, Mr. Bogard explained.

"General Electric will control the land (10,000 acres or more); establish master planning; maintain architectural and design supervision; install necessary utilities, amenities; and retain ownership of key commercial properties. It will in no way be a Company town, even though a new plant expansion may be located there to seed the job base. Builders and individual owners will be invited to purchase improved land for construction.

$2,000 An Acre

"When a study is made of realistic selling prices of housing, commercial and industrial properties; and taking into account the cost of improvements, amenities and public facilities; our computer programs and feasibility studies indicate a ceiling of about $2,000 per acre for raw land is all a developer can afford to pay. Don't forget that building a city will probably require 20 years or more and carrying charges will approximate 8% including interest and taxes," Mr. Bogard reported.

Because of the above criteria, Mr. Bogard believes that the Federal program for 50% loans to developers on large land purchases is of questionable value and will not accelerate successful new town development to any degree.

"If a development proposition is sound, as Messrs. Rouse, Simon and Hunt have demonstrated, insurance companies or pension trusts will make investment funds available. Land acquisition is only one problem, marketing at a very demanding schedule is a far greater one, and more difficult to solve," Mr. Bogard said.

One comment by Mr. Bogard made plain a difference in philosophy between some of the panelists and himself. The G.E. executive asserted that most of the "so-called" new towns are a collection of physically designed neighborhoods or subdivisions. Most lack economic planning and are not very sophisticated in their approach to human or social problems, he believes. "This is an area," he went on, "where builder-developer and manufacturers have the least in knowledge and expertise. We must look to experienced planners and sociologists, anthropologists and psychologists for guidance."

Subsequently, Mr. Bogard's systems approach was taken to task by Mr. Rouse for not starting off with people and for stressing a product when the goal was a child's development.

Mr. Bogard subsequently acknowledged that G.E. was not developing community systems as an exercise but as a means of learning how it can place more of its own products in the house. It expected to use any increase in land values to defray the costs of setting up the housing experiments needed to produce a community systems.

Mr. Perini interjected a wry comment that the average developer could never afford to hire an anthropologist or psychologist.

TYPE OF DEVELOPER HAS CHANGED— FAT CATS TO BIG CATS

The next speaker was John P. Eberhard, director of the Institute for Applied Technology at the National Bureau of Standards, of the U.S. Department of Commerce.

The overall subject of innovation in urban development, Mr. Eberhard said, reminded him of a game that he played as a child in a densely populated area in Louisville. The game was called, "May I" and under the rules of the game, a leader was selected and he told the players that they could take a giant step or a small one or a sidewise step and so on, but the child addressed couldn't move until he asked the leader "may I," and was told to proceed or was instead given a new set of directives. "It seems to me," Mr. Eberhard observed," that G.E. is in this game and that it will depend on to whom the question, "may I," is addressed as to whether or not the program takes a giant step."

Mr. Eberhard didn't clarify the allusions here and it is interesting to note that some observers felt he was talking about whether the urban developers and builders would permit G.E. to take the giant step and others felt he was referring to the government.

In the late 1940's and early 1950's urban development was played, Mr. Eberhard declared, by small builders who were fat cats; by people who perhaps even did the building themselves. And then in the mid '50's the roles were played instead by larger developers and they were money men, "panthers and sleek cats who served as brokers for the fragmented skills of the construction industry.

"And now we enter the era of big cats who know how to put it all together and they may not ask may I," Mr. Eberhard mused.

The entrance of firms like G.E. into the urban development field may be a giant step for the field, the National Bureau director observed, but the rules of the game may have to be changed because of it, he indicated.

Mr. Eberhard then went on to discuss the role of firms like G.E. explaining why they are becoming active in urban development.

Seeking New Fields

"Companies like G.E. are creatures of society," the government official asserted. "They are big and such organizations must find new fields to conquer."

He explained that when the production of ordinance by the government slows these firms will look for new fields to keep their forward momentum.

"We should keep in mind," Mr. Eberhard said, "that the next stage in much of our physical development will be for us to build for ourselves, our children, their children and their children. And the research base is not adequate for this job. It will take courage for companies like G.E. to try to do the work without the necessary information. Even now, the efforts to acquire the necessary new knowledge are woefully inadequate.

"We must expand our knowledge base, our technological capability and our imaginations. We will, of course, get the new urban plant we need but the concepts underlying the new plant also should be new.

"We must increase the performance capability of our cities and we at the National Bureau of Standards want to help."

continued

Difficult to Define Goals

Mr. Eberhard recognized that there are substantial problems in the way of building a new urban plant from new concepts especially because we can't measure the essence of man while we can measure the physical aspects of environment.

"How do you improve authority? How do we devise a system of communications that encourages trust. How do you prevent crime and still be just? We need a whole new science of measurement for man," Mr. Eberhard declared and he quoted Robert Oppenheimer—"a scientist of the first order"—to the effect that society should provide an environment where a man can grow very sharply.

Before introducing the next speaker, moderator Perini mused, "Fat cats, big cats . . . I began to think of some of the people in this room as I heard those words" and members of the audience laughed as if they too had played Mr. Perini's game. "Personally, I haven't decided what I want to be —fat, sleek or big," the builder said, somewhat ironically.

PLANNING NEEDED FOR HUGE GROWTH PERIOD

James W. Rouse, the next commentator, is president of The Rouse Company, a mortgage banking and real estate development firm, with executive offices in Baltimore, Md. The company has financed over a billion dollars in real estate development. Its largest undertaking is Columbia, a planned new city for 110,000 people on 15,000 acres of land midway between Baltimore and Washington.

G.E.'s planned entrance into the building business on the scale indicated is very exciting, Mr. Rouse said and he added that more G.E.'s are needed.

One of the problems of urban development, Mr. Rouse said, is that we get so preoccupied with the old city and the inner city that we forget that by the year 2,000 we will have to rebuild what has been built since the country began. So, we'll need the best planning because of this very large job, the developer believes.

"Lack of planning in the past has been irresponsible," Mr. Rouse said. "And planning doesn't require vast sums of money or armies of people. We are going to do this rebuilding willy nilly or we will plan."

Continued Sprawl Possible

To stress the scope of the growth this nation will be faced with, Mr. Rouse said that it is possible to imagine that the caricature that is Los Angeles' sprawl will spread across the country.

"In the next 20 years, six million people will be added to New York City," Mr. Rouse explained. "Where? How?"

"California in the next 20 years will be twice as large as it is. Will this just mean more smog?

"Baltimore and Washington, D.C., will add 2½ million people in the next 20 years and will grow together."

Mr. Rouse believes that open tracts of land should be regarded as a natural resource. He noted that there is talk of forming local community planning corporations that would be owned by the government and that would have the government's power of land assembly.

As justification for giving these groups this power, Mr. Rouse said that government efforts regarding the development of roads and sewers results in an increase in land values and that the government should then have some control over the way this value increment is used.

Values From Planning Itself

Large scale urban development, Mr. Rouse indicated, is becoming accepted and the value that is generated by the tight planning controls of these new towns and by the restrictions on development, is being recognized as real value.

He pointed to the financing of Columbia, and noted that in the first stage, the Connecticut General Life Insurance Company committed $25 million for the 15,000 acre land assembly. Then, the second stage financing, provided by the Teachers Annuity and Pension Fund of New York and Chase Manhattan Bank, raised the total to $50 million. During the question and answer period, Mr. Rouse emphasized that these commitments were issued on the new values created by the plan itself since the Rouse firm is only just starting to add improvements.

Stressing the reality of this planning value, Mr. Rouse revealed that one of the lending institutions took a 2% lower interest rate in exchange for the right to buy 10% of company owning Columbia for $3 million. So, while the value increase of the land has not been demonstrated yet, Mr. Rouse said, the fact that a knowledgeable lender is anticipating it helps to support the theory.

Mr. Rouse asserted that glib talk about environment and systems analysis and measurements can result in an improper focus on the hardware of urban development as opposed to the software—people.

People Are the Goal

By what systems or institutions do we produce the environment for growth of peoples," Mr. Rouse asked and then declared that the whole business of the urban revolution is the growth of a child and his attitudes and this is not sentimentality, he emphasized.

"This is the surest way to the highest profits," Mr. Rouse said. "We should not start with the products. This is the most illogical route to the production of the most profits."

He indicated that by starting with people at Columbia, in terms of an open racial policy and a system of small schools, he will have a larger group of customers to draw from and lower school transportation costs.

He reported that in the development of Columbia, a kind of electricity was generated once the planning got underway and that people in the area cooperated on several points despite a history of antagonism to the Columbia point of view. This antagonism included the open racial policy of Columbia and the proposal for a school system based on a size of 800 to 1,000 children per school so that transportation could be kept to a minimum. The approval of the local school boards was needed because the housing density of the school areas would be determined by the granting of authorization to try the small school set-up proposed by the Rouse group.

Health Plan Attracts

Another plus value of starting with people was the development of a program by Johns Hopkins of a comprehensive system of health care on a monthly fee basis for the residents of Columbia—and this has a market value because people will be attracted to Columbia for the health plan. So, there are dollars from this health plan as there are dollars from the small scale school system that are added to the value of the land. The process of how people live is what we should deal with rather than products, Mr. Rouse concluded.

Mr. Perini observed that with all these new ideas the city building business will be a competitive field. And then he introduced William Wittausch, manager of Housing Research in the Construction Sciences Department of the Stanford Research Institute in Southern California.

SYSTEMS CONCEPTS ILLUSTRATED IN TALK

Mr. Wittausch perhaps more than the other panelists discussed a systems approach to urban development.

As Mr. Rouse did, Mr. Wittausch found the entrance of G.E. into the field to be a significant step and he

said it gave him new heart to encourage the companies he works with as a consultant to emulate G.E.'s action.

The statistical material cited by Mr. Wittausch supports his contention that many large companies are needed in the field of urban development.

We need to build 20 cities of 100,000 units each every year to match our growth, the planner estimated. He made a point of noting that there are several different ways of providing accommodations for these people. It could be done in the 20 cities containing 100,000 families each or it could be done in 200 towns of 10,000 families each or in 2,000 villages of 1,000 each. He broke the needed new construction down this way to put the situation into better focus and he added that today's building industry works at the 2,000 village of 1,000 families level.

Focusing on problems as they are depicted in numbers, Mr. Wittausch said that new construction is only a fraction of what will be needed in the coming years.

The projected annual construction for two million families he explained, is only about 4% of the existing urban plant. Further, about 20% of American families move every year and the new construction needed is only about one-fifth of this transient category.

Projects Theoretical Costs

Carrying his survey one step further, Mr. Wittausch said that a city of 100,000 units has a value of about $1 billion so this would put the existing plant for 50,000,000 families at about $500 billion. And this housing environment is being paid for at a rate of about $60 billion a year, about 12% of the total value. So, on a small level, a town of 100,000 units valued at $1 billion requires an income stream of $120 million.

The housing environment lends itself to another set of figures. Mr. Wittausch explained that the income stream can be broken down into a set of parameters in the ratio of 3, 4 and 5.

Taking the $120 million needed to pay for the city of 100,000 units, he said that about $30 million of the income stream could be allocated as the cost of the location; $40 million could be given over to the cost of the facilities; and the balance of $50 million covers the cost the money in which he included the interest charge and the fee for management.

Locating Cost Reductions

Playing the numbers game another way, Mr. Wittausch suggested, helps to indicate where there might be room for reducing the cost of urban development, based on a systems approach. This breakdown, he said, exposes six cost areas, including several that lend themselves to cost reduction.

He went back to the $120 million income stream needed to pay for the $1 billion of housing environment. About one-fourth of the income stream, $30 million, is needed to cover the cost of the location. This 25% of the total income stream breaks down into 8% for the cost of the site and 17% for the cost of the common facilities.

Next, he said, is the 33 1/3% of the income stream needed for the cost of the facilities and this breaks down again into 22% for the cost of maintenance and upkeep and 11% for the energy systems such as power, and water.

The last components require 42% of the income stream, and may again be divided: about 33% for the interest cost and 9% for the cost of management and brokers' fees.

Improvement in the cost of developing housing is most promising in the use of the land, Mr. Wittausch said. The cost of land can be reduced by working out better densities and service techniques. He pointed out that he was talking of the cost of land per year.

The Stanford professor's statement about education costs stresses and points up his systems or component approach to understanding housing costs. He explained that the cost of housing can be reduced by 8% if the cost of education is shifted to some other base. He didn't say what other base and one observer noted that this rather neatly puts the cost problem on somebody else's shoulder and doesn't help find the money for education.

Can Shift Other Cost

But as a technique, the shifting of the educational cost to another base does reduce the cost of housing and, continuing in this vein, Mr. Wittausch said that other reductions become possible when the housing product is broken down into components, such as the shell, the site and the core. These elements, he explained have a different life expectancy.

You can literally maintain your housing environment simply by replacing those things that wear out as they wear out. He posed this as an alternative to what he implied is done now: waiting for the longest-lived element to wear out before replacing the housing.

Another example of reducing the cost of housing by shifting the cost base was Mr. Wittausch's suggestion that utility installations in a house should be rented. This type of installation cost is about 8% of the income stream needed to pay for the housing environment. He drew a parallel between renting the utility installations and renting a telephone and while the former is strange the latter is an everyday method. One of the advantages of renting the utility installations is that it puts the utility on a commercial basis and this will encourage a business to try to develop a way of reducing its costs, something a homeowner wouldn't do.

Reducing Interest Expense

The cost of money can be reduced, Mr. Wittausch said, by reducing the risk and this can be done by making the environment better—and he noted that every dollar saved on interest cost can be put into products to make the house more livable.

Regarding the reduction of interest cost, Mr. Wittausch subsequently cited the case of James Rouse who was offered a chance to reduce his interest factor by 2% a year because his total plan was expected to increase the value of the land.

This method it was noted, would reduce the interest cost but not necessarily the cost of getting the overall financing since Mr. Rouse, to obtain

Prologue And A Final Note

Stephen Currier, the president of Urban America, Inc., left Florida soon after the Boca Raton conference ended and with his wife traveled to San Juan, Puerto Rico, and then continued on by private plane to the Island of St. Thomas. Subsequently, his plane was reported missing and he and the other passengers were presumed lost.

The 36 year old executive had been president of Urban America for two years, from the start of its merged existence. Mr. Currier had been elected president of the American Planning and Civic Association in January, 1965, a month before the Association merged with Action, Inc. The Association and the two groups brought together different housing emphases. The Association was regarded as a conservation and planning group and Action was looked on as having a business stress. The blend resulted in a new group that in February of '65 was set up as Urban Development, Inc., which Mr. Currier has headed since.

Both Mr. Currier and his wife Audrey came from families well-known in top-financial circles. Mrs. Currier was the grand-daughter of Andrew Mellon and was an heir to the Mellon fortune.

Urban America is being run by William L. Slayton, executive vice president of Urban America. The group's budget for 1967 and 1968 had been approved at the Boca Raton meeting. Its annual meeting is set for April 24 and 25th in Montreal, a few days prior to the opening of Expo '67.

the interest reduction, had to give up a piece of the ownership at what could be regarded as a bargain price.

Another aspect of housing that came under Mr. Wittausch's analysis is existing mortgage patterns. He noted that one-fifth of the population moves every year and that this casts some doubt on the correctness of thinking in terms of one mortgage for one family per life. It could be that this thinking is out of phase with reality and that a new approach to providing families with mortgage money should be developed.

Why there is pressure to utilize as much of the existing urban plant as possible was made apparent by Mr. Wittausch's proportions for old and new construction. The same investment used to build one unit on new land can build two units on reclaimed land, using existing facilities, and can build four units in a reclaimed structure. These ratios Mr. Wittausch indicated, are significant because of the size of the new construction job facing this country.

Q & A

A. Rouse—I can promise you that we believe that this is a highly profitable thing. We are only at the start of development at Columbia so it's dangerous to talk in terms of "can we make a profit." The point is that a new town is more profitable than a subdivision.

We project a 13 year period for developing Columbia but our economic projections show that we will reach a peak between cost out of income from land sales of $48 million in our third year and then we will taper off.

We have acquired about 14,000 acres of land comprising about 165 farms with no sewers or water—both of which we had to bring in—and we promised to leave 3,200 acres permanently open. (Mr. Rouse has explained that the land cost ran about $1,400 to $1,500 an acre.)

The financing we have received consists of a security investment by the two insurance companies and a real estate investment by the bank.

A. Eberhard—It would be to the advantage of developers to create a product that the do-gooders will like.

Question—I had hoped that G.E.'s system would produce ways of building lower rent housing. Why did you say that it won't?

A. Bogard—Without government subsidy you can't produce housing for people with incomes of $3,000 a year and under.

Q. Question—How much has this to do with housing code problems?

A. Bogard—Not too much because the code deals with the structure and it is the land package that prevents you from building for the lower rent scale. You still have the cost of water, sewers and land. Sometimes it seems that the only solution is housing these people in new trailers. It is unfortunate that cost of financing trailers is higher than financing regular housing.

LUNCHEON SPEAKER DESCRIBES NEW DIRECTIONS FOR METROPOLITAN GROWTH

The afternoon speaker was introduced by Arthur Rubloff, Chicago, who described Robert C. Wood, the under-secretary of the Department of Housing and Urban Development, as a wizard because he was able to explain the complicated model cities program to Congress.

Mr. Wood spoke about "New Directions for Metropolitan Development" and as a comment on the market he told the joke about a farmer who wanted to unload an old horse at a good price even though the animal was blind so he put him in the most unobstructed pasture he had—one with only one tree.

Then he brought a customer to see the horse and after the man had watched the horse nibbling on the grass at the far end of the pasture he asked to see the horse move so the farmer whistled for the horse to run over. Sure enough, the horse ran right into the tree and fell down unconscious. "Why, he must be completely blind," the customer exclaimed. "Oh, not necessarily", said the farmer, "maybe he just doesn't give a damn."

In his talk, Mr. Wood said that the concept underlying the technique of systems analysis is important "not because it is a magic 'in' but because it is a technique for manageably dealing with very complicated problems. When we talk about applying systems analysis to metropolitan planning we are describing a way to make the planning by relating it to what is really happening, by making it realistic and precise."

The Undersecretary believes that the time offers redevelopers "unique opportunities for mastering the urban environment.

"A convergence of population trends, sustained public attention, revolutionary technical capabilities and new legislative tools both compel and permit us to experiment."

Population Center

It is in the development of metropolitan areas that urban redevelopers are needed, Mr. Wood indicated, because it is in the suburban ring of our metropolitan areas that the bulk of urban America lives. In addition, he said, it is this 'middle country' in which developers have their greatest influence both in number and dollars.

The HUD official asserted that the spread city is here to stay. The growing, mobile metropolitan popualtion is clustering, he pointed out.

"Large metropolitan areas grow larger and tend increasingly to dominate their states," Mr. Wood went on. "The Baltimore metropolitan area contains 53% of Maryland; Chicago 62% of Illinois; Boston 60% of Massachusets; Detroit 48% of Michigan.

"Metropolitan goliaths are merging: Greater Pittsburgh extends from Altoona to Wheeling; Cleveland merges with Akron; San Francisco joins Oakland, San Jose, Stockton. In Florida, the area from here through Fort Lauderdale and Miami is, to all intents and purposes, a single megalopois."

Commenting on the roles and similar patterns of HUD and Urban America, which he said has been an important factor in the urban cause, Mr. Wood recalled that Winston Churchill was once visited by a lady temperance group to induce him to stop drinking brandy. The leader of the group pointed to a large barrel and remarked that if all the brandy Mr. Churchill had drunk was put into the barrel it would come up to a mark she designated which was about half way up the barrel. Churchill walked over to the barrel slowly and looked at the mark. Then he shook his head wearily and sighed, "So much done, so much to do!"

THE 2ND SEMINAR —REVOLUTION IN REAL ESTATE FINANCE

The Tuesday morning session was favored by cloudy weather and drew a fairly large audience, not, as was pointed out, that there necessarily was a connection. The scheduled theme was "The Necessary Revolution in Finance," and the main speaker was John G. Heimann, vice president of E. M. Warburg & Company, N.Y.C., international investment bankers. Mr. Heimann headed up a panel of experts who were to comment on the topic and the speech.

Albert M. Cole, president of the Reynolds Metals Development Corporation, Washington, D.C., was the moderator and he began the meeting by noting that when you talk about a revolution in anything you must be controversial and he added that some of Heimann's thoughts on the morning's topic were being expressed publicly for the first time. Taking up Mr. Cole's thought, Mr. Heimann pointed out that a revolution ordinarily comes when evolution stops. He felt rather that the industry had to repair a past period of mis-evolution.

The financial expert had prepared a 24 page paper of about 7,500 words on the theme and since the paper was to be made available he said he would only skim the highlights.

Last year, Mr. Heimann was hired by the Department of Housing and Urban Development to explore new techniques and sources for financing housing and he noted that he was not at the Boca Raton Conference as a representative of HUD. He added that the ideas he presented in his paper were not necessarily the ideas of HUD but he acknowledged that he was try-

ing to convince HUD officials that he was right.

In his talk, Mr. Heimann threw out "a grab-bag of ideas" and he pointed out that not any one of them will solve the problems of housing finance but "all of them together with other concepts, many as not yet developed, might help us get on with the business of providing decent shelter for all people."

He urged the housing industry to take the lead in working out the changes needed and insisted that the time for action is now, when people still remember the difficult period the shelter industry experienced. He feels his suggestions regarding Fanny May are the most important.

Early in his talk, the investment banker indicated that the present make-up of the industry, especially the project-by-project concept will have to be revised so that the industry can provide the specific type of shelter an area needs and do this over a long period of time. He indicated that the taxes and other resources should be redirected so that the builder doesn't only have to build that which must be immediately rented and so that the lender doesn't only have to lend on housing that is immediately viable.

In developing new sources of money, Mr. Heimann said, we should differentiate between equity, which earns variable return depending on market conditions, and fixed-income capital which is a senior lien and receives a fixed return and is repaid at a specific time.

He noted that when the industry talks of availability of capital it is usually referring to the fixed income sector. He believes though that equity also has to be attracted that is not one-shot and that will stay in the urban field after the project is completed.

One possible source of this "quality" equity is large corportions, some of which have indicated they are attracted to the urban field by the land write-downs, tax benefits and possible product development. But he stressed the importance of eliminating bureaucratic and political risks that he believes make the large corporations reluctant to enter the redevelopment field.

The housing industry should be more active in setting the broad economic goals of the nation, Mr. Heimann believes, so that the industry's lobbies and HUD are involved in the setting of overall national policies and not just when a crisis develops.

In this regard, Mr. Heimann also would make changes in the set up of the Federal Home Loan Bank, which is the primary government agency solely concerned with the supply of savings for housing. Mr. Heimann asserted that the FHLB should be amalgamated with the secondary market operations of FNMA.

He also suggested the possibility of the FHLB being more directly influenced by HUD.

He described the FHLB as being primarily concerned with single family homes. It does not usually service the moderate and low income shelter needs; it is geographically concentrated in the Western States; and it is made up mostly of savings and loan associations.

One of the means of improving the mortgage situation for the housing industry would be to increase the funds available to the deposit-thrift institutions and Mr. Heimann raised the question of these banks selling participations or notes to tax exempt funds. "The paper," he said, "could be guaranteed by the insurance corporation with no changes in the existing law." This, he said, is a short term solution.

In addition, Mr. Heimann went on, it is necessary to design a security which will be attractive to that sector of savings not now directly investing in mortgages; i.e., individuals and pension funds. For purposes of allocation, he said, this might be designed to favor a particular area of housing activity—moderate-to-low income rental housing, for example.

"The security," the banker explained, "would be a mortgage bond, serialized to absorb amortization, issued in $1,000 segments with both a fixed maturity and a fixed coupon." He noted that the development of a national market in this type of paper would be a logical development. He described this as a long-term solution.

Mr. Heimann believes that Fanny May holds the key to both establishing a viable secondary market for the mortgage field and to changing the mortgage instrument so that it is more readily marketable. The result would be the creation of Fanny May as an institution that stands ready to buy and sell mortgages at prices it establishes. This would be an auction market.

Mr. Heimann believes that FNMA should revert to public ownership. He noted that the fixed interest rate on government insured and guaranteed mortgages tends to discourage private fixed-income capital when interest rates are rising and usually this is when capital is needed the most. A free rate would do much towards freeing the flow of capital into the market, Mr. Heimann said.

"We should design a formulized floating rate, pegged to direct obligations of the United States," Mr. Heimann suggested. "Such a technique would not eliminate but rather reduce the magnitude of discounts. Admittedly," he added, "this is only a partial solution but it is a workable and may well be politically acceptable. He pointed out that a fixed rate results in discounts that penalize the average home owner.

Other problems that he believes need further exploration include: "How can the financing problems of rehabilitation of owner-occupied units be handled on a mass basis? What changes in amortization policies can be applied to take into account unique land values in urban area? (Why should downtown property be amortized at the same rate as home loans?) Can the concept of the blanket mortgage be applied in rehabilitation areas."

COMMENTS ON TALK

When he was through summarizing his paper, Mr. Heimann was greeted with a long round of applause from what had been an attentive audience. Mr. Cole commented that it had been a profitable speech and called for a short break, during which one member of the audience, who said he was there as a representative of a Wall Street brokerage firm, observed that some of the ideas in Mr. Heimann's talk had been presented before but that he had put them and other suggestions into a unified program. He added that he was interested in the talk because his firm expects that a great deal of money will be put into the housing field over the next ten years. Discussions, he said, such as Mr. Heimann's and the others that were taking place at the Urban America seminars, would indicate the direction of the redevelopment efforts.

After noting that discussions about finding sources of money for the housing field was not a new idea, and likely would be a continuing one, Mr. Cole introduced the first panel commentator, George Brady, senior vice president of the Rouse Company.

continued

WANTS FREE RATE AS WAY OF AVOIDING DISCOUNTS

Mr. Brady said the talk was extraordinary and that it pointed out the problems and some of the solutions. He disagreed though with one of Mr. Heimann's suggestions. Mr. Brady recognized that it might be politic to water down efforts to achieve a free interest rate and compromise by agreeing to a pegged rate that would still move as did rates on direct obligations of the United States fluctuate. But he insisted that the industry needs a free interest rate, something that Mr. Heimann indicated he wanted but did not think could be obtained.

Mr. Brady asserted that the industry must join forces to achieve a free interest rate which would level out the peaks and valleys of discounts.

"It is ridiculous that home buyers can buy new homes but that home sellers owners can't sell because they have to pay points and will lose too much of their equity."

The pegged F.H.A. rate, Mr. Brady observed, has driven many investors away from F.H.A. insured mortgages. The F.H A. has had a good influence and builders should be brought back to F.H.A. financing, the housing executive declared.

He stressed the bad effect discounting has on insurance companies, which he claimed don't like to admit they buy at discounts, believing it hurts their image. As a result, they withdraw from F.H.A. lending and once they have left and found new outlets for investments, they usually don't come back. The procedure for different kinds of lending is different, Mr. Brady explained, and the lender changes its staff and can't easily go back to older operations.

Mr. Brady believes that more equity capital for all types of real estate will be coming from large industrial firms.

SOME GOOD AND SOME CRITICISM

The next speaker, Nathaniel H. Rogg, executive vice president of the National Association of Home Builders, took Mr. Heimann to task on several points but he felt that the banker was making a real contribution to the field in bringing an investment banker's expertise to bear on housing problems. He added though that he would try to sharpen Mr. Heimann's thinking in some areas.

For all the fragmentation of the housing industry, home builders have done an amazing job, Mr. Rogg declared. Since World War II, he reported, the industry has produced 30 million houses.

The industry has been handled ineptly by the government, the NAHB economist asserted. The country lost 400,000 units of housing in the past year, Mr. Rogg judges, because of power politics and as the result of a government policy that didn't come off.

Referring to Mr. Heimann's program, Mr. Rogg said that institutional changes are not enough. We need changes in policy and this is at the heart of the issue, he asserted. "Even if we had done all that John Heimann wanted, we still would have had difficulties in the past year."

Forecasting a housing growth that will exceed the growth of the nation's gross national product, Mr. Rogg said it is important that the obstacles to the free flow of money should be removed and that what is needed is an adequate flow of money.

The system failed when the government clobbered it, Mr. Rogg believes.

He said he was indignant over Mr. Heimann's statement that Hud should be given a larger voice in the economy. Hud has a voice but has failed to use it, Mr. Rogg asserted.

Mr. Rogg agreed with Mr. Heimann that there is a shortage of long term capital for the housing industry and he noted that the pattern of financing in the past will not be applicable to the future. The industry has needed $19 or $20 billion a year but it will need $30-$35 billion a year in the 10 years ahead. We will need sources other than thrift institutions, he added.

The NAHB spokesman judges that demographic changes will encourage building. He pointed out that in 1970 there will be fewer men in the 30 to 40 year age bracket than there was in 1960 despite an overall rise in population, and indicated that this will foster new types of housing efforts.

Mr. Rogg also described the changes in saving habits and noted that "people simply aren't putting money aside" and the statistics he cited revealed a steady decrease in the past three years of those investors who put savings in the pass-book kind of account.

Unlike Mr. Brady of the Rouse firm, Mr. Rogg said he felt that tieing the interest rate on mortgages to the government rate was an ingenious solution to the discount problem. He added, also, that in the past he has been opposed to putting the cost of a discount into the appraisal but he now thinks it might be a tolerable solution.

CRITICIZES GOVERNMENT —PROPOSES WAYS TO SPEED UP MORTGAGE FLOW

Robert H. Pease, senior vice president and director of Draper and Kramer, Inc., midwestern real estate and mortgage firm, emphasized the "Revolution" in the title of the morning seminar when he asserted that our present multi - housing multi - family housing program should be scrapped.

"What should we do then?" he asked, and answered that first a multi-family underwriting agency should be set up. He believes it is not efficient to work both multi- and single-family development with the same staff. He declared that the people who handle multi-family applications need special training and should be given the authority needed to do the job.

To support the contention that training and authority are needed, he noted that it can take years for a multi-family project to be processed by the government agencies involved and that it can even take three to six months just to get a cost estimate program through.

Private Lender Fast

"Any mortgage banker," Mr. Pease said, "can take any office building or apartment house mortgage proposal and in two weeks can have a submission ready for a life insurance company and then in a week or 10 days will have an answer from the lender."

The F.H.A.'s multi-family processing technique must be done over and speeded up, the Realtor concluded.

Mr. Pease disagreed flatly with a suggestion by Mr. Heimann that the Department of Urban Housing and Urban Development should take over the Federal Home loan Banking Board. He regards the FHLB as a banker's bank and as the guardian of the $130 billion of savings in the savings and loan associations, most of which are members of the FHLB.

"The major function of the FHLB is to protect the saver. It is not an institution of accomplishing social change or obtaining housing," Mr. Pease declared.

Mr. Pease agreed with Mr. Heimann that there was a need to attract more money to the housing field. He said that Mr. Heimann's suggestion that the government issue mortgage bonds as one way of attracting mortgage money should be explored. Mr. Pease also predicted that before the end of this year, we will see saving and loan associations issuing saving certificates that will be purchased by pension funds. This was one of Mr. Heimann's suggestions.

Archaic Laws

The mortgage broker pointed out that pension funds had $90 billion of which about $9 billion were invested in mortgages. This small percentage, he believes, is the result of archaic laws and the fact that pension managers tend be stock market and credit oriented and generally do not understand mortgages. One way of helping pension funds to become active in the mortgage field, Mr. Pease said, would be to set up a central mortgage bank.

He noted that many life insurance companies are now offering pension funds their service as mortgage consultants. The insurance companies, which already have mortgage departments, would both buy and service the loans for a pension fund and this would expand the participation of the funds in the mortgage field.

Another way of increasing the flow of investment money into the mortgage field, Mr. Pease suggested, would be to divide up a high loan-to-value mortgage into a relatively safe portion and a top, risky portion, guarantee the top part and have the different parts show different yields.

For example, he cited a conventional 90% mortgage as an example. The loan would be divided up in proportions of 75% and 15%, with an insurance company taking the 75% part and a private mortgage investor taking the top 15%. The interest would be broken into say 6½% on the insurance company portion of the loan and 8% on the private investor part of the loan. A private mortgage company could be used to guarantee the top part of the loan.

Small Equity, Big Loan

One of the attractive features of this loan set up is that a small amount of equity money could generate a large amount of mortgage money and would safely enlist the funds of pension and insurance groups.

TAX FACTORS IN REAL ESTATE

The final speaker of the morning session, Stanley Surrey, assistant secretary for tax policy of the Department of the Treasury explained that he felt a bit out of place and so had asked some of the experts in the Treasury Department for assistance and their comments provided him with background perspective on Mr. Heimann's talk.

He pointed out that housing is a debt-financed product. Perhaps he observed, Fanny May and the Federal Home Loan Bank should be merged. But he added that saving and loan associations should achieve a more regular flow of capital by the sale of large certificates of Deposit.

Contrary to what some industry spokesman have been saying, Mr. Surrey judges that it is not obvious that the long range cost of money is up. This is dependent on many factors, he said.

Cites School Loans

The tax expert pointed out that a new trend in education, that of financing heavy academic expenses with a large loan, could alter the pattern of mortgage financing in this country. He explained that usually men get married shortly after college and then, rent housing and subsequently buy it. But, when men begin to leave school with a heavy indebtedness that they have to start repaying, they will hesitate to incur further heavy debt.

Mr. Surrey reported that the Treasury is trying to find out how decisions are made in the real estate field to determine the best tax policies and he noted that the government has not been neutral toward housing. "Have we been giving too much or too little to the housing field?" he asked.

The government expert believes that housing is a tax favored industry. He explained that it has access to favorable depreciation methods, it can swap on a tax-free basis and it can deduct interest charges.

SOME COMMENTS

Before the question and answer period got underway, Mr. Heimann rose and informed his audience hurriedly that he does not favor a merging of the Federal Home Loan Bank and Fanny May.

Mr. Rogg said he was intrigued by something that had come up in Mr. Heimann's and Mr. Surrey's talks and he felt that the contradiction he saw pointed up the fact that we don't have and need a national housing policy. John, Mr. Rogg said, calls the housing industry an unequal participant and Surrey says it is tax favored and this points up the dichotomy in housing policy.

Mr. Rogg, commenting on the proposal by Mr. Pease to divide up a big, high interest mortgage, noted that this is good technique and might attract money for upper income housing but that it couldn't be used for lower income housing. He also wondered how a 90% loan would increase the flow of funds for mortgages since a high loan-to-value ratio mortgage would tie up a lot of money.

Mr. Pease responded to the latter point and explained that there has been a trend for insurance companies to get out of the mortgage housing field because the 75% loan-to-value limit put them at a disadvantage with the saving and loan associations which were making higher loan-to-value mortgages.

This technique will allow the insurance companies to make the bigger loans and still not increase the size of the risk that they take, he said. The higher interest, he suggested, will avoid the discount practice that also tended to repel insurance companies. He noted that discounts last year went as low as 91%.

MODERN CITIES FOR THE URBAN DEVELOPER

The afternoon speaker, H. Ralph Taylor, assistant secretary for demonstrations and intergovernmental relations of Hud, said that from his conversations with many men at the conference he knew they were wondering what role they could play in the model cities program, which he said is the latest approach to a solution for the many interrelated problems we find in our slum and blighted areas.

"First, let me point out one fact that too often escapes narrow gauge contemplation of the urban problem: what happens to the slums in your cities has a direct bearing upon your own economic future," Mr. Taylor explained. "You have a primary stake in the economic health and viability of your cities, regardless of whether the model cities program offers you investment opportunities.

"Unless the deteriorated neighborhoods improve, the cities cannot improve. As the cities erode, your economic interest will also diminish.

Housing Programs Changing

"And you must realize that the environment in which renewal and housing programs operate is changing. For instance, there is pressure from many quarters to rehouse displaced families in the same neighborhood. This sentiment is reflected, for example, in the decision of New York City to use renewal as an instrument for constructing new housing for lower income families, and in the 1966 housing amendment that requires a proportionate share of lower income housing in urban renewal areas developed for residential purposes."

The vast requirement for housing for lower income families has a most direct bearing upon your operations, Mr. Taylor told the developers. "The plain fact of the matter is that you can no longer depend on existing housing to fill the need for rehousing displaced families, so many of whom are of lower income. No matter whether you are going to develop renewal sites for higher income housing or non-residential reuse, you will have to face up to the need for an expanded supply of new or rehabilitated housing for lower income families."

RECOMMENDATIONS FOR MEMBERSHIP

URBAN AMERICA INCORPORATED
1717 Massachusetts Avenue, N. W.
Washington, D.C. 20036

One of the privileges of membership in Urban America is that of recommending others for membership. If you have friends or associates who might be interested in Urban America's programs, please list their names and addresses below. They will be sent information and an invitation to membership. (Please print)

1. NAME _____

   Street Address _____

   City/State/Zip _____

2. NAME _____

Urban Coalition Opens Drive for Million Jobs to Aid Ghettos

BY VINCENT J. BURKE
Times Staff Writer

WASHINGTON—A coalition of American leaders Thursday launched a campaign to force President Johnson and Congress to respond to city riots with a massive program aimed at providing 1 million jobs for the unemployed.

More than 1,000 delegates to an emergency convocation of the newly organized Urban Coalition approved by voice vote a "statement of principles, goals and commitments." The delegates, who include leaders of business, labor, church and civil rights groups and city mayors, heard pleas for action from motor magnate Henry Ford II, banker David Rockefeller, AFL-CIO President George Meany, United Auto Workers President Walter Reuther and others.

The statement avoided mention of the Vietnam war, on which the delegates held sharply opposing views. Nor did it mention the staggering budgetary deficit which has deterred Mr. Johnson from seeking a crash program of ghetto aid.

Revision of Priorities

But it said "the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face" in our cities.

The delegates applauded loud and long after this passage from New York City Mayor John V. Lindsay's keynote speech:

"Our international commitments should not be allowed to weaken our resolve at home. If our defense commitment, our commitment to space, or any other commitment made before our urban areas were beset by agony is blocking a vigorous effort to end those agonies, those commitments should be reassessed."

The group's statement said:

"The crisis requires a new dimension of effort in both the public and private sectors, working together to provide jobs, housing, education and other needs of our cities.

"When the private sector is unable to provide employment to those who are both able and willing to work, then in a free society the government must of necessity assume the responsibility and act as the employer of last resort or must assure adequate income levels for those who are unable to work."

In calling upon the government to develop a job program, the statement said:

"The emergency work program should concentrate on the huge backlog of employment needs in parks, streets, slums, countryside, schools, colleges, libraries and hospitals. To this end an emergency work program should be initiated and should have as its first goal putting at least 1 million of the presently unemployed into productive work at the earliest possible moment."

Leaders of the Urban Coalition did not attempt to meet with President Johnson. The President is reported to have made it clear to them several weeks ago that he is unwilling to support a crash program of ghetto aid so long as there is no overwhelming public demand for it.

After the Urban Coalition adopted its stand at a morning session, its leaders kept a luncheon date with congressional leaders. Reporting on that meeting, Detroit Mayor Jerome P. Cavanagh told the delegates that no Republican leader showed up for the luncheon and Democratic leaders offered no encouragement.

"I must in all candor report that the sense of urgency was lacking," Cavanagh said. ". . . We came away convinced that we must develop grass-roots support for our program. We need a massive action program, if we are to move Congress off dead center."

That is what the group now hopes to do — by organizing in every city urban coalitions of business, labor, church, civil rights and city government leaders.

The Urban Coalition's statement pledged the business leaders to make an all-out effort to provide jobs and job-training for Negroes and to explore ways in which government incentives can be used to attract private investment into "deteriorating neighborhoods."

(more)

In addition to creation of 1 million jobs, the group set as its goal "the rehabilitation and construction of at least a million housing units for lower-income families annually."

If the 1 million new jobs which the group set as its goal were all to be federally financed, the cost to the U.S. Treasury probably would be in the neighborhood of $4 billion a year.

Andrew Heiskell, board chairman of Time, Inc., and chairman of Urban America, Inc., chaired the one-day convocation. He announced at its conclusion the appointment of five task forces to develop recommendations more specific than those set forth in the group's general statement.

Ford, chairman of the Ford Motor Co., told the delegates the nation now faces "the greatest internal crisis since the Civil War—a crisis which demands no less than a massive national response."

Reuther, noting that his union now is locked in bitter contract negotiations with Ford and other auto makers, observed that in the crisis of the cities "I am privileged to sit on the same side of the table with Mr. Ford."

Whitney Young, moderate Negro leader of the National Urban League, was applauded when he said "responsible Negro leadership has not failed—we have been failed by the whole community."

Rockefeller, president of Chase Manhattan Bank in New York, said, "Too many of us have felt that making our own company successful was an adequate contribution to society . . . The central cities are crucial to the economic health of this nation. When their residents lack a stake in society, it breeds violence."

Johnson and Urban Group Differ Over Plan for Slum Jobs

BY ROBERT J. DONOVAN
Times Washington Bureau Chief

WASHINGTON — The contrast between vision and reality here was sharply etched Thursday in two separate developments involving the question of federal funds for jobs for ghetto dwellers.

The vision was projected by the Urban Coalition, a gathering of eminent Americans concerned over the plight of the cities. They proposed an emergency work program through which the federal government would strive promptly to provide at least 1 million new jobs. Large federal expenditures, of course, would be required.

Reality Bared in Capitol Hill

The reality was laid bare on Capitol Hill, where the Johnson Administration was disclosed to be opposed to several amendments to the antipoverty program. One of them would provide an estimated 200,000 to 250,000 jobs in the next two years at a cost to the government of $2.5 billion.

By the time the day was over, it was obvious that Washington officials were talking one way and leaders from private life who attended the Urban Coalition session were talking about the need for the government to take urgent, massive steps to relieve racial tension in the cities.

The men who drafted the proposal for an emergency work program to cover at least 1 million persons were not impractical visionaries by trade. They included David Rockefeller, chairman of the Chase Manhattan Bank; Henry Ford II, chairman of the Ford Motor Co.; Frederick J. Close, board chairman of the Aluminum Company of America, and Gerald L. Phillippe, board chairman of the General Electric Co.

To Pressure Congress

Together with a number of mayors and labor, religion and Negro leaders they came to the Urban Coalition meeting to try to put pressure on Congress to do much more about the plight of the cities.

How difficult a task this is in the face of the present mood of Congress, however, was underscored by the Administration's maneuvering over the anitpoverty bill.

President Johnson had asked for $2.06 billion for a one-year extension of the antipoverty program. A Senate labor subcommittee not only increased the figure to $2.2 billion, but its chairman, Sen. Joseph S. Clark (D-Pa.), attached a $3 billion amendment. Of this, $500 million would be for loans to repair riot damage. The rest would be for jobs in various public service fields over the next two years.

Urges Deletion

Then on the eve of the Urban Coalition meeting it was revealed that an Administration memorandum written by an official of the Office of Economic Opportunity had been circulated among certain members of the subcommittee calling, among other things, for deletion of the Clark amendment.

"The OEO," the memo explained "is trying to preserve what we have. You know the President has requested a tax increase. If this is going to be considered it should be considered as a separate piece of legislation."

Joseph A. Califano, special assistant to President Johnson, admitted that the memorandum had been circulated, but he said no one at the White House saw it in advance.

Inaccuracies Noted

Califano said the document correctly outlined Administration misgivings about some provisions of the subcommittee bill but it was inaccurate in a number of respects.

He said the Administration's primary goal is to get the bill out of the full labor committee and passed by the Senate by Labor Day.

With the Vietnam war costs rising, with a large budget deficit looming and with a proposal for an income tax increase pending, the President had given Congress assurance that every effort would be made to slash domestic spending. This undercut the ground for any new federal job program. Furthermore, with the economy bloc in Congress on the rampage the Administration did not want to risk a year's extension of the poverty program by having another $3 billion item tacked onto it.

Face Hard Going

The Administration memorandum, incidentally, also asked for the deletion of a proposed $105 million to finance a slum job program supported by Sens. Robert F. Kennedy (D-N.Y.) and Jacob K. Javits (R-N.Y.).

With Mr. Johnson deeply influenced by the mood of Congress, therefore, sweeping plans for any vast new approach to the easing of racial tensions and to solving the problems of the cities will face hard going.

Clearly, the outlook is for more hard going at home as well as in Vietnam.

COALITION URGES U.S. ACT TO SPUR JOBS IN THE CITIES

Conference of 800 Leaders Calls for New Priorities — Housing Drive Backed

PRIVATE ROLE STRESSED

Remarks and Statement Hint Delegates' Dissatisfaction With Johnson Programs

By ROBERT B. SEMPLE Jr.
Special to The New York Times

WASHINGTON, Aug. 24—A convocation of more than 800 mayors and business, labor, church and civil rights leaders called on the Government today to "reorder national priorities" and develop "an emergency work program" to provide jobs in the nation's riot-torn cities.

The group, which calls itself the Urban Coalition, held a one-day meeting at the Shoreham Hotel here. I sought solutions to the urban crisis and, in the words of its keynote speaker, Mayor Lindsay of New York, to forge "a national coalition of those with a stake in the city and its people."

In a statement of "principles, goals, and commitments," which was adopted by a rousing voice vote shortly before noon, the coalition pledged itself to work for better urban conditions on a variety of fronts.

An Appeal to Washington

The statement also urged Congress and the Administration to do the following:

¶Provide at least one million "meaningful" and "socially useful" jobs immediately, concentrating on "the huge backlog of employment needs in parks, streets, slums, countryside, schools, colleges, libraries and hospitals."

¶Develop a closer-working relationship with the private sector and, through incentives, encourage industry to create vast new programs of job training.

¶Undertake "bold and immediate steps" to provide a decent home for every American, "including the goal of at least a million housing units for lower-income families annually."

Although neither the statement nor the speakers mentioned President Johnson by name the tone of the remarks and the substance of the document strongly suggested that the delegates believed the Administration's response to the urban crisis had been insufficient.

The President has indicated several times in recent days that he plans no major new programs this year, arguing instead that his primary mission is to persuade a reluctant Congress to provide money for programs enacted last year.

But the coalition and its leaders clearly felt that additional measures were necessary now, even if it meant a reassessment of the nation's other commitments.

Mr. Lindsay won the day's biggest applause when he stated that the American commitment abroad "should not be allowed to weaken our resolve at home." Later he added:

"If our defense commitment, our commitment to space, or any other commitment made before our urban areas were beset by agony is blocking a vigorous effort to end those agonies, those commitments should be reassessed."

The statement of principles adpoted this morning declared:

"We believe the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face," the statement said. "The crisis requires a new dimension of effort in both the public and private sectors, working together to provide jobs, housing, education and the other neds of the cities."

The coalition grew out of a yearlong effort by the big-city mayors to overcome what they felt was "citizen indifference" to city problems. But it did not become a reality until July 31, when, in response to the riots in Newark and Detroit, a decision to call today's meeting was made by the National League of Cities, the National Conference of Mayors, and Urban America, Inc., a nonprofit group.

The participants at the meeting today included well-known leaders from nearly every major field.

There were some notable absentees — no governors, no members of the Federal Government, and, with the exception of a small group from Rochester, N. Y., very few of the poor.

'Dial With All Segments'

The absence of the poor themselves was not a matter of public comment until the closing moments of the session when Andrew Heiskell, board chairman of Time, Inc, who was co-chairman of the meeting, invited final comments from the delegates.

The last to speak was Marion Barry, former leader of the Student Nonviolent Coordinating Coordinating Committee in the capital, who is now active in other civil rights grounps here. Dressed in a green T-shirt and wearing sunglasses, Mr. Barry, who said he had not been invited, moved to the rostrum and warned the coalition not to overlook the poor.

"You've got to deal with all segments," he said, including those "not accustomed to coming to the Shoreham Hotel and fussing round. They don't understand all this hifalutin talk.

"And when you hold these meetings, please don't have them out here at the Shoreham. Hold them down where the people are, get down there and try to get to the nitty-gritty. When that time comes we'll begin to scratch the surface of the urban problem."

Randolph Is Co-Chairman

The other co-chairman of the meeting was A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters. Both he and Mr. Heiskell were members of a 32-man steering committee that hammered out the statement of principles in a three-and-a-half-hour session last night.

Other members of the steering committee included Henry Ford 2d, chairman of the Ford Motor Company; David Rockefeller, president of the Chase Manhattan Bank; George Meany, president of the American Federation of Labor and Congress of Industrial Organizations; Walter P. Reuther, president of the United Autc Workers.

Also, Whitney M. Young Jr., executive director of the National Urban League; Roy Wilkins, executive director of the National Association for the Advancement of Colored People; the Most Rev. John F. Dearden, Roman Catholic Archbishop of Detroit; Rabbi Jacob P. Rudin, president of the Synagogue Council of America, and the mayors of several major cities.

'A Lot of Plain Talking'

In the opinion of many of the participants, the meeting served several useful purposes apart from the fundamental objective of dramatizing the crisis in the cities.

In the steering committee sessions last night and the panel sessions this afternoon, "a lot of plain talking was done and a lot of problems were finally brought out on the table," one participant told a reporter.

Sources reported, for example, that in last night's meeting, which was closed to the press, Mr. Meany and Joseph D. Keenan, secretary of the International Brotherhood of Electrical Workers, agreed to make a serious, sustained effort to end restrictive admission practices in the building trades unions and cooperate in promoting new and perhaps quicker methods of construction.

(August 25, 1967)

Leaderless Consensus

The United States for the last four years has been governed by a leader in perpetual pursuit of a consensus. Yesterday in Washington, however, the nation witnessed the paradox of a consensus searching for a leader.

An emergency convocation of the Urban Coalition mustered hundreds of influential leaders from business, labor, religion, education, civil rights and municipal government, united in a common determination that the nation must do more to rebuild its decaying cities and to restore hope and dignity to its desperate poor.

They called for an immediate Federal program to provide jobs for at least a million of the unemployed. They pledged the participation of private industry and local government in a stepped-up program of housing and public works. They applauded Mayor Lindsay when he said the nation's commitments abroad should not be allowed to weaken its resolve at home.

This nonpartisan gathering of responsible men and women represented an American consensus at its best. Their call for a reassessment of national priorities in the face of what Mr. Lindsay rightly identified as "the gravest domestic challenge since the Depression" springs from the depths of the American conscience.

Lyndon Johnson, the consensus President, is the man who will have to give the consensus its answer. The Urban Coalition has outlined a program for progress around which all Americans, regardless of race or party, can rally. But yesterday's brave rhetoric will come to naught unless the President seizes this opportunity to lead.

(August 28, 1967)

Double Dilemma

The Mayors and other community leaders who met last week in Washington to form "a national coalition of those with a stake in the city and its people" are facing up to a double dilemma.

Their first perplexing task is how to get the nation to see the crisis of the cities in all its many forms and terrifying urgency and then to persuade the President and Congress to reorder national priorities to meet that crisis. This is an assignment in persuasion and politics.

Many Americans who live in wealthier neighborhoods or in suburbs do not comprehend the range and gravity of the dangers now besetting the cities. They think in terms of a Negro problem or a slum problem or a police problem. It is all of these, but much more. Businessmen who have an enormous investment in office buildings, banks, factories and retail stores realize that what is at stake is the survival of the cities as attractive, economically viable places in which to work, shop and live. The Mayors and the religious, labor and civil rights leaders who have to cope with the day-to-day problems of millions of restless, impoverished people know how close to the edge of danger society is treading. Every Mayor realizes that what happened in Newark and Detroit could readily happen in his city. New Haven removed the last lingering doubt on that score.

President Johnson, preoccupied with the Vietnam war, is reluctant to seek dramatically expanded funds for domestic programs. The Democratic leaders in Congress supinely follow his lead. The Republicans, for their part, give the President and his party the perfect political excuse by voting to cut or eliminate Administration programs that were inadequate in the first place.

Even if the businessmen and other responsible leaders from private life can arouse the public and move Congress to act, they will then only have arrived at their second dilemma. It is desirable to set a goal for immediate creation of a million socially useful jobs and for building a million houses and apartments for lower-income families each year. It is equally desirable to move ahead with plans to stimulate private investment in slum-rebuilding and private participation in creating jobs. Governor Rockefeller's proposal to encourage the flow of private funds into slum-renewal is promising.

Yet the experience of the Federal antipoverty program and of private foundations suggests that placing the unemployed in jobs and rebuilding deteriorated neighborhoods is no swift or simple matter, whatever the availability of funds. It is not easy to retrain men who have been out of work for a long time, who have never developed work habits or have become addicted to alcohol or drugs.

Many of the younger unemployed will not take jobs that now exist in public institutions and in the service industries because they regard them as dead-end jobs, and they are not qualified to take highly skilled jobs that are open. Broken families, interrupted education and lack of confidence are among the influences that perpetuate the mismatch between men and jobs.

Moreover, private firms with a duty to their stockholders to show profits are inhibited in their capacity to take risks in creating jobs or building new housing. Experience shows that unless the Federal Government underwrites private participation through tax credits, fast tax write-offs and guaranteed loans, the private sector will not be able to meet the need.

The obstacles seem mountainous, but they can be overcome. A nation that organized itself to win World War II and is now setting out to explore the moon and the planets can respond effectively to the crisis of its own inner cities. But first the nation must realize the character and scope of the crisis. Here the Urban Coalition has pointed the way.

Aid to Cities Pressed

Urban Coalition Finds Leaders of Congress Cool To Proposal for a Massive Federal Job Program

By Jean M. White

A potentially powerful urban lobby held its first meeting here yesterday and took its demands for urgent action on city problems directly to Congress.

Among the demands was one for a massive Federal program to provide jobs for one million unemployed.

The urban leaders came away from their meeting with Democratic congressional leaders without much encouragement, a spokesman reported.

Detroit Mayor Jerome P. Cavanagh said he didn't find any "sense of urgency" and called for a "massive political action program to move Congress off dead center." He added that some "urban power" also should be channeled to the White House.

Cavanagh reported back to an emergency convocation of more than 1000 delegates of the newly formed Urban Coalition. It bands together leaders of city government, business, labor, religion, and civil rights.

Among the coalition leaders who went to the Hill were Mayors John V. Lindsay of New York, Richard J. Daley of Chicago, James H. J. Tate of Philadelphia, Joseph M. Barr of Pittsburgh, and Ivan Allen Jr. of Atlanta; businessmen Henry Ford II and David Rockefeller; union leader Walter Reuther, and Negro leaders Roy Wilkins and Whitney Young Jr.

The statement adopted by the group clearly implied that President Johnson's urban programs aren't enough to attack massive city problems. There have been reports that the White House has taken a cool view toward the new Urban Coalition, certain to demand stepped-up spending on urban programs.

Criticizes Programs

Cavanagh, whose city was torn by the summer's worst riot, called present programs "too small, too harrow, too pedestrian to really turn our country on."

About 25 coalition leaders had lunch with House Speaker John W. McCormack (D-Mass.), House Majority Whip Majority Leader Carl Albert (D-Okla.), and Sen. Democratic Whip Russell Long (D-La.). None of the Republican leaders was present, although several on both sides had been invited.

"They were presenting to us a program which was more ambitious than the President's program, "Boggs later told newsmen. "What we were saying was, 'heck, we had better work on that first."

Clarence Mitchell, Washington lobbyist for the NAACP, said McCormack told the urban group that he liked their statement of objectives but that they had to round up votes to get the job done. Mitchell, disagreeing with Cavanagh, said he didn't think the Speaker lacked urgent concern over urban problems.

The new coalition, if it can pull together, could have much influence with the combined strength of big-city mayors and big names in business, labor, civil rights, and the church.

Its support of a Federal emergency work program yesterday heartened supporters of Sen. Joseph S. Clark's effort to attack a $3-billion slum job program to the antipoverty bill. Congressional sources had accused the White House of trying to undermine Clark.

Several other bills have been introduced in the House to provide jobs for hard-core unemployed. Rep. James G. O'Hara (D-Mich.) and Hugh L. Carey (D-N.Y.) are authors of two of the bills.

They call for a $4-billion-a-year program of "public service" works to provide one million jobs in needed community services in the fields of health, education, recreation, and urban improvement. An active co-sponsor has been Rep. James H. Scheuer (D-N.Y.).

Lindsay said the O'Hara bill was "exactly the same" idea that the coalition had in mind for a Federal job program.

The Republican Mayor of New York delivered the keynote address at the emergency convocation and got his biggest applause he said the Nation's priorities should be shifted to meet the needs of cities even if this means a reassessment of defense and space commitments.

Lindsay told the more than 1000 delegates in a Shoreham Hotel ballroom:

"We are the beginnings of a national coalition of those with a stake in the city and its people."

Coalitions, he stressed, must be organized in local communities to push for action on goals.

The first goals drawn up in the statement adopted yesterday focused on job programs.

The statement called on private industry to help train and hire the hard-core unemployed but added:

"When the private sector is unable to provide employment to those who are both able and willing to work, then in a free society the government must of necessity assume the responsibility and act as the employer of last resort or must assure adequate income levels for those who are unable to work."

(more)

The statement was approved unanimously by the steering committee, including Ford, Rockefeller, and several other corporation executives and businessmen.

Ford told the group: "That business must help is no longer in question."

Rockefeller added that central cities "are crucial to the economic health of our Nation, and we must press aggressively" on urban problems.

Coalition Co-Chairmen Andrew Heiskell and A. Philip Randolph announced that five emergency task forces will be appointed to come up with action recommendations in the areas of public service employment, private employment, educational disparities, reconstruction and urban development, and equal housing opportunities.

The coalition is an outgrowth of two meetings. One was held last January by a group of mayors to discuss long-range urban problems. The other was held on July 31 after riots hit Newark and Detroit.

Dissension Found

The catalytic action to pull together the urban coalition came from Urban America, a nonprofit organization, with the United States Conference of Mayors and the National League of Cities.

The new coalition found some dissension in its ranks yesterday.

Dr. Nathan Wright Jr., chairman of last month's Newark Black Power conference, issued a statement calling for "black insights and black definitions and leadership" in solving urban problems.

He said the coalition-approved statement should include these principles and had been drawn up by "the leaders of our cities while they were going to pot."

At the closing session, several complaints came that the voice of the poor wasn't being heard.

Rufus (Catfish) Mayfield, who identified himself as head of Pride, Inc., the District's summer job program for teen-agers, said he was "hurt by not being invited here."

"But the problem should be here," he said, pointing out that a lot of "important men" were sitting at the "long table" but no one like him.

The City Lobby

The most important thing about the thousand mayors, business men, union leaders, Negroes and clergymen who met in Washington to form an "urban coalition" was that they were there. "We are the beginnings of a national coalition," New York's Mayor Lindsay said, "of those with a stake in the city and its people." And high time.

There are still congressmen who think the answer to city problems is to spend just a little more on agricultural training back home in their districts. They need to be disabused. If the big and middle-sized cities, which have pressing problems in common, had as good a lobby as the gun people or the oil producers, national policy might be more relevant than it frequently is.

The coalition's actual initial proposals are less important than its proclaimed birth. The recommendations call for immediate work programs, which might strengthen Senator Clark's job creation amendment to the Administration's poverty bill against White House opposition, and for public housing schemes not yet on congressional drawing boards. President Johnson has stressed the need to get funds for existing programs first, which makes sense.

"They were presenting to us a program which was more ambitious than the President's program," House Democratic Whip Hale Boggs commented after meeting with their leaders. "What we were saying was, 'heck, we had better work on that first.'" Heck, yes. Maybe now they will.

People like Henry Ford 2d, Walter Reuther, David Rockefeller and others who joined with them are not legislatively naïve. They know how things are done on the Hill. By saying the White House program is not enough, they might help it. The important task now for this coalition, which was summoned into existence by the frustrated mayors of America, is to keep it going, make it real and potent, and not just a one-shot publicity gimmick that took a thousand busy people away from their desks for an interesting day in Washington. City people need a lobby.

New bloc seeks aid for cities

By Lyn Shepard
Staff correspondent of
The Christian Science Monitor

Rank-and-file members of the Urban Coalition—the nation's newest pressure bloc—aren't sure what the future holds for their group or their cause.

Perhaps, as one of the 1,100 conferees in the elegant Shoreham Hotel here predicted hopefully, the alliance will be "an effective tool in rebuilding our cities as they ought to be."

But it also could repeat the disappointment of last year's White House conference "to fulfill these rights." That meeting aired "a lot of glorious rhetoric," the skeptics recall. Yet it failed to follow words with deeds. So could the Urban Coalition.

Many of the delegates attended the earlier gathering and noted the similarities—for better or worse:

• Just as the White House conference, this "emergency convocation" attracted a galaxy of stars to its head table: names like Ford, Meany, Lindsay, Reuther, Cavanagh, Wilkins, Randolph, and David Rockefeller.

Subsidiary group

• The delegates, almost to a man, carried themselves with the confident air of prefessional conference-goers. Some seemed troubled, however, that outspoken leaders of the poor—including militant black youths like the District of Columbia's Marion Barry Jr. and Rufus (Catfish) Mayfield—hadn't been invited. A few came anyway, invitation or not.

• The convocation drew few if any conservatives. Nor did the White House conference of 1966. Thus, in terms of its impact on Congress, the coalition may serve simply as a back-up force to the Democratic Study Group and Republican Wednesday Club. Its leaders hope not. The joint forces of the DSG and Wednesday Club have won few battles in the House this session.

The new alliance got off to a shaky start. Its steering committee lunched with the Democratic leadership of Congress (Senate Whip Russell B. Long, Speaker John W. McCormack, Majority Leader Carl Albert, and House Whip Hale Boggs). It quickly learned of the political realities on Capitol Hill.

"I want to report in all candor," Mayor Jerome P. Cavanagh of Detroit later told the delegates, "that the sense of urgency was in fact lacking in our discussion with the leaders of Congress."

"We came away convinced," he said, "that we must evolve a new grass-roots demand for our interests. . . . A massive political-action program to get Congress off dead center."

It hardly boosted the steering committee's morale that not a single member of the GOP leadership attended the luncheon, though all had been invited. Coalition spokesmen brushed off the slight, noting that both houses were busy answering roll calls. But it was not a good sign.

Task forces named

Making the best of it, the alliance's co-chairmen announced formation of five task forces. Their members—mayors, businessmen, clergymen, and labor and civil-rights leaders — will meet within the next few weeks.

The committees will study business and government hiring practices, housing and school problems, and investment in urban development programs. Their suggestions will serve as a basis for the coalition's urban betterment campaign.

The broad outlines of that effort were heard throughout the convocation in comments laced with self-criticism.

Walter P. Reuther, United Automobile Workers president, looked at past meetings on city problems as "too long on pious platitudes and too short on performance."

But Mr. Reuther took encouragement in the fact that he and Henry Ford II, "who are sitting at opposite ends of the table in Detroit," were seated together at the head

(more)

table at the Shoreham. Both business and labor must invest heavily in the coalition effort, if it is to succeed, he said.

The keynote speaker, Mayor John V. Lindsay (R) of New York, appealed for members of both parties and all regions to agree on the need for immediate action.

Cities start plans

The Mayor warned that "it would be all too easy for this coalition to become just another well-intentioned, crisis-inspired, one-day attempt to spark urban change."

That prospect bothers many members of the Urban Coalition—so much that they are looking homeward rather than to Washington for an effective alliance.

Mayor Henry Marsh of Saginaw, Mich., for instance told a workshop group that he had already "started the ball rolling" for a local model-city program—with or without federal funds. Mayor John W. Potter of Toledo said he had already launched his city's plan, too.

"We're not just waiting for word from Washington on funding," Mayor Marsh, said. "If it's a good concept with federal help, it's a good one even without it."

"We're going to do it," the Negro Mayor vowed, "if it takes us 1 year or 10."

A Negro councilman in Camden, N.J., also advised delegates to work hard at building coalitions at home.

"If we sincerely want to get to the heart of these problems," he said, "we have to have local ingenuity."

The councilman said that when he first took office in 1961 a Camden Negro "couldn't reach for anything but a garbage can." Today, he said, half the members of the city's commissions and boards of directors are Negroes

Vital intangibles like this—a reawakening of civic pride and human dignity—are an unannounced first step toward the Urban Coalition's grass-roots goals.

Leaders Call For 1 Million Jobs For Minorities

The 1,000 delegates attending the emergency convocation of the Urban Coalition in Washington cheered as New York City Mayor John Lindsay urged a reassessment of national commitments to meet the need of the cities. In his keynote address at the one-day meeting of the leaders of civil rights, city governments, labor management and religion, Lindsay said, "Our international commitments should not be allowed to weaken our resolve at home. If our defense commitment, our commitment to space, or any other commitment made before our urban areas were beset by agony is blocking a vigorous effort to end those agencies, those commitments would be reassessed . . . our priorities should be reordered." The conference discussed and endorsed a statement of principles, drawn up by the coalition steering committee which is headed by A. Philip Randolph and Andrew Heiskell, board chairman of Time, Inc., and included the mayors of Atlanta, Pittsburgh, Boston, Detroit, Chicago, Phoenix, New York, Minneapolis, and Philadelphia, business leaders such as Henry Ford II, David Rockefeller and Asa T. Spaulding, labor leaders such as AFL-CIO President George Meany and UAW President Walter Reuther, and Martin Luther King, Roy Wilkins, and Whitney M. Young Jr. from the civil rights camp. It set as its first goal an all-out attack on unemployment. The coalition called on the federal government to develop an immediate emergency work program for at least one million jobless and pledged a greater effort on the part of private industry to recruit, train and hire the hard-core unemployed. Among the concrete suggestions was the establishment of "Earn and Learn Centers" in urban centers, run jointly by business, labor and local government.

ST. LOUIS POST-DISPATCH
August 20, 1967

Coalition Will Meet in Capital To Review Problems of Cities

By a Staff Correspondent of the Post-Dispatch

WASHINGTON, Aug. 19 — About 1000 leaders of business, civil rights, labor, religion, education and city government will meet here this week to attempt to stir a national passion for curing the sick cities.

The urban coalition emergency convocation, under the chairmenship of Andrew Heiskell and A. Phillip Randolph, may go down in history as just another quick reaction to the 1967 riots. But it could be much more — the seed from which could grow "a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto."

The fact that Heiskell, chairman of the board of Time, Inc., and Randolph, long-time civil rights leader and president of the brotherhood of Sleeping Car Porters, are heading the convocation is relatively significant.

"There has never been a meeting like this ever," one highly influential expert on cities told the Post-Dispatch. "One important segment has always been missing in the past — business."

The urban coalition had its beginning last January when mayors from several large cities met to discuss their mounting problems and agreed that their pleas were being interpreted by many as selfish. They decided to try to form an alliance of many groups to alert the nation to the urgency of the crisis in the cities. The effort faltered until flames started rising in the ghettos.

The coalition was hammered out July 31 at a meeting convened by Mayors Joseph M. Barr of Pittsburgh and John V. Lindsay of New York City. Among those involved were the leaders of such organizations as General Electric, the Chase Manhattan Bank, the Steel Workers union, Auto Workers Union, electrical workers, the major civil rights organizations and the Catholic, Protestant and Jewish religions. Since then other business leaders have joined the effort, including those who head the Aluminum Company of America, Ford Motor Co., Allied Stores Corp. and Litton Industries.

"The business guys who live in the suburgs didn't see much stake in the ghetto until this summer," one source close to the coalition said. "But the light from the fires has illuminated things for them. Business is waking up."

THREE MAJOR programs will be taken up by the coalition. One would be a major expansion of the private sector's efforts to train and provide jobs for the hard-core unemployed. The second would be an emergency work program to provide job training and employment. The third would be a general commitment to a long-range program for physical and social reconstruction of the ghetto.

Jobs have the highest priority.

The business leadership in the coalition appears ready to make a national-significant commitment to go into the city's slums to recruit employes on a scale never before attempted, it was learned. This commitment would extend further to providing skilled training with pay and to placement in responsible jobs after training.

"The business people are scared," the Post-Dispatch was told. "They have finally accepted the proposition that while the current system has worked well, it is now in danger because an awful lot of people are not in it and that those not in the system dislike it and want to damage it. The business community is realizing that the system has to be changed to include those outside it. The people with the most to lose if this isn't done are the business people."

One coalition source said, "Business won World War II. The Government conducted it but business showed how to build the thousands of planes it took to win. Now we have to say to business, 'we want to win this war in the cities. Show us how.' It's simply impossible for us to duplicate the kind of organization which already exists in the private sector. So we have to use it."

ANOTHER DRAMATIC product of the coalition, it was said, may be the business community's acceptance of the Government as the employer of last resort. Several persons close to the coalition said they expect business to indorse a massive emergency public work program to find jobs for the unemployed. The coalition leadership is expected to present plans for such a program to Congress in the course of the Thursday meeting.

If the National Association of Manufacturers and the United States Chamber of Commerce, whose representatives will attend the convocation as observers, join the labor, civil rights, religious and urban lobbies in calling for such a program, Congress would find it almost impossible to say reject it.

"When the people in the ghetto ask for help, the suburban congressman doesn't listen," one urban expert asserted. "But when the chairman of the board of a major company who is a constituent of the congressman says, 'Want your help, Harry,' then the congressman listens. Business can influence suburban congressmen to help the cities."

Other legislation could grow out of coalition activity to seek to provide incentives or subsidies to business to take the lead in reconstruction of the ghetto, especially slum housing. Financial involvement in the slums — through major investments such as factories or through dollar backing for redevelopment projects — is being seriously considered by a growing number of businessmen, the Post-Dispatch was told.

The other parties to the coalition are pondering their roles in the cities. Labor and religion, in addition to stirring their members on behalf of urban programs, can invest their finances in ghetto projects. As one planner said, "The churches can put their money where their souls are." Education leaders are looking for ways to stir the establishment to try experimental methods to educate the residents of the core cities. Labor can open its ranks, especially in the construction trades, to Negroes and can co-operate with business in projects to rebuild slum areas.

THE COALITION has some strong points going for it, those close to it believe. One is the impressive sense of personal commitment by the business leaders involved who, it was explained, are throwing company and personal prestige behind a solution to urban problems. Another is the energy of the big-city mayors who realize they are in serious trouble and will fight to make the coalition a success. Perhaps the most important is the realization that, although tremendous differences exist among coalition members, they have some common ground and by a joint effort all can be helped.

The Johnson Administration is not enthusiastic about the Urban Coalition and reportedly suggested that the meeting be postponed.

"The Administration resents anything it didn't think of and can't control," one coalition planner said.

When the coalition participants leave Washington, they will return to their home communities to form local coalitions with the same broad representation. "What we hope to start is simply a massive and immediate national movement to deal with urban problems," a staff member explained.

If the coalition fails to catch fire, any attempt to forge such a unified approach in the future will be seriously impared, it is conceded. But if business, labor, civil rights, religion, education and city government can find at least one common denominator, the results could be monumental for America's cities.

Urban Pressure

There were two quite distinct aspects of the meeting of several hundred business, labor, education, civil rights, religious and local government leaders which convened in Washington last Thursday under the label of the Urban Coalition to press for more urgent action on city problems.

The heavily publicized conference was in one sense, of course, an old-fashioned lobbying venture, motivated by a desire to spur both Congress and the President to greater concern (and to massively increased spending) in the problem areas plaguing cities everywhere. There is nothing illusory about the needs. Much more effective federal approaches, particularly in the field of jobs and housing, and possibly including some variation of the grandiose public works proposal advanced by the Coalition, are going to have to become a part of the administration's commitment at some point before any real progress is made.

Press Secretary George Christian's comment on Friday to the effect that any major new administration commitments in this area are going to have to await the President's state-of-the-Union message in January, however, merely stated the obvious. Congress' temper at the moment, the dual push for economy and a tax increase, our heavy war commitments—and indeed the dismal prospects for many of the pitifully modest urban-aid requests already languishing on Capitol Hill—all argue against a likelihood that the President is about to embark immediately on any vast new domestic spending. Had the Urban Coalition's purpose rested solely on this barren hope, the prestigious members of this group might as well have stayed home.

That, however, was not the sum of the meeting—nor, in our opinion, the real substance of it. The realists among the Coalition see their new organization, if it can be held together, as an extremely influential force in defining and pushing for urban improvements in the future—in the cities themselves as well as on the national level.

And perhaps the most significant accomplishment of all was the firm commitment of the group's top-caliber business, industrial and labor leaders, as expressed in their "statement of goals," to proceed immediately on their own—especially in the fields of training, jobs and hiring practices, to benefit residents of the city's ghettos.

"All representatives of the private sector in this Urban Coalition," the statement said, "decisively commit themselves to assist the deprived among us to achieve full participation in the economy. . . . We pledge full-scale private endeavor through creative job-training and employment, managerial assistance and basic investment . . . We will re-evaluate our current testing procedures and employment standards so as to modify or eliminate those practices and requirements that unnecessarily bar many persons from gainful employment by business or access to union membership . . . We will encourage more leaders in the private sector to get directly and personally involved in urban problems. . . ."

For our part, we recall hearing no such forceful voluntary promises from the leaders of industry and from such labor leaders as George Meany in the past. Greater federal assistance will be necessary in some form to carry out these pledges fully. But if these influential representatives of the private sector really mean what they say they are in a position to achieve a great deal of good on their own, now, without further delay.

URBAN COALITION AT PRAYER*
A search in hearts, consciences and pocketbooks.

A Search for Solutions

Luck notwithstanding, it will take an unprecedented combination of power and principle to resolve the plight of America's cities. Last week in Washington, the beginnings of such a partnership were welded at a day long "convocation" of the newly formed Urban Coalition. The group included Henry Ford II, Walter Reuther, David Rockefeller, George Meany, A. Philip Randolph, I. W. Abel, Whitney Young, John Lindsay. The list, 1,200 strong, comprised mayors and millionaires, bishops and union bosses.

The delegation, commanding an impressive proportion of the nation's economic, spiritual and intellectual resources, had assembled neither as a creature of Congress nor of the Administration, but out of its own desire

(more)

to grapple with the crisis of the cities —a crisis that will not be solved with mere rhetoric or even the force of law. The Coalition's members gathered at Washington's Shoreham Hotel in full awareness that it will take a stupendous effort, financial as well as philosophical, to meet the gravest internal threat to the nation since the Depression. Their differences forgotten, the cross-section of American leadership offered the most clear-cut program yet devised for the ills of the cities.

Enlightened Self-Interest. Founded last January as an outgrowth of Urban America Inc., a nonprofit organization dedicated to the study of city problems, the Urban Coalition meets the need for a concerted effort on the part of all the institutions and individuals most concerned with the city.

Time Inc.'s Board Chairman Andrew Heiskell, the Coalition's co-chairman, underscored the sense of enlightened self-interest that motivates its members. "The problem is too vast and complex to be resolved by any one sector," he said. "The failure to move on urban problems is not only socially disastrous but also economically unsound. Each year of delay in funding programs will inexorably require enormously greater expenditures in the future." Added Pittsburgh's Mayor Joseph Barr: "Regrettably, it took a national calamity to provide the urgency and concern which makes this meeting possible."

Turn Around. By bringing the resources—both monetary and managerial —of the private sector to bear on the plight of the cities, the Urban Coalition answers demands raised by such disparate political figures as New York's Democratic Senator Robert Kennedy and Illinois' Republican Charles Percy, both of whom have urged far greater participation of industry in meeting the cities' needs. As the London *Economist* noted last week, "If Litton Industries can work out a scheme for economic development in Greece, why not in Watts?" Litton President Roy Ash, a member of the Coalition, could hardly disagree. Said the Urban League's Whitney Young: "The people gathered in this room can turn the country around."

The big question is whether the country is willing or ready to be turned around. Concern over "rewarding" Negro rioters could still result in a series of repressive measures by Congress. One such, an anti-riot bill passed by the House, is pending in the Senate, where the Judiciary Committee last week heard former CIA Director John McCone admit that a check on incitement might sometimes be helpful. However, McCone, who headed the presidential commission that investigated 1965's Watts riot, warned that anti-riot legislation would be no panacea. "What worries me," he said, "is the climate that might prevail in the country. I feel very deeply that unless we answer this problem, it is going to split our society irretrievably. The temptation is to say this is hopeless, but I think we have to stay at the job until we find the answer."

The program outlined by the Urban Coalition (*see box opposite*) provides cogent answers to the cities' most immediate problems. For the long term, it calls for a reexamination of the nation's priorities and interests. However difficult that may be, no attempt to alleviate the social despair and economic disparities of U.S. cities can succeed until all Americans are willing to search their hearts, consciences and pocketbooks. The Urban Coalition may well have given that effort its initial impetus.

* From left to right, Metropolitan Life President Gilbert Fitzhugh, Henry Ford II, Phoenix Mayor Milton Graham, Secretary of International Brotherhood of Electrical Workers Joseph D. Keenan, New York Mayor John Lindsay, Co-Chairman A. Philip Randolph, Rabbi Jacob Rudin, Co-Chairman Andrew Heiskell, George Meany, Cummins Engine Co. Chairman J. Irwin Miller, Minneapolis Mayor Arthur Naftalin, General Electric Chairman Gerald Phillippe, Walter Reuther, David Rockefeller.

A Most Potent Lobby

The President and Congress last week heard for the first time from the Urban Coalition. They will hear from it again and eventually they will listen. For as David Meeker reported, it is "potentially one of the nation's most powerful lobbies," and its business is the most urgent business in America, the revitalization of its cities and their people.

The coalition was represented in Washington by 1200 persons, each one a "big name." Among them were the Mayors of the country's largest cities, the heads of some of its wealthiest corporations, some of its most eminent clergymen, influential publishers, mass union officers and distinguished professionals. Indeed it is hard to call to mind anything quite like this delegation.

Accustomed as they are to standard brand lobbyists, the politicians may have been tempted to regard this as a one-shot demonstration, too all-encompassing for continuity. After all, Henry Ford and Walter Reuther were among the delegates. So was the board chairman of General Electric and the secretary of the Brotherhood of Electrical Workers. But their diversities did not preclude a common interest in high priority for urban needs.

Much of what they had to say had been said time and again since so many in Washington have been so slow to hear. These would do well, however, to scrutinize the memorandum left by the coalition, especially its suggestions for opening up 1,000,000 new jobs. Equal attention will be due to recommendations to be made by the coalition's newly formed task forces on public employment, private employment, educational disparities, equal housing opportunities and reconstruction investment and urban development. These will come from men who know what they are talking about and who are in a position to help in the implementation of their recommendations.

The Urban Coalition exists because urban ills are felt in board rooms as well as ghettos. So it is unlikely to tolerate presidential lip service and congressional indifference. And it is likely to persevere because it has learned that self-interest carried too far becomes self-destruction.

William L. Slayton
Executive Vice President

September 12, 1967

To the Officers, Trustees, and friends of
Urban America:

Last winter, Stephen Currier proposed that leaders from the major segments of society that make up our cities be brought together to press for the cities' needs. On Thursday, August 24, more than 1,200 such leaders met in an unprecedented Emergency Convocation to further this objective in the name of the Urban Coalition. The day, by coincidence, was the 37th anniversary of Stephen Currier's birth.

I am enclosing, with the pride and satisfaction he would have shared, the report of that Convocation, including the statement of goals it adopted. I believe that it constitutes a truly significant first step toward forming the kind of national consensus required for the solution of our critical urban problems. The accompanying selection of clippings indicates that there is wide agreement on this point.

The Urban Coalition is now an independent force, and Urban America has helped make it so. We will continue to work in whatever appropriate ways we can to make its goals a reality.

Sincerely,

William L. Slayton

From: J. Wm. Bethea, Public Affairs

Subject: Materials being sent

Date: October 13, 1969

The enclosed brochure issued by the San Francisco Planning and Urban Renewal Administration (SPUR) effectively presents in succinct fashion services available to individual residents. We thought you might like to see it. Also enclosed is the most recent run-down of affiliated organizations.

Under separate cover a two-part Fact Kit on housing is being sent you. These volumes contain a compilation of basic materials on the nature and extent of the nation's housing problem.

Part I highlights the effects of poor housing on families and neighbourhoods and enumerates in detail the federal and state programs available to public, private and non-profit sponsors; Part II covers the technological innovations, both here and abroad, that are being applied to housing production and design.

Additional copies of the housing kit are available for $25.00.

Lower Income Housing Development Seminars

1969 HOUSING SPECIALIST PROGRAM

HOUSING SPECIALIST PROGRAM. Sponsored by Foundation for Cooperative Housing and Urban America, Inc.

PURPOSE: To train specialists in the development and management of low- and moderate-income housing in cooperative, nonprofit sales or nonprofit rental projects.

PERIOD: Two six-month courses are offered. Course 1 will begin in September 1969, and Course 2 in January 1970. Each program will consist of an eight-week intensive seminar held in Washington, D.C., followed by a four-month on-the-job training experience with selected housing development and management organizations.

QUALIFICATIONS: Bachelor's degree or equivalent practical experience in the fields of housing, urban planning, architecture, engineering or in the disciplines related to planning, public administration, urban development or community services.

FUNDING: The courses will be funded in part by tuition and by a Ford Foundation grant. Tuition for interns under private sponsorship will be $700, plus living expenses. A limited number of fellowships of $2,500 will be awarded to outstanding applicants who are not employed with a sponsoring institution. Such funded interns may expect to earn an additional salary of $400 per month plus travel expenses incident to their on-the-job training phase.

ON-THE-JOB TRAINING: Approximately four months in two or more of the following fields:

project development: Developing cooperative and/or nonprofit sales and rental housing programs including market analysis, site selection, site planning, architectural and engineering design, selection of construction techniques, cost analysis, financing, and processing of necessary data with municipal, state, and federal agencies such as FHA.

organization and marketing: Organizing and marketing a large cooperative project under development — including cooperative principles and procedures — and organizing a nonprofit mortgagor corporation and tenant or home-owner groups. Interns will attend membership meetings, sponsor board meetings and at least one mortgage closing and will participate in move-ins and member organization and education.

management and maintenance: Care and maintenance of properties, budgeting, buying, and bookkeeping required for nonprofit housing operation, and the community programs of cooperatives or tenant, or home owner associations. Interns will make reports to boards of directors of cooperative and/or nonprofit mortgagor corporations.

community facilities and community development: Planning and providing for adequate community facilities in housing developments, and creating adequate machinery within the community for use and expansion of community facilities for fuller living experience of all participating families.

CERTIFICATION: Graduating interns will be accorded certification as Housing Development and Management Specialists.

FUTURE EMPLOYMENT: During the training period the Director will have consultations with each intern regarding placement opportunities.

Further information and application forms may be secured from the Executive Director, Housing Specialist Program, 1012 14th Street, N.W., Washington, D.C., 20005. Telephone (202) 737-3411

PREFACE

This summary is one of a series of publications of the Nonprofit Housing Center of Urban America, Inc., a national, nonprofit citizens' organization dedicated to improving the quality of life in American cities. Urban America is an outgrowth of the 68-year old American Planning and Civic Association, and in 1965 merged with the ACTION Council for Better Cities.

The Nonprofit Housing Center, financed by a grant from the Ford Foundation, is one of five centers that are components of Urban America. It provides technical assistance, through experienced staff and consultants, to nonprofit sponsors of low and moderate income housing and helps communities form revolving development funds and nonprofit development corporations. Four Protestant denominations--the Episcopal, Methodist, United Presbyterian, and United Church of Christ--have contracted with Urban America for help from the Nonprofit Housing Center on housing developments undertaken by their local parishes or denominational bodies. The Center holds training sessions for representatives of nonprofit groups and publishes books, brochures, and manuals, such as this summary.

Regional staff representatives of the Center are prepared to meet with nonprofit sponsors to provide guidance to them in determining their role in housing; in the assembling of the professional team to develop the project, such as the architect, attorney, and builder; in selection of the site and determination of the market to be served; in the processing of the proposed development, and in selecting the management for the continuing operation of the development after completion.

For further information concerning assistance from Urban America, Inc., sponsors or potential not-for-profit sponsors, write or call:

SUMMARY OF FEDERAL HOUSING PROGRAMS

FOR LOW AND MODERATE INCOME FAMILIES

Introduction

There are several programs administered by the United States Department of Housing and Urban Development (HUD) which are designed to assist nonprofit sponsors to provide housing for low and moderate income families. This summary contains a brief description of the more active programs. This information has been prepared in order that the programs may be readily identified and more easily understood. In addition, there is an explanation of the "subsidy principle" which is employed in producing low and moderate income housing under the programs currently in existence.

Subsidy Principle

The cost of housing is governed by the cost of various components (i.e., land, labor, money, and materials) which are essential in the production of dwelling or housing units. In order to produce housing for low and moderate income families at rates which they can afford, it is necessary to reduce the cost of one or more of these housing components. Since, in a free economy, the consumer must pay the "going rate" for the goods and services making up these components, a reduction in the cost of housing can only be accomplished by the use of some type of subsidy. Federal housing programs designed to serve low and moderate income families involve both a direct and indirect subsidy plan. The direct subsidy plan permits low rental charges to qualified tenants, since the Federal Government makes a rent supplement payment to the housing owner on behalf of such tenants. The indirect subsidy plan reduces the cost of producing and operating a housing project by making mortgage money available to the owner at a low rate of interest. The lower cost thus realized makes it possible for the project owner to charge less rent for the housing units.

Major Housing Programs

A. Section 221 (d) (3) Below Market Interest Rate Program (Indirect Type of Subsidy)

This program provides for mortgage financing in an amount equal to 100 per cent of the "replacement cost" of the project. The replacement

cost includes the cost of the land, financing, and organizational expenses, legal and architectural fees, construction costs and other items normally incurred in the construction of a multifamily project. Mortgages may cover a period of 40 years and provide for payments to interest at a special low rate of 3 per cent per annum.

Banks, mortgage loan companies, or similar lending institutions which have been approved by the Federal Housing Administration (FHA) advance money during the construction stage of the project at the market rate of interest (currently 6 per cent). When the project is completed and all the mortgage money is disbursed, a "final closing" is held and the interest rate is reduced to 3 per cent Immediately following the final closing, the Federal National Mortgage Association (FNMA), a separate organization under the Department of Housing and Urban Development, buys the mortgage from the private lending institution with special funds which Congress has made available for this purpose. This device enables the nonprofit sponsor to charge less rent to the low and moderate income tenant since the sponsor will have lower monthly mortgage payments as a result of the low 3 per cent interest rate applicable to the mortgage loan.

In order to guarantee that these rental units will be available only to low and moderate income tenants, the FHA has issued a regulation which provides that the Commissioner will establish, from time to time, income limitations which qualified tenants cannot exceed in order to be eligible to live in projects constructed under this program. In addition, the project owner is required to execute an agreement restricting the occupancy of the project to eligible tenants.

B. Rent Supplement Program (Direct Type of Subsidy)

This program is similar in some respects to the 221 (d) (3) Below Market Interest Rate Program. Mortgage financing may be obtained in the amount of 100 per cent of the replacement cost of the project through lending institutions which have been approved by FHA. The mortgage loan bears a market rate of interest (currently 6 per cent). Unlike the Below Market Interest Rate Program, the interest rate is not reduced at final closing, but remains constant during the full term of the mortgage. Since the Federal National Mortgage Association is not required to buy the mortgage from the construction lender, a private lender may be the mortgagee during the term of the mortgage. Under this program low rental payments by the tenants are achieved by the use of a rent supplement payment to the nonprofit sponsor on behalf of the tenants. Projects can be constructed only in communities that formally request to participate in this program.

The amount of the rent supplement cannot exceed the difference between 25 per cent of the tenant's income and the full rent that is required for the dwelling unit. In the event that a tenant's income increases after occupancy commences, the amount of the rent supplement payment must be reduced to reflect the change in income. When a tenant's income equals or exceeds 25 per cent of the economic rent, supplement payments will be terminated. The tenant, however, will be permitted to live in the project and pay the full economic rent.

Under the Rent Supplement Program, it is also possible for tenants who are willing to pay the full economic rent to occupy units in the project. This arrangement makes possible the economic integration of tenants with different levels of income. In no event may the rent supplement payment involve an amount less than 10 per cent nor more than 70 per cent of the rent due on the dwelling.

It is important to note that a rent supplement payment can only be made on behalf of a tenant who is unable to obtain standard, privately owned housing at a rental which is equal to or less than one-fourth of his income and who is also either displaced, elderly, physically handicapped, or occupying substandard housing. In addition, the income of prospective tenants must be within the limits applicable to public housing tenants in the area.

C. 221 (h) Program - Rehabilitation Sales

This program is similar to the 221 (d) (3) Below Market Interest Rate Program except that it is designed to achieve home ownership (rather than rental housing) through the acquisition and rehabilitation of substandard or deteriorating structures by nonprofit corporations for subsequent sale to low income families.

Low income families, under this program, must have incomes below the maximum limits applicable under the Rent Supplement Program.

The nonprofit sponsor can obtain financing up to 100 per cent of the appraised value of the property before rehabilitation plus the estimated cost of rehabilitation. The mortgage will bear interest at the below market rate provided for in the 221 (d) (3) program (3 per cent) and will have a maturity determined by the FHA.

The nonprofit sponsor has to agree to sell the rehabilitated dwellings to low income purchasers whose individual mortgages will also be insured by the FHA. The purchaser must pay at least $200 down which may be applied to the closing costs.

To be eligible for insurance under this program, a mortgage will have to cover property or properties containing five or more single-family dwellings of detached, semi-detached, or row construction. When an individual unit is sold to a low income purchaser, such dwelling units will be released from the lien of the principal mortgage. Unsold dwelling units will be held and operated by the nonprofit sponsor as though they were rental units in a 221 (d) (3) Below Market Interest Rate project.

The low income purchaser must buy the dwelling unit for his own occupancy and, if he does not continue to occupy the property, the special low rate of interest (3 per cent) will terminate and the interest rate will automatically rise to the highest permissible rate under the 221 program (6 per cent). However, the special low rate of interest will remain in effect if he resells the property to the original nonprofit sponsor or to a local public housing authority or to another approved low income purchaser.

D. Section 202 Housing for the Elderly or Handicapped

This program is a direct government loan program administered by the Housing Assistance Administration in the Department of Housing and Urban Development. It is different from most government housing programs in that the mortgage money is loaned directly by the United States Government. It is intended to provide housing for elderly (62 years) and handicapped persons whose incomes make them ineligible for public housing, but who cannot afford rental charges of housing in the regular market.

Maximum income limits have been established for occupancy which vary with different geographical locations. Related facilities such as dining facilities, community rooms, workshops, and health centers for diagnostic and emergency cases can be included in the project. However, the housing cannot be elaborate or extravagant in design or material.

Sponsors of such housing must be able to prove that they are unable to obtain the necessary funds from other sources upon terms and conditions as favorable as those under the government program.

A loan may cover 100 per cent of the total development cost of a project and can be repaid over a period up to 50 years. Low rents are achieved by a special low rate of interest of 3 per cent per annum.

The National Home Ownership Foundation Plan

In addition to the existing Federal housing programs available to nonprofit sponsors, the proposed plan to establish a National Home Ownership Foundation would open new opportunities for nonprofit sponsorship. This plan, proposed by Senator Percy on April 20, 1967, has not yet passed the House or the Senate and, therefore, is pending legislation.

The general purpose of Senator Percy's bill, S 1592, is to establish a National Home Ownership Foundation which is intended to help provide mortgage financing within the economic means of poor people. The proposal is based on the reasonable assumption that providing housing poor people can afford will require a subsidy. The bill proposes a new device to subsidize interest rates and is a highly technical piece of legislation dealing with financing.

The two main features of the proposal are:

1. A Federal guarantee for the payment of principal and interest on debentures to be issued in an amount up to two billion dollars by a Federally chartered National Home Ownership Foundation.

2. An interest subsidy to be paid by the United States Treasury to reduce monthly payments on individual mortgages.

The National Home Ownership Foundation would be created under the bill which would sell debentures in the private money market not in excess of a total of two billion dollars. Money received from these obligations would finance the program. The obligations would be guaranteed by the United States Treasury. A guarantee fee of up to 1/4 of 1 per cent would be paid to the Treasury.

The Foundation would use the borrowed money to make loans to various local nonprofit organizations which, in turn, would use the funds to construct or rehabilitate private housing for sale to low income purchasers.

The low income purchaser would obtain a mortgage loan from a private lending institution. The Treasury Department would pay monthly a portion of the interest on the mortgage on behalf of the low income purchaser through the redemption of mortgage coupons. In the event such a mortgage could not be obtained, a loan may be made to the homeowner by the nonprofit organization.

Under the bill, the Federal interest subsidy could not be in excess of the annual rate of interest set forth in the statute.

Payments made by the Treasury on account of individual mortgagors are repayable by the homeowner based on an income formula during ownership or by a lien which is established upon the sale of the property. The amount of the assessment computed by the Secretary of the Treasury would equal the sum of 5 per cent of any part of the adjusted gross income of such persons for the previous taxable year which exceeds 80 per cent, but which does not exceed 90 per cent of the 221 (d) (3) income limit for the area in which the person resides plus 10 per cent of any part of such income which exceeds 90 per cent, but which does not exceed 100 per cent of such income limit plus 15 per cent of any part of such income which exceeds such income limit.

The bill also requires the nonprofit sponsor to provide relocation resources and it establishes 17 separate criteria applicable to the making of a loan. It also provides for the purchase of foundation obligations by a buyer who may direct the funds from such obligations to be used in a specific area. Also, no state can receive more than 12 and 1/2 per cent of the Foundation's debenture authorization.

OUTLINE OF EXISTING FEDERAL PROGRAMS

Mortgage Amount	Term of Mortgage	Interest Rate	Insurance Premium	Eligible Tenants
SECTION 221 (d) (3) BELOW MARKET INTEREST RATE PROGRAM				
100% of Cost	Up to 40 Years	3	0	Families and individuals whose incomes are within limits established by FHA.
SECTION 221 (d) (3) RENT SUPPLEMENT PROGRAM				
100% of Cost	Up to 40 Years	6	0.5	Families and individuals whose incomes do not exceed limits established for Public Housing in the area. Tenants must also be in one of the following categories: displaced by governmental action, 62 years or older, physically handicapped, or living in units damaged by a natural disaster.
SECTION 221 (h)				
100% of Cost	Up to 30 Years	3	0	Families whose incomes do not exceed limits under the Rent Supplement Program. Families must have ability to purchase and own dwelling units.
SECTION 202				
100% of Cost	Up to 50 Years	3	0	Persons 62 years (or older) or who are handicapped. Tenants must satisfy area income limitations.

URBAN
AMERICA
INC.

Cities

URBAN AMERICA PROGRAM

For the information of our Members, this is a brief summary of the elements of program and structure which are in being or under development.

NATIONAL FUNCTIONS

The Architectural Forum -- whose mission is to enhance the quality of urban design by stimulating thoughtful dialogue about our urban future among those engaged in the design professions.

The Urban Policy Center -- which will seek to determine and disseminate the ideas, standards and policies most beneficial for the development of urban centers.

The Urban Design Center -- which is expected to combine a variety of design talents in seeking solutions to especially difficult problems in the appearance and usefulness of basic elements of the urban environment.

The Information Center -- which will provide a clearing house for information of many types about the urban environment -- for national and local communications media and, through special publications and newsletters, for the individuals and groups served by Urban America.

The September National Conference -- representing a private sector response to the May, 1965 White House Conference on Natural Beauty. The conference will endeavor to sharpen the focus of present efforts to improve the quality of our cities and the objectives of designing cities that better serve human needs.

COMMUNITY ACTION SERVICES

The Citizens Mobilization Division -- which helps to create local citizens groups; seeks to enlist them -- together with individuals, private companies and public agencies -- as members of Urban America; and assists all members in full utilization of the resources of their national organization. The division includes the Technical Advisory Service, professionally staffed and equipped with a comprehensive library and reference files. The service contributes to

2 West 46 St.
New York
N.Y. 10036
212
757-6060

the Information Center and offers advice to individuals and groups on the many tools available for effecting every type of urban improvement.

The Local Development Services Division -- which renders counsel and technical services to nonprofit organizations, and to groups establishing local development funds, with the goal of creating new and rehabilitated nonprofit housing to meet the special needs of the disadvantaged.

The Redevelopment Division -- which provides information services and training for private developers, local public agencies and civic groups seeking reconstruction by private enterprise on lands cleared of slums.

Each of these eight principal functions and organizational units is or will be under the guidance of a special committee appointed by the Board of Trustees. The committees are responsible to the Board of Trustees, and between Board meetings, the Executive Committee. The National Action Council of Urban America -- broadly representative of the many fields of endeavor concerned with the future of cities, and of major geographical areas - exists to counsel and provide creative guidance for all Urban America programs, and particularly to advance the work of the Citizens Mobilization Division in cooperation with local groups and other members.

About the Speakers and Commentators

George T. Bogard, General Manager, Community Systems Development Division, General Electric Company, with headquarters at Louisville, is a native of Kentucky. After graduation from Purdue University in 1934 with a degree in Electrical Engineering, he began a career with General Electric which has included engineering, advertising, sales and over-all marketing assignments.

For six years prior to his appointment to General Manager of the new Community Systems Development Division, Mr. Bogard was Manager of the Construction Market Development Operation which co-ordinates the sale of all General Electric products to residential and commercial construction, provides application engineering and design services to builder-developers and generates merchandising plans to help sell and rent residential and commercial properties.

His new assignment is to direct the multiple resources of the General Electric Company to bring about the creation of prototype cities which can offer superior environmental values at less cost than present day communities afford.

Mr. Bogard is a member of the Board of Trustees of Urban America, Inc.

George M. Brady, Jr. is Senior Vice President and Director of The Rouse Company as well as James W. Rouse and Company, Inc., the mortgage banking division. Mr. Brady is in charge of growth and development for this division and is manager of the Washington office.

The Rouse Company has financed over a billion dollars in real estate development. The company has developed, owns and manages nine regional shopping centers and is now developing a planned city of more than 110,000 population.

Mr. Brady is vice chairman of the District of Columbia Commissioners' Planning and Urban Renewal Advisory Council and serves as vice chairman of the Community Planning Committee of the Washington Board of Trade. He is former chairman of the Urban Renewal Committee of the Mortgage Bankers Association of America.

He is a graduate of Johns Hopkins University and the University of Maryland Law School and is a member of the Maryland Bar.

Albert M. Cole is President of Reynolds Metals Development Corporation, Washington, D.C.

A native of Missouri, he attended Washburn College in Topeka, and was graduated from the University of Chicago with an LL.B degree.

From 1925 to 1944, he practiced law in Kansas. He was elected to the Kansas State Senate in 1941, serving until 1944.

In 1944, Mr. Cole was elected to Congress and served on the House Banking and Currency Committee, which has jurisdiction over housing legislation.

President Eisenhower in 1953 appointed Mr. Cole as Administrator of the Housing and Home Finance Agency, the predecessor to what is now the Department of Housing and Urban Development. In that year the President also appointed Mr. Cole as chairman of the President's Advisory Committee on Government Housing Policies and Programs.

Mr. Cole in 1959 became Executive Vice President of Reynolds Metals Development Corporation, a subsidiary of Reynolds Metals Company. He assumed the presidency of the subsidiary in 1964. In this post, Mr. Cole is responsible for developing and guiding Reynolds' participation in urban renewal and other real estate projects.

Mr. Cole served as President and Chairman of Action, Inc., and is now a member of the Executive Committee and the Board of Trustees of Urban America, Inc.

John P. Eberhard is the Director of the Institute for Applied Technology at the National Bureau of Standards, U.S. Department of Commerce. The Institute seeks to create opportunities for the introduction of new technology in government and industry. Mr. Eberhard came to the Bureau after extensive experience as a consultant to industry, as a practicing architect, and as a lecturer in the School of Industrial Management of the Massachusetts Institute of Technology.

Born in Chicago, Mr. Eberhard received a B.S. in architectural design from the University of Illinois in 1952. During 1958-59 he attended M.I.T. under an Alfred P. Sloan Fellowship and obtained an M.S. in industrial management.

Mr. Eberhard was one of the incorporators of Creative Buildings, Inc., and was its President from 1952-58. The firm was initiated to design and build medium-priced homes, but was converted to the design and manufacture of prefabricated buildings, primarily religious structures.

In 1959 he joined the Sheraton Corporation of America as Director of Research where he was concerned with the investigation of data processing techniques and their potential use by Sheraton, as well as the application of new technologies.

In 1963, Mr. Eberhard was appointed Consultant to Dr. J. Herbert Hollomon, Assistant Secretary for Science and Technology at the U.S. Department of Commerce, and remained in that post until assignment to the Institute for Applied Technology as Deputy Director in 1964. He became the Institute's Director in 1966.

John G. Heimann is Vice President of E.M. Warburg and Company, Inc., international investment bankers. Mr. Heimann also serves as special advisor on international finance to the Secretary-General of the United Nations and as consultant on housing finance to the Secretary of the Department of Housing and Urban Development.

E.H

From 1954 to 1966 Mr. Heimann was Vice President of the investment banking firm of Smith, Barney and Company, Inc., with responsibilities in both domestic and international finance. For seven years he specialized in the investment problems and practices of retirement funds, including those managed by corporations, trade unions, and states and municipalities. He supervised the investment management of accounts with total assets in excess of $1 billion.

Mr. Heimann has also been actively concerned with a broad variety of corporate financial problems, real estate finance, both conventional and insured, the latter including FHA and the AID guaranteed middle-income loans to developing nations. He has published and lectured extensively on these subjects.

He is engaged in many civic and political activities. They include membership on the New York State Commission of Federal-State Fiscal Relations; Chairman for taxation and fiscal problems of the New York County Democratic Committee on the Constitutional Convention; Chairman, Committee for Bipartisan Re-apportionment; and Co-chairman, New York Council for Landmark Preservation.

Mr. Heimann received an A.B. from Syracuse University in 1950 and was a member of the Faculty of New York University from 1958 to 1963.

Robert H. Pease is Senior Vice President and a Director of Draper and Kramer, Inc., one of the largest real estate and mortgage firms in the Midwest, with offices in Chicago, Minneapolis, and St. Louis.

A former president of the Chicago Mortgage Bankers Association, Mr. Pease joined Draper and Kramer in 1934. He is Treasurer and a member of the executive committee of the Mortgage Bankers Association of America and in 1954 received the MBA National Award for outstanding service to the mortgage banking industry. He is editor of the McGraw-Hill textbook on mortgage banking and has taught courses in investments and corporate finance at the Graduate School of Business, University of Chicago.

He received a bachelors degree in finance and a masters degree in business administration from the University of Chicago.

P

Among his numerous civic activities, Mr. Pease has served as a trustee of the Village of Hinsdale and chairman of its Plan Commission. He is also past chairman of the Chicago Metropolitan Cancer Committee.

Louis Perini, Jr. is President of the Perini Corporation, which deals in construction and land development on a worldwide basis. He also serves as President of Perini Land and Development Company, a wholly owned subsidiary, and continues to be responsible for all Perini realty interests.

A native of Massachusetts, Mr. Perini studied economics at Tufts University and real estate at Boston University. In 1964 he received an honorary bachelor of science degree from Tufts University.

Mr. Perini, previous to his joining the family Perini Corporation in 1958, was engaged in the mason contracting and mining business and in exploration and development work. He also served as Vice President for Western Operations for the Perini Corporation, with responsibilities for the corporation's Golden Gateway Center urban renewal development in San Francisco.

Mr. Perini is a member of the Board of the Research Institute of the National Association of Home Builders and the advisory committee of the Redevelopment Division of Urban America, Inc. He is also a member of the executive committee of the Florida Council of 100, a statewide group of business, industrial and financial leaders appointed by the Governor. A resident of West Palm Beach, he is a director of the Citizens Bank of Palm Beach County and the West Palm Beach Chamber of Commerce.

Nathaniel Rogg is Executive Vice President of the National Association of Home Builders. Mr. Rogg directs the 130-man national staff of the association, with headquarters in Washington, D.C. Previously, he had been NAHB Vice President for Association Services. He joined the NAHB staff in 1954 as Chief Economist and later served as Director of Policy Planning.

PR

Before joining the NAHB staff he was Chief of the Statistics and Reports Section of the Housing and Home Finance Agency and had served as a government economist and statistician for many years.

A native of New York, Mr. Rogg holds a B.A. magna cum laude and an M.A. in economics from New York University, and a doctorate of law degree from the George Washington University. During 1962 and 1963 he was a visiting Professor of Economics at Harvard University, teaching construction and housing economics.

Mr. Rogg is a member of the District of Columbia Bar, Phi Beta Kappa, the national honorary scholastic fraternity, and Coif, the national honorary legal fraternity.

James W. Rouse is President of The Rouse Company, a mortgage banking and real estate development firm, with executive offices in Baltimore, Maryland.

The Rouse Company has financed over a billion dollars in real estate development. Its largest undertaking is Columbia, a new city for 110,000 people on 15,000 acres of land midway between Baltimore and Washington.

Mr. Rouse was formerly a member of President Eisenhower's Advisory Committee on Government Housing Policies and Programs and chairman of the subcommittee that recommended the urban renewal program embraced in the Housing Act of 1954.

In 1955 he was engaged by the District of Columbia to lay out a workable program of urban renewal for the City of Washington. He has lectured on various aspects of housing, design and community development at Johns Hopkins, Harvard, and the University of California.

Mr. Rouse was a member of one of the original committees whose recommendations resulted in the formation of Action, Inc. He was President of Action and Chairman of its Board of Directors and is now a member of the Board of Trustees of Urban America, Inc.

Mr. Rouse is a member of the Advisory Board of the Federal City Council of Washington. Formerly Chairman of the Greater Baltimore Committee, he is now Chairman of its Executive Committee.

R

Stanley S. Surrey became Assistant Secretary of the Treasury for tax policy in April, 1961.

Mr. Surrey, a lawyer, earlier had served with the Department from 1937 to 1947, ultimately as tax legislative counsel. For eleven years thereafter he was a professor of law at the University of California and at Harvard, where he also was Director of the Harvard Law School International Program in Taxation.

He has held many advisory posts on tax policy for foreign governments and has acted as consultant to the Ford Foundation on various occasions between periods of government service. He has been a member of the Council, American Bar Association Section of Taxation; Chief Reporter, American Law Institute; and a member of the advisory committee to the National Committee on Government Finance of the Brookings Institution.

Mr. Surrey is an honors graduate of the City College of New York and the Columbia Law School.

H. Ralph Taylor took office in May, 1966, as Assistant Secretary for Demonstrations and Inter-Governmental Relations in the Department of Housing and Urban Development.

Mr. Taylor was President of Taylor-Hurley Associates and H.R. Taylor Management Corporation, a private consulting organization specializing in urban renewal and development. In his capacities with the firms since 1959, he had been responsible for the programming and development of nearly $100 million of new housing in urban renewal areas under Sections 220 and 221(d)(3).

Mr. Taylor received an M.P.A. from the Harvard Littauer School of Public Administration in 1947. He earlier received his A.B. from Harvard in 1939 and an M.A. from Louisiana State University in 1946.

As an urban renewal and development expert, he has worked closely with local citizen groups and local governments as well as with various federal agencies in the field. He has been a consultant to profit motivated and non-profit developers.

ST

From 1958 through 1959 he was an Agency for International Development consultant on urban renewal for the Government of Chile, vice chairman of the Executive Committee of the National Association of Housing and Redevelopment Officials, and a member of the Board of Directors and Resolutions Committee of the National Housing Conference.

He was Director of the New Haven Redevelopment Agency from 1955 to 1959, leaving to become the personal field representative for a major private developer, James Scheuer of New York City. From 1951 to 1955 he was assistant director of the Somerville (Mass.) Housing Authority. Mr. Taylor was administrative assistant to the Director of the Massachusetts State Housing Board, administering the veterans' emergency housing program, from 1948 to 1951.

William K. Wittausch is Manager of Housing Research in the Construction Sciences Department at Stanford Research Institute's Southern California Laboratories in South Pasadena.

Prior to joining the Institute, Mr. Wittausch was chief housing advisor to the U.S. AID Mission in Guatemala. Previous to this assignment, he was assistant vice president and economic advisor to the First Federal Savings and Loan Association, Chicago.

His foreign assignments have included serving as the U.S. High Commissioner's representative in charge of a multi-million dollar Marshall Plan reconstruction project in Germany, and as housing consultant to the International Cooperation Administration in Vienna. He organized the technical assistance program for Austria's prefabricated homes industry, helped draft legislation to encourage locally financed homeownership, developed a simplified bidding and cost control system for factory and site construction of houses, and built the first all modular, all component housing project in Europe.

Mr. Wittausch entered government service in 1934 as one of the first employees of the Federal Housing Administration. He served on its research and technical staff as housing economist, urban planner, prefabrication production engineer and market analyst.

W

He earned his A.B. in civil engineering at Stanford University, did graduate work in industrial engineering at the Technische Hochschule in Berlin, and received his M.B.A. in industrial management at the Harvard Graduate School of Business Administration.

Robert C. Wood took office as Undersecretary in the Department of Housing and Urban Development in January, 1966. Prior to his appointment, he had been Chairman of the Political Science Department at Massachusetts Institute of Technology.

Born in St. Louis, Missouri, Dr. Wood spent his early life in Jacksonville, Florida. He received an A.B. from Princeton University in 1946. At Harvard University, he was awarded an M.A. in 1947, a Master of Public Administration in 1948, and a Ph.D. in 1950. At Princeton he was elected to Phi Beta Kappa.

From 1949 to 1951 he was Associate Director, Legislative Reference Bureau of the State of Florida. At the U.S. Bureau of the Budget from 1951 to 1954, Mr. Wood served as a management organization analyst in the housing field.

Mr. Wood became a lecturer and then an Assistant Professor of Government at Harvard University in 1954. In 1957 he left Harvard to join the faculty at MIT where he taught as an Assistant Professor of Political Science from 1957 to 1959, and as an Associate Professor from 1959 to 1962. In 1962, Mr. Wood was named Professor of Political Science; and in 1965, he became the Chairman of the Department.

He is a member of the Advisory Board of the National Capital Transportation Agency, the Committee for Economic Development, and the American Academy for Arts and Sciences.

Mr. Wood is the author of "Suburbia, Its People and Their Politics" (1958); "Metropolis Against Itself" (1959); "1400 Governments, The Political Economy of the New York Region" (1960); and the co-author of "School Men and Politics" (1962); and "Government and Politics of the U.S." (1965).

URBAN AMERICA PROGRAM

For the information of our Members, this is a brief summary of the elements of program and structure which are in being or under development.

NATIONAL FUNCTIONS

The Architectural Forum -- whose mission is to enhance the quality of urban design by stimulating thoughtful dialogue about our urban future among those engaged in the design professions.

The Urban Policy Center -- which will seek to determine and disseminate the ideas, standards and policies most beneficial for the development of urban centers.

The Urban Design Center -- which is expected to combine a variety of design talents in seeking solutions to especially difficult problems in the appearance and usefulness of basic elements of the urban environment.

The Information Center -- which will provide a clearing house for information of many types about the urban environment -- for national and local communications media and, through special publications and newsletters, for the individuals and groups served by Urban America.

The September National Conference -- representing a private sector response to the May, 1965 White House Conference on Natural Beauty. The conference will endeavor to sharpen the focus of present efforts to improve the quality of our cities and the objectives of designing cities that better serve human needs.

COMMUNITY ACTION SERVICES

The Citizens Mobilization Division -- which helps to create local citizens groups; seeks to enlist them -- together with individuals, private companies and public agencies -- as members of Urban America; and assists all members in full utilization of the resources of their national organization. The division includes the Technical Advisory Service, professionally staffed and equipped with a comprehensive library and reference files. The service contributes to

2 West 46 St.
New York
N.Y. 10036
212
757-6060

the Information Center and offers advice to individuals and groups on the many tools available for effecting every type of urban improvement.

The Local Development Services Division -- which renders counsel and technical services to nonprofit organizations, and to groups establishing local development funds, with the goal of creating new and rehabilitated nonprofit housing to meet the special needs of the disadvantaged.

The Redevelopment Division -- which provides information services and training for private developers, local public agencies and civic groups seeking reconstruction by private enterprise on lands cleared of slums.

Each of these eight principal functions and organizational units is or will be under the guidance of a special committee appointed by the Board of Trustees. The committees are responsible to the Board of Trustees, and between Board meetings, the Executive Committee. The National Action Council of Urban America -- broadly representative of the many fields of endeavor concerned with the future of cities, and of major geographical areas - exists to counsel and provide creative guidance for all Urban America programs, and particularly to advance the work of the Citizens Mobilization Division in cooperation with local groups and other members.

URBAN AMERICA INC.

In February, 1965, the pioneering American Planning and Civic Association changed its name to Urban America Inc., and broadened its purposes to encompass improvement of both the social and physical environment of the nation's cities. The change was accomplished through a grant from the Taconic Foundation, and Stephen R. Currier, the president of Taconic, became the first president of Urban America. In December, 1965, the organization was expanded into its present form through merger with the ACTION Council for Better Cities.

Urban America's first 18 months were spent in a wide-ranging examination of urban problems for the points at which its intervention could have most effect. In June, 1966, William L. Slayton, former commissioner of the U. S. Urban Renewal Administration, was appointed executive vice president, and began building the professional staff to carry out Urban America's programs.

Urban America is organized into five centers of activity, with separate but interlocking responsibilities. The Business and Development Center seeks to find new forms of involvement of private enterprise in the building and rebuilding of cities. The Nonprofit Housing Center, under a Ford Foundation grant, provides technical and professional assistance to religious and other groups sponsoring lower-income housing, and to nonprofit development funds and corporations. The Urban Design Center is concerned with the means of making design quality an important factor in urban development decisions.

Under the Urban Policy Center will be a coalition of mayors and public-interest groups sharing concern with the problems of cities, and an Urban Economic Council to provide authoritative analyses of the cities' economic needs and contributions. The Urban Information Center is responsible for publications, including a forthcoming bimonthly review of urban affairs, and for providing information to the press and to local citizens' organizations affiliated with Urban America. THE ARCHITECTURAL FORUM also is published by Urban America, from the magazine's offices in New York City.

James W. Rouse, Baltimore mortgage banker and real estate developer, is president of Urban America; Andrew Heiskell, chairman of the board of Time Inc., is chairman of Urban America's Board of Trustees; and August Heckscher, New York City administrator of cultural affairs and commissioner of parks, is vice chairman.

JAMES W. ROUSE

James W. Rouse, 52, is President of The Rouse Company, a mortgage banking and real estate development firm with executive offices in Baltimore, Maryland.

Formerly a member of President Eisenhower's Advisory Committee on Housing, Mr. Rouse was Chairman of its subcommittee on Urban Development, Rehabilitation and Conservation. One of the original committee whose recommendations resulted in the formation of ACTION, Mr. Rouse has served as President and Chairman of its Board of Directors and is now a member of the Board of Trustees of Urban America Inc., which was merged with ACTION in 1965. In 1955 he was engaged by the District of Columbia to lay out a workable program of urban renewal for the City of Washington. He is now a trustee of the Federal City Council of Washington, D.C.

Active in Baltimore civic affairs, Mr. Rouse is one of the founders of the Fight Blight Fund, is past chairman of the Greater Baltimore Committee, which he also helped found, and is a member of its Planning Council. He is also on the Board of Directors of the Peale Museum. A trustee of Union Memorial Hospital, he is Chairman of its Planning Committee. He also serves as an Elder in the Brown Memorial Presbyterian Church.

Mr. Rouse, who received his law degree from the University of Maryland, is also active in academic circles in Baltimore, serving on the Advisory Council to the Field Work Offices of Goucher College, and the Visiting Committee for the evening division of The Johns Hopkins University.

Mr. Rouse has lectured on various aspects of housing, design, and community development at Johns Hopkins, Harvard, and the University of California. In 1964 he was chosen by HOUSE & HOME as one of the "Top Performers" in the community development field.

FOR A.M. RELEASE WEDNESDAY, APRIL 12

James W. Rouse of Baltimore, mortgage banker, developer, and a national leader in urban affairs, has been elected president of Urban America Inc.

Mr. Rouse fills the vacancy caused by the death of Stephen R. Currier, the organization's founder and first president. Mr. Currier and his wife were lost on a flight over the Caribbean in January.

Mr. Rouse is president of The Rouse Company, whose activities include development of the new town of Columbia, Maryland, between Baltimore and Washington.

He has served as president of the ACTION Council for Better Cities, which merged with Urban America in 1965; chairman of the Greater Baltimore Committee; and a member of former President Dwight D. Eisenhower's Advisory Committee on Housing.

(more)

Urban America Inc. is a nonprofit organization dedicated to improvement of the quality of life in the nation's cities, with headquarters in Washington, D.C.

PLEASE NOTE: Additional information on Mr. Rouse and on Urban America Inc. is attached. Photographs of Mr. Rouse are available on request.

FOR IMMEDIATE RELEASE

Montreal, April 24--The election of six new members to the board of trustees of Urban America Inc. was announced Monday by the organization's president, James W. Rouse.

The new trustees are:

Lawrence Halprin, San Francisco landscape architect, author, environmental planner, and a consultant to the 1965 White House Conference on Natural Beauty.

Thomas P. F. Hoving, New York, director of the Metropolitan Museum of Art and former New York City Parks Commissioner and Administrator of Recreation and Cultural Affairs.

George Russell, Detroit, executive vice president for finance of General Motors and a trustee of the Committee for Economic Development and the Automotive Safety Foundation.

Lelan F. Sillin, Jr., president and chief executive officer of the Central Hudson Gas & Electric Corporation, Poughkeepsie, New York, and chairman of Mid-Hudson Pattern for Progress, Inc., a regional planning, research and development organization.

John G. Simon, Woodbridge, Connecticut, president of the Taconic Foundation and associate professor of law at Yale University, where he is involved in developing an urban land program. He is a director of Dixwell Community House, New Haven, Connecticut.

Whitney M. Young, Jr., executive director of the National Urban League, president of the National Conference on Social Welfare and a member of the National Advisory Council of the U. S. Office of Economic Opportunity.

The election, at a general membership session, was part of Urban America's two-day annual meeting here. Tuesday's agenda includes a meeting of the organization's National Action Council, a group of business and professional leaders representing major metropolitan areas. Other events gave delegates a close view of new multilevel developments in downtown Montreal and a look at the island site of Expo 67.

Urban America Inc. is a nonprofit citizens organization which seeks ways to improve the quality of life in cities. It was formed early in 1965 when the American Planning and Civic Association adopted that name to reflect a new, broadened concern for both the social and physical characteristics of the urban environment. Later that year the organization was expanded to its present form through merger with the ACTION Council for Better Cities.

Emergency Convocation: The Urban Coalition

1717 Massachusetts Avenue, N.W., Washington, D.C. 20036
202/265-2224

BACKGROUND OF THE URBAN COALITION

Last January, mayors of a cross section of major cities met in Washington to discuss what was clearly emerging as a crisis situation.

Despite their efforts and new programs of Federal aid, the problems of most of their cities were increasing. In common they faced rising welfare loads, high rates of unemployment and underemployment, deterioration of inner-city housing--and a rising sense of alienation in ghetto areas. At the same time, local tax bases were dwindling as the Federal share of tax revenue increased, and the shortage of operating revenue had become chronic.

The mayors--from Atlanta, Baltimore, Boston, Denver, Detroit, Miami, Milwaukee, New York, Philadelphia, Pittsburgh, and Tacoma, Wash.--had come to Washington at the invitation of the late Stephen R. Currier, then president of Urban America Inc. Mr. Currier had formed Urban America as a nonprofit organization to deal with these same problems, and to work for improvement of the quality of life in cities.

The mayors felt that their own appeals for reallocation of priorities and a greater share of national resources for cities were interpreted as special pleading. They felt that it was time for those with a stake in the cities' well-being to join in a coalition to alert the nation to the urgency of urban needs. They asked Urban America, together with the U.S. Conference of Mayors and the National League of Cities, to act as catalyst in formation of such a coalition.

A steering committee of mayors was formed as the first component of the coalition. Last spring, a series of meetings was begun with representatives of business, civil rights, labor, and religion. The timetable called for the coalition of these groups to be completed by September to work on long-range solutions to urban problems.

Then came summer. The outbreak of violence in more than 80 cities, and the beginnings of a hardening in national reaction, clearly called for emergency action. In the week following the riots in Detroit, Mayor Joseph M. Barr of Pittsburgh, president of the U.S. Conference of Mayors, and Mayor John V. Lindsay of New York called upon leaders of the five fields to meet in Washington on July 31.

At that meeting the Urban Coalition became a reality. Eighteen national leaders from the five segments of society attended and, along with 14 others who could not be there but signified their full support, became the Coalition's Steering Committee (see list attached).

In their call to the meeting, Mayors Barr and Lindsay said that its purpose would be to seek both long- and short-range measures "to overcome citizen indifference, encourage interracial cooperation, and enroll national support until racial peace is a reality and the promise of America has been fulfilled." The goal, they said, was to mobilize national action and achieve "a major reassessment of present national priorities."

At the meeting, the Coalition adopted a statement of purpose calling for specific measures to meet these goals (text attached). The statement was not a staff document ratified by the Coalition: it was produced by the members themselves, in the course of a discussion that displayed a unanimous sense of urgency.

The Coalition also called for an Emergency Convocation before the end of August to expand the base of the effort to include at least 1,000 leaders from the five fields. Andrew Heiskell, chairman of the board of Time Inc. and of Urban America Inc., and A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, were named co-chairmen of the Convocation.

The one-day Convocation August 24 will not be a deliberative session, but an action meeting. Those invited have been asked to attend on the basis of commitment to the Coalition's purposes. The work of the Convocation will be to plan the implementation of these purposes.

Emergency Convocation: The Urban Coalition

1717 Massachusetts Avenue, N.W., Washington, D.C. 20036
For further information: Don Lief, 202/265-2224

FOR IMMEDIATE RELEASE

WASHINGTON, D.C.--A broad public-private attack on the problems of American cities has been launched by 1,200 leaders of business, labor, civil rights, religion, and local government.

They were brought together by the newly formed Urban Coalition in an unprecedented one-day Emergency Convocation Thursday, August 24, at the Shoreham Hotel. Co-chairmen were Andrew Heiskell, chairman of the board of Time Inc. and of Urban America Inc.; and A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters.

At the end of the Convocation, five emergency task forces were appointed to carry the Coalition's attack on the urban crisis forward.

Early, the delegates had approved a Statement of Principles, Goals, and Commitments drafted by the Coalition's 33-man steering committee. The statement called for a national emergency public works program, an urgent commitment by industry and labor to create new jobs and job training,

(more)

and a broad program of urban reconstruction, urban investment, and remedial education. At noon, a steering committee delegation led by Mayors Richard Daley of Chicago and John Lindsay of New York went to Capitol Hill to present the Convocation statement to Congressional leaders. They were received by House Speaker McCormack, Reps. Boggs and Albert, and Sen. Russell Long.

In the afternoon, the delegates met in nine concurrent workshops to develop ideas and discuss formulation of local Coalitions. At the end of the day, Mr. Heiskell announced appointment of the following co-chairmen of Emergency Task Forces:

Public Service Employment--Mayor Richard J. Daley of Chicago, Mayor John V. Lindsay of New York, Mr. Randolph.

Private Employment--Gerald L. Phillippe, chairman of the board, General Electric Co.; John Wheeler, president, Mechanics and Farmers Bank, Durham, N.C.; and David Sullivan, president, Building Service Employees International Union.

Educational Disparities--Dr. Arthur Flemming, president, National Council of Churches, and Roy Wilkins, executive director, National Association for the Advancement of Colored People.

Reconstruction Investment and Urban Development--Walter Reuther, president, United Auto Workers; Joseph D. Keenan, secretary, International Brotherhood of Electrical Workers; and a businessman yet to be announced.

(more)

Equal Housing Opportunities--Archbishop John F. Dearden, Detroit; Whitney Young, Jr., executive director, National Urban League; and Frederick J. Close, board chairman, Aluminum Co. of America.

Mr. Heiskell said the Task Forces will draw staff and other resources from the five elements that make up the Coalition. They will begin meeting within a few weeks, he said, and the steering committee will meet again within a month.

After the steering committee's statement was presented to the Convocation at the morning session, nine leaders in American life rose to back the principles it enunciated.

Mayor Lindsay, the keynote speaker, warned that urban ghettos are growing by a half million people a year. He declared that this growth is creating "truly national problems, from which no city, no state and no citizen can escape."

"Every city in this nation is crowded with the despairing and the disaffected," Mr. Lindsay said. "They are not fighting a man, a program, or a symbol. They are challenging a system and a society which has failed to respond to their needs."

Mr. Lindsay said the Coalition must mobilize itself to tap unused resources:

"Mayors must establish direct communication with ghetto residents to bring them into the mainstream of American life....Labor

(more)

must break down antiquated and artificial barriers to apprenticeship and membership....Business must undertake an aggressive campaign to recruit and train the unemployed and under-employed....Religious leaders must support the efforts of the central city poor....Our churches must bring together the despairing slum-dweller with the affluent suburbanite...."

Backing the Convocation's call for an emergency work program that creates one million jobs for the unemployed, Mr. Lindsay warned that, while words have failed to create a national awareness of slum agony, "they have too often succeeded in arousing false hopes and unfulfilled expectations. Many new programs have been oversold....We must close the gap between promise and performance."

The mayor told the Convocation that if the nation were unable to meet its urban obligations because of international commitments, "those commitments should be reassessed."

The conferees were welcomed to the meeting by Mayor Joseph Barr of Pittsburgh, who is president of the U.S. Conference of Mayors, and Mayor James Tate of Philadelphia, who is president of the National League of Cities.

Mr. Barr called the unmet needs of American cities "our Number One problem." He said that President Johnson's urban program "is the beginning of what needs to be done (but) this is not a partisan matter." He called for a new bipartisan policy on urban affairs akin to the bipartisanship

on foreign policy that evolved in the forties.

Co-chairman Heiskell said that the conferees had come together "because we know that anything less will mean disaster for our cities...." The urban problem, he said, "is too vast and complex to be resolved by any one sector...."

The steering committee's statement of principles and goals was read to the Convocation by Mr. Randolph, who then moved its adoption. Speaking in response, the Rt. Rev. John E. Hines, Presiding Bishop of the Episcopal Church, called for a "massive change in national priorities." Repressive measures against minority dwellers, he said, would only "compound the root cause of alienation." The nation "must be emphatic and unequivocal about the right of the poor to power," he declared.

Roy Wilkins told the delegates that "only after we have revamped our educational system to take care of our submerged population--from the bottom up, not from the top down--will we be able to talk to these people about American ideals....If you read the history of our country and it has no meaning to you," he said, "then you are not being educated--not becoming an American."

Henry Ford II followed Mr. Wilkins, declaring that America "today faces its greatest internal crisis since the Civil War--a crisis which demands no less than a massive national response."

(more)

"It is essential for business, government and unions to consider how current policies and practices can be modified to make it less costly for business to hire and train poorly qualified people," Mr. Ford said. He pointed out that the "key to equal economic opportunity is vastly expanded and improved education and training for those who now receive the least and poorest preparation for a productive life."

President George Meany of the AFL-CIO said that America's first priority "as this statement clearly recognizes (is) one million jobs in socially productive work for the presently unemployed....America must have these jobs right now." Battles will have to be fought, with Congress, and beyond, with state and local governments "many of which have far worse records," he said.

Whitney Young, Jr., executive director of the National Urban League, also speaking in response to the statement, called the Convocation a "profoundly significant" event.

"The people in this room have the power and resources to turn this country round," he said. "The question is whether you have the will." Responsible Negro leaders have not failed in their duty, he declared; "they have been failed by responsible white leaders." The American Negro, Mr. Young said, needs to be told by the white: "I believe in you."

Joseph Keenan, international secretary of the International Brotherhood of Electrical Workers, said that while "calls to action

are not new, the alliance of all the different elements represented here is new and very significant. I think it shows that we have reached the point of common sense in dealing with our most pressing problems."

David Rockefeller, president of the Chase Manhattan Bank, said that the success of the Convocation's efforts will depend upon the "close personal involvement of businessmen and other leaders from the private sector."

"In the past," Mr. Rockefeller said, "too many of us have felt that doing a good job in making our companies successful was an adequate contribution. But today, we see that we cannot leave to others direct involvement in the solution of our urban problems. The same successful managerial techniques which have been applied to our businesses must be brought to bear when dealing with our social problems. These responsibilities cannot be left solely to the public sector...."

Walter Reuther, president of the United Auto Workers, said that, to solve its problems, "America must look within itself. When faced with the challenge of war, no one would suggest we meet it with half-way measures." The nation, Mr. Reuther said, needs a "grand alliance by men and women of good will."

Dr. Martin Luther King, a steering committee member who was unable to attend the Convocation, instead sent a telegram calling it "clearly the most realistic, relevant, and moral response yet to emerge

to the grave domestic crisis of which we have been made so painfully aware this summer."

The steering committee statement approved by the Convocation was hammered out by its members in a four-hour meeting Wednesday night. (Full text attached.)

URBAN AMERICA ACTIVITIES: Business and Development Forums

The Business and Development Forums serve as a vehicle through which Urban America seeks to inform and update corporate executives and developers to the needs of the urban community and the opportunities for profit, as well as social contribution through private involvement in urban development. Initiated in 1965, the Forums are a continuing series of conferences which focus on both physical and economic development. Among topics examined in earlier sessions:

Development Forum-1, August 1965, Denver, Colorado -- Redevelopment Roundtable

Development Forum-2, January 1966, Honolulu, Hawaii -- Residential-Commercial Redevelopment

Development Forum-3, January 1967, Boca Raton, Florida -- Business Innovation and the Urban Revolution

Development Forum-4, January 1968, Columbia University, New York -- Public-Private Partnership

Development Forum-5, October 1968, University of California, Berkeley -- A two part program: The corporate role in Corporate Aid to the National Housing Partnerships; and Corporate Aid to Minority Entrepreneurship

Development Forum-6, scheduled for April 21 and 22, 1969, at Columbia University, will focus on the profit potential for corporate investors in developing rental and ownership housing for low and moderate income families under the 1968 Housing and Urban Development Act. Two model cases will be presented: One under Section 235 (home ownership) and one under Section 236 (rental housing). Computer printouts on the two projects will illustrate costs -- land, labor, money and materials -- and the potential overall return to the investor, who takes full advantage of financial inducements in the 1968 Act.

Development Forum-7, slated for October 9 and 10 , 1969, will consider the problems and yields related to the development of "new towns." The University of California at Los Angeles will serve as a co-sponsor of the Forum, which will include an on-site inspection of Westlake Village.

In January 1970 Development Forum-8 will meet in Mexico City to discuss "New Technology in Housing Construction." A variety of techniques which have been used abroad, as well as some which are being tested in the United States will be reviewed.

URBAN AMERICA MAKES STAFF APPOINTMENTS

Three new staff members have been appointed to the Nonprofit Housing Center of Urban America Inc., William L. Slayton, executive vice president, announced today.

Lewis L. Douglass, deputy executive director of the Bedford-Stuyvesant Restoration Corporation, Brooklyn, was named deputy director of the Housing Center; Larry M. Lefkowitz, director of land disposition, Pittsburgh Redevelopment Authority, was appointed Northeastern regional direct; and Norman J. Jacques, former Rhode Island State Senator, was named director for state and local housing development corporations.

As deputy executive director of the Bedford-Stuyvesant Restoration Corporation, Douglass was responsible for the development and administration of economic development, housing, employment and manpower training programs.

Prior to his experience in Bedford-Stuyvesant, Douglass served as a trial attorney for the Interstate Commerce Commission, and as an assistant United States attorney in the Eastern District of New York. He also served as the vice president and treasurer of the Brooklyn branch of the National Association for the Advancement of Colored People (NAACP).

(more)

As land disposition director, Lefkowitz was responsible for all real estate marketing of the Pittsburgh redevelopment agency. He also worked on Federal housing programs with principal emphasis on technical and organizational assistance to nonprofit groups in the area of low and moderate income housing.

Jacques, who was defeated in the November election for a seat in the U.S. House of Representatives, was a proponent of Model Cities legislation for Rhode Island during his terms of office as a state senator and as a member of the Rhode Island House of Representatives. He sponsored or co-sponsored legislation concerning fair housing, medicare, increased state aid to education, a state-supported loan program for college students and establishment of a vocational school.

The Nonprofit Housing Center was created in 1965 under a Ford Foundation grant to provide technical assistance to nonprofit sponsors of low income housing, and to assist communities in creating nonprofit housing development corporations and revolving loan funds. In 1968, the Center assisted nine communities in organizing such corporations.

Urban America Inc. is a Washington-based nonprofit organization concerned with improving the quality of life in the nation's cities. It was formed in 1965 by a merger of the American Planning and Civic Association and the ACTION Council for Better Cities.

3/13/69

URBAN AMERICA INC.
1717 Massachusetts Ave. N.W.
Washington, D.C. 20036
(202) 265-2224

To meet the challenge
of the 1968 Housing Act

...Urban America Inc. is expanding its services to nonprofit housing sponsors, assigned a significant role in reaching the Act's production goal of 600,000 low- and moderate-income units per year. Enclosed is an announcement of a series of nationwide seminars to be conducted by Urban America's Nonprofit Housing Center, a new brochure outlining the center's services and an announcement of staff additions.

But achievement of this goal requires more than new techniques, as was made clear in One Year Later, the anniversary assessment of the Civil Disorders Commission's report published by Urban America and The Urban Coalition in March. Meeting the housing and other needs of the urban poor will require, in the words of One Year Later, "changes in national priorities, programs, and attitudes."

The central purpose of Urban America is to help bring these changes about, in both the private and public sectors of national life. You are invited to join in this work by becoming an Active Member, if you are not already on our membership rolls. A membership application is enclosed for your convenience. (Use it to sign up a business associate if you are already a member!!) Among the benefits of membership:

1. Every two months you will receive CITY, Urban America's unique and highly regarded magazine, and every month the news supplement to CITY, the Chronicle. Both are produced by the same editorial and research staff that prepared One Year Later. You can also subscribe to the monthly Architectural Forum at a special member's rate.

2. You will also get, without charge, special publications such as One Year Later and the forthcoming compendium on national housing policy "The Ill-Housed." IF YOU RETURN THE MEMBERSHIP FORM IN THE NEXT 30 DAYS, WE WILL INCLUDE A FREE COPY of One Year Later in the first mailing to you. (A copy has already been mailed to you if you are a Voting Member.)

3. You will get a special reduced rate at all Urban America sponsored meetings -- housing seminars, business and development forums, the annual meeting, etc. For its annual meetings, Urban America uses a different city as a laboratory of urban problems. This year the sessions will be in Boston, May 19-21, with Urban America's examination of problems and progress of that city to be aided by Mayor Kevin White, Governor Francis Sargent and Robert Wood, head of the Harvard-MIT Joint Center for Urban Studies.

4. You will be eligible to take part in Urban America's yearly special urban development study tours of Europe. This year's Spring tours will begin soon after the annual meeting (May 24 and 31), and the itinerary includes the new communities of Harlow, Stevenage and Welwyn Garden City near London; Vallingby, Farsta and Skarholmen near Stockholm; Tapiola near Helsinki; new areas near Leningrad and Moscow and Sarcelles and Massy Antony near Paris. Cost: $765, which includes round trip jet air fare from New York to Europe and all other air travel in Europe; overnight ship passage from Stockholm to Helsinki; airport-hotel transfers; hotel accommodations (two in a room), two meals a day (three per day in the Soviet Union) and sightseeing tours.

The most significant aspect of membership in Urban America, however, goes beyond these benefits. As a member you will be part of a continuing movement to improve the quality of life in urban areas -- the nation's most pressing task.

WAR ON COMMUNITY UGLINESS

FIVE PHASES OF BATTLE

1 Beautifying the community with trees and plants, while very desirable, is a small part of community design. We will have livable cities only if we take the same hard-nosed attitude toward the use of land that our forefathers did in many of our early towns.

—MORRIS KETCHUM JR., FAIA
President of The American Institute of Architects

2 The question for architects and landscape architects is not the topical one, "Who is responsible for ugliness?" but the ever-present one, "Who is responsible for design?"

—ARCH R. WINTER, FAIA

3 During the next year it is essential that our detailed plan for a long war be refined and made evident to the public as well as our own members. We have a popular crusade; we have the capability of sparkplugging a successful effort; and the good of the country demands victory at whatever cost.

—ROBERT L. DURHAM, FAIA
Chairman, Commission on Architectural Design

4 Everywhere, responsible people believe things have gotten out of hand. But they look to New York as the symbol of what Western civilization is trying to do, as the modern city.

—JEAN GOTTMANN
Author of "Megalopolis"

5 It [second Columbia Conference] opened up a whole new range of prospective *Atlantic* authors. . . . And, perhaps more importantly, it aroused me from an attitude of complacency and indifference to the enormous and continuing problems of the city.

WAR 1

A STRATEGY BRIEFING

What Is This Quest for Beauty?

THE American Institute of Architects is engaged in an all-out war to confront spreading ugliness of American cities, but what is the raison d'être? Outgoing President Arthur Gould Odell Jr. FAIA, at the 1965 convention's annual dinner, succinctly explained that objective when he told his colleagues: "Architects, of course, have always been the designers of our new towns and cities. They must involve themselves in political affairs, struggle against the makers of ugliness, and make it clear to the ordinary citizen that he can have a better city and a better life if he will just demand it."

The next question then: How do we translate "a better city and a better life" into a meaningful phrase? Let's take a look at Detroit, for example—a good case in point because the city, its mayor and its citizens received the first AIA Citation for Excellence in Community Architecture (*see* the June AIA JOURNAL) for "their vision in implementing a comprehensive plan for the central 30 square miles which will transform and revitalize this great metropolitan region."

On a recent visit to the Motor City, the writer had occasion to spend some time with a young minister who has heard about the war and the citation; he feels that architects and planners are often insensitive to human needs. The physical shortcomings are, after all, the most tangible and the easiest to correct.

But good planning and money alone will not remove human ugliness, this youthful man of the cloth reminds the profession. He knows of what he speaks, for he lives in and serves an inner-city neighborhood where people of varying race, color, creed, national origin, social, cultural, educational and religious backgrounds find themselves compressed. They live in homes and apartments owned largely by absentee landlords. We must find a way, he warns us, to motivate these people to want a great environment.

The young clergyman is convinced that driving a bulldozer through such neighborhoods, and building low- and high-rise apartments at rents that range from $150 to $300, will not solve this community problem either. Solutions do not come easily, he admits. Currently he is the president of the West Central Organization, an equally youthful, militant unit whose "purpose is to coordinate the efforts of civic, religious, business and other community groups and work together for the improvement and enrichment of life in our modern urban society."

One of its chief projects is aimed at the razing of abandoned houses, a campaign which reached an emotional peak when three small boys were burned to death in just such a structure. Said the *Detroit Free Press,* a strong supporter of the movement, in a recent report:

"Between March 6, 1965, when the city's Dangerous Building Ordinance was passed, and June 1, 1965, Detroit demolished 1243 unsafe buildings—not including urban renewal project demolitions. Twice that number—2401—are awaiting removal proceedings."

As one drives around Detroit, he sees the same chaos that dots the cityscape across the land. All the familiar ingredients are there: the used-car lots ablaze with multicolored banners; the shuttered theater with its "Post No Bills" declaration; the fire-sale "Best Deal in Town" announcement; and the companion selling-out "Save on Appliances" pronouncement.

But in traveling about town, one also sees concrete evidence of the urban design plan at work: in Lafayette Park, Detroit's first major effort at private redevelopment of blighted land for residential use, and in the cranes and hard hats on the

scene at several other sites—the Medical Center, University City, West Side Industrial Project, Kern block renewal—in various stages of progress.

As AIA President Morris Ketchum Jr. FAIA puts it, "There is a 'hunger in the land' for orderliness and beauty, a hunger reflected in the deep interest shown by city, state and national governments in creating a better physical setting for the lives of our citizens. It is our evident and urgent responsibility as architects to help provide the answers to that demand."

The role of the professional, then, must be much more basic than planting trees and flowers, eliminating billboards and neon signs; these things are not enough. Last fall, in formulating a positive counterattack of architectural and urban design, the Institute emphasized five elements which are essential in any civic improvement undertaking:

• *Citizen participation* means the active support and involvement of the people of a city or town.

• *Government action* means that governments must first of all care about civic improvement.

• *Professional competence* means that architects, planners, engineers, landscape architects, city managers, sociologists, educators—all those who speak out and act from professional platforms and address themselves to the problems of the city—must be up to the job.

• *Competent city management* means a good building code which is well administered, competent civic housekeeping and efficient administration of the city's building agencies.

• *Proper financing* means an obligation of the city as well as private enterprise to budget wisely.

The program, of course, must sift down to the regional and then the chapter (community) level. The challenge calls for a coordinated attack in such a way that the architect marshals the strength of allied professionals and enlightened civic leaders.

So, what about Detroit? President Louis G. Redstone FAIA explains that his chapter has not appointed a special committee for the war effort, but "several others have made it their goal to make our city a better place in which to live.

"The civic design committee has as one of its main objectives the creation of a Detroit Municipal Art Commission, which would have a legal status in planning of major public, civic and even private building projects. The commission, it is hoped, will be similar to the one established in Seattle (*see* the January AIA JOURNAL). The civic design committee is consulted on projects within the central business district and also on public projects throughout the city."

Redstone echoes the sentiment "that physical changes alone will not win the war; social and economic factors are just as important."

In the final analysis, it all gets back to the individual practitioner, acting for the community as a whole, as outgoing President Odell explained: "There are undoubtedly as many incompetent architects as there are incompetent lawyers, doctors, engineers or policemen. But there are many competent architects too. Some excel in design, some in administration and some at coordinating the specialized talents and activities of others.

"Fundamentally, the architect is a generalist. We have never needed competent generalists as much as we do now. Without them, the specialists—each assiduously working away at his limited task of laying concrete, building machines or stringing wire—will ruin us all."

President Ketchum has dedicated his administration and himself to that very cause. But even the azaleas which Mrs. Lyndon B. Johnson planted in the nation's capital have not thrived as they should, either because they did not take root or were not cared for properly. For the Institute, for the profession at large and for every architect, the moral is obvious. ROBERT E. KOEHLER

Who Is Responsible for Design?

BY ARCH R. WINTER, FAIA

The author calls this a minority report, insofar as current views of urban design are concerned. The article dissents from much of what is being proposed for abolishing ugliness and achieving beauty in cities. Yet, instead of discouraging this new attention to city design or disparaging the campaigns to improve city appearance, it seeks a more substantial premise.

THE ISOLATION of ugliness as an evil in itself and the wide public interest in it is relatively new. It began in earnest about four years ago, with the New York Chapter AIA's "First Conference on Esthetic Responsibility." This one-day meeting was so lively as to receive the probing attention of the *New Republic* under the heading "Ugly Day at the Plaza."

Since then, ugliness has become a popular whipping boy. Professional journals castigate it; seminars are devoted to it; books are written about it. Is has reached the tabloids, where it comes profusely illustrated with pictures of billboards, electric power poles and wires, and used-car lots. Schemes have been formulated to take down overhanging signs (though few have actually come down) or to fit them all into block-long bands flush against the facades. Other schemes would cover the upper parts of old store fronts with terra cotta grills or anodized aluminum screens. This is a catchy Sunday-supplement sort of thing, particularly when it comes with smart sketches and retouched but recognizable photographs. These constitute, however, a small part of the remedy. Most of the time, the city scene would be ugly even without the claptrap. Beauty is not merely leaving out signs and power poles; nor is it produced by making old windows with sun screens or hiding automobile wrecking yards with facades of greenery.

Second thoughts suggest that visual chaos is the natural reflection of deeper confusion. It is not the result of lack of attention to appearance, but the consequence of neglecting design in city building, a far more sinful omission. It follows, as the aim is to reshape the urban environment, that this will have to be done, not by face lifting or superficial glances, but through design that is based on ideas and derived from concepts.

In 1924, under the chairmanship of Clarence Stein, AIA Gold Medalist, and with the help of Lewis Mumford, the AIA Community Planning Committee issued a monumental report on the state of town planning and the responsibility of the architect for it. Choosing between planning suggestions that "might be called superficially constructive suggestions and fundamentally constructive ones," the report did not hesitate to take the latter. It said, significantly, that this kind of fundamental planning, "Confronted by a congested traffic avenue . . . examines the alternatives between widening the roadway or creating, let us say, a new center of business which will divert the stream of vehicles." The illustration is so simply put, so understated, that one scarcely realizes that what is being advocated is nothing less than complete and comprehensive city design.

Today's AIA urban design effort is also concerned with the planning that gives shape and form to cities. Likewise, the American Society of Landscape Architects is more concerned with the place of design in planning than with screening unpleasant views, whether of bad architecture or of junkyards. As Grady Clay expressed this concern in a *Landscape Architecture* editorial last fall, "You cannot separate 'design' from 'plan,' nor apply good design like lipstick. The esthetic approach is a way of arriving at thoughtful decisions."

But the insistent urging to do something quickly and clear away urban clutter impels even trained designers toward that very superficiality which the AIA Community Planning Committee warned against. The decisions on whether to widen the

street or divert the stream of traffic are left to highway engineers, while we draw a plan to close off streets, plant trees and install sidewalk cafes.

However much we deplore this kind of "urban-redesign," it has become high fashion. It's easy and it's fun. But enthusiasm for easy esthetic effect is blind to its fatal shortcomings: that it does not get at the real problem and therefore is unlikely to come to much beyond pleasant decorative frills. Worse, when it fails, it discredits the more fundamental design, the design that is—or ought to be—an integral part of planning.

Among professional planners too, urban design is being discovered with spell-binding fascination. Like a new-found ancient artifact, it is being deciphered, discussed and defined in planning circles. One lofty definition called it: "attention to the perceptual elements of the urban environment" but cautiously limited its scope to "the kind of experiences that enhance and enrich daily life rather than those which provide mundane information." This must have been a nondesigner's definition; for no designer is going to exclude the utilitarian from his interest.

A recent study suggests that a city's master plan contain a component called the "design plan" as a companion to the "land use plan" or to the "major street plan." Design is a part of what is termed "the planning process," but it has a separate identity. Focusing attention on design is important, but it cannot be divorced from its subject material. The whole problem is wrapped up in a single statement: "The making of the municipal design plan, like the making of the whole master plan, is a creative process requiring professional skills and techniques."

It is discouraging to turn and find planners, architects and landscape architects embracing, or at least accepting, that design, if not cosmetic, is at least a thing apart—a sort of icing or a dessert separate from the "mundane" staff of life. Nothing could be more false.

In Atlanta, members of the Georgia Chapter AIA studied a suburban section of the city, the Buckhead area, to see what a "design plan" could accomplish. What the study accomplished was a scheme for redeveloping a business center and a nearby residential district. But it went at once—and quite rightly—into questions of land use and circulation to demonstrate that if these elements are well organized, and if buildings are well placed and uncrowded, good design results. Inadvertently perhaps, but conclusively, the study demonstrated that design cannot be divorced for a single moment from its planning subject.

What, then, is the place of urban design, and how is it related to the other aspects of city planning? The answer lies implicit in the name. Its function is the same as that of design without the qualifying adjective: to organize the physical elements for the city's activities and its circulation. In a large city, this can be a complex and difficult task and one that extends from the first studies to the final stages of implementation. But in concept as in fact, the purpose and the place of design in the entire process remain simple. For instance, if design solves the problem of relating urban activities (land uses) to circulation and communication, it will very likely be successful urban design. There is a good chance that pleasing appearance will follow, not automatically, but because, at every stage, the three-dimensional end result will have been in mind.

Urban design, like architectural design, is also a pervasive force that goes beyond the boundaries of its own land. For instance, it should be uppermost in mind during such data-gathering activities as terrain and topographic studies or the "visual survey." The latter itself should be a part of the overall physical conditions and not an analysis of appearance segregated from its subject. Design lies at the very beginning of the process of industrial locations, say, or of street and highway placement.

Fluency is another earmark of urban design. It flows through the whole process of providing accommodations for the activities of the city and their linking circulation. Needless to say, it is present in any consideration of buildings and other structures.

Finally, urban design is a constant factor. It cannot ever really be absent. It is always there, good or bad and inescapable. The point is to realize this fact and, with equal parts of sensitivity and firmness, to draw its potentialities to their highest point of achievement. In this view, good urban design is no different from good building design. Both reject the notion of treating appearance alone and insist on concerning themselves with organizing the functions and arranging their accommodations. They reject the "superficial" solution in favor of the "fundamental" one.

While the nature of city planning is no different now than when the AIA Community Planning Committee made its diagnosis in 1924, the considerations that lie behind urban design and the activities to be organized today are vastly more complex. There is the apparently limitless increase in private automobile transportation and other important factors to be reckoned with: far-reaching power grids and instantaneous communication, home ownership and septic tank subdivisions, geometric population progression, industrial automation and installment living, government financing of private enterprise, especially

that unrugged segment so concerned with land exploitation.

City planning, even where it is well conceived and strongly supported, is finding it difficult to cope with these forces. Government financial aid abounds, but it does not buy the ideas that are needed. And, despite their mystique, those handy helpers, the computers, really do not have much originality.

The answers to many questions may be found outside design. Taxing policies, for example, might be used to promote the best use of land. Raising the income of poor families, whether through the Federal poverty program or otherwise, holds more promise for eradicating slums than any amount of land clearance.

There is one problem, however, that might find the major share of its solution on the drawing board of design. This problem is that of circulation, which in our time and for all but the largest cities means private automobile transportation. But a major difficulty has come up in this respect. Street planning has traditionally been a part and parcel of town planning. However, this part of planning became separated and responsibility for it transferred to central state and Federal bureaus. There, traffic counters and origin-destination surveys revealed the obvious: that the amount of traffic was heavy and getting heavier, while the surveys brought out the fact that 85 percent of motorists were going to, or returning from, the center of the city. What to do about this? The answer was given on a suitably grand scale. A glance at the map will show how well integrated the highway system is as a national transportation network and how poorly it is integrated with the cities through which it passes.

Freeways have not only fallen short of solving the circulation problems, but on the contrary, they have often intensified congestion. The fault and the failure of the urban freeways in most cases come from their having been planned not as streets but as highways, almost independently of the urban activities they were intended to serve. *Urban* highway location should be a part of *urban* planning and consequently a part of comprehensive city design. Up to now, it has not been.

The difficulty has by no means ended here. Another planning activity, in which design is either largely breach-honored or dealt with in a minor way under such headings as "street furniture" or "appearance control," is urban renewal. Yet, especially in the Federal urban renewal program, urban design could find one of its more rewarding fields. For, if renewal is to create permanently useful and attractive districts for city life, it must be done under the discipline of city planning—planning that organizes in a comprehensive design all the physical elements of a particular environment. In other words, renewal ought to be simply a means of carrying an ably conceived city plan.

Lately, urban renewal has been concerned with historic preservation in downtown districts. Hardly anyone will disagree with the motive of historic preservation, especially when it promises protection of important works of architecture. But just as urban design is sometimes reduced to mere appearance control, historic preservation is often distorted to mean architectural conformity. Too often, enthusiasm for preservation spills over into a reforming zeal for regulating style.

Take, for instance, a new three-story office building to be constructed in an upper South state capital. The architectural review board charged with preserving the city's historical and architectural heritage approved the plans only after they complied with its requirements. Among others, the board had required "real, rather than fake shutters." The newspaper reporting this quackery added that the colonial style office building with the real shutters would replace a landmark house built in 1816 and once the home of a distinguished U.S. senator.

Such perversions of historic preservation and design into the shallowest parodies of their intentions are not unusual. Like urban freeway planning outside the context of city planning, they are typical enough to be a warning to those who are seriously concerned with design.

It is possible to renew and rebuild without losing the feel of an era and without copying its architectural style. Philadelphia's Society Hill renewal project does just that. The townhouses clustered at the foot of a group of apartment towers announce frankly their newness. Yet in their use of materials and texture, color and form, and in their scale and setting, they fit congenially and with distinction into their 18th century surroundings. In buildings and cities as in people, individuality does not need to be arrogant, nor originality be coarse.

The place of design in planning for the foreseen urbanization is a tremendous issue. Some idea of the size of the demand for city planning and its critical component, urban design, can be gained from the growth projected for the nation, a growth that will call for city building equivalent to all that exists today. As the AIA has stated it, we must build a "second United States."

With this prospect, the question for architects and landscape architects is not the topical one, "Who is responsible for ugliness?" but the ever-present one, "Who is responsible for design?" ■

Adapted from an address given at the Senior Honors Banquet, Ohio State University, sponsored by its student AIA chapter.

WAR 3

AMMUNITION SUPPLIES

How Should the Community Be Involved?

WHEN THE City of Eugene, Oregon, was honored with a citation for Excellence in Community Architecture last month, it became the third to receive the newest, broadest and one of the most important Institute awards—certainly a potent weapon in the current war.

Within the next six months, 11 similar citations will have been made. Shreveport, Louisiana, and Detroit (*see* the June AIA JOURNAL) were the first two cities selected in the program established by the Institute's board of directors in January.

Like most professional organizations, the AIA has a host of awards it gives annually to outstanding individual practitioners and related design professionals. Chief among them is the Honor Awards program, the "Oscars" of architecture. Implicit in the recognition of the architect is equal credit to the client who insisted on outstanding design.

But the new program, administered on a regional basis, honors literally millions of clients, the taxpayers in cities having planned projects which "successfully realize the objectives of creating vital environments for the core of American cities."

Under terms set up by the directors, a project to be considered must be planned and approved, under construction or completed, so that "every valid step toward the realization of creative urban environmental architecure may be recognized and its sponsors encouraged to proceed with its completion."

The AIA Commission on Architectural Design, through its Committees on Urban Design and Esthetics, is responsible for searching out, evaluating and proposing suitable projects in each of the 17 Institute regions for citations. The regional director in each case makes the nomination to the national board after it has the approval of the AIA chapter located nearest the project.

In further specifications, the board has asserted that only projects which recognize the need for separation of pedestrian and motor traffic, integration rather than separation of human activities, and the need for overall traffic planning to serve the project and its surroundings should be considered for an award.

The public relations potential of such a comprehensive program is great indeed. Look at Shreveport, for example. The director presented citations to the president of Downtown Shreveport Unlimited, an organization of businessmen supporting the plan, and to the architect consultant (author of the preceding article) during the regional convention in Biloxi, Mississippi. At the same time in Shreveport, the director's partner presented the award to Mayor Clyde E. Fant at the annual banquet of the Louisiana Municipal Association, attended by some 900 officials from throughout the state.

In Detroit, Mayor Jerome P. Cavanagh, upon accepting the citation at the Michigan regional convention held in the Motor City, helped to focus attention on the award with a carefully thought-out statement, which said in part:

"We must plan and design for a people in a vibrant, urban society. The architect will continue to play a leading role in developing the Great Society, the city of promise, if he keeps in mind as all of us must, that the human being is the most important element in art and in science.

"And a truly creative architect cannot turn from his fellowman—from his needs and aspirations—and expect to fulfill his own potential. Fortunately, for Detroit and for America, most of your profession are well-rounded men: men who recognize their responsibilities as well as their talents. The rest of us depend upon you. We need your help in making our cities and our world a better place in which to live. We appreciate what you already have done for us. We look forward to working with you even more in the future."

When one realizes that the same kind of enthusiasm is to be generated in cities in all parts of the land, the impact of the program becomes readily apparent. As Commission Chairman Robert L. Durham FAIA puts it, "A project so honored serves to illustrate John Ely Burchard's article in the AIA JOURNAL (*see* "Some Antidotes for Ugliness" in April) in which he pleads that what we need are better examples of urban architecture in this country in a number of different categories so that the populace can see the difference between the good and the bad."

The community citations program, however, is just one phase of the ammunition, material about which has been compiled in a "Weapons" book distributed to every AIA chapter president. Other significant items:

• *"No Time for Ugliness" film*—Now being distributed, copies of movie No. 1 already have been purchased by 60 chapters. Viewers at each showing will be given a brochure entitled "No Time for Delay," suggesting steps they can take in their own communities (examples below).

• *Silent, 54-frame color filmstrip*—Used primarily in social studies, history and art classes of secondary schools, "Our Alabaster Cities" is accompanied by an explanation and text. Estimated presentation time: 25-30 minutes.

• *"No Time for Ugliness" brochure*—The 11x14-inch piece, also carrying the film title, has been prepared for government officials and other decision-makers. It closes with a plea for action: "What can *you* do? The situation isn't hopeless. The same dedication and ingenuity that built Greece 2500 years ago and is hurling tons of hardware at Mars today can surely eliminate the ugliness of the American city."

• *Inventory of community environment*—Good and bad examples are tabulated in a list which includes views and impressions, sidewalks, signs, billboards, public buildings, etc.

• *Survey of historical buildings and sites*—The objective is to preserve for posterity and to endow with new meaning and vitality as many structures, groups of structures or monuments as possible that have architectural and/or historical value.

• *Design concept seminars*—Conducted at the chapter level, these sessions give all members of the profession an equal opportunity to participate in this analytical and self-improvement program.

• *Esthetic responsibility seminars*—Sixteen have been held on the regional level in the past two years, but they are now being promoted on the community level so that the practitioners and civic leaders can get together to discuss what can be done to help fight the cause.

• *Urban Design Worksheets*—This series gets underway in the current issue, while the preceding 12 JOURNAL articles will be available in book form during the fall—all to help the architect achieve the "realization that his responsibility is not just to each individual client, but to the entire community and to all its people." ■

WAR 4

FRONT-LINE OPERATIONS

Where Are Some Signs of Progress?

THE URBAN PATTERN of New York is in a state of constant evolution. The magnitude of its problems in terms of population, deterioration of neighborhoods, shifts of centers and the magnificent scope of its building operations make it one of the most complex and contemporary cities in the world: a city, then, which surely is worth observing in terms of the current crusade. These operations appear isolated, being in the main, left to an initiative motivated solely by the laws of supply and demand, without subscribing to a coherent overview of the city.

The inefficiency of these operations is due, not so much to laissez-faire patterns as to programs expediently launched under diverse and independent controls. These controls, more often than not, are antagonistic and competitive; particularly within the current planning framework of the municipal government. Thus Traffic Commissioner Barnes will successfully bid for two city parks to provide the city with underground garages at the expense of the Park Department, while over the objections of the City Planning Commission, a police headquarters building slated for the proposed civic center is assigned by the Site Selection Board to another location simply because the latter was available.

The multiplicity of controls, each with its own set of priorities, makes New York difficult to deal with in terms of urban design. New York is a series of submaster plans; its precarious unity is retained to a certain degree only by the rigidity of its gridiron structure.

These plans, these new centers, include municipal endeavors such as the creation of a civic center or the renewal of Manhattan's West Side; quasi-public projects such as the proposed World Trade Center; and audacious projects under private initiative of large corporations or labor unions such as new headquarters for General Motors or Litho City. Even within an unfavorable planning climate, these examples indicate the degree to which progress is attainable by bold undertakings and planning experiments. These are the needed first steps in a logical progression toward a master plan for the future development of the city.

West Side Urban Renewal—In the planning stage since 1955 and launched in 1962, this program has become a 20-block laboratory to test new tools and try new approaches to urban renewal. Combined with the conservation of buildings in good condition and the rehabilitation of marginal ones, approximately 7500 dwelling units in four low-income projects and four middle-income cooperatives will be provided along with luxury-housing units. Known as "vest-pocket" projects because of their moderate size and relatively small sites as opposed to the superblock development used until now, these projects were scheduled for construction to avoid large scale relocation of the present inhabitants of the area—the first phase being the construction of the four Housing Authority projects now nearing completion.

The planned integration of various economic groups within the area bounded by 87th and 96th Streets, Central Park West and Amsterdam Avenue features a new experiment. A maximum of 20 percent of the middle-income units will have "skewered-rentals" in which low-income families will pay public housing rentals, the difference being subsidized by the city or state. These rentals will go up as the income of the family increases.

These two major innovations reveal an anxious search for new ideas and an attempt to soften the impact of renewal on the social and economic life of a community. The vest-pocket concept was an expensive experiment which has proved its practical feasibility. The deteriorated portions of a city block are replaced, but the block's still valuable private housing and commercial structures are retained or rehabilitated. Mass relocation is avoided and the positive features of a neighborhood and architectural diversity are preserved. Vest-pocket

sites have allowed the financial participation of local citizens, business groups and community organizations such as the Goddard Riverside, the Riverside Neighborhood Assembly and other philanthropic and religious groups.

A Civic Center for New York—Proposals for a cohesive civic center plan of approximately 60 acres were developed by a mayor's civic center committee assisted by traffic and architectural consultants (Max Abramovitz FAIA, Simon Breines AIA and Robert W. Cutler FAIA). An important part of the city's efforts to rehabilitate lower Manhattan, the ABC plan would consolidate various existing and projected Federal, state and municipal buildings into a unified center free of vehicular traffic. For convenience, the center was divided into three areas.

Plans for Area 1 currently being prepared by Edward Durell Stone FAIA and the firm of Eggers & Higgins propose a 52-story tower with 892,725 square feet of office space fulfilling the functions originally assigned to two buildings under the ABC plan. The open space of the new scheme is divided into landscaped perimeter parks, recessed courts, a mall and plaza with reflecting pools, a treatment criticized recently by various architects who feel that the new structure "should be handled less as a tower and more as a wall" to define a central open space.

Area 2 of the center, immediately north of the new municipal tower, was assigned to a 41-story Federal office tower and its U.S. Customs Court. In the ABC plan, the consultants had recommended the shifting of the tower west toward Broadway and the Court annex to Worth Street, the area's northern boundary. This shift was again requested recently by the Architects Council of New York in view of the extension of the old site to Broadway, but so far without success.

In Area 3, north of Worth Street, sites have been assigned for various civic buildings. This area would extend to the proposed Lower Manhattan Expressway.

The World Trade Center—In accordance with legislation enacted by the states of New York and New Jersey, the World Trade Center whose twin towers will soar 110 stories, 1350 feet, above a 5-acre open plaza will be built on a 16-acre site bounded by West, Barclay and Vesey, Church and Liberty Streets, on the lower west side of Manhattan. It is expected that 50,000 people will work in the Center, which will also accommodate approximately 80,000 daily visitors. The construction, the cost of which is estimated at $350 million, will be financed by the Port Authority on a self-supporting basis.

The main objective of the Center is to consolidate into one headquarters all governmental and private services essential to the movement of international trade and indispensable to the processing and financing of international commerce. This concentration will include government trade agencies such as the U.S. Bureau of Customs, transportation carriers, foreign consulates, commercial attachés, international banks and private concerns engaged in the import-export trade of world markets. In addition, a world trade institute and an

Progression toward urban order: The Civic Center

Progression toward urban style: Kips Bay Plaza

Progression toward urban continuity: Litho City

information service, year-round exhibit and display facilities will serve as focal points for world trade education, promotion and research providing conference facilities and trade information on market opportunities and regulations. Of 10 million square feet of the center's rentable space, approximately 4 million will be available to business and industry.

Progression Toward a Human Measure—The undertakings illustrated above have a tendency toward monumentality, a new dimension and scale fully reflected by the great span of the city's recently completed gateway, the Verrazzano-Narrows Bridge. Yet there is a search to reintegrate the human scale in a city of inhuman dimensions. In recent years, much of the attack leveled at urban renewal and housing programs, has caused architects and planners to re-evaluate many of the concepts popularized in Le Corbusier's Plan Voisin or the Radiant City, Wright's Broadacre City, Clarence Stein's Radburn plan and more recently in Jean Gottmann's Megalopolis and Doxiadis' Linear City. Thus, the idea of the superblock as a sure-cure for urban ills—because it separates vehicular-traffic from pedestrians and provides sheltered open spaces in quasi-suburban privacy—was seriously questioned when placed in the context of mass relocation and disruption of a neighborhood's life. This re-evaluation is evidenced in urban renewal schemes such as Manhattan's West Side and in the hopes voiced at the Planning Commission's design symposium.

Progression toward urban amenity: Carver Amphitheater

The challenge to the superblock has come from such commentators as Jane Jacobs in "The Death and Life of Great American Cities" and from architects faced with the monotonous and unvaried repetition of salmon-colored blocks. Other architects have sought to remedy these inherent disadvantages, attempting to harmonize the volumes of new development with the older five- and six-story buildings in the old sections of the city. Architects such as Pomerance & Breines in their pedestrian mall proposal for midtown Manhattan, Kelly & Gruzen in their Litho City scheme have sought provocative ways to provide continuity to a city fabric otherwise interrupted by the island-like orientation characteristic of superblocks.

A new concern for the human scale and the need for amenities which transcend practical considerations are vividly demonstrated in an experimental program undertaken by the City Housing Authority. New developments unsoftened by the patina of age were hampered by a lack of variety in the pattern of human activity. These barren open spaces with fenced-in grass areas and asphalt parking fields are being gradually transformed into useful focal points indispensable to the social and recreational life of a neighborhood. Such an attempt was made in the East Harlem Plaza designed by Albert Mayer FAIA for the Authority's Jefferson Houses.

More recently, with funds provided by the Vincent Astor Foundation, the Authority undertook the revitalization of the inert spaces at the Carver Houses in East Harlem. In the new design by architects Pomerance & Breines and by landscape architect M. Paul Friedberg, active play spaces for children and teen-agers and the recreational needs of adult residents were fulfilled in an imaginative sequence of levels, spaces and rugged materials. The success of the Carver Amphitheater has called for a repeat performance by the same team for the Riis Houses on the lower East Side.

The paradoxical quest for monumental grandeur on the one hand and a search for human scale on the other are symbolized by a special report issued last fall to launch the Planning Commission's comprehensive planning program. Among the major proposals for the development of the Port of New York, the report pressed for a rejuvenation of its piers, large industrial parks and other port facilities to cope with changing times and technologies. A large mid-town superliner terminal is envisioned; residential towers and recreation centers are placed in verdant parks by the water's edge. The recreational potentials of the Hudson River are further explored in such projects as Litho City where community facilities, restaurants, and student centers are placed close to the river.

CHARLES THOMSEN, AIA

Why Is the Press Sometimes Wary?

"The American Press," a respected editor said, "has not kept pace with one of the biggest home-front stories in American history." And the story of urban building, George McCue of the *St. Louis Post Dispatch* went on to point out, "is breaking right at the doorstep of almost every newspaper."

The story, since McCue's assessment of nearly three years ago, has grown bigger, its dimensions made greater by a national government that has emphasized the herculean building and rebuilding job implicit in the population surge projected over the next four decades.

It is a story made bigger still by the new emphasis on qualitative considerations. The nation's architects and, indeed, its President have rescued beauty from scorn; no longer are community esthetics, environmental accommodations and human planning pathetic concerns of a remote idealism to be strewn helplessly along the path of "progress."

If the press is failing, why? McCue placed the blame on both newsmen and architects. Of architects, he said: "Some are aloof, some are poor communicators, some are so busy that they are hard to catch at the moment a newspaperman needs contact."

Press coverage demands a two-way line of communication. If future coverage is less than commensurate with the innate bigness of the story, architects will want the small comfort of knowing they upheld their end of that line. But vastly overriding all else just now, as the profession undertakes its War on Community Ugliness, is that this campaign, imperatively, must be conveyed to the people; its outcome depends on the people.

There is a temptation to suggest that journalism and architecture enter into a partnership toward a more humane and beautiful America, but something disdainful resides in the notion of the press being in league with anyone, no matter the loftiness of objectives.

As Americans, we want the press to be a detached, bird-dogging force. We want it to continue its wary ways.

Its wariness is hardly mystifying. The press is baited and belittled, "used" and abused. Still, if it knew only fair play and praise, accommodation and caress, its skepticism would scarcely diminish.

The press is wary, mainly out of a sense of public responsibility—a responsibility it is continually being told about, which suggests the press may be a trifle weary as well as wary.

The press is mindful of its public responsibilities and cognizant that not everyone with whom it deals is equally inclined toward the public good.

The press is mindful of what it considers the typical reader: John Smith on Elm Street who watches televised ball games, frequently fails to make head or tail of the newspaper stories on the downtown redevelopment project, and is indifferent to terms like "community esthetics."

In working with the press, it is well to keep the public in mind, in both the general and the specific (John Smith) sense.

With this framework established, the next step is contact, architect-to-newsman contact, human-to-human contact. Establishing contact with the press is easier than it might at first seem, and it does not at first seem easy. But newsmen, the feverish atmosphere of their home base notwithstanding, relish the bearer of something worth talking about; and the architect, elite corpsman in the crusade for a better community, has a worthwhile message, one that is directly tied to the public interest.

Maybe the architect's message will make a news story. Maybe it will open some eyes, as the eyes of Alfred Harrison, associate editor of *The Atlantic Monthly,* were opened recently at a three-day meeting on "Design and the City," sponsored by the AIA with an assist from Columbia University. Named for its site, Arden House in Harri-

man, New York, the conference "aroused me from an attitude of complacency and indifference to the enormous and continuing problems of the city," Harrison declared.

Conceivably, the architect might be let down hard. In any event, he was neither aloof nor too busy to recall George McCue's words, to try to uphold his end in the two-way flow of communication that is so vitally necessary.

Somehow a contact has to be made, says Charles Abrams, chairman of the Columbia University School of Architecture's Division of Urban Planning and a writer long familiar with problems of reporting on the environmental scene.

A panelist at the Arden House conference, Abrams told the assembled magazine editors and broadcast personnel that meager coverage is due neither to Mr. Typical Reader nor to the journalist's ability to interpret.

What is wrong, Abrams said, is that the "average journalist doesn't know the story." And so, he added, "a mine of interesting information" goes unextracted—because writers "can't establish contact with the field."

Someone in the meeting's final session—"Reporting Problems, Techniques, Opportunities"—said rather flatly that public interest in community design is a goal that defies realization. Not so, snapped Abrams. Look at the popular "city shows" General Motors presents at the World's Fairs. "GM has made the contact that the newspapers have not," he said.

One radio news executive led a press argument that limited staffs—"I've got three guys, chasing fires," he explained—add up to coverage confined to spot, easily tellable events with proved public consumption.

Action, he was inferentially saying, catches the public eye and the eye of the press. Could the speech, then, the slide presentation, the appearance before the city governing body, constitute the necessary action? Hardly sensational events, they nonetheless have movement. In the same vein, a carefully noted visual inventory of the community, taken by the architect to the editor, may be an excellent starting point.

Whether the news is "made," with press coverage as a legitimate and coincident objective, or prepared and furnished the press, newsmen by and large will welcome the architect's help in covering the physical environment—on some newspapers a regular assignment.

Magazine and broadcast participants at Arden House were advised not to "go to the experts because the experts confuse us." That advice may or may not be valid for an accomplished architectural writer, from whom it came, but it is certain that the workaday reporter needs all the help he can get, and would be the first to admit it.

The architect can and must help, and not inappropriately, for both architect and journalist are generalists in creative pursuits. Both are interested in the well-being of their community. There is good basis for their having a healthy working arrangement.

To help the newsman, the architect's words must be clear, layman-oriented but professionally couched; his evangelism must be earnest but low-keyed. His is a war of reason. He should forget the attributes ascribed to newsmen by most books and all movies, except that of skepticism.

The press is indeed wary; its members are wary. All the same, newsmen respond, sometimes with astonishing enthusiasm, to substance presented with sincerity, and sincerity involves actions as well as words.

If the architect, the person expected to care most about how his community looks and functions, appears less than passionately concerned, how can the newspaper feel any real confidence in critical environmental judgments it may have made? If the architect seems preoccupied with having his renderings published, how can the newspaper reasonably focus in on the larger matters of spaces between buildings—the architecture of the community?

If newsmen encounter "rendering quibblers" in the War on Community Ugliness instead of high-minded, public-spirited combatants, the consequences for the profession of architecture could be devastating. More importantly, an innocent third party—the public—will suffer most.

To cover the assault on community ugliness, the newsman needs not renderings but rapport.

He doesn't want the architect to write his story; he needs help in appraising the subject.

He doesn't want to be patronized; he needs a solid basis of understanding.

He doesn't want to be impressed; he needs a set of impressions from the knowing.

He doesn't want to be exploited or deceived; he needs encouragement and guidance in helping the public to perceive.

He doesn't want to be cultivated; he needs communication.

Russell Lynes, managing editor of *Harper's Magazine*, said at Arden House that "our primary problem . . . is to get people to use their eyes. Basically, what we try to do is make people look at their environment."

This is not easy. The press needs the architect's help in developing a sighted public if final victory is not to fall to public unsightliness.

NEIL E. GALLAGHER

A New Tool for the Practicing Architect

URBAN DESIGN WORKSHEETS

As the original 12 articles on "Urban Design—The Architecture of Towns and Cities"—will be made available in book form this fall, it is fitting indeed, that a sequel should begin in the AIA JOURNAL. This new, continuing series of worksheets will go beyond the background, elements and aims of urban design to concentrate on the practical working concepts in cities, large and small. ☐ The worksheets will vary both in length and in format. Some will be mostly graphic; others will be in a checklist form or in the typical text layout; still others will be a combination of elements. ☐ Varied in subject matter too, the worksheets sometimes will discuss minute urban design details; at other times, the design aspects of regional planning. In every case they will stress practical knowledge which can be put to work by today's architect. ☐ The worksheets also will report on current projects which have possible relevance to other practitioners. The first in this series is precisely of that nature. ☐ A supplementary dues project, the series will be prepared by Paul D. Spreiregen AIA, who welcomes comments and suggestions, particularly from readers who may have been involved in a project which merits presentation as a worksheet. ☐ The original articles have been considerably revised and brought up to date for the book (McGraw-Hill), which presently constitutes the AIA's overall statement on the role that urban design plays today.

URBAN DESIGN WORKSHEET 1

PREPARED BY PAUL D. SPREIREGEN, AIA, FOR THE COMMITTEE ON URBAN DESIGN

An Urban Design Contract

ROCKVILLE, MARYLAND, is about 15 miles north of downtown Washington. Once a summer community, its population soared from 2000 people in 1940 to 6000 by 1950, 26,000 by 1960 and 38,000 today. So sound is Rockville's financial picture that it can afford to rebuild 90 percent of its old commercial building stock. Progressive civic programs plus astute political leadership have earned it two "All-American City" awards.

As part of an overall civic improvement program, Rockville has a 46-acre renewal project downtown, covering the heart of the central business district. City officials wanted to supplement their initial planning studies—traffic, finance, renewal operations—with detailed urban design studies and plans. To do this they contacted a number of architectural firms whom they felt were capable of this work. They outlined the requirements for the urban design consultant in a letter which is an exemplary document (across page) and a statement of planning activity to date.

Their choice of consultants was the Philadelphia firm of Geddes, Brecher, Qualls, Cunningham (GBQC), with Robert L. Geddes AIA as partner in charge. They then proceeded to draft a contract for services. Actually, two contracts were developed, both of which are reproduced on pages 46-47. These two contracts clearly defined two separate aspects of GBQC's work: The first was for an *overall design concept* for the renewal project plus the preliminary design of the city-built elements of the project; the second was for *consultant work* with individual private developers so their designs would be in accord with the city's plans.

Spelled out more broadly, the first contract was for a design concept and the preliminary design of certain items of public work. These items include open spaces, parks, plazas, lanes, walks, parking structures and other details. This work is akin to the normal preliminary design work of an architectural project leading up to, but not including, working drawings and specifications. Depending on the results of the overall design concept and the preliminary design work, GBQC would write other supplementary contracts to do the working drawings for particular items of design.

In the second contract—the consultant's work with developers—GBQC's position would be somewhat akin to the architect's role during the construction phase of a project. GBQC would act as arbiter between the city and developers but in a creative and helpful way. GBQC, in assuring that a developer's proposal will fit the renewal project, will make many helpful suggestions, as well as clarify the design objectives of the entire project for the developer.

In both the first and second contracts, GBQC acted as architects working at a large scale, on the one hand as preliminary designers and, on the other, as design consultants. The justification for independent contracts is obvious. It allows flexibility as well as the opportunity to tailor subsequent contracts around requirements not foreseen at the early stages of work.

As consultants, GBQC could question some of the basic planning premises of the project as they transformed it into viable architectural form. They could also help determine the exact nature, form and construction scheduling of the key public actions for Rockville's redevelopment. All in all, this procedure amounts to a fluid *modus operandi.*

It should be stated that these contracts are only one example of urban design contracts developed for a particular kind of urban design job. Contracts for other types of urban design work would undoubtedly require other types of documents. It must also be stated that neither the Institute nor the architectural profession has any policy, other than that of the AIA Document B131, for architects' fees and general policies.

We now present the original letter from the City of Rockville to GBQC, contract No. 1, contract No. 2 and illustrations of the design work thus far produced under contract No. 1.

August 13, 1964

Mr. Robert L. Geddes
Geddes, Brecher, Qualls, Cunningham
258 S. Van Pelt Street
Philadelphia 3, Pennsylvania

Dear Mr. Geddes:

The City of Rockville is going to engage an urban design consultant to work with its Departments of Urban Renewal, Planning and Public Works on its 46-acre Mid-City Urban Renewal Project which covers the commercial heart.

The city is seeking a firm or an individual who has had urban design experience; a firm that can see beyond a single building and look at design for an entire central city; a firm that can relate buildings and open spaces to each other and, in turn, effectively relate these to the pedestrian; a firm that can objectively analyze the architectural designs of other firms and assist in making their designs fit into and be compatible with a general urban design for the whole area; a firm that wishes to play a major design role in the rebuilding of a small, progressive city and thus show that small-city-commercial urban renewal can result in a pleasing, lasting, satisfying and functional heart of a community. Specifically, the urban designer who is employed by the City of Rockville will:

1. Work with the city staff in expanding or modifying the existing urban renewal plan by preparing a detailed design concept and objectives which will serve as a basis for development controls and regulations, and which will guide developers and their architects as they design specific buildings.
2. Design the improvements for all the public areas—malls, sidewalks, streets, etc.—so they will play their proper and effective role in the total design concept.
3. Participate in the design of the parking facilities, service parking areas, ramps, garages and underground parking facilities, all of which will be built by the city.
4. Work with the city on a continuing basis to give advice on urban design as the project develops and to participate in the review of potential developers' proposals.

The attached statement "Rockville and Urban Renewal" and the accompanying documents describe the urban renewal project and the urban renewal plan as they stand today. There is much to be done to convert these documents, and the ideas contained therein, into physical reality.

We would like to further discuss our project with you if you have an interest in joining with the City of Rockville as an urban design consultant. We hopefully look forward to the possibility of hearing from you.

Sincerely,
PETER L. CHENEY
Director of Urban Renewal
City of Rockville

URBAN DESIGN CONSULTANT CONTRACT NO. 1

AGREEMENT

This agreement entered into this _____ day of _____ by and between *the Mayor and Council of Rockville,* Maryland, hereinafter referred to as the "Local Public Agency," and *Geddes, Brecher, Qualls, Cunningham,* Architects, 2101 Pine Street, Philadelphia, Pennsylvania 19103, hereinafter referred to as the "Urban Design Consultant."

WITNESSETH THAT:

WHEREAS, the Local Public Agency has, under date of August 20, 1964, entered into a Loan and Grant Contract with the United States of America providing for financial aid to the Local Public Agency under Title I of the Housing Act of 1949, as amended by all amendatory acts including the Housing Act of 1954; and

WHEREAS, pursuant to such Contract the Local Public Agency is undertaking certain activities necessary for the planning or execution of a Project, situated in the Project Area described below; and

WHEREAS, the Local Public Agency desires to engage the Urban Design Consultant to render certain technical advice and assistance in connection with such undertakings of the Local Public Agency.

NOW THEREFORE, the parties hereto do mutually agree to the following:

1. *Scope of Services*

The Urban Design Consultant agrees to furnish and perform the various professional services required for the Project Area known as the Mid-City Urban Renewal Project—Project No. Maryland R-16 as described in Exhibit "A" attached hereto—and shall do, perform and carry out, in a manner satisfactory and proper as determined by the Local Public Agency, the following:

a. Design Concept

In cooperation with the staff of the Local Public Agency, the Urban Design Consultant shall prepare a *definitive design concept* for the development and for the disposition and development of land in the Project Area. The Urban Design Consultant shall take into account, give consideration to and build upon previous efforts and information gathered, the expressed interests of the Local Public Agency and the City staff and needs of the area, and the expressed cooperation of all agencies, in establishing the urban design and schedule of the Project. This design shall set forth the urban design criteria and objectives for the Project Area and the necessary controls to insure achievement of the design concept.

Design criteria and objectives shall include but not be limited to the following:

(1) Site plan

(2) Interrelationship of buildings to open spaces

(3) Height and bulk of buildings

(4) Pedestrian and vehicular traffic circulation

(5) Parking plan

(6) General standards for control, architecture, landscaping, signs, amenities, etc.

The design concept for the development shall consider and relate appropriately the component elements of the Project Area to each other, to the surrounding area and to the community as a whole.

The design concept for the development shall include recommendations for changes in the Urban Renewal Plan, as may be necessary for establishing such design criteria and objectives.

The design concept for the development shall include only such schematic architectural plans and details for buildings as may be considered necessary to communicate the quality and character that is desired.

The design concept for the development shall be prepared in a form that will be usable to the Agency in preparing the documents necessary to offer, dispose of, and develop the land in the Project Area.

The Urban Design Consultant will submit to the Local Public Agency a final report (100 copies), containing a written statement, graphics and tabulations, as necessary, expressing the design criteria, objectives and controls for the Project Area. The written statement shall be accompanied by sufficient maps, drawings, elevations, and photographs to give a clear graphic presentation of the design criteria and objectives.

b. Public Facilities

The Urban Design Consultant shall prepare schematic plans and details of public work, including open spaces, parks, plazas, lanes, walks and the circulation ways when desirable to communicate the quality and character of the public work.

c. Use of Consultants and Special Studies

When, and as authorized by the Local Public Agency, the Urban Design Consultant in developing the design concept for the development may consult with or obtain special studies from appropriate persons or entities. Special studies will not be obtained without prior authorization from the local Public Agency and the cost of such studies shall be paid for by the Local Public Agency.

The Local Public Agency may retain, and contract for directly, Consultants and Special Studies, and the Urban Design Consultant will work closely with such consultants to insure the best results and protect the interests of the Local Public Agency.

2. *Time of Performance*

The Urban Design Consultant shall begin the performance of his service upon receipt of written notice by the Local Public Agency to proceed. The time of said performance shall comprise a maximum period of six (6) months from said written notice to proceed.

The schedule of work by the Urban Design Consultant will be established in conjunction with the scheduling requirements of the Local Public Agency.

3. *Compensation and Method of Payment*

a. *The Maximum Compensation*

Any terms of provisions herein to the contrary notwithstanding in execution of this contract, the maximum compensation to the consultants shall be in the amount of $_____.

b. *Method of Payment*

Compensation shall as hereinafter described be made by the Local Public Agency to the Urban Design Consultant on a monthly basis, as promptly as possible upon the receipt of a requisition for payment from the Urban Design Consultant specifying the work performed for the respective monthly period, as well as the work proposed for the coming month.

(1) The Urban Design Consultant shall submit to the Local Public Agency the names, qualifications and proposed compensation of all personnel and principals of the Urban Design Consultant's firm proposed to be employed.

(2) Robert Geddes, the principal designated by the Urban Design Consultant as Director of the professional services and work described in the Scope of Services above, shall be charged at an hourly rate of _____ per hour.

(3) Salaries and wages of professional, technical, secretarial and administrative staff required for

services and work described herein shall be charged at a rate of two and one-half times actual rate.

(4) The following fees and charges shall be directly reimbursable to the Urban Design Consultant in accordance with invoices rendered:

(a) Consulting and subcontractor fees for contracting and subcontracting services deemed necessary which cannot be provided by the Urban Design Consultant, provided, however, that the employment of said outside consultants and subcontractors, if any, shall first have been approved in writing by the Local Public Agency.

(b) Travel expenses for out-of-town services and subsidy costs relating to such services.

(c) Long distance telephone and telegraph charges.

(d) Cost of reproductions of maps, charts, drawings, reports, all other data and materials required to be reproduced pursuant to the terms of this agreement.

(e) Such other costs as may from time to time arise, provided however, that expenditures therefore which are not expressly provided for herein above, shall have first been authorized and approved by the Local Public Agency prior to having been incurred and made by the Urban Design Consultant.

It is expressly understood and agreed that in no event will the total compensation and reimbursement, if any, to be paid hereunder exceed _____.

5. *Terms and Conditions*

This agreement is subject to and incorporates the provisions attached hereto as *Part II—Terms and Conditions* (Form H-621B, dated _____).

IN WITNESS WHEREOF the Local Public Agency and the Urban Design Consultant have executed this agreement as of the date first above written.

URBAN DESIGN CONSULTANT CONTRACT NO. 2

AGREEMENT

[Same as in Contract No. 1]

1. *Scope of Services*

When and as directed in writing by the Local Public Agency, the Design Consultant shall render services to the Local Public Agency in the disposition and development of land in the Project Area known as the Mid-City Urban Renewal Project—Project No. Maryland R-16 as described in Exhibit "A" attached hereto and made a part hereof. Such services shall be performed in a manner satisfactory and proper as determined by the Local Public Agency and in conjunction with the satisfactory progress or completion of the contract between the Urban Design Consultant and the Local Public Agency calling for the preparation of a "Design Concept" which contract is dated _____ _____. This subject contract may include, but is not limited to, the following:

a. Assistance in the preparation of the necessary procedures and documents.

b. Review and analysis of the proposals of owner participants and developers.

c. Advice and assistance in contract negotiations with developers.

d. Advice and assistance in the control of the development of the sites under contracts for disposition and development.

e. Consultation with owner participants and developers and their architects.

f. Preparation of schematic and/or preliminary design and plans for the development of all public work, including all open spaces, parks, plazas, lanes, walks and other circulation ways; all parking areas and structures; and related physical improvements.

The Local Public Agency retains the right to approve the assignment of the Urban Design Consultant's key personnel to perform any of the services this contract requires.

In order to protect the Urban Design Consultant against excessive and unnecessary expense and time and to provide a reasonable cost control and cost anticipation to both the Local Public Agency and the Urban Design Consultant, all contacts, conferences and consultations by the Urban Design Consultant with owner participants and developers shall, in all cases, be at the written request and approval of the Local Public Agency.

When directed by the Local Public Agency, the Urban Design Consultant may incur such expenses for travel, telephone, telegraph, reproductions, printing, etc., as are necessary to provide services under this contract.

The Local Public Agency agrees to give thorough consideration to all reports and recommendations as made by the Urban Design Consultant.

2. *Time of Performance.*

The services of the Urban Design Consultant are to commence when authorized by the Local Public Agency after execution of this contract and in conjunction with the appropriate progress of the contract for preparation of an Urban Design Concept and shall be undertaken and completed in such sequence as to assure their expeditious completion in the light of the purposes of this contract, but in any event all of the services required hereunder shall be completed eighteen (18) months after the date of this contract. In the event that the Local Public Agency desires additional service, after the eighteen-month period, the Urban Design Consultant shall act as consultant for the Local Public Agency under the terms of this agreement, amended to reflect the extension.

The schedule of work by the Urban Design Consultant will be established in conjunction with the scheduling requirements of the Local Public Agency.

3. *Compensation and Method of Payment.*

[Same as in Contract No. 1]

4. *Terms and Conditions*

[Same as in Contract No. 1]

5. *Other Provisions*

It is the intention of the Local Public Agency to enter into an additional contract with the Urban Design Consultant to complete the final design and Contract Documents for the public ways, spaces and facilities.

Since there is more than one contract involved covering different stages of work on the Mid-City Urban Renewal Area, it is intended and agreed that the same item of work will neither be charged nor paid for more than once and, therefore, it is agreed that costs incurred by the Urban Design Consultant for the preliminary plans for public ways, spaces and facilities will be deducted from the charges for the preparation of final design and Contract Documents for the public ways, spaces and facilities.

IN WITNESS WHEREOF the Local Public Agency and the Urban Design Consultant have executed this agreement as of the date first above written.

Educating the Exceptions

"That's what education means—to be able to do what you've never done before."

GEORGE HERBERT PALMER

IN A middle-sized American community with a total school enrollment of 10,000, there may be several hundred children between the ages of 6 and 18 who have never gone to school. These are children who cannot, for one reason or another, cope with the school system, or with whom the school system cannot cope.

Some children are unable to attend because the school cannot accommodate their wheelchairs; some cannot negotiate the steps with their crutches and braces. Others can't go because they have defects of sight or hearing, and there are no special classrooms, equipment or methods to handle their problems. Still others are barred because, although their IQ's may approach the genius range, they have been emotionally damaged to the point where they are teetering on the edge of severe psychosis—and there is no teacher who is qualified to handle a severely disturbed child.

For whatever reason, these children stay home. Some are tutored by traveling teachers and complete a limited curriculum by home instruction. Some eventually get into "special" schools—where their living and learning experience is carried on in the exclusive company of classmates who are also blind, retarded or disturbed.

Some are placed by their desperate parents in residential institutions, where—often—a lid is clamped on their learning potential by the very philosophy of institutional care, which is aimed toward *maintaining* the child, rather than teaching him to maintain himself. (Some accidents of heredity, metabolism or the birth process itself leave a child so severely damaged that institutional care is the only answer. But many could be salvaged who are not.)

Public education is now, belatedly, starting to assume its full responsibility toward handicapped children. Many of them who have never gone to school could go—if the school would accommodate its design, its curriculum and its educational philosophy to their limitations.

The AIA Committee on School and College Architecture recently sponsored a workshop on schools for exceptional children, at which architects and educational specialists conferred for two days on the problems of such children and ways their schools can help alleviate these problems.

Special education has taken giant steps, not the least of them semantic. Children with problems, which make it difficult or impossible for them to learn in a normal classroom environment, are now labeled "exceptional." Yesterday's labels—"crippled," "feeble-minded," "incorrigible"—have given way to "orthopedically handicapped," "retarded," "disturbed."

Although "exceptional" is not as cruel a designation as many of its predecessors, it has the disadvantage of imprecision. It also has the musty aura of Victorian euphemism: a throwback to the days when legs were "limbs," even when they were holding up the piano. (The professional patois of educators is peppered with such euphemisms; one workshop participant, chiding his colleagues for their semantic squeamishness, asked plaintively,

CSCA acknowledges the Educational Facilities Laboratories, Inc., for providing a transcript of the workshop and the Joseph P. Kennedy Jr. Foundation for the use of its photographs.

The illustrations on these two pages and on the AIA JOURNAL cover were selected from those prepared in fulfillment of contract No. 1. They will be published in color in a brochure.

The rendered plan, above, shows careful integration of the new with the old. The diagram to the right is a generalized land-use plan with special facilities indicated by graphic symbols. The diagram, lower right, shows the relationship between buildings and open spaces.

In the rendered plan, note the east-west shopping arcade with its eastern end terminating in a rail transit station for a commuter connection to downtown Washington. On the western side of the project area is the courthouse square through which parades will pass. The residential area is on the southeast side of the project. Note the variety of pedestrian areas and walkways. Automobiles and trucks enter at numerous peripheral points, generally below pedestrian level.

In the land-use plan, the parade route is shown as a dashed line. Horizontal shading indicates residential areas; vertical shading, commercial. Particularly important here is the intimate nature of complementary activities such as the post office, theater, fire station, library, neighborhood center, department store, banks, coffee shops, churches and gas stations.

In the lower plan, new buildings are indicated in black; existing buildings, white. Note the colonnades and covered shopping arcade, paved pedestrian open spaces and green areas. Note, too, the pedestrian links across project boundaries. ■

CP 605

HOUSING FOR FAMILIES OF MODERATE AND LOW INCOME

SECTION 221 NATIONAL HOUSING ACT

Introduction

There are a number of families whose incomes are too high for public housing, but not high enough to compete for adequate housing in the private market. Some of these families have been forced into the market because of urban renewal or other governmental action. To help these families obtain housing at prices they can afford, the Federal Housing Administration insures mortgages on special terms under the provisions of Section 221 (d) (3) of the National Housing Act. To keep the rents within the means of the people for whom the housing is intended, the Act authorizes a mortgage interest rate below the current market rate on F.H.A. insured mortgages.

Eligible Mortgages

Proposed new construction, and existing properties requiring rehabilitation, with five or more units may be eligible for mortgage insurance. Mortgages on acceptable existing projects not requiring rehabilitation, with five or more units, may be refinanced if the mortgages are presently insured by F.H.A.

Eligible Mortgagors

1. Non-profit or Builder-seller Mortgagor

   A non-profit mortgagor is a corporation or association organized for purposes other than the making of profit for itself or for

persons identified with it.

A builder-seller mortgagor is a special type of limited distribution mortgagor organized to build or rehabilitate a project and sell it, immediately upon completion, to a private non-profit organization at the certified cost of the construction.

2. Public Mortgagor

A Federal instrumentality, a State or its political subdivision, or an instrument of a State or its political subdivision, which is not receiving financial assistance exclusively for public housing from the Federal Government.

3. Limited Distribution Mortgagor

A corporation, trust, partnership, association, or other entity restricted by the law or by F.H.A. as to distributions of income - formed exclusively for the purpose of providing housing. It is regulated as to rents, charges, rate of returns and operating methods in a manner satisfactory to F.H.A.

4. Cooperative or Investor-sponsor Mortgagor

A cooperative mortgagor is a non-profit cooperative ownership housing corporation approved by F.H.A. Permanent occupancy is restricted to members. Eligibility and transfers of membership are subject to F.H.A. Control.

An investor-sponsor mortgagor is a special type of limited distribution mortgagor organized to build or rehabilitate a project and transfer it to a cooperative.

Workable Program Requirement

Projects must be located in a community having a "Workable Program" which has been approved the H.H.F.A. A workable program is an official

community plan for dealing effectively with slums and blighted areas.

Interest Rate

The interest rate during construction may be as high as the established F.H.A. maximum interest rate at the time of construction - currently 6 percent. Upon final endorsement of the loan, the interest rate is lowered to 3 percent or the annual rate of interest determined by the Secretary of the Treasury, whichever is lower. F.H.A. waives the mortgage insurance premium of ½ percent for projects with this low interest rate.

Mortgage Limitations

For public agencies, cooperatives, and non-profit sponsors, mortgages on new construction may not exceed the replacement cost of the project; on rehabilitation projects it may not exceed the estimated cost of rehabilitation plus the value of the project before rehabilitation. The maximum mortgage for an entire project is $12,5000,000.

Amendments under Section 102 of the 1965 Housing Act

1. The authority of the F.H.A. to insure mortgages under the 221 program was extended to October 31, 1969.
2. A ceiling of 3 percent was established on the F.H.A. below market interest rate program.
3. Special funds were appropriated to cover expenses of the 221 (d) (3) program usually covered by mortgage insurance premiums.

Extent of Use

From the inception of the 221 housing program in 1961 to October 31, 1966, F.H.A. approved mortgages on 86 projects or 7538 units. The total amount insured during this period was $69,300,256.

Conclusion

Although the 221 program is relatively new, it has proved itself a valuable tool in the provision of housing for low and moderate income families. Up to this time, the appeal of the program has primarily been to non-profit organizations. However, the extent of non-profit organizations financially able to undertake an extensive housing project is limited. In addition, several other Federal housing programs deal with non-profit organizations. There seems to be a need for a program of public education designed to encourage other segments of the population to explore the possibilities of entering into the provision of housing for families of low and moderate incomes. Up to this time, there has been little use made of the provisions for builder-seller, public, or investor-sponsor mortgagors.

A SUMMARY AND ANALYSIS OF THE REHABILITATION LOAN PROGRAM

Section 312

The National Housing Act of 1965

as amended

This section of the National Housing Act was introduced in 1964. It was slightly reworded and amended in 1965.

Purpose

The purpose of Section 312 is to enable eligible applicants to receive low - cost loans for the purpose of improving property to meet code requirements and/or the objectives of the urban renewal plan for the area.

Nature

The loans authorized in Section 312 are granted to qualified applicants only if:

The applicant is unable to obtain the necessary loan from conventional sources with comparable terms and conditions, and;

The loan is an acceptable risk considering the degree of rehabilitation required, the security available, and the ability of the applicant to repay the loan.

The interest rate on these loans is not more than 3% and the term is not to exceed 20 years or 3/4 of the remaining economic life of the structure, whichever is less.

The amount of the loan will not exceed the actual cost of rehabilitation or the cost of rehabilitation plus the refinancing of outstanding indebtedness, if necessary to reduce the total monthly pay-

ments to within 20% of the applicant's average monthly income.

In no event, will the amount of a residential loan exceed $10,000 or a commercial loan exceed $50,000, or, in either case, exceed the amount that could be considered as a first mortgage, whichever is less.

Eligibility

In order to qualify for a loan under Section 312, an applicant must own the property to be improved, be purchasing it under contract, or hold it under a lease expiring not sooner than 6 months after the maturity date of the loan. The property must be within the boundary of an urban renewal area. The applicant must be judged financially able to repay the loan.

Appropriation

In 1964 the act created a revolving fund of $50 million to handle the loans authorized in this section. In 1965 the appropriation was changed to $100 million each year.

The 1965 act added a termination date to this program. No loan will be made after October 1, 1969, except pursuant to an agreement or commitment entered into before that date.

Comments

This program was so widely used in its first year that the appropriation was greatly increased. Instead of a one - time appropriation to set up a revolving fund, there is now a yearly appropriation of a larger amount to constantly increase the revolving fund.

One drawback is the relation of the program to the elderly. Often, they have been living in their homes or operating their businesses in the same condition for a long time. They see no reason to improve the structures just because of urban renewal. They also feel that the long

terms of the loans will probably outlive them and they would rather not spend the rest of their lives in debt.

1965

P6

FEDERAL ASSISTANCE FOR LOCAL CODE ENFORCEMENT PROGRAMS

The Housing and Urban Delelopment Act of 1965 authorizes code enforcement grants to local governments under Section 117 of Title I. The purpose of this program is to arrest the decline of areas which are becoming blighted, but are not yet in need of extensive rehabilitation or clearance.

Federal assistance is available in two forms:

1. Direct grants to cover part of the cost of concentrated code enforcement programs in a designated area within a city, other municipality, or county.

2. Eligibility of the cost of code enforcement activities carried out in an urban renewal project area.

CODE ENFORCEMENT GRANTS

Federal grants for code enforcement programs will be made to cities, other municipalities, and counties that have statutory authority to enforce housing, building, and related codes.

The amount of a Code Enforcement Grant will be based on a code enforcement program budget, submitted by the municipality and subject to HUD approval and on a final audit of program costs. Grant payments will be made periodically, based on requisitions submitted by the municipality and, with the exception of the initial or advance payment, on reports of progress of code enforcement activities and the provision of needed public improvements in the designated area.

ELIGIBLE CODE ENFORCEMENT COSTS IN URBAN RENEWAL PROJECT AREAS

The cost of code enforcement activities carried out as part of a property rehabilitation program may be included in the gross project cost of an urban renewal project involving rehabilitation and conservation treatment.

The requirement that the locality maintain its previous level of expenditures applies only to the Code Enforcement Grants, not to code enforcement costs incurred as part of an urban renewal project.

POLICIES FOR CODE ENFORCEMENT PROGRAMS

1. At the time of approval of an Application for Code Enforcement Grant, the municipality must have a certified Workable Program for Community Improvement, have adopted a comprehensive system of codes, and be carrying out an effective program of code enforcement.

2. The municipality must agree that, during the period it is under a Contract for Code Enforcement Grant, it will maintain a level of expenditures for code enforcement, exclusive of any expenditures for areas assisted by Code Enforcement Grants or Title I project grants, that is not less than its average expenditures for code enforcement activities for the two fiscal years prior to the execution of the contract.

3. The municipality must have a satisfactory program for providing all necessary public improvements within the area assisted by a Code Enforcement Grant.

4. The area selected for concentrated code enforcement must be limited with respect to code enforcement workload, so that there is a reasonable expectation that the buildings in the area may be brought up to code standards in three years or less.

5. The municipality has an obligation to assure that any individuals or families in the code enforcement area who are displaced are relocated into decent, safe, and sanitiary housing within their means, and to provide related relocation assistance.

AREA ELIGIBILITY REQUIREMENTS

1. The area must be built up and predominantly residential in character, with residential uses distributed throughout the area.

2. Census, survey, or other data must indicate that code violations appear to exist in at least twenty per cent of the buildings in the area and that these violations are distributed throughout the area.

3. Conditions in the area must be such that the proposed program for concentrated code enforcement and the provision of the proposed public improvements will be adequate to eliminate code violations and arrest the decline of the area.

FEDERAL FINANCIAL ASSISTANCE

The following Federal financial aids are available to assist a municipality in carrying out a code enforcement program and to assist owners and tenants of properties in a designated code enforcement area in making the required property improvements:

1. Federal grant to the municipality to assist in planning and carrying out a concentrated code enforcement program, including the provision of eligible public improvements. Grants will be made on the following basis: (a) Up to two-thirds of the cost of the program for municipalities with a population of over 50,000, according to the 1960 Census. (b) Up to three-fourths of the cost of the program for municipalities with a population of 50,000 or less, according to the 1960 Census.

2. Federal relocation grant to the municipality to cover the entire cost of relocation payments to eligible families, individuals, businesses, and nonprofit organizations that are displaced because of the code enforcement program.

3. Direct Federal three per cent loans to eligible property owners or tenants for financing the rehabilitation required to make property conform to applicable code requirements.

4. Direct Federal rehabilitation grants (not to exceed $1,500) to eligible families and individuals for repairs or improvements required to make property conform to applicable code requirements.

5. Federal Housing Administration mortgage insurance for properties eligible under Section 220 of the National Housing Act, including home improvement loans under Section 220(h).

MUNICIPAL CODE STANDARDS REQUIREMENTS

HUD will accept an Application for Code Enforcement Grant only if the municipality has, prior to submitting the application, adopted a comprehensive system of codes that regulate the minimum conditions of use, location, construction, alteration, repair, maintenance, demolition, and removal of private property. The codes must prescribe adequate standards of health, safety, and welfare, including the following specific minimum requirements:

1. The comprehensive system of codes must include:
   (a) A housing code or equivalent.
   (b) Zoning regulations and building, plumbing, electrical, fire prevention, and related codes.

2. Provisions of codes and other pertinent regulations for police power enforcement action must have sufficient applicability to existing properties to correct or remove all substandard property conditions in the designated code enforcement area. Standards, requirements, and provisions for enforcing the housing code must be applicable to all existing and new dwellings and dwelling units.

3. The basic standards and requirements of the municipality's housing, building, plumbing, electrical, fire prevention, and related codes must be comparable to the standards and requirements contained in the most recent editions of the nationally recognized model codes or developed and promulgated by nationally recognized standards setting organizations.

To determine whether these requirements are met, HUD will review the codes and ordinances section of the municipality's most recent Workable Program for Community Improvement.

REQUIREMENTS FOR CONCENTRATED CODE ENFORCEMENT PROGRAM

For an area designated for a concentrated code enforcement program, there must be a planned and systematic program for intensive code compliance that provides for:

1. A definite plan and schedule for bringing all properties into code compliance.
2. An adequate number of trained inspectors.
3. An effective notice, permit, and records system.
4. Close coordination among all local governmental units and officials responsible for inspections and other compliance actions.
5. Administrative and legal procedures for the prompt and equitable handling of noncompliance and appeal cases.
6. Close coordination between all municipal agencies participating in the program and citizens and neighborhood organizations, to obtain understanding and support for the program.

PUBLIC IMPROVEMENTS PROGRAM

As a prerequisite to making a Code Enforcement Grant, HUD must obtain adequate assurances that the municipality has a satisfactory program for the provision of all necessary public improvements for the designated code enforcement areas.

With the grant application, the municipality must provide (1) evidence that it has considered the total needs of the area for public facilities including, but not limited to, schools, parks, neighborhood centers, streets and sidewalks, and street lighting, and (2) adequate assurance that any additional facilities needed to assure the stability of the area will be provided prior to completion of the concentrated code enforcement program or within a reasonable period thereafter.

Any improvements provided should not be inconsistent with objections of the Workable Program for Community Improvement and the general plan and with any Community Renewal Program objectives.

The cost of planning, installing, constructing, reconstructing, or repairing eligible public improvements may be included in the code enforcement program cost. Expenditures for the following public improvements are eligible when the improvements are necessary to arrest the decline of the area:

1. Streets, except expressways, freeways, and other limited access streets.
2. Curbs, gutters, and public sidewalks.
3. Traffic lights and signs.
4. Street name signs.
5. Publicly owned street lighting and stationary fire and police communication systems.
6. Street tree planting.

CRITICISM

This program is still very new, having been in operation for about a year and a half. HUD officials charged with administering the program state that interest in the program is growing. In the Southeast there are currently five programs in the execution stage, and more than a dozen applications are awaiting approval.

Objections to the program have been centered around the limitations on funds available for public improvements, and the fact that no funds are available for acquisition. These objections, however, are not serious, and the program certainly supplies a necessary tool for implementation of any plan to eliminate blight.

SOURCES

"Local Public Agency Letter No. 345," Department of Housing and Urban Development, Urban Renewal Administration. (Washington, August 18, 1965)

Interview with Mr. Joe Behrens, District Administrator, Code Enforcement Program.

FIVE PROFESSIONALS with a common interest in the complexity and excitement of urban living and a desire to work on some of the attendant problems came together as a study group in the fall of 1964. The team consisted of Dr. R. M. Dunham, a psychologist (PSY); Elaine Maas AIA, a graduate student in sociology (SOC); Joseph Goeters, a computer systems analyst (COM); Keitt C. Barkley, an architectural designer (DES); and H. F. P. Goeters AIA, an associate professor of urban design, University of Notre Dame (ARCH), who comments:

"Our first aim was to see if we could communicate our particular view of the urban milieu, and then if we could find something worthwhile for architecture in current psychology and sociology. We began by recognizing some of the characteristic social problems that originally helped to inspire urban renewal programs. We thought particularly of the situation people in a blighted area face in meeting society's requirement for social competence and of the questions concerned with social responsibility.

"We knew that conditions such as delinquency have been found to arise where there is not an atmosphere of cohesiveness in which the individual can express his sense of belonging, of identity. We also know that the development of individual competence, whether as social maturity, intelligence or some other form, is enhanced by exposure to a variety of stimuli. Our design, then, would be to encourage the cohesiveness of the neighborhood and to provide a diversity of experience, primarily visual and social, suitable to arouse the participation of the community's youth.

"The Louisville Urban Renewal Competition was chosen as a study model because it was at hand and had sufficient 'reality' as a problem to satisfy our need for a subject. [The submission which materialized did not survive the first stage, and publication of portions of it here is done solely in terms of its interesting approach and in no way is to be construed as an attempt to second-guess the jury.—Ed.]

"The group met four times during a four-week period in sessions of from 1½ to 2 hours each. Then for 10 days beginning with the last meeting, four designers—Kenneth S. Carbajal, James Hagan, Marvin King and C. R. Sundin—joined Barkley and this writer in assembling a specific project.

"We were all instinctively suspicious of group action and consciously tried to function as a creative unit. During the first meeting, the conversation ran at fever pitch, while the shared attitude seemed positive that there was a strong undercurrent of doubt as to what, precisely, we were doing. This was confirmed at the next session, but we agreed we could continue to a total of four meetings and decide in retrospect what we were attempting to accomplish. We did state one overall objective: to formulate social science principles that yield design principles."

The edited transcript of the meetings, illustrated by a number of the resultant sketches, reveals how the group functioned and what it did in fact achieve. As for conclusions relating to the merits of this interprofessional effort, each reader can draw his own.

Design with a Social Conscience

MORELAND GRIFFITH SMITH FAIA
38 PEACHTREE CIRCLE, N. E.
ATLANTA, GEORGIA 30309

MEETING I

COM: In New York, you might have an ultra-high rental property next to a slum area; every other block seems like a different environment. But in Louisville, this might be completely unacceptable.

ARCH: Many schools in Houston are designed very much like jails in the sense of making them destruction-proof. My suspicion is that somewhere you cross a line and start defying people to destroy the school *because* you've made it impregnable. Dunham, how would you react to the idea of building a school the way you build a house?

PSY: If there is a psychological answer, it would be in the form of a question: Do you have any reason to think that making a *secure* environment will lead to less destructiveness than making a vulnerable one? I don't know of any good reason to think that the cash loss would be less. I have just encountered a related situation. One of my graduate classes is learning to deal with small children and their parents. One pair of students is observing two approaches as regards three-year-olds. In one case, the family has followed what amounts to the school-system policy—keeping everything destructible out of the child's reach, filling the house with old, hard-wearing furniture. This works in a way, but the characteristics of the family become a little bleak. The real problem arises when the child goes elsewhere. The other family puts away only its most fragile possessions, and maintains the point of view that the child needs to learn something about self-restraint and the value of things. So the atmosphere is a bit more comfortable. I don't know for sure whether the total cost in one case is less than that in the other.

DES: Could we take the family analogy and relate it to communities, as you have taken a problem in the schools and related it to the home?

PSY: What you're saying is consistent with what's been written on maintaining discipline within a community—a sense of what is right, the idea that the family values should pervade throughout.

SOC: You mean to take the family as a prototype and work from that?

PSY: This isn't the way it's usually expressed, but I think it's as good a way as any other; that is, you want a community as well as a family to be characterized by responsibility and also warmth, security, creativity, etc.

DES: You described one family's house as being bleak. Physical things can be quite bleak, and yet the family can be quite warm.

PSY: It *can* be, but this hasn't been our experience in going into these homes. It's been as though the walls reflected the family characteristics.

DES: In urban renewal projects, we are continually confronted with the idea that these are communities of individuals who want to feel they are responsible for their existence. There is always the problem in a large complex of finding some way for these people to do things that are creative with their environment, rather than just occupy space. After all, a standard apartment is a minimal thing. Take artists as an example; they occupy loft space and make it a great place to be in. How about loft space as a part of our solution?

.....What's the difference between making something yourself and going out and buying something you like?

SOC: You mean that the more that people participate in a thing, the more they will feel involved.

PSY: That's a stimulating idea. You go to the downtown area with the general notion you don't touch anything, you don't move anything; if you buy something, you can take it.

DES: What tore me up was that we took out our Farmer's Market. It was a wonderful urban thing, it smelled; you could touch the fruit and vegetables, watch men work. But what did they do? Moved it to the suburbs.

PSY: I wonder if you couldn't build something like that back into downtown. Suppose you were to build a concrete structure in the form of a progressively steeper ramp (appropriately cuved on the sides so that small children couldn't fall off). I would like to know what would happen with such a thing.

SOC: You mean the people wouldn't touch it?

PSY: No! I bet every kid in sight would want to see how high he could climb.

DES: A local architect built a school with an arched concrete canopy. Of course, the problem was that the kids would get on their bikes and ride all the way over it.

PSY: That's the point: Was it a problem?

ARCH: Most of us are now mobile enough so that contrast could be pretty exciting, if the contrast were enjoyable in both extremes; that is, if you didn't flee the downtown to get to the country but would occasionally flee the country to go downtown—because there was excitement there that was nowhere else.

SOC: This idea of complexity and diversity seems to be the key to a lot of things. Scientifically, people are always trying to classify phenomena—what is it that all of the things downtown have in common? They all serve a public order rather than an individual one. There are varieties, but they are all phenomena of the same class. For example, there are no single-family residences. So you really don't have diversity of classes—only variety within the class.

PSY: I want to mesh two ideas that all of you have come up with thus far: that what characterizes New York is the location of an old house next to a high-rise apartment, and that in the downtown area a special atmosphere can be created. Isn't it possible to incorporate these ideas in a place like this? Suppose one of your principles is: The first step will be to examine the area and see which structures are viable and which ones have character—even if it's an unpleasant character—worth preserving.

.... Another thing I have been thinking about building into the downtown area is sharp contrast. Suppose you were designing a neighborhood branch bank—a drive-in on the bottom floor; a main banking area with no walls on the second, with radiant heating and wind control by some system of louvers; and, by using the new system of lighting and temperature control that is available, create a dining terrace on the third floor that is invisible from the ground.

PSY: And one of the old houses could be remodeled into a rathskeller.

DES: You know a group had to exist before you could get a place like 10th Street in New York; you don't just provide the spaces for something like that. Down the street on 14th—it's the same street really without the people there.

ARCH: But this isn't like the infinite number of monkeys writing the New Testament. What happens is you provide an environment that will accept this; provide it in a hundred places, and one of these becomes 10th Street. You don't have to develop the design so far that you say the rathskeller is going to be here. You should provide an environment that will allow for diversity and you'll get some, though possibly not the diversity that you planned. Without the village you wouldn't have 10th Street—but what happens there couldn't happen on Park Avenue.

DES: In other words, you can plan for things that don't have to happen but *might* happen. In group action, though, it seems like an awfully hard thing to plan for. I can see planning for things that create a tactile environment, but I can't understand—except for loft space perhaps.

ARCH: I would like to make a point here for the group vs. the individual approach. No matter how much we concentrate on diversity, we will approach the limit of the individual's concept. It will be, as was said earlier, diversity within a class. It will be the diversity within his rational ability to think. Where the individual might take the idea of loft space and make it a

design scheme, for a group it would become part of a thing for which the scheme was never discovered until it was finished. For instance, trying to state the *scheme* for the village amounts to describing the village.

MEETING 2

ARCH: I would like to attempt a statement of our general goal: to uncover social science principles which will yield design principles. And I want to add an aside. I am very wary of this becoming list-making, having fallen victim to such a procedure once before. At least as far as the individual is concerned, all of his ideas of diversity seem to fall, as Elaine would put it, into one class.

PSY: Are you saying that somehow completeness destroys the individuality of the project?

ARCH: I am saying that by being too rational we could even destroy some of our principles.

SOC: Since this is a competition to design a housing area for a city, shouldn't we know whom it is for, what economic and ethnic groups will be living here? Or are we looking for principles that are true for all people all of the time? I think it is important to make something explicit here; that is, that if as a group we are only discussing how *we* would like to see a city or area designed, this is all right. But the idea needs to be made emphatic, for then you realize it is *our*

values we are discussing and not necessarily those of the people who may in fact be occupying the area. We are simply talking about a place *we* would like to live in.

ARCH: Can't we give our project a highly special character, just as the village has a special character?

DES: But not like the village.

ARCH: Right, but just as unique. The normal developer chooses from among given stereotypes. I don't think we should fall into the same trap. What we do here should be unique and to some extent unpredictable.

..... What I'm saying is that if I were building a house for a client I didn't know, I wouldn't make it an anonymous house. I would make it a very strange house and let someone who liked that kind of thing buy it. Let's put forth all of the hopeful ideas we have for a place like this, and let them sort of roll around and see what happens, instead of trying to state first what we will or won't do. Let's think of things we might do, and maybe from this we can develop principles. A principle is an abstraction of choices, and I'm afraid if we state our principle in a certain way, we immediately limit our number of choices more than we actually wish.

SOC: I have read that people need an image, need to have something physical that marks the boundaries or the structure of their cities; that people want something they can identify with.

ARCH: This is a rationale for the megastructure. Perhaps we could accomplish this the same way be paving all the streets with cobblestones and lining them with street lights and trees so that the minute you step on the

cobblestones, you are home—your neighborhood.

DES: This sounds like picking out all the colors for an office building, picking each one in good taste.

ARCH: You know how it is when you are driving around town, and one house seems to stand out as being nicer than the rest. When you look carefully, you realize that what distinguishes it is someone's good taste in the selection of materials and colors.

DES: On the funny little street where I live, there is a house that is sky blue with red planters. No discriminating person would have selected that color, but I like it.

ARCH: I was suggesting a way to establish an identity for an area.

DES: To take a negative point of view, there are many areas in New York with a strong physical identity that are unpleasant, and there are some other areas with no apparent physical identity that have a strong social identity.

COM: Do you know where Murray Hill is in New York? The only way it can be identified is on a map. In going through or driving by, it is just like any other place.

SOC: Getting back to what we were saying earlier, the place ought to allow the individuals to manipulate and change the area.

DES: I think we all agreed on the point last time that people should have some effect on the world they live in. It's very healthy.

ARCH: But what an enigma! How do you get people to take an interest in their environment?

DES: Maybe it takes New York for there to be a village, maybe it takes New Orleans for there to be a French Quarter.

PSY: I'm ready to start talking about what we are going to do and how we are going to do it. First, we are close to the Louisville Restoration Area, which I will assume will be handled like Williamsburg, and here is the Civic Center within six blocks of our site. And over here is the central business district and across the way is the Medical Center, which could provide some of the type of cultured people we would hope for in our area.

ARCH: More specifically, low-income cultured people such as nurses and interns.

PSY: The areas around us already

have an identity which makes it easier to sell the idea that our particular area should have an identity too. I would like to name it Boone Parish. This would imply individuality, initiative, democratic values, and I would also like to imply that there is a cohesiveness about this area that people within it feel for one another. I think we ought to have the edge of this project marked off some way. I would like to put a 6-foot wall around it, but I don't think we can, so I'd like to suggest an overwide sidewalk or lawn area. And then a 4-foot wall, another 25 or 50 feet before the first building—and then close all the streets. Next, in keeping with the idea of diversity, one of the things we would want is a variety of architectural styles. This would involve keeping some of the buildings, especially those relating to the Louisville Restoration Area, and we could use cobblestones on the streets that are closed. We are within easy-seeing distance of the river which suggests a luxury apartment, but it should not have its own services in order to encourage contact with the tenants' neighbors. One of our main principles would be developing a neighborhood that would welcome people from all income levels.

ARCH: In view of the controlled rent situation, couldn't we accomplish diversity by concentrating on other characteristics?

PSY: No.

ARCH: Joe, you stated a problem earlier; now I want you to try to answer it. How do you deal with the iron-headed individual when you are planning?

DES: Who is the iron-headed individual?

ARCH: He's the guy who does all the things we've talked about. He opens a rathskeller. He's the one who rents a $90 apartment when he can afford a $200 one. He takes loft space and turns it into great studio space.

COM: If you could get enough of these people together, you'd get what you want without planning. In Chicago there is an area called Old Town, which used to be rundown, but is now the swingingest part of the city.

ARCH: This always seems to occur in an area where you can stamp your personality and usually where there are old, unused buildings.

COM: One of the initial drawing cards is that the rent is cheap.

ARCH: We have that here because the rent is supposed to be held down.

COM: A point you have overlooked is that the residents of the village have the highest per capita income of any area in Manhattan.

PSY: Ten percent of the population because of some special talent could establish the identity of the area.

COM: One of the things that concerns me is that we talked about putting in a specific kind of pastrami shop, but I still have the feeling that it's all going to come out the same.

PSY: The thing that produces stereotypy is not what we encourage people to do but what we keep them from doing.

SOC: This is our answer then—no restrictions.

ARCH: It isn't really that simple.

SOC: It seems that many of our ideas are contingent on individual ownership or owner-occupied dwelling units; that is, someone who rents has limited liberty to manipulate his environment.

ARCH: Joe, how do you write a computer program to get an infinite number of variables?

COM: You are really looking for an optimum. Your given expression to solve might be *diversity* = *MAX*. This is not a fixed solution, it is a maximum. You start anywhere and try to approach a best solution.

ARCH: One of your parameters could be there won't be 100 percent of anything; no characteristic or element would appear in the entire project.

COM: Yes. I don't know whether we could ever solve this problem on a computer, but what we are doing is analagous to a linear program. You are given a statement of the problem, a solution you want to arrive at, and any beginning point. You can't possibly examine all of the intermediate steps in arriving at the optimum solution by hand, but on a computer you can examine every possibility.

ARCH: How do you set up a program for *variety = MAX* or *Diversity = MAX* without knowing in advance what MAX is? The way we've been going about it, we have decided what MAX is in advance.

COM: In suboptimizing, you have to have constraints on the modules of the problem. As Hesiod put it: "A generation of men is as a generation of leaves."

MEETING 3

DES: I think we have established some critera. For instance, we have decided that any stratification either by income or social group is wrong, that we should have a mixture. I feel that this area should be a cross section.

ARCH: Would you agree with me if I said that it should be distinctively unlike the rest of the city but diverse?

DES: Right, just as a person stands in relation to a race. If the person is whole and healthy, he has a certain broadness of outlook and maturity which makes him similar to all other people. But he has his own personal traits which are unique.

SOC: But every community is like that.

DES: No, it seems that every city seems to stratify.

SOC: Are you going to go along with that?

DES: If you leave cities to "natural" forces, areas tend to become specialized to the point at which you can recognize people from different parts of town.

ARCH: I'd say this was a good thing.

DES: I'm not clear on what I am saying, but somehow we should be able to do a renewal area that doesn't need renewing.

ARCH: Haven't we stated several ways of achieving this? By keeping some old buildings, by being able to sell off small parcels of land so that 50 years from now some of the buildings will be 100 years old, some 50, some 5.

DES: If you have an area that represents as many kinds of interchanges as possible, this area should continue to be self-renewing because it's never subject to a mass evacuation or status evacuation.

SOC: What about the need for privacy? Some place—out-of-doors—where people can fight or argue in private.

DES: Some people don't need privacy.

PSY: This has not been established either way.

SOC: There were some experiments in Topeka which demonstrated that the need for privacy cut across all other characteristics.

DES: In the Marseilles project by Le Corbusier, the walls between the apartments are lead blocks, and the tenants found the lack of sound transmission disturbing.

ARCH: But isn't this because there is no place for accidental social interchange?

SOC: It's sort of like a maximum security prison.

DES: There is a need for some sound transmission so you have the feeling, for example, that someone could hear you if you called for help.

ARCH: Isn't this just because there are no comfortable areas for social exchange?

DES: You mean like the backyard-over-the-fence exchange that goes on between housewives?

ARCH: You could put all of the schools and all of the shopping in one giant pedestrian complex and then remove the housing and isolate it in blocks or groups. Suppose we were to consider a 16-hour school with several characteristics (perhaps these are a little oversimplified). Suppose they were activity areas; for example, a science area with lab benches, a library, and they were all covered by one structure—like areas within a park. Try to break down the standard idea of this being a building so you are dealing with places within something. Here the students and the residents of the area could sit in on any of the activities at any time, and the students would have to be somewhere, but it didn't really matter whether a second grader sat in on a chemistry experiment at 12th grade level or second grade reading class. You would be dealing here with community activities that during the day would be child-oriented, but there would be a free range most of the time. This relates to Dick's idea of having a center or forum and the discussion of bringing the school more into community life.

SOC: To put this in the form of a principle or general statement, you're saying you want things for people to do in a community-oriented area.

ARCH: I'm saying that we want a hub or center for community life. Now what is it? Where is it? What is its nature? We have talked about recognizing our area by its physical boundaries, but we've never talked about a convocation of the people who live here.

SOC: If you are going to get a diversity of population, you don't want to exclude people from activities.

PSY: Some of the public facilities are already there— schools, churches, etc.

SOC: In outline then: Everything is in the interrelation between people and environment. We need a diversity of architecture (that is the environment) and a diversity of people. We have some basic needs that must be met: privacy, security, chances for interaction. The latter has to do both with people *outside* the area, which involves the kind of streets and how you let them come in; and with people *inside* the area, which includes people interacting in parts of the area and also the relation of the parts to the whole area—this is where the center or hub comes in. Then there's another category we'll call miscellaneous. The identity of the area needs to be felt in terms of the architecture, that is physically, and another identity by participation, that's the common center.

ARCH: Two points: When you talk about interaction with the environment—an example being a courtyard—you have to be specific because not all courtyards invite interaction. Second, the hub or center can be anywhere.

SOC: When I speak of interaction with the environment, I mean tactile or visual interaction.

ARCH: In between the individual residents and the center or forum, where is a place for interaction?

SOC: It would seem to me places like a little park, a bakery.

ARCH: They are usually empty.

PSY: No, no. Coffee shops in Vienna are not empty.

ARCH: This isn't Vienna.

PSY: No, but it can be, though. To get on with the discussion, there are things already existing that constitute logical parts of this center. For example, this area has a boundary which will enhance its identity. It provides for an opportunity for commercial and educational and political varieties of interaction of a public sort, and this raises the question of whether there should be private outdoor areas. Very early we talked about footpaths feeding into the center area. It's only a maximum of two blocks from any point to the center. There would be no thoroughfare except for service roads.

People would be funneled down toward the middle. Could our need for outdoor privacy be met by benches and planting in widened areas along the footpaths? Let's call them parklets so that neighbors could end up watching the sun go down or getting away from the kids for a few minutes. These could be toward the periphery and wouldn't be commercial but something between primary and secondary group functions.

ARCH: What are primary and secondary functions?

PSY: I mean between the lack of privacy of the family and the lack of privacy of the market. It would be the privacy you would be able to get walking on a country road; that is, you may run into someone or you may not. In any case, you could relax and not be under downtown pressure or home pressure.

ARCH: Let me bring up several points here. First, I have found out that the area is predominantly Negro, and this is a Negro high school. There will, of course, be open occupancy, but things being the way they are, it will likely

be a Negro neighborhood. All the things we are tending to do to establish a strong identity in this area would tend to reinforce the characteristics of the all-Negro neighborhood.

PSY: A ghetto, in other words. We have a real serious problem with the idea that this is going to be a Negro neighborhood. I think we ought to attack that head on. If both the high school and the elementry school are going to be Negro, then unless we take very direct action, we are sunk; we will not have any of the things we asked for in the beginning. We've got to break that pattern or we've got to design for a Negro lower-class citizen. And we haven't been designing for him.

ARCH: In addition, this rental scale is close to governmental housing.

PSY: One way to do this would be to gain the cooperation of the Medical School or Hospital Complex and the Chamber of Commerce. We could have a higher rent structure as one of our stipulations, and insist that a characteristic of this in a very final way would be to build in institutions that would control the ratio. Coming back to an idea that Keitt proposed, we could try to make sure that the representation in this area approximated that of the community as a whole.

ARCH: Like an immigrant quota system?

PSY: If it takes a sociological institution to do it, then let's build the institution in with the architecture. Then we can say that one of the unique things we are doing is not artificially separating architectural design from social institutions but recognizing that they have to work together for some acceptable purpose.

DES: Getting back to the Negro neighborhood concept, you need to break into a big block, and the fact is that this community might be formed with blocks A, B, C, D, E, F. "A" may be student housing, while "B" may be an enclavish type of

court housing, designed for medium or high rent. We could put these large blocks in, and even though in the scheme they are quite separate, in the community they wouldn't be; they would be components of it.

ARCH: You could have hidebound small groups, and this would perhaps help with the institutional aspect but forced so that everybody mingles—then you would be less conscious of it.

SOC: Nurses and interns and students are the people who would be the people who would live there, not older couples.

ARCH: There already is an old-folks home there.

SOC: It might be a Negro old-folks home.

ARCH: It's not.

DES: An old-folks community could be a real part of this project.

ARCH: Nobody loves kids like old people.

PSY: This would sell the point that we are really not going to have a ghetto.

DES: Your high-rise would be another kind of area.

ARCH: No, this is specifically excluded from the plan.

PSY: Why?

ARCH: Watch that Dunham! They say there is one street you have to leave in the middle of the project, and he says, "Well, let's just take it out."

PSY: This is a very good point to discuss because it illustrates a whole category of problems we are running into here. They refer to this as a planned thoroughfare. Now what does that mean? The City Council has passed a law it is going to be that way? A city planner has decided that this looks like a street that people could go through on?

ARCH: It means that there is an overall plan for the city that says every fourth street will go through.

PSY: I don't mind challenging this.

ARCH: I don't either. I do want to keep one aspect of the program in-

tact though. Can't we find at least one innocuous requirement that we won't challenge?

PSY: If we are going to draw in people from the Medical Center, then one of the best things we can do is to get them up high enough to see the river—then we have a sure seller.

DES: Remember, we discussed earlier the idea of taking houses torn down for freeway construction and moving them lock, stock and barrel some place and jumbling them all in together with footpaths between and renting them as is for 5 cents a square foot.

PSY: So, if someone wanted, he could sleep on the floor in a sleeping bag.

DES: Or have a studio or a shop.

PSY: This idea appeals to me because I can imagine a poor Negro family living next to a family who has developed its space, and then you have exactly the right sort of social tensions.

DES: I think we should have a place like that where for very low rent . . .

ARCH: So that's another thing we're going to violate, the rental schedule.

DES: It might be that we would use their figures for an average rental.

ARCH: We'll make it a patchwork quilt.

DES: A *big* patchwork quilt. We need big, strong things to drop into this area so they don't get swept away and become a ghetto. One thing would be student housing, another an artist colony, an old-folks community.

PSY: Another thing might be a high-rise with an Olympic swimming pool facing the river.

ARCH: For the young moderns?

PSY: Yes, the young moderns. And just get $10 or $15 above the minimum and rent them to Medical School people. But every Negro school teacher who is within walking distance is going to want to live there, and you get integration automatically. Also, it gets away from the only swimming pool being at the segregated high school.

ARCH: We are now left with no community identity unless it is visual. Don't we have a way of having social identity?

DES: You can have a social identity.

ARCH: How.

DES: You simply force people to walk.

PSY: I know what would bring people in from all over the town. And if you could reach it only by walking, you are just about integrated on the spot! There is a flying saucer ride in Disneyland—people love it and go through it again and again, and it's cheap.

DES: You are proposing then an amusement park?

PSY: Not exactly. I'm proposing to put one *thing* here that there's nothing like it in that part of Kentucky. Not so colorful as to sound like we are rebuilding Disneyland but low-cost entertainment for all ages of people.

FOURTH MEETING

PSY: I have tried to abstract and reorder the things we talked about. Our ideas seem to be in three categories: cohesiveness and complexity of two kinds. One kind involves ethnic variety, individual initiative and freedom; the other the stimulation of intellectual capacity or sophistication of some sort by environmental complexity. You might say that we are talking about complexity on the one hand and democracy on the other. The point about environmental complexity is easier to defend because there is a great deal of technical literature available on this subject.

ARCH: Architects seem to divide themselves into two groups on this score. There are those who favor a simple environment and those who favor a complex one.

PSY: This is precisely what has been found in studies on creativity. Artists or architects who are identified by their peers as creative tend to choose complex forms of stimuli.

ARCH: Is this the same as the experiment you mentioned earlier by Ivo Kohler?

PSY: Not exactly. His point was that for each person there is an optimum complexity which relates to the esthetic experience. Prior to this optimum, things are dull; and after the optimum is passed, the experience becomes unpleasant or chaotic. He didn't care if one person were different from another in terms of his optimum. His point was simply this: To have an esthetic experience was to be con-

fronted with a certain degree of complexity. The sequence, then, is boring-beautiful-chaos.

SOC: Referring to an article in *Harper's* about communities that develop a *Gemeinschaft* feeling, the editor says that in this sort of community the people tend to be alike and not very progressive, whereas one of the US characteristics is that we have given up the *Gemeinschaft* or "we-feeling" for mobility and diversity of interest. He says it is a question of whether you want to eliminate conflict or cohesiveness. The editor suggests that conflict is essential.

ARCH: This "we-feeling" seems to be a characteristic of rural societies or villages. They tend to be much more cohesive but at the same time they are much more conservative and slow to change.

COM: I agree that you don't want to eliminate conflict, but don't you want some sense of camaraderie?

ARCH: I have given five people areas within our site to work on within a grand plan. The idea is to let each develop it as though it were a separate architectural project, to bring it up to a point of having some substance before we do our planning. I'm hoping to get here a sort of tension between the pieces and the whole so that neither really dominates and both have a strength of their own. We begin here to get into artistic principles which we have not discussed. This conflict between the project and the unit is one, our idea of the multiplicity of images is another, and our idea of random intervention a third. The latter means that a scheme needs irony, some stubborn characteristics; something irrational, something off the point. The multiplicity of images is a view of the world in which the pictures or images in it have fuzzy edges and overlap. Life is a series of overlaid images which partly obscure each other. This is a vital characteristic which architecture can lose by being too clear.

PSY: Here are some things I consider important: *planting variation; water* of various kinds, especially for contact, as in wading pools; *sand; paving; facade textures; form variation; sculpture*, which may include concrete castings (anything that is complex in three dimensions provides the developing individual with the opportunity of learning space relationships); *wall characteristics* imposed by the nature of the materials used or by painting patterns on them; *sound and vision control* in the layout of the relationship between buildings.

ARCH: For privacy . . .

PSY: Not only for privacy but for the complexity we spoke of. For instance, I found myself trying to figure out ways in and around these buildings you've drawn. In doing that, I'm better able to solve problems involving spatial relationships. To continue my list: *sight variations* particularly the unexpected and isolated experience like the dining garden on the bank building's third floor; *color variations* including multicolor facades; *sunlight control; height variation* in terms of passageways, high-rise buildings; and finally, *a public height*, such as an elevated pavilion or terrace, moderately large somewhere in the central area but high enough to see the entire neighborhood and as far as the river plus a view of downtown Louisville.

ARCH: We have a real enigma trying to present the solution without written documentation. Maybe we should show with headlines people running, jumping and standing still so you don't have to read it to see it.

. . . . . Normally the architect isn't trying to unite social institutions with architecture.

PSY: The question of social institutions comes later. We are talking in terms of social and psychological principles.

DES: I think one of the wonderful things about this concept is that it can be presented as imagery rather than in a diagramatic way. How do you show variety better than just showing variety? How do you show sunlight on the floor other than just showing sunlight on the floor?

PSY: Here is an attempt to summarize some of the other ideas that have come up. With relation to our idea of cohesiveness, I thought that we could point out its relationship to personal identity or a sense of belonging. Cohesiveness involves our notion of a parish or neighborhood, parish being a more distinctive term. We spoke of a cynosure, totems, institutional elements, such as the forum or the possibility of a neighborhood patrol or newssheet; the center, providing various services including entertainment—the public pool that would help identify the area and draw people together; the communication issue including transportation, streets, parks and parklets to facilitate public mixing and public privacy; and democracy—there are quite a number of studies of democracy as a social style for a community, much literature that can be cited in support of this.

ARCH: I am tremendously concerned about some of our proposed violations of the program, which says: "Any submission which does not adhere to the mandatory requirements of this program may be withdrawn from competition by the jury."

PSY: Well, it does say "May be withdrawn"; at least that offers some hope.

ARCH: And I guess we really don't have any choice in terms of what we have set forth. I notice also a paragraph in the program's introduction which says: "The architect's responsibility in a program such as urban renewal must extend beyond the tools of his drawing board. The physical environment and social behavior are so closely interrelated that the architect cannot ever forget the social aspects. He should respond creatively to the needs of the total environment."

DES: Why, that's what we're doing!

ARCH: I hope so. ■

DIRECT LOANS FOR THE ELDERLY AND THE HANDICAPPED

PROBLEM

There are more than 20 million Americans 62 years of age or older of whom a large part are badly in need of housing that will satisfy their special needs. A high percentage of them are completely unemployed and have relatively low incomes and some of them have health and physical problems.

PROGRAM

The Federal Government has prepared several programs to deal with this problem and the Direct Loan Program is one of them. This program was authorized by Section 202 of the Housing Act of 1959, as amended by the Housing Act of 1961, the Senior Citizens Act of 1962, the Housing Act of 1964 and the Housing and Urban Development Act of 1965. The Amendments enacted by Congress in 1964 and 1965 also extended occupancy elegibility in housing for the elderly developed under this program to the physically handicapped.

This program provides low-interest(3%), long term loans to non-profit organizations, private corporations, consumer cooperatives and public agencies(not receiving financial assistance from the United States exclusively pursuant to the Housing Act of 1937) for the construction of rental housing for this sector of the population. Such loans may be made for 100% of the development cost of the project for up to 50 years. The applicant for the loan must show that it is impossible for him to get the funds from other sources upon terms and conditions equally as favorable as the terms and conditions of this program.

AIM

The aim of this program is to permit development of housing to serve those elderly and handicapped people whose incomes are above levels set for admission to public housing projects but below that needed to pay the rentals for adequate private housing. However, low income senior citizens and the handicapped can be served under this program through rent supplements authorized by the Housing Act of 1965. Each

project must take into account the needs and desires of these people for privacy, participation in social and community activities and acces to community services.

ELEGIBILITY CRITERIA

The project must be a rental housing project. No nursing homes, hospitals or similar medical establishments are eligible and the housing may not be used for transient or hotel purposes.

Loans may be made for the development of eligible housing and related facilities through the rehabilitation of exiting structures including their alteration, conversion or improvement. In order to be eligible, the total cost of acquisition and rehabilitation should be considerably below the cost of new construction, the rents should be lower and the project should be completed sooner than new construction.

Families or persons will be admitted regardeless of race, creed, color or national origin. Occupants may include:

a. Persons who are 62 years of age or over
b. Families the head of which is 62 years of age or over
c. Two closely related persons, both 62 years of age or over
d. Two unrelated persons of the same sex both 62 or over
e. Family members under 62, other than the head of the family or spouse, will be admitted as permanent residents only if their presence is essential for the physical care or economic support of the eligible occupant.
f. Handicapped families, the head of which or his spouse is under 62 and handicapped single persons under 62 are also eligible for occupancy if determined to have physical impairments which are expected to be long continued or substantially impede the ability to live independently.

Income limits are established for the area in which the project is located to assure occupancy by those families or individuals within the middle income range. The rents fluctuate from $50 to $100 a month. In a nation-wide basis, the income limit for an individual is $4000 and $4800 for couples.

Certain social and service facilities are eligible costs under the

loan but it is important to make the maximum use of the existing facilities in the community. Some eligible related project facilities are:

a. Management office space
b. Workshop and storage space
c. Recreation and social center
d. Craft shop and art room
e. Center of educational counselling and employment services
f. Health examination and emergency treatment
g. Cafeteria and dining hall
h. Fall-out shelter
i. Commercial facilities

FINANCING

The applicant is encouraged to employ interim financing from non-Federal sources to finance the project during construction either by the use of its own funds or by temporary bank loans, based upon the Government loan agreement.

USE

At the present time, there are $420 million worth of applications for the whole nation. There are 214 approved projects consisting of 27118 dwelling units worth $322,995,000. Construction has been completed for 109 projects consisting of 11,503 dwelling units for a total cost of $131,917,000.

OTHER PROGRAMS

Other programs develloped to solve the housing problems of the elderly:

a. Aids to single family home purchases - FHA insured mortgage
b. Low rent public housing
c. Nursing homes - through FHA, Small Business Administration and U.S. Public Health Service

SECTION 703 - GRANTS FOR NEIGHBORHOOD FACILITIES

HOUSING AND URBAN DEVELOPMENT ACT OF 1965

PURPOSE: The Neighborhood Facilities Grant Program provides financial and technical assistance for the development of neighborhood centers which can house health, recreational, social and other community services and activities for low and moderate-income groups.

ELIGIBILITY: Any local public body or agency (city or county) or In dian Tribe may apply for a grant (no size requirement). A non-profit agency (eg. Red Feather) may also apply. However, they must prove, as must the local body, that they will (1) have the legal, financial, and technical capacity to carry out the project, (2) they will have satisfactory continuing control over the use of the proposed facilities for a minimum of twenty years.

BASIC PREREQUISITES:

(1) That the applicant determine the extent of the subject neighborhood. This size may be different for each city.

(2) That the project will provide a neighborhood center that is necessary for carrying out an existing program, eg., Community Action Program.

(3) The operation of this neighborhood center will provide increased services for the area and will not result in a decrease in services elsewhere in the community.

(4) The facility must be located so as to be available for use by a significant portion of the community's low and moderate-income residents. In smaller communities (25,000 or less), a center serving the whole community may be eligible.

(5) The neighborhood facility must be consistent with comprehensive planning for the development of a community. If a comprehensive plan is not yet in existence, the neighborhood facility must be designed in conformance with the community's planning goals.

GRANTS: The Federal grant may not exceed two-thirds of the development cost of the center. However, in an area designated as a redevelopment area by the Economic Development Administration of the Department of Commerce, the Federal grant may cover up to three-fourths of the development costs. In only a few states (New York, California, Pennsylvania) is state money available for this type of program.

DEVELOPMENT COSTS: These include costs of preparing plans for the facility, purchase price of the land and related costs, demolition, relocation, site preparation and construction of the facility. They may also include the rehabilitation or expansion of an existing structure. If individuals, families or businesses must be relocated the Federal grant will pay 100 percent of the cost.

PROGRAMS OF CENTERS: The neighborhood centers should be multi-purpose and provide a wide range of services and activities.

Some types of programs are: (1) day care centers, (2) legal advice and services, (3) family counseling, (4) job training, (5) Youth Opportunity Center, (6) Project Head Start, (7) Relocation information, (8) special health services, (9) Community Action Program, (10) recreational facilities

EXAMPLES: 135 communities in the southeast have applied for these grants. Three examples of programs which have been accepted are:

(1) Chattanooga, Tenn. - This facilit y will be located in a neighborhood of 9,000 residents, as an addition to a four year old junior high school, surrounded by a public park.

(2) High Point, N.C. - Neighborhood containing a population of 10,000 - 12,000 will be served by five or six facilities scattered throughout the area.

(3) Jacksonville, Fla. - The facility will be centrally located in a separate structure for a neighborhood of 15,000 - 20,000 low-income inhabitants.

P. 5

URBAN BEAUTIFICATION AND IMPROVEMENT PROGRAM

The Urban Beautification and Improvement Program is authorized by provisions of the Housing and Urban Development Act of 1965 which amends Title VII of the Housing Act of 1961.

What The Program Is

The Urban Beautification and Improvement Program is designed to help communities become more pleasant and desirable places to live.

Who Is Eligible

Any State or local public body with authority to undertake urban beautification activities and contract with the Federal Government to receive grants for this purpose is eligible for Title VII assistance under the Urban Beautification and Improvement Program.

Eligibility Requirements

The beautification program must be carried out in an urban area that is actively engaged in comprehensive planning. The program must be consistent with the local comprehensive plan.

The grant is limited to beautification and improvement activities directly related to open space and other land that is publically owned or controlled, such as streets, parks, sidewalks, and plazas.

Beautification activities undertaken with Title VII assistance must be part of the locality's beautification program. This program must be officially adopted by the government responsible for its preparation. The beautification program shall include the goals of the program, establish priorities for the next 3-5 years, describe the public and private resouces and actions to be utilized in implementing the program, and show what local action is being taken to cause the removal of ugly features.

Classification of Eligible Activities

The following classification of eligible activities has been established:

Group I Upgrading and rehabilitation of parks, including construction, renovation, or provision of basic water and sanitary facilities, interior paths, walks, roadways, landscaping, shelter, and other similar items normally associated with park and open-space areas.

Group II Design and construction, substantial upgrading, or other improvement of public places such as malls, squares, plazas, and other waterfront areas, including construction or installation of fountains, decorative pavement and lighting, planters, street furniture, kiosks, and other similar improvements. Activities in behalf of the arts, such as construction of facilities for outdoor exhibits, may also be included.

Group III Communitywide activities to upgrade and improve the appearance of streets, greenways, parkways, waterfronts, stream valleys, rights-of-way, and other nonrecreational public places. Eligible activities include tree planting; landscaping design, construction, and installation of special street furniture, signs, benches, and decorative fencing; and other measures to beautify the area over and above normal maintenance.

Group IV Activities to beautify and improve historic and other public building sites, including installation

of special lighting or paving, landscaping, special fencing, and related work.

Ineligible Activities

The following costs will not be eligible for an Urban Beautification grant:

ordinary overhead, administrative costs, and maintenance activities

cost of major public works projects such as large buildings, museums, zoos, golf courses, swimming poos, marinas, dredging, levee or dike construction, etc.

cost of land acquisition

cost of citywide or areawide urban design plan

cost of activities for which Federal assistance is available under other programs.

Amount of the Grant

The Federal grant assistance is 50% of the proposed annual beautification expenditure minus the average yearly expenditure on urban beautification for the last two fiscal years. For example:

1967 proposed urban beautification expenditure	$ 400,000
average expenditure on urban beautification 1965 and 1966	100,000
difference	300,000
grant is 50% of the difference	$ 150,000

The maximum allowable grant on any single item is $25,000.

Critique of the Urban Beautification and Improvement Program

The way in which the grant is computed penalizes those communities which have an active program of urban beautification.

The program offers too many opportunities to use it to secure recreational facilities. There is nothing wrong with the Federal Government aiding communities to improve their recreational potential but this should be carried out under a separate program. Local governments can stretch their recreational dollars under the quise of urban beautification. Recreation areas are not necessarily beautifal.

RELOCATION PAYMENTS UNDER FEDERALLY ASSISTED DEVELOPMENT PROGRAMS

Relocation payments are made to an individual, family, business concern, or non-profit organization displaced by a federally assisted development program to cover the expense of moving. The United States Housing Act of 1949, as amended, places conditions and limitations on the payment.

DIFFERENT RELOCATION PAYMENTS

1. A payment to an individual or family for reasonable and necessary moving expenses and any actual direct loss of property for which reimbursement or compensation is not otherwise made.

2. A payment to a business concern for its reasonable and necessary moving expenses and any actual direct loss of property except goodwill or profit.

3. A payment made to a small business concern for its displacement. Called a Small Business Displacement Payment.

4. A payment made to a displaced elderly individual to assist in adjusting to the amount of rent needed to be paid in a new location. Called a Relocation Adjustment Payment.

DEFINITIONS OF TERMS

Elderly Individual--Person greater than 62 years old at time of displacement.

Business Concern--A private entity engaged in some type of business activity that requires fixtures, stock in trade, equipment, or other tangible property for carrying on business.

Small Business Concern--A business concern which has an average annual gross receipts or sales in excess of $1,500 but average annual net earnings before income taxes of less than $10,000 in the two years preceding displacement.

ELIGIBILITY

To be eligible, the site occupant must have been displaced because the real property he occupied was: a) within an urban renewal area; b) within an area of code enforcement activities in accordance with an urban renewal project; c) within an area of a program of voluntary rehabilitation of the buildings.

LIMITATIONS ON AMOUNT OF PAYMENT

1. Individuals or Families--The maximum amount for moving expenses and actual direct loss of property not compensated for otherwise is $200. Maximum payment for two or more unrelated individuals occupying the same dwelling unit is $200.

2. Business Concern--The maximum amount for moving expenses and a claimed direct loss of property is $3,000. If no loss of property is claimed, the relocation payment is a reimbursement for the actual cost of moving or $25,000, whichever is less. For moving expenses greater than $25,000, two-thirds of the amount in excess of $25,000 will be paid by the federal government if the city pays the remaining one-third. The federal government will pay the expenses of a business to be moved a maximum distance of one hundred miles from the project.

3. Small Business Concern--Small businesses receive a displacement payment of $2,500.

4. Elderly Individual--An elderly individual or family can receive, in addition to a relocation payment, a relocation adjust-

ment payment not exceeding $500. The amount, added to 20% of the elderly's annual income, should equal the average annual gross rental required for a decent, safe, and sanitary dwelling of modest standards adequate in size to accomodate the elderly individual or family.

5. A local public agency may also reimburse an individual, family or business concern for recording fees, transfer taxes and similar expenses incidental to conveying the real property to the project, penalty costs for prepayment of any mortgage on the property, and the pro-rata portion of property taxes allocated subsequent to the date of transfer of title. The limitations are $25,000 for a business and $200 for an individual or family.

ADMINISTRATION

1. The local agency must furnish all site occupants a statement advising them of the availability of relocation payments and the location of the office processing the claims.

2. Any money owed by the site occupant to the local agency may be deducted from the relocation claim amount except in documented hardship cases.

3. Fixed payments to eligible individuals or families not owning furniture shall not exceed $5 for any individual and $10 for any family.

4. Claims for relocation payment and direct loss of property must be submitted within a period of six months after displacement of the claimants.

5. A business concern must submit three bids to the local agency fifteen days prior to moving if the moving expenses will be in excess of $500. The payment will not exceed the lowest bid.

PROGRAM OF ADVANCES FOR PUBLIC WORKS PLANNING

January 25, 1967

submitted by:

Henry Wyche, Jr.

PROGRAM AUTHORIZATION:

The current program of advances for public works planning is the third in a series of programs begun in 1940, designed to give Federal Aid for planning public works projects. The current program is authorized by P. L. 560 (83rd Congress) as amended by P. L. 345, Section 702, (84th Congress).

ELIGIBLE PROJECTS:

An advance may be made for planning of any specific public work which the applicant has the legal authority to plan, finance, and construct. However, limitations are placed on the eligibility of certain types of projects. These limitations are:

1. In the case of transportation, water and sewer, and regional open space and recreation facilities, to those projects which are part of a program for a unified or officially coordinated areawide system of facilities which is consistent with an areawide comprehensive plan; or

2. In the case of other facilities such as schools, libraries, hospitals, local recreation centers, and other public buildings, to those projects which are included in a well-conceived local capital improvement program which is consistent with a local comprehensive plan.

3. In the case of political jurisdictions with populations of 5,500 to 10,000, not part of a larger urban area, to those projects which are included in well-conceived local capital improvement programs covering a span of not less than four years, and

4. To those programs which the applicant can reasonably construct within a five year period.

Advances may be requested to finance preliminary, final, or both types of planning. Preliminary planning should include all investigations and surveys needed as a basis for decisions by the applicant's officials regarding type, size, and scope of the public work, and for reliable estimates of construction cost. The plans should be sufficiently complete to permit the applicant to select and acquire sites, and to prepare for completion of the final plans and specifications. Final planning is based on preliminary planning and includes preparation of all detailed plans and specifications required before construction bids can be obtained. Approval of an advance for preliminary planning will not commit the government to subsequently approve an advance for final planning.

An advance may be made to revise plans prepared under previous planning programs where the plans have become obsolete due to no fault of the applicant.

Advances for the following types of projects are specifically prohibited:

1. For a project which is defined as an Urban Renewal Project under the Housing Act of 1949.

2. For the planning of public housing.

3. For studies of basic need, priority, or economic feasibility.

4. For a project which is a Federal-aid or State highway project of the U. S. Bureau of Public Roads and/or State highway department for which planning funds are available.

5. For a project for which other Federal funds are available when such funds can be used for planning costs.

ELIGIBLE APPLICANTS:

Advances may be made to any non-Federal public agency which is legally authorized to plan, finance, and construct the proposed project. Such non-Federal public agencies include State Governments and their agencies and instrumentalities; the political subdivisions of a State such as counties, cities, townships, and school districts; and other special districts, authorities, or agencies established under State or local law. The largest number of applications for advances comes from cities and towns.

Private on privately-controlled non-profit organizations are not eligible for planning advances.

PROGRAM ADMINISTRATION:

The Program of Advances for Public Works Planning is administered by the Department of Housing and Urban Development through its regional and area offices. The H. U. D. Regional Office in Atlanta handles applications from the states of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

FINANCIAL CONSIDERATIONS:

The Secretary of Housing and Urban Development is authorized to make interest-free, repayable advances of funds for the planning of the aforementioned types of projects. The Act authorizing the Program of Advances for Public Works Planning specifically provides that --

1. The making of an advance will not in any way commit the Federal Government to appropriate funds to assist in financing the construction of any public work so planned.

2. Advances will be repaid without interest by the applicant when construction of the planned project is started.

3. If an applicant starts construction of only a portion of a planned public work, it will repay such proportionate amount of the advance as the Secretary of Housing and Urban Development may determine to be equitable.

4. If an advance is not repaid promptly upon the start of construction, interest at the rate of four percent per year will be charged.

5. Applications requesting funds in excess of $125,000.00 will not be considered at this time.

GENERAL INFORMATION:

Housing and Urban Development is presently accepting applications for advances under the program; however, the Region III (Atlanta) office has approved only one application during the past six months.

NEW KINDS OF PUBLIC HOUSING: PURCHASE AND LEASING OF EXISTING PRIVATE HOUSING

Purpose of Existing Low Income Program

The low-rent public housing program was established by Congress in the Housing Act of 1937 to aid communities to provide decent housing for low-income families who cannot afford standard private housing. Subsequent Federal housing Acts have made special provision for low-income elderly families and individuals, the handicapped, and those displaced by urban renewal and other governmental action. Forty-nine States now have enabling legislation under which local public housing programs can be initiated. Of major importance are new provisions in the Housing Act of 1965 which expands and gives greater flexibility to the program.

New Provisions

The 1965 Housing and Urban Development Act provides for 60,000 public housing units a year--240,000 in four years. Of these, an estimated 35,000 a year will be the traditional new construction. However, the new provisions permit an estimated 15,000 units a year to be bought from existing housing and rehabilitated if necessary. And an estimated 10,000 units a year will be leased from existing housing for short term use in meeting particular needs. Such housing will be particularly suited to large families.

Method of Financing

Section 502 of the 1965 Act amends section 10(c) of the U. S. Housing Act of 1937 to provide an alternative formula for computing annual contributions in the case of low-rent housing provided through the purchase, purchase and rehabilitation, or lease of privately owned existing dwelling units. Under the alternative formula, a maximum dollar amount (based on the fixed annual contribution otherwise established for a newly constructed housing project offering comparable housing facilities) can be established as the annual contribution for a purchased or leased unit, thus permitting the acquisition, or acquisition and rehabilitation, of existing units as well as the leasing of units for short term use in meeting particular needs. This formula will permit local housing authorities to make greater use of the existing housing supply.

Turnkey Housing Program

The 'turnkey' method of public housing is a new technique recently developed by the Dept. of Housing and Urban Development. It was first authorized by the 1965 housing act and it permits a private developer or builder to deal with a local housing authority in essentially the same way as he is accustomed to deal with his private clients. The private developer, who has a site or an option to buy one, may approach the local housing authority with a proposal to construct a public housing project. He will have his own architect prepare the plans and specifications which must be consistent with good design, quality, and workmanship. Provided the developer's proposal is acceptable to the housing authority, the two parties will enter into a contract under which the housing authority agrees to purchase the completed building. As the Public Housing Adminstration is committed to financially assist the local housing authority, the contract will be solidly backed and the developer will be able to secure commercial construction financing in his usual way.

The Housing and Urban Development Act of 1965 contained the policy change which makes the turnkey program possible. Section 502 of this act amends the Housing Act of 1937 to let local housing authorities use the fixed Federal contribution they would get for building their own projects for the purchasing or leasing of existing structures.

Procedure for Implementing a Turnkey Program

The existence of the local housing authority is the first requirement of a turnkey program, as P.H.A. financial assistance is channeled through it. The L.H.A. files an application with the Public Housing Adminstration which must demonstrate the need for a public housing program. Then the L.H.A. will be requested to publicize information in their localities describing the dwelling units they want built, and indicating their interest in receiving proposals from private builders or developers. H.U.D. will also inform any interested party as to the L.H.A.s that have filed applications. This will enable the L.H.A. to receive as many and as great a variety of proposals as possible, before its ideas have had time to become fixed on any particular plan.

Each developer, working in close consultation with the L.H.A., will prepare a preliminary proposal containing a certain site or sites, schematic drawings, and preliminary estimates of costs. The developer will be required to pay wage rates which are approved by the Secretary of Labour and to agree not to discriminate in employment. When the L.H.A. has decided on a particular proposal, the developer will be advised to submit preliminary plans showing all essentials of the project including the estimated price. The L.H.A. will then present the proposal in the form of a Development Program to the P.H.A. for approval. The P.H.A. will, if it approves of the Development Program, enter into a financial assistance contract with the

L.H.A. to cover purchase by the L.H.A. of the finished project.

When the financial assistance contract with the P.H.A. has been concluded, the L.H.A. will issue a letter of intent to the developer to enter into the contract of sale. The proposed purchase price, to be specified in the letter of intent, will be negotiated on the basis of two independent appraisals of the land and proposed improvements. It must then be presented to the P.H.A. for approval. Next, the developer will prepare, under supervision of a registered architect, complete working drawings and specifications which will meet P.H.A. requirements for approval. After these documents have been approved by the L.H.A. and P.H.A., the L.H.A. will enter into the contract of sale with the developer.

Contract of Sale

Inspections:

L.H.A. inspections will be preformed by an independent, experienced architect selected and hired by the L.H.A.

Purchase and Settlement:

Full settlement will be made within five days after completion.

Financing:

P.H.A. approval of the project makes it covered by the financial assistance contract between the L.H.A. and the P.H.A. and so it is eligible for the financial assistance that the P.H.A. grants to the L.H.A. Should the L.H.A. default, the developer is assured of performance and payment by the P.H.A.

Eligibility Requirements

Local Housing Authority:

The eligibility requirements for a L.H.A. to engage in a turnkey project are the same as those for any program of federally assisted public housing.

1. The L.H.A. must prove a definite need for public housing.
2. It must be able to raise 10% of the total project cost.
3. The project is required to meet all P.H.A. standards.
4. The community is required to pay a sum equal to 20% of all federal contributions.

Developer:

1. The developer must own or have an option to buy an acceptable site.
2. He must engage the services of a registered architect.
3. He must be able to obtain the necessary financing capital .
4. He must follow government approved wage levels and be free from discrimination in employment policy.

Federal Contributions

P.H.A. assistance to the L.H.A. is the same for the turnkey program as for the more conventional public housing program. The amount of the fixed annual contribution that the P.H.A. would give the L.H.A. for a newly constructed public-

housing program serving a number of families of given size and kind would be available for the L.H.A. to provide housing for a comparable number of families of the same size and kind, by purchase from a private developer.

Evaluation

As a means of silencing the opposition of private builders to public housing, the turnkey program is effective. Instead of having the L.H.A. undertake the building program, private enterprise constructs the project and the L.H.A. purchases it upon completion. This turnkey program serves two purposes: it simplifies the role of the L.H.A., and it enables private developers to realize a profit.

Another aim of the turnkey program is to shorten the time between conception and completion of the public housing program. Although some time may be saved it is doubtful that it will be very substantial for their are still four separate stages of P.H.A. approval that the L.H.A. must get before the program can be started. Significant time-saving will require that this approval procedure be shortened.

Degree of Use

As the turnkey program has only been available since August of 1965 it has not yet been widely used. The first project under this program has been recently completed in Puerto Rico. Other projects are presently underway in several cities. In Atlanta, several proposals are presently under consideration. Both the Atlanta Housing Authority and the Atlanta

Regional Office of H.U.D. report active interest by private developers both within Atlanta and throughout the south-eastern states.

'Invisible' Public-Housing Program

Neither the housing acts nor any of the library's collection of housing material seem to refer to 'invisible' public housing programs. Likewise, officials contacted at the Atlanta Housing Authority and the Atlanta Regional Office of H.U.D. were unfamiliar with the term. As it is grouped with three other terms, turnkey, scattered, and 'vest-pocket,' it seems likely that it may refer to the leasing program. None of the other three terms involve leasing of public housing. Moreover, the term 'invisible' would seem to apply to a program where dwelling units, for use as public housing, are leased by the L.H.A. within a private building. No public housing projects would be visible or identifiable as such.

The authorization for leased housing or low-rent housing in private dwellings is contained in Section 23 of the U.S. Housing Act of 1937, as amended by the Housing and Urban Development Act of 1965.

I. 27. 67

THE URBAN PLANNING ASSISTANCE PROGRAM

Since the dawn of human civilization, the world has observed various changing trends in different spheres of activities. Rapid urban growth in recent years has brought this issue in fore-front and has stirred the feelings regarding the common problems of urban areas, cities and smaller towns. Four-fifth of American population increase in the past decade has been in metropolitan areas and currently 70% of the population live in urbanized areas. With the coming up of this tremendous growth in population of urban areas, sizes of urban areas were bound to be influenced and as a consequence we witnessed new suburbs spreading out. It is anticipated that rapid urbanization will continue in the near future and to face these re-volutionizing trends the urban planning assistance program is a big step forward. This program with its vast scope poses a challenge to practicing planners.

PURPOSES.

To foster good community, metropolitan area, regional and statewide planning. It renders assistance to both smaller community and metropolitan areas to plan wisely and avoid hazards of living in a mess.

ACTIVITIES COVERED

The urban assistance program covers the following, to the extent they are directly related to urban needs.

I. Preparation of a comprehensive development plan for the pattern and intensity of land use and the provision of public facilities.

2. Programing and scheduling of capital improvements, also definite financing plans for the improvements to be constructed in the earlier years of the program.

3. CO-ordination of all related plans of the departments or sub-divisions of the government concerned.

4. Inter-governmental co-ordination of all related plans among the state and local governmental agencies concerned.

5. Preparation of regulatory and administrative measures in support of the foregoing activities.

WHO IS ELIGIBLE.

Section 701 of the Housing act of 1954, as amended through November 4th, 1966 lays down that in order to assist state and local governments in solving planning problems resulting from the increasing concentration of population in metropolitan and other urban areas, to facilitate comprehensive planning for urban development, including co-ordinated transportation system etc, the Secretary of the Department of Housing and urban development is authorized to make planning grants to:

I. Section 701 (a)

1. Cities and other municipalities having a population of less than 50,000.

2. For groups of adjacent communities incorporated or unincorporated having a total population of less than 50,000 and having a common or related planning problems.

3. For cities and other municipalities which are situated in redevelopment areas designated under Section 5 of the area

redevelopment act or which have suffered a major desaster.

4. For counties.

5. For areas which are expected to become Federally impacted.

6. For metropolitan and regional areas.

7. For state and inter-state comprehensive planning.

8. For the comprehensive planning for the Appalachian region.

9. For Indian Reservation.

2. Section 701 (b)

The secretary is authorized, in areas embracing several local governments or political sub-divisions, to encourage planning on a unified metropolitan basis and to provide technical aid for such planning.

3. Section 701 (f)

Under this clause the consent of congress is granted to any two or more states to enter into agreements or contracts, not in conflict with any law of the United States, for co-operative efforts and mutual assistance in the comprehensive planning for the physical growth and development of inter-state, metropolitan or other urban areas.

4. Section 701 (h)

Under this section a municipality or county is eligible for assistance in making a survey of the structures and sites in localities which have historical or architectural value.

ELIGIBILITY REQUIREMENTS

In order to be eligible for assistance program, organizations should consist mainly or elected representatives of cities and

counties rather than official from several special agencies and authorities. At least 90% of the area population should be represented.

FINANCIAL GRANT PROVISIONS SECTION 701 (b)

A planning grant shall not exceed 2/3 of the estimated cost of the work for which the grant is made; provided that such a grant may be in an amount not exceeding 3/4 or such estimated cost to an official Governmental Planning Agency for an area described in sub-section (a) - (7). All grants made shall be subject to terms and conditions prescribed by the Secretary. No portion of any grant made under this section shall be used for the preparation of plans for specific public works. The Secretary is authorized, notwithstanding the provisions of Section 3648 of the revised statutes, as amended, to make advances or progress payments on account of any grant made under this Section. $230,000,000 are to be appropriated to carry out the purposes of this Section.

HOW TO APPLY.

1. Cities and other municipalities with less than 50,000 population, counties and Indian Reservations apply directly to their State Planning Agency or their properly authorized metropolitan or Regional Planning Agency, which in turn applies to an appropriate H U D Regional Office.

2. Official state, metropolitan, and Regional Planning Agency and metropolitan organizations of public officials apply directly to the H U D Regional Office.

The various Housing Acts and the amendments made afterwards since 1949 have brought powerful leverage to bear in support of progressive city planning, with initiative and responsibility as they should be in local government's hands. Cities that made use of the act's. Resources found themselves moving from fragmentary program of the past to a new approach that blends the work of planning, operation and regulating bodies in comprehensive programs.

However, feel that whatever important and desirable federal and state financial aids may be, they can not substitute for local interests, planning and action. President Johnson rightly said " In our great metropolitan areas, and in our rural communities as well, the difficult problems of growth and development require understanding and co-operation at all levels. The Federal Government can assist and encourage, but in the last analysis, the success or failure of programs of community developments depends on those most directly involved."

RENT SUPPLEMENT PROGRAM

The rent supplement program of HUD is designed to help fill the need for decent, safe, and sanitary housing for low-income families and individuals. Supplement payments are made directly to owners of projects on behalf of qualified tenants.

Eligible Tenants

Tenants are restricted to those who have incomes which would make them eligible for public housing and who in addition qualify as one of the following:

a) has been displaced by governmental action,

b) either he or his spouse is 62 years of age or older,

c) either he or his spouse is physically handicapped,

d) now lives in substandard housing,

e) occupies or did occupy living units destroyed or extensively damaged by natural disaster.

In addition to income requirements, assets are limited to $5,000 for elderly persons and $2,000 for other tenants. Tenants pay 25% of their income for rent during the period they are eligible and in the event their income increases above the maximum they may continue to live in their unit and pay full rent.

Eligible Projects

Projects must be approved for mortgage insurance

and rent supplements before construction or rehabilitation and must be owned by one of the following; a) nonprofit private organization, b) limited dividend mortgagor, c) co-operative housing corporation. Projects must be either new construction or existing housing projects involving major rehabilitation. All construction must meet FHA minimum property standards and are subject to FHA regulations governing rents, rate of return, rent supplement requirements and specific management and operation procedures. A project must contain at least five dwelling units and may be detached, semidetached, row, walkup or elevator structures. Swimming pools, two bathrooms per unit, airconditioning, and similar items are not permitted. Housing owners must obtain private financing and mortgage insurance from FHA. Mortgage term is not to exexceed 40 years or 3/4 of the economic life of the property.

Rent and Supplement Limits

Maximum gross rentals are; 0-bedroom - $85, 1-bedroom - $105, 2-bedroom - $120, and 3 or more bedrooms - $140. Rent is defined as gross rent and includes utilities except telephone. No supplement more than 70% or less than 10% of the approved rental is paid.

Administration

The Secretary of HUD is responsible for;

a) allocation of funds to localities and specific projects,

b) determination of low-income housing need in various localities,

c) establishment of income and asset ceilings for tenant eligibility,

d) coordination with other means of satisfying low-income housing demand.

FHA performs the following duties;

a) receives proposals and applications from sponsors,

b) issues commitments to insure,

c) reviews and certifies tenant eligibility,

d) contracts with owner to pay supplement,

e) makes approved payments to project owners.

Special Programs

A special provision of law authorizes rent supplement payments on behalf of selected tenants occupying rental units with an option to purchase. Rent supplement projects may be planned as cooperatives and sponsored by nonprofit cooperative housing corporations. At least 90% of the residents must be members of the cooperative. A limited number of rent supplement projects for the elderly can be financed under this act. The FHA central office must approve all such projects.

ADVANCED ACQUISITION OF LAND GRANT PROGRAM

The increased difficulty and cost of acquiring land for needed public works and facilities is a pressing problem facing both large and small communities. Increasing land costs and unplanned prior development all too often hinder acquisition of proper sites. The result has been inadequate and misplaced facilities, plus increased taxes for inadequate services.

Under section 704 of the Housing and Urban Development Act of 1965 (Public Law 89-117), the Metropolitan Development Office, Department of Housing and Urban Development is authorized to administer grants to assist public bodies and agencies in the timely and well-planned acquisition of land needed for the future construction of public works or facilities. Such advance acquisition is important in helping to attain maximum economy and efficiency in the construction of proposed projects and the orderly implementation of the community comprehensive plan.

Grant Assistance

The Advance Acquisition of Land Grant Program will pay the reasonable interest charges on a loan obtained to purchase land up to five (5) years in advance of proposed construction of public facilities. The land cost may include the cost of condemnation proceedings, appraisals, title evidence, documentary taxes, and recording fees.

Additional grant assistance is available (section 404 of the

Housing and Urban Development Act of 1965) to pay the cost of relocation payments to eligible persons or organizations displaced from land acquired under this program.

Eligibility Requirements

Any public body or agency with legal authority to acquire and finance land for future construction of public facilities may apply for grant assistance. Applicants can include cities, towns, villages, townships, counties, Indian tribes, special districts, or combinations of such units.

In general, this program can provide assistance for land to be utilized in connection with any public work or facility for which a planning advance may be made under section 702 of the Housing Act of 1954. The proposed project must contribute to economy, efficiency, and the comprehensively planned development of the area. A grant is available even though the proposed facility is to be constructed with assistance under another Federal program. No grant, however, will be made if the other Federal program can itself assist in the advance acquisition of the land.

Industrial parks and other property to be leased or sold for private use are not eligible, nor are recreation areas or other sites to be put to immediate public use.

Present Status of the Program

Response to this program has not been good to date. Current fiscal policy (tight money market) has produced a decline in the availability of money in recent months and has denied potential applicants a source of financing land acquisition. Applicants are, in addition, often hampered by local statutes and other regulations which either limit borrowing capacity or prohibit borrowing altogether.

The Advance Acquisition of Land Grant Program has, however, been in operation only eight months and any conclusions based on its record during that period would be premature. The program is presently being evaluated by HUD and some minor changes may be forthcoming. Basically this program appears to provide a feasible means of promoting the timely purchase of needed land.

HISTORIC PRESERVATION

Historic Preservation is a new phase in Federal programs. The Demonstration Cities and Metropolitan Development Act of 1966 is the first act on a Federal level to provide for historical preservation as part of the urban renewal program. Preservation as a whole is a fairly recent development. At the end of WWII only two cities, Charleston, S.C., and New Orleans, had laws dealing with the architectural control of historic districts. Since that time, some 60 areas have passed laws regulating changes in historic areas.

AIMS OF THE PROGRAM

Title VII, Sec. 701, Subsec. (c):

> "The Congress further feels that there is a need for timely action to preserve and restore areas, sites, and structures of historic or architectural value in order that these remaining areas of our past history and heritage shall not be lost or destroyed through the expansion and development of the Nation's urban areas."

GRANTS AVAILABLE

(1) Up to 2/3 of the cost of surveys of structures and sites determined to be of historic or architectural value (with criteria compatable to those used by the Secretary of the Interior for the National Register) in order to identify such structures and sites, determine the cost of their rehabilitation and restoration, and provide other related information.

Chuck Gandy
C.P. 605
Winter, 1967

(2) Up to 50% of the cost of acquisition of title to or other permanent interest in areas, sites, and structures of historic or architectural value in urban areas, and in the restoration and use for public benefit.

(3) Up to 90,000 dollars per structure to cover the costs of renovating or restoring structures which the National Trust for Historic Preservation considers to be of historic or architectural value and which it has accepted and will maintain for historic purposes.

PARTICIPATION

This is a new program but it should prove to be a popular one in a number of areas where public concern has been felt over the destruction of historic sites. Between 1934 and 1940 the Historic Building Survey recorded some 6400 buildings of historic value. By 1964, over 40% were gone.

FEDERAL OPEN SPACE LAND PROGRAM

TITLE AND PURPOSE: Title VII of the Housing Act of 1961 authorizes the Housing and Home Finance Agency (Department of Housing and Urban Development) to make grants to States and local public bodies to assist in the acquisition of land in urban areas for permanent open-space land use. This section of the Act is known as the Federal Open Space Land Program.

OBJECTIVES: The objectives of the open-space land program are to help curb urban sprawl and prevent the spread of urban blight and deterioration, to encourage more economic and desirable urban development, and to help provide necessary recreational, conservation, and scenic areas by assisting public bodies to preserve open-space land essential to orderly long-range urban development.

SPECIFIC USES: To provide parks and other recreation, conservation, and scenic areas or preserve historic places. Urban beautification and improvement includes such activities as street landscaping, park improvements, tree planting, and upgrading of malls and squares. Relocation payments are provided for individuals, families, and businesses displaced by land acquisition.

ELIGIBILITY: An applicant must;

1. Be a State, or a regional, metropolitan, county, municipal, or other public body established by state or local law or by interstate compact or agreement.
2. Have authority to acquire title to, or other permanent interests in, open-space land.
3. Be able to provide the non-Federal portion of the cost.
4. Have authority to contract with the Federal Government and to receive and expend Federal and other funds.

SPECIFIC REQUIREMENTS: The following requirements must be met before an application grant may be approved;

1. The proposed use of the land for permanet open space must be important to the execution of a comprehensive plan.
2. There must be a program of comprehensive planning being actively carried on for the urban area.
3. Developed lands are eligible only if open-space needs cannot be met with existing undeveloped land.
4. Beautification activities must have significant, long-term benefits to the community.

TERMS OF GRANT: Federal assistance of 50 percent is available to help public agencies acquire and preserve urban lands having value for park, recreation, scenic, or historic purposes. Fifty percent assistance is also available to assist in developing lands acquired under the open-space program.

Grants of up to 90 percent are authorized to carry out projects of special value for demonstrating new and improved methods and materials for urban beautification.

OBLIGATION OF FUNDS: Not more than 12 1/2 percent of the total grant funds available in any year will be used for the acquisition of open-space land in any one state.

GRANT PAYMENT: A grant payment to the public body will be made upon the completion of acquisition of the open-space land.

RELATED PROGRAMS: Urban renewal; urban planning assistance; outdoor recreation and parks programs of Department of Interior; neighborhood facilities program of HUC; small watershed Program of Department of Agriculture; landscaping activities under Federal highway program; FHA Land Development Program.

GENERAL INFORMATION:

The Federal government itself acquires no land under this grant program. Instead, funds are made available to State and local public bodies to stimulate public open space land acquisition in urban areas. The Urban Renewal Administration in the Department of Housing and Urban Development administers the program and has established regulations for grant applications.

Open space land to be acquired with URA assistance must be of sufficient size so that their permanent dedication to open space uses will have a substantial effect in curbing urban sprawl and preventing the spread of blight and deterioration. Ten acres in one tract has been determined to be the minimum usually necessary to accomplish this purpose. Smaller tracts may be eligible if they can serve the desired objectives.

Before an application for an open space land grant is approved, evidence must be submitted to URA to show that a program of comprehensive planning is being carried on actively for the urban area, and that the proposed use of the land for permanent open space is important to the execution of a comprehensive plan. If a comprehensive plan covering the entire urban area has not yet been completed, however, a grant application still may be approved on the basis of a comprehensive plan for the jurisdiction where

the land proposed for acquisition is located.

The comprehensive plan must include, with respect to the open space land program, (1) a statement of objectives of and standards for the open space land program for the urban area or locality, (2) identification of the proposed open space uses and description of the areas designated for these uses, and (3) a description of the means of implementing the open space land program including regulations, controls, or restrictions.

Requests for information about URA open space land grants under this program should be made to Regional Directors of Urban Renewal in Regional Offices of the Housing and Home Finance Agency. Their location and the States they serve are listed in most of the Urban Renewal Administrations publications.

1965 HOUSING ACT

Title X. Rural Housing.

A. History of Program.

1. 1949 Housing Act. Title V.

This act authorized $250 million for 4%, 33 year loans for farm housing or other needed farm buildings and $12.5 million for grants for technical services and farm housing research. This program was to be conducted by the Secretary of Agriculture through the Farmers Home Administration.

2. 1955 Housing Act.

Authorized $100 million in loans, plus $12 million for farm improvement.

3. 1961 Housing Act. Title VIII.

Increased authorization for farm housing to $407 million. Made families living in rural areas, even though not engaged in farming, eligible for farm housing loans. Authorized the Secretary of Agriculture to set up a loan insurance program to insure $25 million in commercial loans to farmers (at 5%) for construction of housing facilities for domestic farm laborers.

4. 1962 Housing Act.

Authorized the Farmers Home Administration loan program to: (1) permit the elderly in rural areas to buy or alter existing housing; (2) permit co-signers in

the case of elderly applicants with low repayment ability; and (3) permit the elderly to purchase land as well as housing with loan proceeds. Authorized $50 million for a new revolving loan fund to permit the Farmers Home Administration to make direct, 50-year loans to provide nonprofit corporations and consumer cooperatives to purchase land and build moderate-cost rental housing for the low or moderate income elderly. Permitted the Agriculture Secretary to insure loans not exceeding $100,000 made by private companies to individuals, corporations, etc., to build rental housing for the elderly.

5. 1964 Housing Act. Title V.

Authorized a new grant program to pay up to two-thirds of the development cost of low-rent housing for domestic farm laborers.

6. 1965 Housing Act. Title X.

Authorized the Farmers Home Administration to make loans to persons in any age group to buy previously occupied dwellings, farm service buildings and adequate farm land. Established a new loan program which authorized the Secretary of Agriculture to make and to insure loans for rural home improvement. Defined a rural area for purposes of the loan program as a place which was not part of or associated with an urban area

and which had: (1) a population not in excess of 2,500; or (2) a population between 2,500 and 5,500, if rural in character(3).

B. The Rural Housing Program.

1. Rural Housing Loans.

The loans are made to farmers and other rural residents in rural areas and small rural communities with populations of not more than 5,500 which are not part of or closely associated with an urban area. Rural housing loans may be used to build, improve, or repair rural homes and related facilities, or farm service buildings, of fallout shelters, or to provide water for farmstead and household use. In addition to major construction, funds are available to modernize homes--add bathrooms, central heating, modern kitchens, and other home improvements, as well as to enlarge or remodel farm service buildings and put in related facilities such as yard fences, and driveways.

A rural resident also may use loan funds to buy a previously occupied house and lot or to buy a minimum adequate site on which to build his home as well as to build or repair a home on land he owns.

Rural housing loans are made only to applicants who are unable to obtain the credit they need from private and cooperative lenders, have sufficient income to pay operating and family living expenses, and meet payments

on debts, including the proposed rural housing loan, and are without decent, safe, and sanitary housing or without farm service buildings essential to the success of the farm. Special provisions are provided for rural senior citizens who are 62 years of age or over. A senior citizen who does not have enough income to repay a rural housing loan may qualify if a relative or someone else with adequate repayment ability cosigns his note.

2. Housing for Senior Citizens.

The Farmers Home Administration makes direct and insured loans to provide rental housing in rural areas for senior citizens, 62 years of age or older. Loan funds may be used to construct, purchase, improve, or repair rental housing designed to meet the needs of senior citizens who are capable of caring for themselves. Housing may consist of apartment buildings, duplex units, or individual detached houses or cottages suitable for independent living by senior citizens. Funds may also beused to provide appropriate recreational and service facilities, to buy and improve the land on which the buildings are to be located, and to develop the water, sewage disposal, heat, and light systems needed for the housing.

Direct loans may be made to private non-profit cooperatives. Insured loans may be made to individuals,

trusts, associations, partnerships, and corporations including municipal corporations or other corporate agencies of a State or local government. Loans are made only to applicants who are unable to finance the housing either with their own resources of with credit obtained from private or cooperative sources.

3. Farm Labor Housing.

The loans and grants for farm labor housing may be used to build, improve, buy, or repair farm labor housing for domestic farm laborers. Loans and grants may be used for kitchens, dining halls, and appropriate health and recreational facilities as well as water, sewage, heat, and light systems. Grant funds may be used to buy land on which labor housing projects will be located.

Loans may be made to a farmowner, association of farmers, State or political subdivision, or nonprofit organization. Grants may be made to a State or political subdivision or a broadly based nonprofit organization that intends to provide labor housing as a community service.

C. Use of the Program.

In 1966 the Georgia office of the Farmers Home Administration made 1506 loans and grants under Title X of the 1965 Housing Act with a total value of $14,029,460. At the present time the program is restricted in line with the anti-inflation program.

REHABILITATION GRANT PROGRAM

Part of the Federal financial assistance through loans and grants offered by the Department of Housing and Urban Development is directed toward the rehabilitation and renewal of housing by repairing, remodeling, and restoring rather than by clearance and demolition. This paper discusses the grants phase of the Rehabilitation Program.

Eligibility

Section 115 of the 1965 Housing Act authorized a direct grant to an owner of a one or two unit dwelling within an approved Urban Renewal Area or Code Enforcement Area. The applicant for a grant must occupy the property, and the Local Public Agency must determine that he meets the requirement that,

> "Rehabilitation grants are intended for hardship cases to avoid displacement of home owners who have no other means of financing repairs and improvements which must be made to their homes."

Owner-occupants with combined husband and wife income of $3,000 and under are eligible for a grant. Families with incomes exceeding $3,000 may be eligible for a partial grant if their housing expense amounts to twenty-five per cent or more of their total income.

Amount

The grant may be for the cost of the repairs need to meet the specified requirements of the Property Rehabilitation

Standards up to a maximum of $1,500. Should the cost of the necessary work exceed $1,500, the balance may be covered by a Section 312 loan or a loan from other sources. The grant may not be disbursed until the amount over $1,500 is obtained. When a grant is made, any additional assistance loans may only be used to bring the house up to Property Rehabilitation Standards. Grants may not be used for luxury items or for construction which expands the size of the structure.

Administration

Each Local Public Agency has Rehabilitation Advisors, Finance Officers, and Building Inspectors that will assist and advise the applicant and supervise all contract work. Applications to HUD must be made through the LPA. Once the applicant's request is initially approved by the LPA, a request for funds availability is made to HUD. When HUD confirms that the funds are available and have been reserved, the application to HUD is submitted.

The Staff of the Lacal Public Agency will assist the applicant in a number of ways.

1. The Rehabilitation Advisors will survey the applicants property and advise him on what work needs to be done.
2. The Staff will process the applications for the grant and any additional loans that are necessary.
3. The Rehabilitation Advisor will assist the applicant in obtaining three or more sealed bids from reliable contractors,

and will award the contract to the lowest bidder.

4. The Building Inspector will see that the work is done in a proper and workmanlike manner, and will make periodic inspections during the time the work is being done.

5. The LPA will pay the contractor only after the work has been approved by the Building Inspector.

Participation

In the Southeastern Region reception of the Rehabilitation Grant Program and the over-all Rehabilitation Program has been poor. Only 321 grants have been made in the entire Region since the inception of the program. Atlanta has established one of the best records with 124 Rehabilitation Grants. This lack of participation seems to result from a lack of confidence in rehabilitation among the local officials.

P#2 1967

SUMMARY OF THE PRINCIPLE PROVISIONS OF THE DEMONSTRATION CITIES AND METROPOLITAN DEVELOPMENT ACT OF 1966. By John Cox, CP 605, Winter, '67

Title I - since renamed Model Neighborhoods in Demonstration Cities - provides machinery for an attack on all problems that affect city livability. It essentially co-ordinates existing Federal programs and makes them more flexible. It may be applied only to a specific neighborhood within a city, which contains roughly 10% of the city's population.

To qualify for Federal assistance, a city's program must be designed to renew slum neighborhoods by the use of physical and social development programs, increase substantially the supply of standard housing of low and moderate cost, reduce substantially social and economic disadvantages, ill health, underemployment and enforced idleness, and contribute toward a well-balanced city. Additionally, the city's presentation must indicate that the projects will be initiated reasonably soon, adequate local resources are now or will be available, private initiative will be used whenever possible, an adequate relocation program exists, and that the plan is consistent with comprehensive planning in the entire urban and metropolitan area.

Once these conditions have been met, the Secretary of HUD will make grants and provide technical assistance for the planning of city demonstration programs. The Federal assistance will cover up to 80% of the total cost. Any existing Federal programs in the area will be co-ordinated and brought up to the 80% level. These grants will be made to any local public agency designated by the local governing body. All demonstration programs must have the approval of that local governing body. The cities will designate the neighborhood within which the project will take place.

The program will operate in two stages. First, assistance will be provided to plan and develop demonstration programs. $12 million will be provided both this fiscal year and the next for this purpose. Second, after July 1, 1967, assistance will be provided to carry out the programs in the amounts of $400 million for fiscal year 1968 and $500 million for fiscal year 1969.

The city may contribute its 20% in the form of community projects it constructs. The Housing Act of 1949 has been broadened to include certain public facilities of a community-wide or general benefit, expand the air rights provisions, making it easier to use such areas for industrial development when they are found to be unsuitable for housing, and to raise the distance from the boundary of the project site within which these projects may be built from one-quarter mile to one mile.

The Secretary of HUD is authorized to make supplemental grants to State and local public bodies and agencies for up to 20% of the cost of projects receiving aid under certain other Federal programs in metropolitan areas where development is being carried out in accordance with their own metropolitan planning and programming. The supplemental grants, which are to act as an incentive to planned metropolitan development, are available for basic sewer and water facilities, including sewage treatment plants, library facilities, hospital and medical facilities, highway construction - exclusive of the Interstate Highway System - airports, urban mass transportation facilities, acquisition of open space land for urban beautification and improvement and historic

site and structure preservation, acquisition and development of lands and waters for recreation purposes, and for public works and facilities in redevelopment areas. This supplemental grant cannot exceed 20% of the cost of the project. In addition, the total Federal contributions to a project cannot exceed 80%.

After June 30, 1967, all applications for Federal assistance for projects for which supplemental grants can be provided must be reviewed by a metropolitan or regional planning agency, which shall make comments concerning the extent to which the project is consistent with the comprehensive planning developed or in process for the area.

At the request of local officials, the Secretary of HUD may appoint a metropolitan expediter for the area. The expediter shall provide information, data, and assistance to local authorities in the area with respect to programs and activities conducted by HUD. The Secretary is also authorized to make matching grants to States to help finance programs to provide communities of under 100,000 with information and data on urban needs and assistance activities and technical assistance for the solution of local problems.

The FHA program for land development is broadened to permit the financing of "new communities." These new communities must be approved by the State Governor unless the localities have home rule. FHA is also authorized to insure the financing and equipping of medical, dental, and optometric facilities. Additionally, veterans benefits and sales of Housing to low-income families are broadened, as is assistance to rural housing and homeowners near closed military bases.

The Secretary of HUD is authorized to make matching grants to States and local public bodies to assist in the acquisition and restoration of historic structures and areas. Also, under a provision added to the urban renewal law, the redevelopment of an urban renewal area, unless it is for predominantly non-residential uses, must provide a substantial number of standard housing units for low and moderate cost and result in marked progress in serving the poor and disadvantaged people of the area. For the purpose of computing local grants-in-aid to an urban renewal project, a publicaly owned facility which was begun not earlier than 3 years prior to the enactment of this 1966 act, shall be deemed to benefit an urban renewal project to the extent of 25% of the total benefits or $3.5 million, whichever is less, if the facility is used by the public for cultural, exhibition or civic purposes, is a city hall or a public safety building, or is constructed or rehabilitated by a public university and devoted to the treatment of physical or mental disabilities and illness or to medical research; is located within, adjacent to, or in the immediate vicinity of the urban renewal project; is found to contribute materially to the objectives of the urban renewal plan; and is not otherwise eligible as a local grant-in-aid.

Since this legislation is only three months old and has not in any form been implemented, it is difficult to criticize. Comments from local HUD officials, however, seem to indicate that this program, like many others from the Federal Government, assumes

a much higher level of administrative competence in State and local governments than actually exists. There is no project related to this legislation in this area yet, but every city of size within this HUD Regional Area (Ala., Fla., Ga., Ky., Miss., N. Car., S. Car., Tenn.) has made inquiries about this program.

This legislation is a break-through in that for the first time the Federal Government has indicated its desire to attack city problems on ALL fronts in a co-ordinated fashion. Before, the effort has been fragmented; HEW took care of social areas, URA took care of physical rehabilitation, etc. This act co-ordinates these efforts in one office.

Of equal significance is the emphasis that the legislation puts on planning, particularly at the regional level. This is an effort to encourage cities and rural areas to plan for an entire area, and not just for their particular section, and to encourage them to plan for their development in a co-ordinated fashion.

The broadening of the provisions under which localities may contribute their 20% to a project is also significant in that it acts as an incentive to cities to participate in this program, and it will encourage those cities not having a comprehensive planning program to initiate one to qualify for Federal aid. The provision for Federal expediters is a recognition by the Federal Government that the many programs available need explaination and co-ordination within the cities, and that help is needed locally in preparing for such Federal programs.

Project:

ENVIRONMENT USA

Of such crucial intensity is war that the struggle itself can consume all attention, submerging the campaign's very objectives. The War on Community Ugliness: Is it merely that? Or is it a crusade for a beautiful, efficient, livable America? It is, in the ultimate, for the latter. There is little danger that the negative aspects be given too great emphasis, for ugliness, as The American Institute of Architects points out, "is allowed to flourish by the great mass of people who have trained themselves not to see or, seeing, think that nothing can be done about it." This approach notwithstanding, the propensities of creative architects are toward the positive, as depicted by the following photographs from an exhibition originally planned by the Architectural Panel of Los Angeles, a portion of which was later hung at the Octagon House.

A PORTFOLIO BY JULIUS SHULMAN

MORELAND GRIFFITH SMITH FAIA
38 PEACHTREE CIRCLE, N. E.
ATLANTA, GEORGIA 30309

Open land is vanishing and old landmarks are violate. Worst of all, expansion is eroding the precious and time-honored values of community with neighbors and communion with nature. The loss of these values breeds loneliness and boredom and indifference. Our society will never be great until our cities are great.

PRESIDENT JOHNSON

A happier and lovelier America, by design. A house at Big Sur, Calif., by Gregory Ain AIA beckons to sea, sky and land, inviting them in. It represents, at once, shelter and continual communion with nature. In his own house, Frederick Emmons AIA sought an answer to the question: How do I look from my neighbors' point of view? A gratifying communal contribution resulted. A housing project by Ridgely & Wexler in California's Conejo Valley demonstrates with its sculptured site that tract housing can be beautiful. Single-family dwellings are blessed with singleness. But such a house is inappropriate for many families, especially in urban areas. Marquis & Stoller's multiple low-income housing in San Francisco has a handsome, safe environment for all.

In every part of the nation we need men and women who will fight for man-made masterpieces and against senseless squalor and urban decay.

STEWART L. UDALL

Wherever there are children, there must be space to play. In Los Angeles, the Park Department created this small park and shelter complex in the midst of a busy and heavily populated area. In search of a playful, carefree, away-from-it-all atmosphere, Spencer & Lee produced this fantasy in Vacation Village on San Diego's Mission Bay. But man can enjoy beauty not only when in retreat but while at his labors. An industrial complex by Charles Luckman & Associates is graced with a rural, parklike atmosphere. Man, through design, is also brought closer to his God. A church in the wildwoods by Mario Ciampi FAIA is strongly rooted in the earth but heavenward in its quintessence.

PAGE PARTIALLY ILLEGIBLE

Beauty that is man-made is of particular importance to our cities. Two of Frank Lloyd Wright's contributions: San Francisco's V. C. Morris Shop with its exciting arched entrance and New York's Guggenheim Museum with all its spatial intrigue. In Detroit, the Michigan Consolidated Gas Co. Building by Minoru Yamasaki & Associates respects and enhances the site. The Seagram Building in New York (Ludwig Mies van der Rohe FAIA and Philip Johnson FAIA) is happily framed by Lever House (Skidmore, Owings & Merrill), a visually satisfying interrelationship between two major structures. Yet as we move toward buildings that are integrated with our technological age, we acknowledge the esthetic values of the past. The Bradbury Building in Los Angeles, completed in 1893, works well to this day in all its decorative elegance, as designed by George H. Wyman.

PAGE PARTIALLY ILLEGIBLE

As a citizen, all my thoughts have gone toward a better understanding of human and community needs. My camera, since 1936, has been dedicated to that cause.

JULIUS SHULMAN

PAGE PARTIALLY ILLEGIBLE

At Harvard, the old and new live together compatibly. The Yard will continue a sanctuary of space and freedom for generations unborn. When Le Corbusier was commissioned to do Carpenter Hall on the Cambridge campus, few could visualize the master's solution to a confined space. But in viewing the building from the approach shown, there is little awareness of surrounding structures. Finally, a reminder of our wondrous, natural endowment. Design, preservation and conservation—these are the guideposts for a greater, more beautiful and more livable America [commentary based on observations of Julius Shulman].

URBAN UNIT CALLS PARLEY ON CITIES

22 U. S. Leaders Ask Nation to Work on Domestic Issues

By JOSEPH A. LOFTUS
Special to The New York Times

WASHINGTON, July 31 — Twenty-two American leaders in a variety of pursuits called upon the nation Monday night to revise its priorities and to bring more resources to bear on domestic problems.

Big-city mayors, shaken by riots, called the conference of leaders in business, labor, religion, education, civil rights and city government. The group announced an emergency convocation of 1,000 to be held in Washington late in August.

The leaders proposed:

¶That the Federal Government develop an Emergency Work and Reconstruction Program to provide new training programs and jobs for the unemployed.

¶That the Urban Coalition, as the group tonight called itself, proceed immediately to promote "earn and learn" centers in the cities to provide job training and jobs.

¶That the private sector of the nation directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job training and hiring and "all other things that are necessary to the full employment of the free enterprise system, and also to its survival."

Lindsay Questioned

Mayor Lindsay of New York, answering a question at a news conference about the apparent mood of Congress to reduce rather than expand welfare programs, said:

"It would be sheer tragedy to penalize the majority because of resentment of the criminal acts of a tiny fraction."

David Rockefeller, president of the Chase Manhattan Bank, was asked whether he thought business had been "scared out of the ghettos."

"They certainly are deeply concerned," he said. "I wouldn't say they were scared away. They need the feeling that the country is back of a radical change."

Mayor Joseph M. Barr of Pittsburgh, chairman of the Conference of Mayors, and Mayor Lindsay, of the conference's executive committee, sponsored the conference.

The tentative agenda for the meeting included an item called "meeting with the President and Congressional leaders." Afterward Mayor Barr said no such meeting had been or was beng arranged.

The coalition's statement of more than 600 words did not mention the President.

List of Leaders

Those attending were:

I. W. ABEL, president, United Steelworkers of America, A.F.L.-C.I.O.

ARNOLD ARONSON (representing Roy Wilkins), executive secretary, National Leadership Conference on Civil Rights.

MAYOR JOSEPH M. BARR, president, United States Conference of Mayors.

ANDREW J. BIEMILLER (representing George Meany), legislative director, A.F.L.-C.I.O.

THE REV. WALTER FAUNTROY (representing the Rev. Dr. Martin Luther King Jr.), Washington representative, Southern Christian Leadership Conference.

JOHN FIELD, director of community relations for the Conference of Mayors.

HAROLD FLEMING, president of the Potomac Institute.

ARTHUR S. FLEMMING, president, National Council of Churches.

JOHN J. GUNTHER, executive director of the Conference of Mayors.

ANDREW HEISKELL, chairman of the board, Time, Inc., and chairman of Urban America, Inc.

JOSEPH KEENAN, secretary-treasurer, International Brotherhood of Electrical Workers, A.F.L.-C.I.O.

MAYOR JOHN V. LINDSAY, executive committee, Conference of Mayors.

MAYOR ARTHUR NAFTALIN of Minneapolis, chairman, Community Relations Committee, Conference of Mayors.

GERALD PHILLIPE, chairman of the board, General Electric.

WALTER P. REUTHER, president, Citizens Crusade Against Poverty, and president, United Automobile Workers, A.F.L.-C.I.O.

DAVID ROCKEFELLER, president, Chase Manhattan Bank.

RABBI JACOB P. RUDIN, president, Synagogue Council of America.

BAYARD RUSTIN (representing A. Philip Randolph), executive director, A. Philip Randolph Institute.

WILLIAM L. SLAYTON, executive vice president of Urban America, Inc.

THE MOST REV. PAUL TANNER (representing the Most Rev. John Deardon), general secretary, National Conference of Catholic Bishops.

JOHN WHEELER, president, Mechanics and Farmers Bank, Durham, N. C., and president, Southern Regional Council.

WHITNEY M. YOUNG Jr., executive director, National Urban League.

NEW YORK TIMES

Text of Statement by Urban Coalition

Special to The New York Times

WASHINGTON, July 31—The Urban Coalition, at its first meeting to discuss the problems of cities, issued the following statement:

Preamble

The tangible results of the urban riots in terms of death, injury and property damage are horrifying in themselves. The intangible damage in terms of the riots' effects on men's minds may yet be even greater.

At this moment, millions of Americans are forming attitudes that could mean disaster to our social structure: the homeowner who vows to shoot the next suspicious character he sees in his neighborhood; the businessman who decides to get out of the slums; the labor leader who determines to keep minorities out; the insurance man who refuses to cover slum properties; the Negro or white who goes out to take whatever he can get his hands on; the legislator who fails to meet his public responsibilities.

These people and others are reversing a trend that, however slowly, was working to the benefit of our cities' disadvantaged minorities.

Let them realize that it is the citizen, in the end, who will keep our country united or will divide it. It is the Government's duty to maintain law and order. But all must understand that law and order is not an excuse for oppression. If law and order is to be accepted by the minorities, the majority must clearly and positively demonstrate its belief that justice, social progress and equality are the rights of every citizen.

We the undersigned pledge ourselves to this purpose. We will call upon the leaders of all segments of society, city by city, to publicly commit themselves to programs enabling the disadvantaged minorities to share in all of the benefits of our society.

Joint Statement

This conference of leaders of business, labor, religions, education, civil rights and city government has formed an Urban Coalition to bring about a sense of immediate urgency about the need for positive and progressive action for our cities.

Lawlessness and all its ingredients cannot be tolerated. Looting, burning and bottle-throwing are criminal acts, and must be dealt with as such.

But let not a reaction to acts, committed by a small fraction of the population of the country's ghettos, blind us to the absolute necessity of moving dramatically and immediately to correct the desperate condition of our urban centers.

We call upon the nation and the Congress to reorder our national priorities, with a commitment of national resources equal to the dimensions of the problems we face. The crisis requires a full new dimension in both the public and private sectors, working together for jobs, housing, education and the other needs of our cities.

'Congress Must Move'

This coalition believes the Congress must move without delay on urban programs. The country can wait no longer for model cities, antipoverty, housing, education and job training legislation and a host of other matters that have been too long denied the cities.

We call upon the Federal Government to develop an Emergency Work and Reconstruction Program to provide new training programs and jobs for the unemployed.

The Coalition also believes that the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investments, job training and hiring and all other things that are necessary to the full enjoyment of the free enterprise system, and also to its survival.

Earn and Learn Centers

To carry this forward, the Coalition commits itself to proceed imediately to promote "Earn and Learn Centers" in the cities of the country to provide job training and jobs. The Coalition agrees these centers might well be the joint venture of business, labor and local government.

The Coalition believes the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto.

The Coalition's commitments can be for no less and its determination is for even more.

The Coalition further commits itself to convene an Urban Coalition Emergency Convocation in Washington near the end of August.

The Convocation will be attended by 1,000 leaders across the nation of business, labor, religion, education, civil rights and city government.

Coalition for Better Cities

While commissions to "investigate" urban riots proliferate in Washington, a group of outstanding citizens has decided to take the lead in spurring the country to positive action to improve housing, schools and jobs, the obvious needs to combat despair in the slums.

This private initiative pools the energies of such dissimilar Americans as David Rockefeller, Walter P. Reuther, Bayard Rustin, Mayor Lindsay and Gerald Phillipe, chairman of the board of General Electric. They and their associates in a new Urban Coalition plan to mobilize a thousand leaders in religion, education, business, labor, civil rights and municipal government at an emergency convocation in Washington later this month.

That meeting could become the generator of as dramatic a goad to the national conscience as was provided by the civil rights March on Washington four years ago. The spread of rioting from one racial ghetto to another has made it plain that the critical problem now is faster progress toward making real the promises of social justice embodied in the laws for which tens of thousands marched in 1963.

Unquestionably, no amount of effort, no outlay of funds, no application of public or private resources will eradicate the roots of unrest swiftly enough to guarantee civic tranquillity this year or next. But reliance on repression without a massive readjustment of priorities to tackle the sources of hopelessness merely means a downward spiral of hate, with increasingly violent eruptions as its outrider.

The statement of the coalition leaders stresses that lawlessness in all its forms cannot be tolerated, but it reminds the nation that the acceptance of law and order by the minorities demands a clear demonstration by the majority of its belief that "justice, social progress and equality are the right of every citizen."

Congress is urged to move without delay on urban problems, especially in the provision of new training programs and jobs for the unemployed. However, there is no disposition to push the whole burden onto Government. The coalition calls on every American "to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto."

The shortage now is as much of will and ideas as it is of public and private money. A state of guerrilla warfare is developing between many in the white and black communities. The diversity of the elements in the Urban Coalition represents a serious and significant effort to end this drift, even rush, toward an ugly kind of American apartheid. Reconstruction of attitudes and redefinition of priorities are essential precedents to reuniting America's riven cities.

Will There Be An Urban Coalition?

By WILLIAM V. SHANNON

WASHINGTON, Aug. 5—Twice in this generation, the leaders of American life outside of Washington reached agreement on a major issue and forced the Federal Government to act.

In 1947-48, the issue was the Marshall Plan. Business and civic leaders rallied to support the proposal for the rebuilding of Western Europe submitted by a Democratic President to a conservative and potentially balky Republican Congress. In 1963-64, religious leaders of all faiths powerfully reinforced the civil rights movement and compelled President Kennedy to ask for a far-reaching civil rights bill and Congress to enact it.

Pressure Is the Spur

The only hope for a way out of the present racial crisis now tearing apart the cities of the nation is that the leadership in private life will once again rally the public and force Washington to respond.

Congress is presently leaderless. There is no one in the House or Senate with the personal force and prestige of Robert Taft or Sam Rayburn to impose a pattern on the naturally inchoate activity of Congress. So far the angry voices of recrimination and repression have been the loudest, but most Congressmen have not really made up their minds. Like other Americans, they have been made bewildered and uncertain by this terrible turn of events.

President Johnson is waiting to have his hand forced. Determined not to abandon or cut back on the war in Vietnam, he intends to cling to the order of priorities he had developed before Newark and Detroit blew up. He already needs the tax increase to finance the war. He will not seek a still larger tax increase or countenance a swollen deficit to pay for a new urban program unless he is sure there is a widespread public demand.

Mr. Johnson appointed his study commission to deflect criticism away from himself and to reassure the public that the situation, if not under control, was under study. But he is not averse to leading a crusade for better life in the cities if he is sure there is a crusade forming and waiting to be led. He is busy now demonstrating in public and in private that there can be "no reward for rioting." But he could move rapidly in the other direction.

Vice President Humphrey's recent speeches chiding Congress for its slowness and recommending a "Marshall Plan" for the cities hints at the President's flexibility. Humphrey does not make major policy speeches without clearing them with the President.

Fortunately, leaders from the business, labor, the churches and the civil rights organizations as well as the nation's Mayors are moving to put pressure on the President and Congress. The 22 leaders who met last Monday to form the "Urban Coalition" plan to hold an emergency convocation of a thousand private citizens in Washington later this month. It is too early to tell that a powerful new consensus may be forming.

The organizers of the conference are not at all certain how they will structure the meeting or what they hope to arrive at in the way of a substantive program.

"All we know is that we can't come up with the same old shopping list," one of them remarked last week. "If this meeting can only recommend a rat-control bill or another 100 million for urban renewal then it will be a failure."

Slow-moving long-term programs looking toward gradual improvement are not enough. The cities need a coordinated attack on their human and physical problems, and they need an attack scaled to the size of those problems. Ten feet of rope will not save a man drowning a hundred feet from shore. Recognizing this truism, the planners of the conference are proceeding on the general assumption — make no small plans.

Ghetto Youth

Experts can identify three distinct groups in the Negro slums who need help. There are the older men, many of them from the Deep South who have only a grade school education and who, as the need for unskilled laborers diminishes, are jobless for long periods.

There are the teen-agers and young men, born and reared in urban slums, who are often but not always high school dropouts. Many of them come from broken homes where no father was present to impose consistent discipline and to provide the example on which boys can model themselves. These youths are variously trapped in unemployment, in dead-end jobs with no career potential or in the criminal culture of the ghetto streets, piecing out an existence, for example, as "runners" in the numbers racket.

Finally there are those Negro women and their youngsters who live on "aid to dependent children" assistance. These women, though much critized for immorality and indolence, are mostly the pathetic victims of the economic defeat of their menfolk.

Deep Are the Roots

The pathology of the Negro slums got its origins in slavery and in the subsequent decades of deprivation and degredation in the rural South. The United States can rescue these people if it makes the same kind of effort it made to rescue Western Europe's shattered economy after World War II.

The President and Congress will assume the leadership when the public and particularly the business community shows that it generally wants the national effort in this direction. If businessmen respond to enlightened leaders such as David Rockefeller and Henry Ford 2d, the nation may yet make progress in this summer of discontent.

1000 Leaders to Meet Here on Cities' Needs

Urban Coalition Sets Late-August Parley

By Robert E. Baker
Washington Post Staff Writer

A convocation of 1000 leaders of business, labor, religion, civil rights and city government has been called for late August in Washington to mobilize an attack on city problems.

The call was made last night by the newly formed Urban Coalition, headed by Mayor John V. Lindsay of New York and Mayor Joseph M. Barr of Pittsburgh.

"We call upon the Nation and Congress to reorder our national priorities, with a commitment of national resources equal to the dimensions of the problems we face," said Lindsay, reading a statement approved unanimously by the 20 national leaders who formed the Urban Coalition.

Two members of the Coalition, Lindsay and I. W. Abel, president of the United Steelworkers of America, are also members of the Presidential Commission on Civil Disorders, named last week to investigate the wave of slum riots that have hit the Nation.

A third Commission member, Executive Secretary Roy Wilkins of the NAACP, did not attend last night's session but he was represented by Arnold Aronson.

The Coalition also called for:

- Quick action by Congress on urban programs "too long denied the cities."
- Federal development of an Emergency Work and Reconstruction Program to provide jobs and training for the unemployed.
- "Earn and Learn Centers" in the cities for job training, a joint venture of business, labor and local government.
- Commitment by private industry in investment, job training and hiring as its role in the crisis of the cities.
- Commitment of "every American to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto."

In a preamble to its statement, the Urban Coalition warned against the forming of attitudes by Americans during this period of crisis and riots "that could mean disaster to our social structure."

"It is the Government's duty to maintain law and order.

"But all must understand that law and order is not an excuse for oppression. If law and order is to be accepted by the minorities, the majority must clearly and positively demonstrate its belief that justice, social progress and equality are rights of every citizen."

The meeting had been called by Lindsay and Barr to mobilize national action for short-term and long-term measures to prevent unrest and violence that have stricken 50 American cities this summer.

It was held at the offices of Urban America, Inc., here under the auspices of the U.S. Conference of Mayors.

It was obviously sparked by the riots, but the idea was born last January when eight big-city mayors, including Barr and Lindsay, called for such a coalition to place urban problems to the top of the Nation's priority list.

Mayor Jerome P. Cavanagh of Detroit was one of the January organizers but he was unable to attend last night's session because of the recent riots in his city.

Leaders who attended last night's session and approved the statement were:

Mayors—Arthur Naftalin of Minneapolis, Barr and Lindsay.

Industry—Andrew Heiskell, chairman of Time, Inc.; Gerald Phillippe, chairman of General Electric; David Rockefeller, president of Chase Manhattan Bank.

Labor—Andrew J. Biemiller, legislative director AFL-CIO, representing AFL-CIO President George Meany; Joseph Keenan, secretary-treasurer, International Brotherhood of Electrical Workert; Walter Reuther, president, United Automobile Workers, and Abel.

Religion — Rabbi Jacob F Rudin, president, Synagogu Council of America; Arthur S Flemming, former Secretar of Health, Education and We fare, now president of the Na tional Council of Churches Bishop Paul Tanner, genera secretary, National Conferenc of Catholic Bishops, represent ing Archbishop John Deade of Detroit.

Civil Rights—The Rev. Wal ter Fauntroy of Washington representing the Rev. Dr. Mar tin Luther King Jr.; Bayard Rustin, representing A. Philip Randolph; Whitney Young, di rector of the National Urban League; John Wheeler, presi dent of the Southern Regional Council, and Aronson.

August 12, 1967

Dear Mr. Smith:

It is with a strong sense of urgency that we invite you to join in the Emergency Convocation of the Urban Coalition, to be held August 24 at The Shoreham Hotel in Washington, D. C., from 9:30 a.m. to 5 p.m.

The Urban Coalition was formed on July 31 by the individuals named above, in direct response to the national crisis in the cities. Alienation has erupted into violence in the slums of 104 communities during the past two summers. We believe that an immediate attack must be launched to reorder our national priorities and to obtain a major commitment of national resources--both public and private--on the scale of the crisis itself.

We are calling the Emergency Convocation, involving 1,000 leaders of our national life, to carry forward the goals of the Coalition. They include: (1) an emergency work program to provide job training and employment for the urban poor, now being drafted into specific legislation; (2) a major expansion of the private sector's efforts to train and provide jobs for the hard-core unemployed; (3) a long-range program for the physical and social reconstruction of American cities.

The Coalition's statement of purpose is enclosed, along with a registration card and hotel reservation form for the Convocation. We hope that you will give your full personal support to the Convocation's goals by agreeing to attend.

Sincerely,

Andrew Heiskell

Statement of Purpose: The Urban Coalition

The tangible results of the urban riots in terms of death, injury, and property damage are horrifying in themselves. The intangible damage in terms of the riots' effects on men's minds may yet be even greater.

At this moment, millions of Americans are forming attitudes that could mean disaster to our social structure: the homeowner who vows to shoot the next suspicious character he sees in his neighborhood; the businessman who decides to get out of the slums; the labor leader who determines to keep minorities out; the insurance man who refuses to cover slum properties; the Negro or White who goes out to take whatever he can get his hands on; the legislator who fails to meet his public responsibilities.

These people and others are reversing a trend that, however slowly, was working to the benefit of our cities' disadvantaged minorities. Let them realize that it is the citizen, in the end, who will keep our country united or will divide it. It is government's duty to maintain law and order. But all must understand that law and order is not an excuse for oppression. If law and order is to be accepted by the minorities, the majority must clearly and positively demonstrate its belief that justice, social progress, and equality are rights of every citizen.

We, the undersigned, pledge ourselves to this purpose. We will call upon the leaders of all segments of society, city by city, to publicly commit themselves to programs enabling the disadvantaged minorities to share in all of the benefits of our society.

This conference of leaders of business, labor, religions, education, civil rights, and city government has formed an Urban Coalition to bring about a sense of immediate urgency about the need for positive and progressive action for our cities.

Lawlessness and all its ingredients cannot be tolerated. Looting, burning, and bottle throwing are criminal acts and must be dealt with as such.

But let not a reaction to acts, committed by a small fraction of the population of the country's ghettos, blind us to the absolute necessity of moving dramatically and immediately to correct the desperate condition of our urban centers.

We call upon the nation and the Congress to reorder our national priorities, with a commitment of national resources equal to the dimensions of the problems we face. The crisis requires a full new dimension in both the public and private sectors, working together for jobs, housing, education, and the other needs of our cities.

This Coalition believes the Congress must move without delay on urban programs. The country can wait no longer for model cities, anti-poverty, housing, education, and job training legislation, and a host of other matters that have been too long denied the cities.

We call upon the Federal Government to develop an Emergency Work and Reconstruction Program to provide new training programs and jobs for the unemployed.

The Coalition also believes that the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job training and hiring, and all other things that are necessary to the full enjoyment of the free enterprise system, and also to its survival.

To carry this forward, the Coalition commits itself to proceed immediately to promote "Earn and Learn Centers" in the cities of the country to provide job training and jobs. The Coalition agrees these centers might well be the joint venture of business, labor, and local government.

The Coalition believes the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic, and moral climate which will make possible the breaking up of the vicious cycle of the ghetto.

The Coalition's commitment can be for no less and its determination is for even more.

The Coalition further commits itself to convene an Urban Coalition Emergency Convocation in Washington near the end of August.

The Convocation will be attended by 1,000 leaders across the nation of business, labor, religion, education, civil rights, and city government.

John
Did you attend this?
Please fill me in!
Arnold

August 15, 1967

Dear Friend:

Since you are one of the 1,000 national leaders invited to attend the meeting of the "urban coalition" on Thursday, August 24, in the Shoreham Hotel, we want to extend an additional invitation on behalf of the Leadership Conference on Civil Rights.

The meeting will be focussed on the critical problem of the cities and the steps needed to remedy them. But we are sure you recognize that just as pressing as the need to correct social and economic inequalities is the need to deal with the closely related matter of correcting the injustice of unequal citizenship.

For that reason, we hope you will be able to remain for another hour or so after the coalition meeting adjourns to discuss the critical situation that confronts civil rights legislation in this Congress.

The coalition meeting is scheduled to end at 5 P.M. We will convene our meeting almost immediately thereafter.

Please plan on staying a while longer. It is important to mobilize public support to break the impasse that now blocks bills that could contribute to a constructive solution of urban problems. It is equally important to mobilize support for passage in this Congress of the pending legislation that would end discrimination in employment and housing and the selection of juries and that would provide greater protection for Negro citizens in the exercise of their constitutional rights.

Sincerely yours,

Roy Wilkins

STATEMENT OF PRINCIPLES, GOALS, AND COMMITMENTS
EMERGENCY CONVOCATION: THE URBAN COALITION

August 21, 1967

CONFIDENTIAL
DRAFT

We are experiencing our third summer of widespread civil disorder. In 1965, it was Harlem, North Philadelphia, and the disaster of Watts. In 1966, it was the Hough area of Cleveland, Omaha, Atlanta, Dayton, San Francisco and 24 other cities. This summer, Newark and Detroit were only the most tragic of 80 explosions of violence in the streets.

Confronted by these catastrophic events, we, as representatives of business, labor, religion, civil rights, and local government, have joined in this Convocation to create a sense of national urgency on the need for positive action for all the people of our cities.

We are united in the following convictions:

We believe the tangible effects of the urban riots in terms of death, injury, and property damage, horrifying though they are, are less to be feared than the intangible damage to men's minds. We also believe that our thoughts and actions should be directed more to the deep-rooted and historic problems of the cities that have led to these riots than to the riots themselves.

We believe it is government's duty to maintain law and order. But if law and order is to be accepted by all, then we as a nation must clearly and positively demonstrate our belief that justice, social progress, and equality are rights of every citizen.

We believe the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face. The crisis requires a new dimension of effort in both the public and private sectors, working together to provide housing, education, and the needs of our cities.

We believe the Congress must move without delay on urban programs. The country can wait no longer for measures that have too long been denied the people of the cities and the nation as a whole--additional civil rights legislation, adequately funded model cities, anti-poverty, housing, education, and job-training programs, and a host of others.

We believe the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job-training, and hiring, and all that is necessary to the full enjoyment of the free enterprise system--and also to its survival.

We believe the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic, and moral climate that will make possible the breaking of the vicious cycle of the ghetto. Each American must have the opportunity to participate fully in shaping and directing the society of which he is a part.

This Convocation calls upon the nation to end once and for all the shame of poverty amid general affluence. Government must accept responsibility to provide all Americans with opportunity to achieve an adequate income. Private industry must greatly accelerate its efforts to recruit, train, and hire the hard-core unemployed. Government must act as employer of last resort for those who cannot otherwise find work, and must assure adequate income levels for those who are unable to work.

Emergency Work Program

This Convocation calls upon the Federal Government to develop an emergency work program to provide jobs and new training opportunities for the unemployed and underemployed consistent with the following principles:

--The Federal Government must enlist the cooperation of government at all levels and of private industry to assure that meaningful, productive work is available to everyone willing and able to work.

--To create socially useful jobs the emergency work program should concentrate on the huge backlog of public service employment needs in parks, streets, slums, countryside, schools, colleges, libraries, and hospitals.

--The emergency work program should put one million of the presently unemployed into productive work at the earliest possible moment.

--The program must provide meaningful jobs--not dead-end, make work projects--so that the employment experience gained adds to the capabilities and broadens the opportunities of the employees to become productive members of the permanent work force of our nation.

--Basic education, training, and counseling must be an integral part of the program to assure extended opportunities for upward job mobility and to improve employee productivity. Grants for training, education, and counseling should be made to private industry as well as to public and nonprofit agencies.

--Grants for employment should be made to local governments, nonprofit institutions, and Federal agencies able to demonstrate their ability to use labor productively without reducing existing levels of employment or undercutting existing labor standards. Wages should be at least equal to those prevailing in the area for similar services, or the Federal minumum wage, whichever is higher.

--Such a program should ensure that new employees become a part of the regular work force and that normal performance standards are met.

--The operation of the program should be keyed to specific, localized unemployment problems and focused initially on those areas where the need is most apparent.

Private Employment Assistance and Investment

All representatives of the private sector in this Urban Coalition decisively commit themselves to assist the deprived among us to achieve full participation in the economy as self-supporting citizens. We pledge full-scale private endeavor through creative job-training and employment, managerial assistance, and basic investment in all phases or urban development.

The alternatives to a massive and concerted drive by the private sector are clear. They include the burden of wasted human and physical potential, the deterioration of the healthy environment basic to the successful operation of any business, and the dangers of

permanent alienation from our society of millions of citizens.

We propose to initiate an all-out attack on the unemployment problem through the following steps:

--To move systematically and directly into the ghettos and barrios to seek out the unemployed and underemployed and enlist them in basic and positive private training and employment programs. We will re-evaluate our current testing procedures and employment standards so as to modify or eliminate those practices and requirements that unnecessarily bar many persons from gainful employment by business.

--To create a closer relationship between private employers. and public training and emergency employment programs to widen career opportunities for our disadvantaged citizens. To this end, we will explore the potential of setting up joint private and public "Earn and Learn" centers in depressed urban areas.

--To develop new job classifications to facilitate the early entry of under-qualified persons into industrial and commercial employment.

--To develop large-scale programs to motivate the young to continue their education. Working closely with educators, we will redouble our efforts to provide part-time employment, training, and other incentives for young men and women. We also pledge our active support to making quality education readily accessible to deprived as well as advantaged young people.

--To expand on-the-job training programs to enhance the career advancement prospects of all employees, with particular emphasis on those who now must work at the lowest level of job classifications because of educational and skill deficiencies.

We pledge to mobilize the managerial resources and experience of the private sector in every way possible. We will expand part-time and full-time assistance to small business development in depressed areas. We will strive to help residents of these areas both to raise their level of managerial know-how and to obtain private and public investment funds for development. We will work more closely with public agencies to assist in the management of public projects. We will encourage leaders in the private sector to get directly and personally involved in urban problems so that they may gain a deeper understanding of these problems and be of greater assistance.

We pledge our fullest efforts to develop means by which major private investment may be attracted to the renovation of deteriorating neighborhoods in our cities. We will explore and encourage governmental incentives to expedite private investment. We will develop new methods of combining investment and managerial assistance so that the residents of depressed areas may achieve a leadership position in the development of these areas.

Housing, Reconstruction, and Education

This Convocation calls upon the nation to fulfill in the next five years the national need, as first enunciated by Congress in 1949, to provide

"a decent home and a suitable living environment for every American family." The attainment of this objective will require construction or rehabilitation of one million housing units a year for lower-income families and guarantees of equal access to all housing, new and existing. The Urban Coalition shall, as its next order of business, address itself to the development of a broad program of urban reconstruction and advocacy of appropriate public and private action to move toward these objectives.

This Convocation calls upon the nation to create an educational system that will equip all young Americans for full and productive participation in our society. This will require a concentrated program to equalize opportunities for achievement. Early childhood education must be made universal. Work and study programs must be greatly expanded to enlist those young people who now drop out of school. Financial barriers that now deny to youngsters from low-income families the opportunity for higher education must be eliminated. Current programs must be increased sufficiently to wipe out adult illiteracy within five years.

This Convocation calls upon all Americans to apply the same determination to these programs that they have to past emergencies. We are confident that, given this commitment, our society has the resources and can devise the techniques necessary to rebuild cities and still meet our other national obligations. Out of past emergencies, we have drawn strength and progress. Out

of the present urban crisis we can build cities that are places, not of disorder and despair, but of hope and opportunity. We pledge ourselves to this goal. We ask the help of the Congress and the Nation.

THE URBAN COALITION

National Steering Committee

Planning Meeting

August 23, 1967
Shoreham Hotel
Washington, D.C.

TENTATIVE AGENDA

I. Report on Planning Activities

II. Review: Declaration of Principles

III. Follow-up Planning

IV. Interim Budget and Staff

V. Tentative Future Schedule

VI. Briefing on Convocation

VII. Final Guidelines for Steering Committee in re: Press

URBAN COALITION

TENTATIVE BUDGET

SIX MONTHS
(August 1, 1967 to January 31, 1968)

STAFF			
Coordination*	12,500		
5 Professionals	35,000		
5 Clericals	15,000		
Benefits	2,500		
		65,000	
OPERATIONS			
Supplies, Telephone, Telegraph, Postage, Etc.	5,000		
Travel	10,000		
Printing	10,000		
National Convocation, Local Meetings, and Techinal Assistance	5,000		
Rent	5,000		
		35,000	
Six Month Total			100,000

*NOTE: It is contemplated that John Feild, U.S. Conference of Mayors, and Ron Linton, Urban America Inc., will serve as Co-coordinators on an interim basis with their agencies to be reimbursed for time.

THE URBAN COALITION

National Steering Committee

Planning Meeting

August 23, 1967
Shoreham Hotel
Washington, D.C.

PRESS ARRANGEMENTS

1. The press room will be located in the hotel's Board Room. It will open at 7:30 a.m. In charge of the press room operation is Donald Canty (Urban America).

2. Press attendance is expected to be heavy, and will include all wire services and national television networks. Upon registration, press representatives will be given the program; the Coalition's Declaration of Principles; a background statement on the Coalition; a list of Steering Committee members; and a roster of pre-registered delegates. An addendum to the delegate roster will be prepared to cover those who register up to 9:30 a.m.

3. There will be a press conference at 9 a.m. in the Ambassador Room (adjacent to the Regency Ballroom in which the general sessions will be held). It would be appreciated if all Steering Committee members at the Convocation would be present at this press conference. The press will be asked to confine its questions to those relevant to the Coalition and Convocation.

4. Any prepared statements should be distributed through the press room.

5. We are certain to get requests for interviews with individual Steering Committee members. The policy of the press staff will be to assist in attempting to arrange such interviews only for the most important national media, and whenever possible to make such arrangements through individual press relations aides of Steering Committee members. All such aides should register in the press room before the morning press conference.

URBAN COALITION

FOLLOW-UP PLAN OF ACTION

It is proposed that we create on an interim basis five Emergency Task Forces which will be appointed by Mr. Heiskel and Mr. Randolph and announced at the final general session of the Convocation. These Task Forces will be responsive to the commitments made by the Urban Coalition in the Declaration of Principles

The Convocation Workshop Chairmen will thus be able to tell their workshop participants that we would like to get some "Task Forces" organized and will ask participants to work with them as a way of chaneling suggestions and commitments. They will not indicate specifics on the Task Forces during the workshop sessions, nor will they make specific appointments.

The five proposed Task Forces are as follows, each with Co-Chairmen drawn from the five segments of the Coalition National Steering Committee:

1. Emergency Task Force on Public Service Employment
   (This group will develop legislation to implement the emergency work program).

2. Emergency Task Force on Private Employment and Investment
   (This group will organize to implement the commitment in the Declaration of Principles, under "Private Employment, Assistance, and Investment.")

3. Emergency Task Force on Educational Disparities
   (This group will organize to implement the commitments of the Declaration of Principles dealing with educational programs).

4. Emergency Task Force on Reconstruction and Urban Development
   (This group will organize to implement the commitments dealing with housing and reconstruction).

5. Emergency Task Force on Equal Housing Opportunities
   (This group will organize to implement the commitments seeking "guarantees of equal access to all housing, new and existing" and seeking to "make possible the breaking of the vicious cycle of the ghetto").

CONFIDENTIAL

STATUS REPORT AS OF 4:00 P.M. WEDNESDAY

Business:	249
Labor:	48
Churches:	134
Civil Rights:	83
Local Government:	62
TOTAL:	576 (fully processed, as of Noon, Wednesday)
plus:	88 (not fully processed)
GRAND TOTAL:	664 (as of 4:00 P.M. Wednesday)

URBAN COALITION

STAFF COMMITTEE MEETING

August 16, 1967

MINUTES OF ACTION

1. The Committee reviewed the Convocation format and approved the following list of speakers:

   Heiskel--gavel
   Randolph--Declaration of Principles
   Key-note--Mayor John V. Lindsay
   Response: Bishop John E. Hines
   Roy Wilkins
   Henry Ford II
   George Meany
   Whitney Young, Jr.
   Joseph D. Keenan
   David Rockefeller
   Walter Reuther

2. The Local Coalition Work Group reported that a working outline was now available for the Co-Chairmen of the Workshops.

3. The drafting groups on Goals and Priorities, Private Sector Program, and Emergency Work Program presented their reports and a single consolidated draft was approved in substance. The consolidated draft was to be edited and sent to the members of the Steering Committee and staff representatives.

4. It was agreed that the next Staff Committee meeting would be held on August 21.

Tentative Future Schedule

1. Co-cordinators to have prepared legislative or draft materials for full staff Committee Review on Monday, September 11, 2 p.m.
2. Preliminary meeting of Co-Chairmen of each Task Force on September 15, a.m.
3. National Steering Committee to meet and approve legislative draft on September 15, 2 p.m. Preliminary reports on Task Force organization.

Emergency Convocation: The Urban Coalition

Washington, D. C.
August 24, 1967
The Shoreham Hotel

9:30 a.m. **Opening General Session,** Regency Ballroom

Invocation: Rabbi Jacob P. Rudin

Welcome: Mayor Joseph M. Barr
Mayor James H. J. Tate

Co-Chairman: Andrew Heiskell

Co-Chairman: A. Philip Randolph
Presentation of Coalition Declaration of Principles

Keynote: Mayor John V. Lindsay

Response: Bishop John E. Hines
Roy Wilkins
Henry Ford II
George Meany
Whitney Young, Jr.
Joseph D. Keenan
David Rockefeller
Walter Reuther

12 noon Informal buffet luncheon, The Terrace

Committee luncheon with Congressional leadership

2 to 3:45 p.m. **Mobilization Workshop Sessions**

Agenda for all Workshop Sessions:

1. Expansion of private initiative in dealing with urban problems
2. Development of local support and local coalitions

Workshop A, Empire Room

Co-Chairmen: John Wheeler, President,
Mechanics and Farmers Bank, Durham, N. C.
Mayor Jerome P. Cavanagh, Detroit

Workshop B, Regency Ballroom

Co-Chairmen: Walter N. Rothschild, Jr., President,
Abraham & Straus, New York, N. Y.
Mayor Arthur Naftalin, Minneapolis

Workshop C, Diplomat Room

Co-Chairmen: Gilbert W. Fitzhugh, President,
Metropolitan Life Insurance Company, New York, N. Y.
Mayor John F. Collins, Boston

Workshop D, The Forum

Co-Chairmen: Atherton Bean, Chairman and Chief Executive Officer,
International Milling Company, Inc., Minneapolis, Minn.
Mayor Floyd H. Hyde, Fresno

Workshop E, Palladian Room

Co-Chairmen: James Downs, Chairman of the Board,
Real Estate Research, Inc., Chicago, Ill.
Mayor Henry Marsh, Saginaw

Workshop F, Ambassador Room

Co-Chairmen: J. Irwin Miller, Chairman,
Cummins Engine Company, Columbus, Ind.
Mayor Ilus W. Davis, Kansas City, Mo.

Workshop G, Tudor Room

Co-Chairmen: Frederick J. Close, Chairman of the Board,
Aluminum Company of America, Pittsburgh, Pa.
Mayor Ralph Kelley, Chattanooga

Workshop H, Heritage Room

Co-Chairmen: John J. Cowles, Jr., Editor,
Minneapolis Star and Tribune, Minneapolis, Minn.
Mayor James H. J. Tate, Philadelphia

Workshop I, Executive Room

Co-Chairmen: Asa T. Spaulding, President,
North Carolina Mutual Insurance Company, Durham, N. C.
Mayor Harold M. Tollefson, Tacoma

4 p.m. **Closing General Session,** Regency Ballroom

Report on Committee meeting with Congressional leadership

Report on implementation of Coalition Principles

Benediction:
The Very Rev. Msgr. Lawrence J. Corcoran

STATEMENT BY THE RT. REV. JOHN E. HINES, PRESIDING BISHOP
THE PROTESTANT EPISCOPAL CHURCH OF AMERICA
EMERGENCY CONVOCATION: THE URBAN COALITION
Washington, D.C.
August 24, 1967

Mr. Chairman, Members of this Convocation:

It is with genuine reluctance that I attempt to speak as a representative of the "religious community" to the critical and, I believe, decisive issues made painfully unforgettable in the shock and horror and loss of a rioting people in the cities of this land. I am reluctant because no one person can speak for the so-called religious sector or community--a description which, incidentally, I cannot defend. I am reluctant because the image of the Churches, at least in the years past, too often has been one of a moral and spiritual bastion from which, from time to time, have been issued divine directives and ethical judgments to which men and women have been called to conform or run the risk of being irretrievably lost. While this is a caricature of the churches and will be recognized as such by people of a broad understanding, like all caricatures, there is enough truth showing to prove a point. And that point is not reassuring.

I am reluctant because mere human beings seem entitled to convincing answers to the dilemmas and frustrations and agonies of people imprisoned by desperate circumstances from a channel for God's might intervention in His world of men, in justice, love and reconciliation--which channel historically the churches have claimed to be--and I am reluctant because we of the churches have demonstrated that we do not have the answers, at least not in the form of discernible specifics, to alleviate the basic hopelessness, the despair of becoming, the powerlessness, and the loss of human dignity which are clearly the root of the Negro's rebellious protestations and subsequent violence.

No, I am afraid that we have unwittingly demonstrated that we are part of the problem inasmuch as the sickness of our society is our sickness also. And our brokenness, highlighted by our fears for our own survival, our institutional status, our insularity from the suffering and hostility of other members of the human family, betrays the fact that, far from being equipped to exercise the role of the physician to the illness of mankind, we should be sensitive to the biblical injunction, "Physician, heal thyself!"

Let us be honest and acknowledge that we are here primarily because we have been shocked and bewildered by the horror that is Watts and Newark and Detroit and Milwaukee and New Haven and other urban centers of a nation whose forefathers fought for the right of self-determination, for the rights and dignity of every human being, for freedom under law, for deliverance from discrimination and for a dream which for nearly two centuries now has been a torch to which the oppressed and shackled could look up in hope. We are here because violence has rudely shattered our complacency about something basic that we had taken for granted.

Let us be clear that lawlessness and violence are frightfully destructive and are not to be condoned as such. But let us be equally aware that men can become prisoners of the law unjustly, for the process of law which is abused into an instrument of oppression by insensitive men of power, thus rigidly prohibiting the rightful process of change which could bring healing to the body sores and spiritual cancers that affect mankind, soon faces the rude awakening, namely, that desperate and despairing human beings will revolt against the tyrranous character of such law, inasmuch as they have no

other recourse open to them by which their wrongs may be redressed. The beneficiaries of order and domestic tranquility must understand this, indeed must learn to deal sympathetically and constructively with it without hypocrisy or illusion or pretense, and to respond to the violence of frustrated hopelessness. For the application of increased restrictive power only is to compound the root causes of alienation, abandon the responsible role of reconciliation and destroy the God-given bonds of relatedness by which men belong to each other inseparably and irrevocably.

Secretary General U. Thant has said, "The truth, the central stupendous truth about developed countries today is that they can have--in anything but the shortest run--the kind and scale of resources they decide to have....It is no longer resources that limit decisions. It is the decision that makes the resources. This is the fundamental revolutionary change--perhaps the most revolutionary mankind has ever known." I believe those words are accurate. I believe their truth places a moral question of unprecedented dimensions before the conscience of America. It is no longer a question of whether we shall do a few good things for the victums of a kind of givenness composed of powerlessness and poverty and hunger and rats and illiteracy and unemployment and second-class citizenship and hopelessness so deep it can find expression only through riots and destruction. The question now is: Shall we mobilize our capacity for wiping these shameful conditions off the face of this nation and this planet or shall we choose other priorities? For the first time in history we are called to leadership and responsibility in the possession of the capacity to eliminate the basic conditions themselves.

On December 7th, 1966, the General Assembly of the National Council of the Churches of Christ in the U.S.A. adopted the following resolution:

"Whereas, we recognize that millions of persons are living without access to an equitable share of our nation's abundance in terms of adequate housing, education and job training employment, as well as health and medical services; and

Whereas billions of dollars of our nation's economic resources and a concertration of manpower resources are required to establish full equality of opportunity; and

Whereas our present set of national economic priorities of defense, space exploration and the production of super-sonic air transport must not be allowed to impede the achievement of social justice for people; therefore be it .

Resolved, that we, the General Assembly of the National Council of the Churches of Christ in the U.S.A., call upon the President and the Congress of the United States to use our nation's economic resources so as to give the highest priority to programs designed to provide for full equality of opportunity."

We need the kind of government programs which reflect a massive change in national priorities and we need the kind of funding that will prevent those programs from being emply promises only. The executive and the legislative branches of our government have a clear responsibility. But unless the private sector similarly changes its own priorities, the task will not be accomplished. Recognition of ghetto community organizations as legitimate agents of the poor, guananteed annual income for all citizens, costly motivational and training programs for the unemployed and the

underemployed, location of manufacturing plants where the jobs are needed, upward mobility for our Negro brethren--all these are overdue. The religious institutions are now beginning to awake to their obligation to invest the large sums in their care according to the prime criterion of responsibility to the total community and all its citizens.

It would be refreshing if this Convocation facing its responsibility seriously as I know it will, would be emphatic and unequivocal about the right of the power, and to an effective voice in decisions that affect their destiny. The more we permit the dilution of the principle of "maximum feasible participation" even in a gathering such as this or, more importantly, in legislation designed to aid the poverty-ridden sector of this country, the less credible we appear to men and women struggling with their misery--and the less likely we are to build our part of a bridge between our alienation. The basic dignity of man demands of us a new style of operation in which we confess our lack of answers and acknowledge our lack of right to prescribe what is good for our brothers! For the best of well-intentioned programs is doomed to failure if it does not from the outset involve those whom it would benefit!

But--as the World Council of Churches Report on the Church and Society reminds us:

"Violence is very much a reality in our world both the overt use of force to oppress, and the invisible violence perpetrated upon people who...still are the victims of repression and unjust social systems. Therefore the question often emerges today, whether the violence that sheds blood in planned revolutions may not be a lesser evil than the violence which, though bloodless, condemns whole populations to

perennial despair."

Someone has suggested that the tremendous job that stands before us depends almost entirely upon two factors: men and money. His point, in part, is that enormous numbers of people must be recruited to do a tremendous variety of jobs simultaneously. And there can be no doubt about that! What is less distinguishable is that any amount of money can make the decisive difference! What Detroit..for example..seems to be telling us is that poverty is more a state of mind than material want. This is what the great prophets of the Bible also said!

Whate makes poor people poor (most of whom are also black) as Mr. Roy Wilkins has reminded us, is "a kind of anguished culture that is almost impossible for people outside to comprehend." To which the Editor of "Commonweal" adds: The anguished culture refers to the fact that vast numbers of black Americans, and particularly their dynamic nucleus, the youth, feel no sense of identity with this nation.... Their sights were encouraged to broaden with the Supreme Court decision on school integration thirteen years ago...but the realization of identity has not accelerated apace. Perhaps they are earning more money. Perhaps more of them have jobs. Perhaps a few are training for skilled posts. But they don't really belong in the White Man's society, and that is what hurts infinitely more than whatever solace is offered by their material improvement." What is being said is that no anti-poverty program will work unless, and until poverty itself is re-defined, and ministered to, in human rather than material terms alone.

STATEMENT BY ANDREW HEISKELL
EMERGENCY CONVOCATION: THE URBAN COALITION
Washington, D. C.
August 24, 1967

In this room, at this convocation of the Urban Coalition, the leadership of religion, business, unions, local government and the civil rights organizations is meeting to make a major commitment. We are here to commit ourselves publicly to an all-out effort on the part of each one of us individually and, more importantly, of all of us collectively, to turn law and principle into reality, to bring equality of opportunity to every one of our citizens.

We are here because we know that anything less will mean disaster for our cities.

But we must also be honest with ourselves, as well as our fellow citizens, by committing ourselves, not for the season, or the year, but for years to come. For even with the greatest concerted effort it will take years to reach our goal.

We are here, representing many aspects of our society, because we know that the problem is too vast and complex to be resolved by any one sector. Our joint presence is testimony to that realization.

While we are here to seek economic solutions we know also that many of the answers lie in the hearts and souls of our citizens.

We are here to determine how we can assist our various governments, many of whose inadequacies are in part the result of our indifference.

We ask ourselves how free enterprise can better participate in the social process. Not only because it <u>should</u> but because, surely, it stands to be the first victim of the failure of that process.

We ask ourselves not only whether the unions are playing the proper role in

maximizing employment opportunities but also whether they could play a new and invaluable role in the chain of communications necessary to this survival of the city.

We ask ourselves whether our legislators know and care about the plight of our cities. For though this convocation is addressing itself to the future of our underprivileged it is in a deeper sense dealing with the future of urban America. We believe that the crisis of our cities requires a commitment of national resources equal to the dimensions of the problems we face. This commitment is in truth an investment in the future of our society. The failure to move on urban problems is not only socially disastrous but economically unsound. Each year of delay in funding programs will inexorably require enormously greater expenditures in the future.

Mainly we ask for a higher level of imagination, for the ability to think in terms of the future rather than the past.

Of course money is needed -- much money over the years.

But we also seek other goals:

Governments that are responsive to their peoples rather than mired in their vast bureaucracies.

Businessmen who recognize that in the long term their profit statements can only be healthy by reflecting a healthy society.

And, most importantly, civic leaders who feel and care. Our commitment must clearly demonstrate our belief in social progress and true equality of opportunity for every citizen. Just as there is a growing gap between the most under-developed nations and our western world, so there is a growing gap between an underprivileged minority of our citizens and the vast bulk of our affluent society.

The goal of this Urban Coalition is to make clear to the Nation the imperative need of the task ahead and the priorities the country must set for itself in order to achieve its goals

Remarks by Mayor Joseph M. Barr
President, U.S. Conference of Mayors
Emergency Convocation: Urban Coalition
Shoreham Hotel, Washington, D.C.
Thursday, August 24, 1967

On behalf of all who have worked to organize this emergency national convocation, let me welcome you and thank you for your concern with the future of America's cities.

In late July, when Mayor John Lindsay and I first called together the planning group which developed the concept of this convocation, our nation was locked in the middle of an urban crisis -- a crisis which continues unabated to this very moment.

Let me quickly add that we should not make the mistake of thinking that this crisis somehow miraculously lessens on Labor Day or with the advent of autumn.

For long after the hot summer has cooled, the causes of turmoil and distress in our cities will persist -- unemployment and under-employment, deplorable housing, inadequate education and job-training, and as we are now learning, perhaps most crippling of all, human despair and hopelessness.

Regrettably, it took a national calamity -- for what has taken place in Detroit and Newark and scores of American cities this summer is nothing less than a calamity -- to provide the sense of urgency and concern which makes this meeting possible.

We have issued this call to get your thinking on how the forces of business and labor, our churches and civil rights organizations can be combined to redirect this nation's sense of values to our Number One problem and our Number One shame -- the unmet needs of our cities, or more precisely, the unmet needs of this nation and our free society.

How can our churches and labor unions, and corporations and civil rights organizations best team up with municipal officials to persuade our Congress -- short of riots and disasters in our cities -- that we need social and physical programs, short-term and long-range, adequately financed, imaginatively administered, to rebuild our cities and to up-grade the quality of American life everywhere.

From the viewpoint of the Mayors of this nation, we are in complete accord with President Lyndon Johnson who only a few days ago stressed "The health of our nation can be no better than the health of our cities".

He made this point in a letter to Senate Majority Leader Mike Mansfield urging quick Congressional approval of his total program of urban measures ranging from model cities to the Economic Opportunity Act to rent supplements.

Without question, the cities of this nation need every one of the 23 legislative proposals that President Johnson listed.

We further believe that the President's program represents simply the beginning of what needs to be done.

We believe as Vice President Hubert Humphrey recently stated, that "The task today is not merely to pass the program before Congress -- as desirable as that is -- but it is to mobilize the entire American community".

This is why we are here today.

How can the coalition of interests represented in this assembly work effectively within this nation to muster the support among the American people that up to now has not been there, and to persuade the Congress that the welfare of the citizens of our cities is not a partisan matter.

Up to now there has been division, both on the dimension of our urban crisis and the solutions needed, not unlike the division of opinion which existed in the nation in 1940 about a proper foreign policy.

But out of an international crisis was ultimately forged a bi-partisan foreign policy which persists to this day.

Politics, we have all emphasized proudly, stops at the water's edge.

Today, America's domestic crisis has reached an intensity and climax of such proportions to demand the same bi-partisan approach, the same determination and concerted action, the same elevation of reason and purpose over supposed political advantage which has been drawn upon successfully in the hot and cold wars of almost three decades.

Ladies and Gentlemen, we Mayors openly admit that up to now our concerted voices have been unavailing.

When the Congress can vote for riot control bills and vote against rent supplements and rat control measures, then we Mayors and municipal officials are simply not getting through.

We Mayors believe that the problems of our American cities are soluble -- but only if the solutions to these deeply-rooted problems are made the major preoccupation of our society and our nation.

We need your help.

We need your help here in Washington with the Congress to produce an adequate national response to our urban problems.

We are not suggesting that the total answer lies solely with the Federal government and Federal dollars.

We need to produce a parallel coalition in every urban community in this nation.

We need your help and direct involvement at the local level.

From this meeting we hope to generate a counterpart effort in every local community that will mobilize the energies and resources of private industry,

organized labor, our churches and civil rights organizations, along with more effective public leadership, to work together to make our cities more livable.

The purpose of this convocation is to gain your thinking on how we can best develop such help.

There is no greater challenge -- or greater opportunity in the nation.

Thank you.

Mr. Heiskell's suggestion: Add new paragraph preceding bottom paragraph, Page 7.

This convocation calls upon local government, business, labor, religions, and civil right, groups to create counterpart local coalitions where they do not exist to support and supplement this declaration of principles.

Mr. Meany's suggestion - substitute for 5th and 6th paragraphs, Page 1.

We believe the tangible effects of the urban riots in terms of death, injury, and property damage, horrifying though they are, are less to be feared than the intangible damage to men's minds. We believe it is the government's duty to maintain law and order.

We believe that our thoughts and actions should be directed to the deep-rooted and historic problems of the cities.

We believe that we as a nation must clearly and positively demonstrate our belief that justice, social progress, and equality are rights of every citizen.

STATEMENT OF PRINCIPLES, GOALS, AND COMMITMENTS
EMERGENCY CONVOCATION: THE URBAN COALITION

We are experiencing our third summer of widespread civil disorder. In 1965, it was Harlem, and the disaster of Watts. In 1966, it was the Hough area of Cleveland, Omaha, Atlanta, Dayton, San Francisco and 24 other cities. This summer, Newark and Detroit were only the most tragic of 80 explosions of violence in the streets.

Confronted by these catastrophic events, we, as representatives of business, labor, religion, civil rights, and local government, have joined in this Convocation to create a sense of national urgency on the need for positive action for all the people of our cities.

We are united in the following convictions:

We believe the tangible effects of the urban riots in terms of death, injury, and property damage, horrifying though they are, are less to be feared than the intangible damage to men's minds.

We believe it is the government's duty to maintain law and order.

We believe that our thoughts and actions should be directed to the deep-rooted and historic problems of the cities.

We believe that we, as a nation, must clearly and positively demonstrate our belief that justice, social progress, and equality of opportunity are rights of every citizen.

We believe the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face. The crisis requires a new dimension of effort in both the public and private sectors, working together to provide jobs, housing,

education , and the other needs of our cities.

We believe the Congress must move without delay on urban programs. The country can wait no longer for measures that have too long been denied the people of the cities and the nation as a whole--additional civil rights legislation, adequately funded model cities, anti-poverty, housing, education, and job-training programs, and a host of others.

We believe the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job-training, and hiring, and all that is necessary to the full enjoyment of the free enterprise system--and also to its survival.

We believe the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic, and moral climate that will make possible the breaking of the vicious cycle of the ghetto. Efforts must be made to insure the broadest possible opportunity for all citizens and groups, including those in the ghetto, to participate fully in shaping and directing the society of which they are a part.

This Convocation calls upon the nation to end once and for all the shame of poverty amid general affluence. Government and business must accept responsibility to provide all Americans with opportunity to earn an adequate income. Private industry must greatly accelerate its efforts to

recruit, train, and hire the hard-core unemployed. When the private sector is unable to provide employment to those who are both able and willing to work, then in a free society the government must of necessity assume the responsibility and act as the employer of last resort or must assure adequate income levels for those who are unable to work.

Emergency Work Program

This Convocation calls upon the Federal Government to develop an emergency work program to provide jobs and new training opportunities for the unemployed and underemployed consistent with the following principles:

--The Federal Government must enlist the cooperation of government at all levels and of private industry to assure that meaningful, productive work is available to everyone willing and able to work.

--To create socially useful jobs, the emergency work program should concentrate on the huge backlog of employment needs in parks, streets, slums, countryside, schools, colleges, libraries, and hospitals. To this end an emergency work program should be initiated and should have as its first goal putting at least one million of the presently unemployed into productive work at the earliest possible moment.

--The program must provide meaningful jobs--not dead-end, make work projects--so that the employment experience gained adds to the capabilities and broadens the opportunities of the employees to become productive members of the permanent work force of our nation.

--Basic education, training, and counseling must be an integral part of the program to assure extended opportunities for upward job mobility and to improve employee productivity. Funds for training, education, and counseling should be made available to private industry as well as to public and private nonprofit agencies.

--Funds for employment should be made available to local and state governments, nonprofit institutions, and Federal agencies able to demonstrate their ability to use labor productively without reducing existing levels of employment or undercutting existing labor standards or wages which prevail for comparable work or services in the area but are not less than the Federal minimum wage.

--Such a program should seek to qualify new employees to become part of the regular work force and that normal performance standards are met.

--The operation of the program should be keyed to specific, localized unemployment problems and focused initially on those areas where the need is most apparent.

Private Employment Assistance and Investment

All representatives of the private sector in this Urban Coalition decisively commit themselves to assist the deprived among us to achieve full participation in the economy as self-supporting citizens. We pledge full-scale private endeavor through creative job-training and employment,

managerial assistance, and basic investment in all phases of urban development.

The alternatives to a massive and concerted drive by the private sector are clear. They include the burden of wasted human and physical potential, the deterioration of the healthy environment basic to the successful operation of any business, and the dangers of permanent alienation from our society of millions of citizens.

We propose to initiate an all-out attack on the unemployment problem through the following steps:

--In cooperation with government, to move systematically and directly into the ghettos and barrios to seek out the unemployed and underemployed and enlist them in basic and positive private training and employment programs. We will re-evaluate our current testing procedures and employment standards so as to modify or eliminate those practices and requirements that unnecessarily bar many persons from gainful employment by business or access to union membership.

--To create a closer relationship between private employers and public training and emergency employment programs to widen career opportunities for our disadvantaged citizens. To this end, we will proceed immediately to promote "Earn and Learn Centers" in depressed urban areas that might well be the joint venture of business, labor and local government.

--To develop new training and related programs to facilitate the early entry of under-qualified persons into industrial and commercial employment.

--To develop large-scale programs to motivate the young to continue their education. Working closely with educators, we will redouble our efforts to provide part-time employment, training, and other incentives for young men and women. We also pledge our active support to making quality education readily accessible to deprived as well as advantaged young people.

--To expand on-the-job training programs to enhance the career advancement prospects of all employees, with particular emphasis on those who now must work at the lowest level of job classifications because of educational and skill deficiencies.

We pledge to mobilize the managerial resources and experience of the private sector in every way possible. We will expand part-time and full-time assistance to small business development. We will strive to help residents of these areas both to raise their level of managerial know-how and to obtain private and public investment funds for development. We will work more closely with public agencies to assist in the management of public projects. We will encourage more leaders in the private sector to get directly and personally involved in urban problems so that they may gain a deeper understanding of these problems and be of greater assistance.

We pledge our best efforts to develop means by which major private investment may be attracted to the renovation of deteriorating neighborhoods in our cities. We will explore and encourage governmental incentives to expedite private investment. We will develop new methods of combining

investment and managerial assistance so that the residents may achieve a leadership position in the development of their areas.

Housing, Reconstruction, and Education

This Convocation calls upon the nation to take bold and immediate action to fulfill the national need to provide "a decent home and a suitable living environment for every American family" with guarantees of equal access to all housing, new and existing. The Urban Coalition shall, as its next order of business, address itself to the development of a broad program of urban reconstruction and advocacy of appropriate public and private action to move toward those objectives, including the goal of rehabilitation and construction of at least a million housing units for lower-income families annually.

This Convocation calls upon the nation to create educational programs that will equip all young Americans for full and productive participation in our society to the full potential of their abilities. This will require concentrated compensatory programs to equalize opportunities for achievement. Early childhood education must be made universal. Work and study programs must be greatly expanded to enlist those young people who now drop out of school. Financial barriers that now deny to youngsters from low-income families the opportunity for higher education must be eliminated. Current programs must be increased sufficiently to wipe out adult illiteracy within five years.

This Convocation calls upon local government, business, labor, religions, and civil rights groups to create counterpart local coalitions where they do not exist to support and supplement this declaration of principles.

This Convocation calls upon all Americans to apply the same determination to these programs that they have to past emergencies. We are confident that, given this commitment, our society has the ingenuity to allocate its resources and devise the techniques necessary to rebuild cities and still meet our other national obligations without impairing our financial integrity. Out of past emergencies, we have drawn strength and progress. Out of the present urban crisis we can build cities that are places, not of disorder and despair, but of hope and opportunity. The task we set for outselves will not be easy, but the needs are massive and urgent, and the hour is late. We pledge ourselves to this goal for as long as it takes to accomplish it. We ask the help of the Congress and the Nation.

###

This statement was unanimously adopted by members of the Steering Committee and their representatives at a meeting Wednesday, August 23, 1967. Mr. Roy Ash and Mr. Theodore Schlesinger were unable to attend or to be represented.

Convention Date Set By Urban Coalition; Co-Chairmen Named

Special to The New York Times

WASHINGTON, Aug. 7—The Urban Coalition, a newly formed group seeking answers to city problems, set a date, drew up an agenda and elected co-chairmen today for its firts national convention.

The meeting will be held on Aug. 24 at the Shoreham Hotel in Washington. Its co-chairmen will be Andrew Heiskell, chairman of the board of Time, Inc., and A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters.

The 1,000 business, labor, religious, education, civil rights and city government leaders who have been invited to attend the all-day session will ponder three major goals set by the 20 persons who formed the coalition here last week.

Those goals are:

¶An emergency Federal work program to provide job training and employment for the urban poor.

¶A major expansion of the private sector's efforts to train and provide jobs for the hard-core unemployed.

¶A long-range program for the physical and social reconstruction of American cities.

The coalition also announced today that 12 more persons had been added to the group's founding committee. Those added were:

Mayor Ivan Allen of Atlanta.
Roy Ash, president of Litton Industries.
Mayor Jerome P. Cavanagh of Detroit.
Frederick J. Close, chairman of the board of the Aluminum Company of America.
Mayor John F. Collins of Boston.
Mayor Richard J. Daley of Chicago.
Henry Ford 2d, chairman of the Ford Motor Company.
James Rouse, president of the Rouse Company.
Theodore Schlesinger, president of Allied Stores Corporation.
Asa T. Spaulding, president of the North Carolina Mutual Insurance Company.
David Sullivan, president of the Building Service Employes International Union.
James H. J. Tate, Mayor of Philadelphia and president of the National League of Cities.

Will There Be An Urban Coalition?

By WILLIAM V. SHANNON

WASHINGTON, Aug. 5—Twice in this generation, the leaders of American life outside of Washington reached agreement on a major issue and forced the Federal Government to act.

In 1947-48, the issue was the Marshall Plan. Business and civic leaders rallied to support the proposal for the rebuilding of Western Europe submitted by a Democratic President to a conservative and potentially balky Republican Congress. In 1963-64, religious leaders of all faiths powerfully reinforced the civil rights movement and compelled President Kennedy to ask for a far-reaching civil rights bill and Congress to enact it.

Pressure Is the Spur

The only hope for a way out of the present racial crisis now tearing apart the cities of the nation is that the leadership in private life will once again rally the public and force Washington to respond.

Congress is presently leaderless. There is no one in the House or Senate with the personal force and prestige of Robert Taft or Sam Rayburn to impose a pattern on the naturally inchoate activity of Congress. So far the angry voices of recrimination and repression have been the loudest, but most Congressmen have not really made up their minds. Like other Americans, they have been made bewildered and uncertain by this terrible turn of events.

President Johnson is waiting to have his hand forced. Determined not to abandon or cut back on the war in Vietnam, he intends to cling to the order of priorities he had developed before Newark and Detroit blew up. He already needs the tax increase to finance the war. He will not seek a still larger tax increase or countenance a swollen deficit to pay for a new urban program unless he is sure there is a widespread public demand.

Mr. Johnson appointed his study commission to deflect criticism away from himself and to reassure the public that the situation, if not under control, was under study. But he is not averse to leading a crusade for better life in the cities if he is sure there is a crusade forming and waiting to be led. He is busy now demonstrating in public and in private that there can be "no reward for rioting." But he could move rapidly in the other direction.

Vice President Humphrey's recent speeches chiding Congress for its slowness and recommending a "Marshall Plan" for the cities hints at the President's flexibility. Humphrey does not make major policy speeches without clearing them with the President.

Fortunately, leaders from the business, labor, the churches and the civil rights organizations as well as the nation's Mayors are moving to put pressure on the President and Congress. The 22 leaders who met last Monday to form the "Urban Coalition" plan to hold an emergency convocation of a thousand private citizens in Washington later this month. It is too early to tell that a powerful new consensus may be forming.

The organizers of the conference are not at all certain how they will structure the meeting or what they hope to arrive at in the way of a substantive program.

"All we know is that we can't come up with the same old shopping list," one of them remarked last week. "If this meeting can only recommend a rat-control bill or another 100 million for urban renewal then it will be a failure."

Slow-moving long-term programs looking toward gradual improvement are not enough. The cities need a coordinated attack on their human and physical problems, and they need an attack scaled to the size of those problems. Ten feet of rope will not save a man drowning a hundred feet from shore. Recognizing this truism, the planners of the conference are proceeding on the general assumption — make no small plans.

Ghetto Youth

Experts can identify three distinct groups in the Negro slums who need help. There are the older men, many of them from the Deep South who have only a grade school education and who, as the need for unskilled laborers diminishes, are jobless for long periods.

There are the teen-agers and young men, born and reared in urban slums, who are often but not always high school dropouts. Many of them come from broken homes where no father was present to impose consistent discipline and to provide the example on which boys can model themselves. These youths are variously trapped in unemployment, in dead-end jobs with no career potential or in the criminal culture of the ghetto streets, piecing out an existence, for example, as "runners" in the numbers racket.

Finally there are those Negro women and their youngsters who live on "aid to dependent children" assistance. These women, though much critized for immorality and indolence, are mostly the pathetic victims of the economic defeat of their menfolk.

Deep Are the Roots

The pathology of the Negro slums got its origins in slavery and in the subsequent decades of deprivation and degredation in the rural South. The United States can rescue these people if it makes the same kind of effort it made to rescue Western Europe's shattered economy after World War II.

The President and Congress will assume the leadership when the public and particularly the business community shows that it generally wants the national effort in this direction. If businessmen respond to enlightened leaders such as David Rockefeller and Henry Ford 2d, the nation may yet make progress in this summer of discontent.

Text of Statement by Urban Coalition

Special to The New York Times

WASHINGTON, July 31—The Urban Coalition, at its first meeting to discuss the problems of cities, issued the following statement:

Preamble

The tangible results of the urban riots in terms of death, injury and property damage are horrifying in themselves. The intangible damage in terms of the riots' effects on men's minds may yet be even greater.

At this moment, millions of Americans are forming attitudes that could mean disaster to our social structure: the homeowner who vows to shoot the next suspicious character he sees in his neighborhood; the businessman who decides to get out of the slums; the labor leader who determines to keep minorities out; the insurance man who refuses to cover slum properties; the Negro or white who goes out to take whatever he can get his hands on; the legislator who fails to meet his public responsibilities.

These people and others are reversing a trend that, however slowly, was working to the benefit of our cities' disadvantaged minorities.

Let them realize that it is the citizen, in the end, who will keep our country united or will divide it. It is the Government's duty to maintain law and order. But all must understand that law and order is not an excuse for oppression. If law and order is to be accepted by the minorities, the majority must clearly and positively demonstrate its belief that justice, social progress and equality are the rights of every citizen.

We the undersigned pledge ourselves to this purpose. We will call upon the leaders of all segments of society, city by city, to publicly commit themselves to programs enabling the disadvantaged minorities to share in all of the benefits of our society.

Joint Statement

This conference of leaders of business, labor, religions, education, civil rights and city government has formed an Urban Coalition to bring about a sense of immediate urgency about the need for positive and progressive action for our cities.

Lawlessness and all its ingredients cannot be tolerated. Looting, burning and bottle-throwing are criminal acts, and must be dealt with as such.

But let not a reaction to acts, committed by a small fraction of the population of the country's ghettos, blind us to the absolute necessity of moving dramatically and immediately to correct the desperate condition of our urban centers.

We call upon the nation and the Congress to reorder our national priorities, with a commitment of national resources equal to the dimensions of the problems we face. The crisis requires a full new dimension in both the public and private sectors, working together for jobs, housing, education and the other needs of our cities.

'Congress Must Move'

This coalition believes the Congress must move without delay on urban programs. The country can wait no longer for model cities, antipoverty, housing, education and job training legislation and a host of other matters that have been too long denied the cities.

We call upon the Federal Government to develop an Emergency Work and Reconstruction Program to provide new training programs and jobs for the unemployed.

The Coalition also believes that the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investments, job training and hiring and all other things that are necessary to the full enjoyment of the free enterprise system, and also to its survival.

Earn and Learn Centers

To carry this forward, the Coalition commits itself to proceed imediately to promote "Earn and Learn Centers" in the cities of the country to provide job training and jobs. The Coalition agrees these centers might well be the joint venture of business, labor and local government.

The Coalition believes the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto.

The Coalition's commitments can be for no less and its determination is for even more.

The Coalition further commits itself to convene an Urban Coalition Emergency Convocation in Washington near the end of August.

The Convocation will be attended by 1,000 leaders across the nation of business, labor, religion, education, civil rights and city government.

NEW YORK TIMES
Wednesday, August 2, 1967
Page 3

Coalition for Better Cities

While commissions to "investigate" urban riots proliferate in Washington, a group of outstanding citizens has decided to take the lead in spurring the country to positive action to improve housing, schools and jobs, the obvious needs to combat despair in the slums.

This private initiative pools the energies of such dissimilar Americans as David Rockefeller, Walter P. Reuther, Bayard Rustin, Mayor Lindsay and Gerald Phillipe, chairman of the board of General Electric. They and their associates in a new Urban Coalition plan to mobilize a thousand leaders in religion, education, business, labor, civil rights and municipal government at an emergency convocation in Washington later this month.

That meeting could become the generator of as dramatic a goad to the national conscience as was provided by the civil rights March on Washington four years ago. The spread of rioting from one racial ghetto to another has made it plain that the critical problem now is faster progress toward making real the promises of social justice embodied in the laws for which tens of thousands marched in 1963.

Unquestionably, no amount of effort, no outlay of funds, no application of public or private resources will eradicate the roots of unrest swiftly enough to guarantee civic tranquillity this year or next. But reliance on repression without a massive readjustment of priorities to tackle the sources of hopelessness merely means a downward spiral of hate, with increasingly violent eruptions as its outrider.

The statement of the coalition leaders stresses that lawlessness in all its forms cannot be tolerated, but it reminds the nation that the acceptance of law and order by the minorities demands a clear demonstration by the majority of its belief that "justice, social progress and equality are the right of every citizen."

Congress is urged to move without delay on urban problems, especially in the provision of new training programs and jobs for the unemployed. However, there is no disposition to push the whole burden onto Government. The coalition calls on every American "to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto."

The shortage now is as much of will and ideas as it is of public and private money. A state of guerrilla warfare is developing between many in the white and black communities. The diversity of the elements in the Urban Coalition represents a serious and significant effort to end this drift, even rush, toward an ugly kind of American apartheid. Reconstruction of attitudes and redefinition of priorities are essential precedents to reuniting America's riven cities.

1000 Leaders to Meet Here on Cities' Needs

Urban Coalition Sets Late-August Parley

By Robert E. Baker
Washington Post Staff Writer

A convocation of 1000 leaders of business, labor, religion, civil rights and city government has been called for late August in Washington to mobilize an attack on city problems.

The call was made last night by the newly formed Urban Coalition, headed by Mayor John V. Lindsay of New York and Mayor Joseph M. Barr of Pittsburgh.

"We call upon the Nation and Congress to reorder our national priorities, with a commitment of national resources equal to the dimensions of the problems we face," said Lindsay, reading a statement approved unanimously by the 20 national leaders who formed the Urban Coalition.

Two members of the Coalition, Lindsay and I. W. Abel, president of the United Steelworkers of America, are also members of the Presidential Commission on Civil Disorders, named last week to investigate the wave of slum riots that have hit the Nation.

A third Commission member, Executive Secretary Roy Wilkins of the NAACP, did not attend last night's session but he was represented by Arnold Aronson.

The Coalition also called for:

- Quick action by Congress on urban programs "too long denied the cities."
- Federal development of an Emergency Work and Reconstruction Program to provide jobs and training for the unemployed.
- "Earn and Learn Centers" in the cities for job training, a joint venture of business, labor and local government.
- Commitment by private industry in investment, job training and hiring as its role in the crisis of the cities.
- Commitment of "every American to join in the creation of a new political, social, economic and moral climate which will make possible the breaking up of the vicious cycle of the ghetto."

In a preamble to its statement, the Urban Coalition warned against the forming of attitudes by Americans during this period of crisis and riots "that could mean disaster to our social structure."

"It is the Government's duty to maintain law and order.

"But all must understand that law and order is not an excuse for oppression. If law and order is to be accepted by the minorities, the majority must clearly and positively demonstrate its belief that justice, social progress and equality are rights of every citizen."

The meeting had been called by Lindsay and Barr to mobilize national action for short-term and long-term measures to prevent unrest and violence that have stricken 50 American cities this summer.

It was held at the offices of Urban America, Inc., here under the auspices of the U.S. Conference of Mayors.

It was obviously sparked by the riots, but the idea was born last January when eight big-city mayors, including Barr and Lindsay, called for such a coalition to place urban problems to the top of the Nation's priority list.

Mayor Jerome P. Cavanagh of Detroit was one of the January organizers but he was unable to attend last night's session because of the recent riots in his city.

Leaders who attended last night's session and approved the statement were:

Mayors—Arthur Naftalin of Minneapolis, Barr and Lindsay.

Industry—Andrew Heiskell, chairman of Time, Inc.; Gerald Phillippe, chairman of General Electric; David Rockefeller, president of Chase Manhattan Bank.

Labor—Andrew J. Biemiller, legislative director AFL-CIO, representing AFL-CIO President George Meany; Joseph Keenan, secretary-treasurer, International Brotherhood of Electrical Workert; Walter Reuther, president, United Automobile Workers, and Abel.

Religion — Rabbi Jacob P. Rudin, president, Synagogue Council of America; Arthur S. Flemming, former Secretary of Health, Education and Welfare, now president of the National Council of Churches; Bishop Paul Tanner, general secretary, National Conference of Catholic Bishops, representing Archbishop John Deaden of Detroit.

Civil Rights—The Rev. Walter Fauntroy of Washington, representing the Rev. Dr. Martin Luther King Jr.; Bayard Rustin, representing A. Philip Randolph; Whitney Young, director of the National Urban League; John Wheeler, president of the Southern Regional Council, and Aronson.

SUPPLEMENT

The National Housing Workshop, convened by the National Committee Against Discrimination in Housing, West Point, New York, April 27-29, 1966 reviewed in depth the NCDH pilot cities study on Atlanta, Denver, Providence and Rochester, New York. In addition there were position papers by:

George Schermer

George B. Nesbitt

Governor David L. Lawrence

From this workshop came a NCHD paper PROGRAM GUIDELINES FOR LOCAL COMMUNITY ACTION reproduced here as a knowledgeable document.

It is assumed that the Mayor's office has a copy of the complete pilot cities study and has seen pages 11-14 dealing with Atlanta, as well as the section tabbed "Atlanta". If this is not the case and it is desired to review this complete report, SRC can provide a copy.

November 3, 1967

MS

Dear Friend:

Due to the continuing requests of cities for assistance in shaping local coalition efforts and the success of The Urban Coalition's recent Chicago planning conference on local coalitions, two additional local coalition planning conferences are now scheduled.

On November 30, 1967, a one-day conference will be held in San Francisco. A second such conference will be held in New York City on December 11, 1967. As was the case with the Chicago conference, these meetings are designed to assist leadership from communities interested or involved in local counterpart action to The Urban Coalition. The format and substance of each of the two meetings will be substantially similar to the Chicago conference.

The purpose of writing you at this time is to advise you of these upcoming meeting dates so that if you would like to attend, you can choose the appropriate meeting and mark your calendar. Program details with respect to the two meetings will be sent to you shortly.

Sincerely,

John Feild

The Urban Coalition / ACTION REPORT

Federal Bar Building West / 1819 H Street, N.W. / Washington, D. C. / 20006

National Coordinators: John Feild / Ron M. Linton

October 31, 1967

During its second month of operations, The Urban Coalition moved ahead on four major fronts--the formation of local coalitions, developing pilot programs to increase job opportunities for the hard-core unemployed, enlisting key segments of the communications industry in promoting public understanding of the urban crisis and urging Congress to "move without delay on urban problems."

LOCAL COALITIONS

In response to requests from communities across the country, the Task Force on Local Coalitions sponsored a one-day planning conference on "Mobilizing Urban Coalitions" on October 17 in Chicago. Two hundred and fifty leaders in local government, business, labor, religion and civil rights--from 52 cities--attended.

Major addresses at the conference were given by Mayors Richard J. Daley of Chicago and Arthur Naftalin of Minneapolis and Dr. Kenneth Wright, Vice President and Chief Economist of the Life Insurance Association of America. John Cardinal Cody, Archbishop of Chicago, and Bishop James Montgomery, Co-Adjutor Bishop of the Episcopal Diocese of Chicago added their support. Also participating in the program were Mayor Joseph Barr of Pittsburgh, Co-Chairman of the Task Force on Local Coalitions and President of the U. S. Conference of Mayors and Mayor Milton Graham of Phoenix. I. W. Abel, President of the AFL-CIO United Steelworkers of America was represented by John J. Sheehan, Legislative Director of the Steelworkers. The conference was opened by John H. Johnson, President of Johnson Publications and Co-Chairman of the Task Force on Communications and Public Support and the closing session was chaired by Arnold Aronson, Executive Secretary of the Leadership Confernce on Civil Rights and Co-Chairman of the Task Force on Local Coalitions.

At a second meeting, two days later in Minneapolis, the Mayors of eleven additional cities met with the leadership of the newly formed Minneapolis Coalition to review ideas for urban coalition activity. Two additional planning sessions are now scheduled--one for the western cities to be held in San Francisco (Nov. 30) and one for eastern cities to be held in early December.

National Steering Committee

I. W. ABEL, *President, United Steelworkers, Pittsburgh*

THE HONORABLE IVAN ALLEN, JR., *Mayor of Atlanta*

ARNOLD ARONSON, *Executive Secretary, Leadership Conference on Civil Rights, Washington, D.C.*

ROY ASH, *President, Litton Industries, Beverly Hills*

ROY WILKINS, *Executive Director, National Association for the Advancement of Colored People, New York*

WHITNEY YOUNG, JR., *Executive Director, National Urban League, New York*

JOHN FEILD, *U. S. Conference of Mayors, National Coordinator*

RON M. LINTON, *Urban America Inc., National Coordinator*

As of October 31, local coalitions were moving toward affiliation in Detroit, New York, Gary, Indianapolis, Minneapolis and Atlanta. Other communities across the nation are also apparently beginning to move. In California, for example, the League of California Cities, at its recent annual convention, called upon all California cities to establish urban coalitions. Fresno and San Diego sponsored the resolution and announced they were taking action in their communities. Similar word has been received from such diverse areas as Newark, Chatanooga, Denver, Phoenix, both Kansas Cities, Washington, D. C. and Seattle.

PRIVATE EMPLOYMENT & ENTREPRENEURSHIP

The Task Force on Private Employment has been contacting individual businessmen, business organizations, labor unions and civic groups for ideas on the role private industry and unions can play in meeting the problems of unemployment and underemployment in our cities. Ideas are being exchanged, case histories are being developed and guidelines for suggested local action are currently being prepared. Officials of the National Industrial Conference Board are cooperating with The Urban Coalition in developing plans for a national clearing-house on hard-core unemployment and training projects.

Two meetings have been scheduled--in Baltimore and Detroit--to examine in detail different local approaches to this problem. The Baltimore meeting (Nov. 14) will concentrate on how Negro business opportunities can be expanded through sub-contracting with industry. The Detroit meeting (Nov. 21) will emphasize training and upgrading. Task Force Co-Chairmen Gerald L. Phillippe and David Sullivan will speak at both meetings.

In addition, regional meetings on private employment are scheduled for Atlanta (Dec. 13), Phoenix (Jan. 17) and Kansas City, Mo. (Jan. 24).

COMMUNICATIONS AND PUBLIC SUPPORT

The new Task Force on Communications and Public Support is headed by Joseph H. Allen, President of McGraw Hill Publications, John H. Johnson, President of Johnson Publications and Harold Fleming, President of Potomac Institute. Through their efforts, key communications organizations such as the Advertising Council, the American Business Press Association and the Public Relations Society of America are being contacted for ideas and support.

McGraw-Hill Publications has scheduled a special supplement on urban problems which will appear in January in all forty of thier publications. This is only the second time in their history that McGraw-Hill has undertaken such a project. A special supplement to City magazine on the August Convocation has been sent to all those who attended and is receiving wide national distribution.

Press support for the Coalition continues strong. Since the August Emergency Convocation, editorials supporting the Coalition's goals and principles have appeared in some 70 newspapers and magazines. In addition, news stories have appeared in a wide variety of dailies, weeklies, and magazines, including business journals, labor union papers, religious publications and the Negro press. (See sample clips)

LEGISLATION

On October 23, Coalition Co-Chairmen Andrew Heiskell and A. Philip Randolph wired members of the House-Senate Conference Committee on Independent Offices Appropriations urging that they support the Senate's recommendation of $637 million for funding the model cities program (the House had approved $237) and $40 million for funding rent supplements (the House had killed the program). In final action, model cities received $312 million and rent supplements received $10 million.

In their wire, Heiskell and Randolph reminded members of the Committee that 1,200 national leaders gathered at the Coalition's August Convocation in Washington had unanimously declared:

> "Congress must move without delay on urban programs. The country can wait no longer for measures that have been denied the people of the cities and the nation as a whole."
>
> (Statement of Principles, Goals, and Commitments)

EQUAL HOUSING

Mr. James W. Cook, President of the Illinois Bell Telephone Company, has accepted the co-chairmanship of the Task Force on Equal Housing Opportunities. Representatives of the Task Force Co-Chairmen are exploring the current private and

government investment situation, and the effect of government housing and financing programs on plans for metropolitan open housing. The group is also surveying the experiences of existing fair housing groups and determining how this Task Force can relate its work to the local coalition movement. Particular emphasis is being paid the problem of new lower-income housing in suburban areas on an open occupancy basis.

A national action session for some 300 suburban fair housing councils is planned for early next year in Chicago. The Leadership Council for Metropolitan Open Communities, under the Chairmanship of C. Virgil Martin, President of Carson, Pirie Scott and Company will serve as the local host.

EDUCATIONAL DISPARITIES

Expansion of this Task Force is under way, work areas are being defined, and technical resources are being surveyed. Representatives of the Task Force Co-Chairmen met following the October 9 Steering Committee to discuss Task Force goals: particular attention was paid to ways in which the Task Force can relate to efforts of local coalitions to deal with educational problems.

A full Task Force meeting will take place November 7 in New York.

HOUSING RECONSTRUCTION AND INVESTMENT

Representatives of the Task Force Co-Chairmen have met twice and are drafting a position paper on the goals of the Task Force, the technical resources it can make use of, and the policies it will consider recommending.

Task Force Co-Chairmen and representatives meet November 22 in New York.

Getting Off the Ground

The concern of the Urban Coalition, expressed so strongly late last summer by public-spirited citizens during an emergency post-riot convocation in Washington, is beginning to find rootholds where it counts —in the front-line cities of America.

Mobilization of the nation's public and private resources for a vigorous attack on that urban hydra—unemployment, slum housing and aimless education —is getting off the ground. Leaders in some fifty cities will meet in Chicago next week to establish local action groups that can enlist the resources and energies of business, labor, religious, academic and community organizations. In this city, a New York Coalition has just started to translate the lofty policy language of the national steering committee into local terms.

High-mindedness, of course, will not be enough. Hard-core unemployment will take hard-core solutions. Lobbying of superhuman proportions will be required in the business and labor communities to break down traditional attitudes.

The Federal Government is in the forefront of action. For this reason the first step of the local Coalition is to discuss the inclusion of New York City in the pilot program, recently announced by the President, to engage the private sector in the attack on unemployment. But the true effectiveness of the Urban Coalition, the New York Coalition and those to come in other cities will be measured by more than simply seeking increased assistance from Washington.

Municipalities with archaic laws and practices that have effectively barred the poor and disadvantaged from job and housing gains will have to be persuaded to change their customs. Certain industries that have blocked Negroes from full opportunities will have to be re-educated. Certain unions which have denied membership on racial grounds will have to reform their practices.

By enlisting the community-action groups—the spokesmen for the jobless and ill-housed—the New York Coalition is getting to the core of center city's problems.

ATLANTA CONSTITUTION
October 26, 1967

Atlanta Joins Urban Coalition

Urban Coalition is a term gaining increasing currency these days and one on which an increasing number of people concerned and involved with the growing frustrations of city life are staking their desperate hopes that our society can survive without undergoing a wrenching upheaval that would surely threaten its very foundations.

What is the Urban Coalition? Nationally it is an organization formed last summer by 1,200 leaders representing city government, business, labor, religious and civil rights interests. Its broad goals are to focus attention on the problems of our cities and, more important, to develop action programs to solve these problems.

Our cities are where three-fourths of 190 million Americans live, yet their problems are rapidly approaching a crisis—indeed, the day of crisis is here in many cities—and these problems are being met by unconscionable indifference. The indifference is not total, but its magnitude is what makes it unconscionable.

When state governments turned their backs to the cities' plight, the federal government stepped in to lend a hand. Many of the federal programs show great promise, but Congress has yet to recognize or sense the urgency. When a city burns, Congress immediately wrings its collective hands, bewails the manifold sins and wickedness of the burners, but effectively ignores the despair that really struck the matches.

Of course we should punish and stop the burners, but potential match lighters are being born and growing up every day in the slums where frustrations and frictions are causing the matches to flare. It is to those frustrations and frictions that more energy and effort must be addressed.

And it is here where the national Urban Coalition intends to concentrate its energy and efforts. As a "super lobby" for the cities, it will focus attention and seek solutions in these problem areas: poverty, lack of job skills, unsound housing, inadequate parks, schools, absence of adequate municipal services, lack of motivation and the increasing desperation among our ghetto poor.

To bring about the "total commitment of all community resources and a reassessment of priorities" so necessary if we are to solve these and other problems facing our cities, the national Urban Coalition is urging local "counterpart" coalitions to join the fight.

This week Atlanta joined New York, Detroit and other great cities in answering this call and this opportunity to "get across to the people and the Congress the urgency of the problems of the cities . . . and encourage private initiative." Atlanta already has an effective informal coalition. Judging from records of men named to the steering committee for the formal coalition, we have a very good chance to bolster national and local efforts.

Success in these efforts is absolutely necessary, and the time is late. Failure to solve the growing problems of our cities is unthinkable.

Allen Seeks Urban Coalition

Summit Group, C of C, Labor Urged to Work for Jobs, Housing

By LORRAINE M. BENNETT

Mayor Ivan Allen Wednesday called on six leaders of various phases of Atlanta life to form an urban coalition whose goals will be to provide decent jobs, housing and education in urban areas.

JOURNAL (cont.)

The mayor and Dan Sweat, director of governmental liaison, presented a statement to the leaders which they will carry back to their respective groups for approval.

Accepting the statement were Al Bows and Opie Shelton of the Atlanta Chamber of Commerce, the Rev. Sam Williams of the Summit Leadership Conference, Robert J. Butler of the Atlanta Labor Council, Dr. Harmon Moore of the Christian Council of Metropolitan Atlanta, Dr. John W. Letson, superintendent of the Atlanta Public Schools and Erwin Stevens of the Citizens' Central Advisory Council (EOA).

Mayor Allen recently attended an emergency convocation of the urban coalition in Washington at which 1,200 leaders representing city governments, business, labor, religious and civil rights interests offered their views on how to deal with the urban crisis.

THE LEADERS agreed to carry back to their own cities the determination to form local coalitions made up of the same leadership cross-section to implement the program on a local level.

The statement Mayor Allen presented to the heads of Atlanta's interest groups said that although the federal government has expressed concern for the plight of the cities, Congress failed to register the sense of urgency of the urban crisis.

"The result is now a tragic chapter in American history. Riots, racial disturbances, civil disobedience in city after city throughout all parts of the country have cast a lasting imprint of inaction and indifference," the statement continues.

LACK OF job skills, unemployment, unsound housing, inadequate parks and schools, the absence of realistic municipal services, lack of motivation and loss of faith and of hope — these are the problems of the cities.

The urban coalition hopes to bring a "total commitment of all community resources and a reassessment of priorities by national and state government." The working together of these forces, the coalition hopes, "can produce results on a scale large enough to sufficiently change the direction of our cities," the statement reads.

BUSINESS WEEK
October 21, 1967

Summer's backlash: more job programs

In wake of riots, business takes a second look at the Negro job problem. Companies are accelerating current programs, initiating new ones, and revising hiring policies

'When the riots occurred, we re-examined what we were doing to see if we were doing enough — and we're still looking for new ways to help'

Radio Corp. of America Executive

'Businessmen who didn't recognize it before are aware that the Negro's troubles cannot be ignored and expected to melt away'

James B. Ammon
Vice-president,
Baxter Laboratories, Inc.

'The thinking of businessmen regarding hiring practices has taken a new twist... They're going into the ghettos to hire Negroes'

Pittsburgh manufacturer

'We will do everything in our power to liberalize screening and testing methods'

Raymond T. Perring
Chairman,
Detroit Bank & Trust Co.

'We would think twice about putting up a store in a Negro neighborhood'

Florida grocery chain Executive

'Riots are going to occur until there's visible evidence of improvement... but you can't get any solutions in a riotous atmosphere'

Reed O. Hunt
Chairman,
Crown Zellerbach Corp.

'We've been breaking our backs for several years to get jobs for Negroes. Now with all the demonstrations, business might just decide to rest on its oars'

Milwaukee executive

What did business learn from the riots that erupted in over 70 American cities last summer?

When Business Week reporters talked to top executives last week they found:

- There's little sign of a corporate backlash on civil rights programs.
- The riots have spurred a broad cross-section of companies, particularly large national concerns, to accelerate programs or to initiate new ones.
- Other companies are taking a second look at their own policies and those of local and federal agencies. Their concern allays the fears of some observers after the riots that business would pull back from civil rights efforts out of disillusionment or fear of financial risk.

James B. Ammon, vice-president and treasurer of Baxter Laboratories, Inc., says: "I think the riots have made businessmen realize that the Negro's problems will be more of a factor in our society and businesses in the future, not less of a one . . . If we don't develop programs today, we just won't have as many options five years from now."

William F.X. Flynn, who heads the National Assn. of Manufacturers' STEP (Solutions To Employment Problems) program, concurs. Flynn and his staff collect and circulate case histories of corporate and community action programs to interested companies. "After the situation this summer . . . we found companies impatient to move faster."

And a California industrialist minces no words: "Perhaps riots help more at some stages in the evolution of this thing than they hurt. How the devil do you get 200-million people to wake up?"

New trend. Such words obviously would disconcert many businessmen who feel they were facing up to the problem long before the riots. But the fact that business has stepped up its efforts in the wake of the summer's violence appears undeniable.

The Urban Coalition is just one sign. The new national advisory group includes such top business names as Chase Manhattan's David Rockefeller, Andrew Heiskell of Time, Inc., Litton Industries' Roy Ash, and General Electric's Gerald L. Phillippe. The group is not only preparing task force reports on urban problems, but has backed such legislative programs as the Clark-Javits proposal to create 1-million jobs for ghetto residents. It is also helping to blueprint some 50 local urban coalitions.

At least three such groups have already been set up—the New Detroit Committee headed by Joseph L. Hudson, Jr., of J. L. Hudson Co. the New York Coalition led by Christian Herter, Jr., vice-president of Mobil Oil, and a statewide coalition in Minnesota.

The Detroit group (whose members include Ford Motor's Henry Ford II, General Motors' James M. Roche, and Chrysler's Lynn Townsend) hasn't wasted any time. Meeting with Michigan Governor George Romney last week, it called for passage of a statewide open housing law—unquestionably the most powerful support such legislation has ever had in the state.

Such groups, of course, are merely advisory in nature, and the big question is whether in the long run they will generate more than sound and fury. For the present, it's clear that business thinking has taken a significant new turn. As one observer comments: "Industry is no longer content to play follow the leader on urban problems. It is moving ahead itself, drawing on its own resources."

Other action. This heightened concern is reflected not only in the insurance industry's announced intention to put $1-billion into slum renewal, but in a spate of local programs surfacing since last summer:

- In Pittsburgh, some 19 corpora-

tions have contributed $1.4-million to set up Allegheny Housing Rehabilitation Corp., which will buy and renovate old houses in ghetto areas and sell them back to ghetto residents. With a goal of $3-million, the organization hopes to renovate more than 1,000 housing units a year.

▪ A major corporation is now completing plans to construct a manufacturing facility within the ghetto area of a Midwestern city.

▪ In Tampa, the city and General Telephone of Florida have set up a Community Relations Council headed by Negro businessman James A. Hammond. Dozens of graduates of the council's training courses have found jobs.

▪ In Baltimore, over 1,000 ghetto residents were hired in a crash employment program that was initiated last August by companies in the area.

▪ In Cleveland, five banks and six companies put up $400,000 for a revolving fund for slum rehabilitation projects. Negro candidate for mayor, Carl B. Stokes, comments: "Frankly, I don't know what the motivation is, fear or genuine social concern, or both. But the important thing is that business is becoming more involved."

The list is endless. In cities across the nation—St. Louis, San Francisco, Camden, Wilmington, Denver—new programs are being mapped out, old efforts intensified. In Detroit for example, between 7,000 and 10,000 ghetto residents have been hired by the auto companies since the riots. "The jobs were there before," says an observer, "but communications with the community were poor." In upstate New York, Rochester Jobs, Inc., an agency that started functioning just last July, has already found over 400 entry-level jobs for slum dwellers.

All of this apparently reflects considerable soul-searching at the highest corporate levels. Understandably, most companies are reluctant to discuss such matters. "We've learned not to talk about any progress we've made," says one man. "No one wants to admit they haven't been doing all they can." But Ford Motor Co.'s creation of a top-level department of urban affairs is indicative of the new mood.

Hiring reforms. One area in which corporate thinking is shifting is in hiring practices. Comments the employee relations director of a major Pittsburgh company: "In the past, corporations pushed the idea of hiring 'qualified' Negroes—protesting that giving preference to a Negro simply because of his race was reverse prejudice. But since the riots, many corporations have been hiring people who couldn't begin to compete with whites for jobs."

This doesn't mean that companies are throwing away their yardsticks of productivity and profits. What's happening rather is that many are recognizing that old rules and practices may be screening out potentially competent people. As Reed O. Hunt, board chairman of Crown Zellerbach Corp., puts it: "Most ghetto kids have jail records, but you have to ask what for? You have to ask if he can do a good job?"

Long-term goals. Other companies are reviewing their contributions programs. Says a Chicago executive: "We used to take the shotgun approach and give $1,000 to every group with a good story. Now we're thinking in terms of five-year commitments in specific areas."

As companies become involved in urban problems, many report a heightened sense of purpose. U. S. Gypsum Co., for example, rehabilitated six slum buildings in New York's Harlem this summer. It is now working on 150 apartments in Chicago and 64 units in Cleveland, and it has options on 450 more units in Chicago. "We're going along," says an executive, "not with the expectation of a great profit, but to demonstrate that private industry does have a role and responsibility. We are beginning to feel a deep-seated involvement that can't be measured in return to stockholders."

Other side. Not everyone shares this feeling, of course. Many companies voice a sense of outrage at the riots. "You can't run a society with riots," says one executive, "and you can't be intimidated by lawlessness." In Milwaukee, currently plagued by civil rights demonstrations for open housing and the scene of two nights of rioting last July, a backlash among some segments of the business community is evident. "We've been breaking our backs to get jobs for Negroes," says a businessman, "Now with all the demonstrations, business might just decide to rest on its oars."

A number of companies report no appreciable change in their policies since the riots. "We've always tried to hire qualified Negroes," is the typical comment. One industry observer, in fact, reports that some executives are coming to regard riots "as seasonal hazards, much like hurricanes and tornadoes."

But others are anything but complacent. Says Crown Zellerbach's Hunt: "You can't ask the Negro people to be quiet. . . . Riots are going to occur until there's visible sign of improvement." **End**

Substituting Action for Oratory

THE $14,000 contributed by Minneapolis area businesses to study the creation of an Urban Coalition shows a growing awareness that the total community, public and private, must become more involved in the effort to solve our problems of race and poverty.

Critics might say that the time for studies is past. In this case, however, there would be no point in forming a coalition if the members had little idea of what they could do or how they should do it. These are the questions that this study must answer. And at nine weeks, it is a short one as studies go.

Participants at the recent National Urban Coalition meeting in Washington, D.C., resolved boldly to push for a million more jobs, a million more homes for the poor, better schools and social conditions. Whether these goals can be attained will depend greatly on the grassroots pressure and contributions of key leaders at the local level.

This is where the Minneapolis coalition comes in. This is where the white community must show Negro critics at the national meeting that it is not attempting to substitute oratory for action.

Earl Ewald, president of Northern States Power Co. and temporary chairman of the contributing local businessmen, said that none of them sees merit in creating just another organization. "But maybe a *new kind* of organization like a genuine 'Urban Coalition' can help," he said. "We hope to find out."

We hope the findings are affirmative.

URBAN COALITION MOVES ON SLUMS

Panel Set Up to Help Local Leaders Form Groups

By SYDNEY H. SCHANBERG

The Urban Coalition, the recently formed prestigious national alliance of business, labor, municipal, religious and civil rights leaders, took a step here last night to help local communities fight a more organized battle against slum problems.

A three-member panel was set up by the nationwide coalition to help community leaders form local coalitions to press for solutions to crucial urban needs, particularly jobs, housing and education.

The panel was announced at a meeting of the Urban Coalition's 33-member steering committee in the Time & Life Building, at 50th Street and the Avenue of the Americas. It was the first gathering of the high-level committee, one of whose members is Mayor Lindsay, since the convocation of the organization on Aug. 24 in Washington.

The members of the local-coalition panel are Mayor Joseph M. Barr of Pittsburgh, Arnold Aronson, executive secretary of the National Leadership Conference on Civil Rights, and Charles P. Taft, Cincinnati lawyer.

The next step by the task force will be to hold a meeting of community leaders interested in forming local units. Leaders in about 50 cities have expressed interest in the idea and are expected to be at the meeting, scheduled for a week from today in Chicago.

Mayor Lindsay, one of the founders of the Urban Coalition, has already organized a local coalition for New York City and is expected to announce its chairman and other members very soon.

About 50 persons, many of them aides to members of the steering committee, attended last night's committee meeting.

In addition to Mr. Lindsay, the participants included Mayor Barr; Mayor Jerome P. Cavanagh of Detroit; Andrew Heiskell, board chairman of Time Inc.; Joseph D. Keenan, secretary of the International Brotherhood of Electrical Workers, and David Sullivan, president of the Building Service Employes International Union.

Also, Frederick J. Close, board chairman of the Aluminum Company of America; Gerald Phillippe, board chairman of General Electric; Harold Fleming, president of the Potomac Institute in Washington, and A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters.

GRAND RAPIDS PRESS
September 17, 1967

Whitney M. Young Jr.

Biracial Coalition, Leadership Crucial

This summer's racial violence has caused a crisis of leadership. The riots have made it easy for "backlashers" to justify resistance to necessary social changes. But this leads to a dangerous polarization of attitudes which could lead to more violence.

Negro leadership has lived up to its responsibility by speaking out against riots and by proposing rational programs to end their causes. Now it is time for white leadership to speak out and condemn the backlashers and start doing something to end the ghetto's problems.

YOUNG

Churches, liberal organizations, political clubs, business and labor, interracial and human relations groups, all have to speak out now and regain the initiative from the backlashers. They have been silent for too long.

There are signs that some leaders realize the urgency of the situation and are willing to join the coalition so desperately needed if our country is to have peace and progress. I took part in a recent meeting to form just such a group.

It is called the Urban Coalition, and our first meeting included leaders of business, labor, religion, city mayors, and civil rights groups. From this came proposals for an emergency work program to provide jobs and training for the unemployed, the establishment of job centers in cities, and the commitment of private industry to take all steps necessary to insure full employment.

This last item is especially significant because business has not done enough to provide the jobs and training needed. Negro workers are unemployed at a rate more than twice that for white workers and Negro family income is $3,000 less per year than for white families. Something has to be done about this—now.

Many business leaders understand that they have a tremendous stake in urban peace and some of them realize they can't afford to continue old ways of doing things. But the real test will come at the local level. Businessmen and community leaders are going to have to come forward with vigorous support for radical changes.

That is why various local urban coalitions are now being formed. In New York, for example, Mayor Lindsay, who was at our meeting, has set up a New York Coalition of local leadership to attack ghetto problems. Other cities and regions will do the same.

The Urban Coalition could be the most exciting new development in a long time—but only if its members are sincere in pushing for radical change. The time is long past for mere lip service to the ideals of equality. Responsible leaders and established organizations must be given the resources to deal adequately with ghetto problems. Negro citizens are tired of being promised jobs and not getting them, they have been lied to once too often.

The business and civic leaders now forming such coalitions in their communities will have to deliver on their promises. This coalition will have to create jobs and strengthen the economic life of the ghetto. It will have to end racial barriers in housing, health and education. These can't be temporary steps to stave off a riot; they must be steps which get at the heart of the problems caused by racism and solve them permanently.

We really have little choice. This country can take the high road to social progress and equality by a strong commitment to far-reaching programs to create jobs and better living conditions for the urban poor. or it can take the low road to social disaster and violence by letting the backlashers speak for it and allowing ghetto conditions to worsen. We have to take that high road.

WASHINGTON POST
October 27, 1967

Church Plans Housing

Cardinal Urges Coalition To Meet D.C. Urban Ills

By William R. MacKaye
Washington Post Staff Writer

Patrick Cardinal O'Boyle urged creation yesterday of a Washington urban coalition to meet the challenge of the urban crisis.

At a press conference, the Cardinal:

- Pledged the support of the Roman Catholic Archdiocese to a soon-to-be-launched drive to raise a $2 million Housing Development Fund.
- Said that church officials are planning a 1150-unit housing project on a 15-acre tract at 4th and Edgewood Streets ne., the site now occupied by St. Vincent's Home and School.
- Announced that the Archdiocesan Office of Urban Affairs, headed by the Rev. Geno Baroni, will back two rehabilitation projects for low-income housing.
- Said that the Archdiocese and the Presbytery of Washington City (United Presbyterian) will pool funds to remodel a building at 1419 V st. nw. for use as an urban affairs office. The Presbyterian body will provide $55,000 for the job, which Cardinal O'Boyle estimates will cost $100,000.
- Announced the launching of an extensive educational program designed to make city and suburban Catholics sensitive to each others' needs.

Cardinal O'Boyle expanded by saying that area clergy would exchange pulpit visits, followed by special seminars and meetings for laymen "to promote a better understanding of urban affairs and community relations."

"The aim of the church and therefore of the Washington Archdiocese," said the Cardinal, "must be to build a society which will afford the ordinary citizen and every citizen the opportunity to pursue his salvation in conditions of life that are not debasing and explosive, but human and encouraging."

At one point, he observed, "We're not playing Lady Bountiful . . . We've got an obligation to do this."

The Archdiocese's efforts in terms of housing will include an unspecified contribution to the Housing Development Fund.

Such a fund is necessary to finance Government-subsidized housing projects here. A fund of $2 million might provide the basis for 40,000 new low- and moderate-income housing units in the area.

One group already pursuing Federal aid is the Housing Development Corp., headed by the Rev. Channing Phillips of the United Church of Christ.

Mr. Phillips' group, which has access to $100,000 in capital, currently is sponsoring construction or rehabilitation of 2000 housing units.

Mr. Phillips was at the press conference yesterday, as were two officials of the proposed Fund. They are John Nevius, a lawyer who is one of the appointees to the new City Council, and Reuben Clark, also a lawyer.

Clark pointed out that the shortage of equity capital — "front money" — now in the hands of the Housing Development Corp. and similar groups has limited the area's ability to take advantage of the low cost loans available under the loans to nonprofit corporations section of the Federal Housing Act.

The proposed housing at the St. Vincent's site would be financed under that rent subsidy section—Section 221 (D) 3 and would provide a mix of apartments for the elderly, public housing units and nonprofit dwellings for families of low and moderate income.

The Archdiocese is involving itself in three other housing programs.

A group of laymen organized in a group known as Sursum Corda, Inc., working with St. Aloysius Church and Gonzaga High School, already has secured Federal support for a $3.7 million, 199-unit housing development off North Capitol Street in the Northwest One urban renewal area.

The other two projects include one elsewhere in Northeast One and the other—in cooperation with five non-Catholic churches and three synagogues—on Capitol Hill.

The Urban Affairs office will be part of the plant of SS. Paul and Augustine Parish. The first two floors of the building will be converted into a community center.

Upper floors are expected to provide space for such operations as Father Baroni's office, the Metropolitan Ecumenical Training Center and the Presbytery's office of urban mission.

KANSAS CITY (MO.) TIMES
September 14, 1967

FORM COALITION TO AID JOBLESS

Urban Leaders to Act for Minority Group Members

NOTE LABOR'S ABSENCE

Group Asks Convocation of Both Kansas Citys

An Urban Coalition was formed yesterday of top community leaders to concentrate on programs to provide jobs for unemployed members of minority groups.

The coalition agreed to call a community-wide convocation from the two Kansas Citys to consider the primary goal of finding jobs for the unemployed. Secondary goals to be undertaken later will be to improve housing and education for disadvantaged citizens, most of whom are Negroes.

For Group Here

A group of 18 leaders met yesterday at the invitation of Mayor Ilus W. Davis to form a local group patterned after the national Urban Coalition which held a convocation the last week in August in Washington. It was organized outside federal government sponsorship as a result of citizens concern over urban riots and inequality of opportunity.

At the meeting yesterday at the Hotel President were representatives of local government, top business executives, civil rights groups and the clergy. Absent were labor leaders although five labor leaders were invited to the meeting.

D. Peter Newquist, assistant to the mayor, said he had been told the labor leaders were unable to attend because they were involved in labor negotiations or were out of town.

Bishop Joseph V. Sullivan, auxiliary bishop of the Kansas City-St. Joseph Catholic diocese, said the group would need the support of labor.

GARY (IND.) POST TRIBUNE
October 12, 1967

4,000 Jobs Hunted By Urban Coalition

Methods of providing jobs for hard-core unemployed will be discussed Oct. 27 at a luncheon-information meeting of Gary's Urban Coalition.

A panel of educators, employment counselors, employers, government officials and civil rights leaders will convene in the Hotel Gary then to search out job problems in Gary.

The Urban Coalition is a federally sponsored group of locally interested citizens organized to coordinate and implement existing and new programs in employment, education, training, housing, reconstruction and equal opportunity.

Mayor A. Martin Katz called for the latest meeting of the group to interest private industry in providing as many as 4,000 jobs for Gary's unemployed.

Attending this conference will be the major employers in the Gary area and representatives from various educational and training groups, and from the employment agencies.

Katz said the obvious real need is to match the requirements of business and industry with available resources and upgrade the full potential of our total manpower resources.

The plans for the conference on employment were outlined by George A. Jedenoff, general suprintendent of U.S. Steel's Gary Steel Works, who was named to organize and chair the conference proceedings.

Jedenoff noted that this conference can serve as a real benefit to Gary by bringing together the various groups interested in making the maximum use of the Gary human resources.

The employment phase of the four-point basic principles submitted by the Urban Coalition Steering Committee calls for fair employment; basic training for employees under existing programs; education plans to assure upward job mobility; re-examination of methods to eliminate any practices that may unnecessarily bar qualified candidates; full cooperation with responsible agencies devoted to the improvement of inter-group relations within the community; and further participation in the Gary community of Plans for Progress under the Committee of Equal Opportunity appointed by President Johnson.

The steering committee submitted this program for the Urban Coalition and is chaired by George R. Coker, executive director of the Urban League of Gary.

Its members include: Joseph Radigan, Republican candidate for mayor; Richard G. Hatcher, Democratic candidate for mayor; L. I. Combs, builder and president of the Gary Chamber of Commerce; Jedenoff; Matthew Glogowski, superintendent, Budd Company; James Breed, manager, NIPSCO; Leo Lewis, manager, Gary-Hobart Water Company; Al Jackson, manager, Illinois Bell Telephone Company; Rev. William Paris; Robert Gordon; Marion O. Mitchell, manager, Sears, Roebuck & Company; Mamon Powers, Powers & Sons Construction Co. Inc. and Walter Ridder, publisher of The Gary Post-Tribune.

Others on the Steering Committee include Curtis Strong; Orval Kincaid, United Steelworkers of America; Donald Belec, school board; Mrs. Bernice Terry; Harold Hagberg, Northwest Indiana Bldg. & Construction Trades Council; Robert Gasser, Gary National Bank; Ray Daly, Bank of Indiana; Reverend S. Walton Cole, president, Council of Churches; Rev. Julius James, president, Gary Human Relations Commission; and Glen Vantrease, city controller.

URBAN COALITION: NEWEST WEAPON TO FIGHT SLUMS

NEW ALLIANCE BETWEEN DIFFERENT GROUPS COULD SAVE U. S. CITIES

By FREDERICK GRAVES

While the long, hot summer of 1967 is now a part of the past, concerned persons are attempting to pool their resources and reorganize their thinking and values, hoping to prevent the predicted long, hot summer of 1968 from becoming a part of the future. To accomplish this monumental task a new alliance between leaders in civil rights, religion, business, labor and local governments was formed. It is called The Urban Coalition, and some look upon it as one of the last measures available to save our cities.

On August 24, after clean-up crews in Newark and Detroit had begun to clear their rubble-filled streets, Urban Coalition leaders held what they termed an emergency convocation. One thousand delegates attended the session at the Shoreham Hotel in Washington, D. C., and they represented all groups that have strong interests in the survival of the cities.

In Washington (l) Heiskell talks with Lindsay; in Chicago, Lincoln, Neb., Mayor Samuel Schwartzkopf and Saginaw, Mich., Negro Mayor Henry Marsh.

The Urban Coalition is co-chaired by Negro labor leader A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, and Andrew Heiskell, board chairman of Time, Inc. At the emergency convocation they were joined by rights leaders Roy Wilkins and Whitney Young Jr. The business community was represented by Asa T. Spaulding, president of North Carolina Mutual Insurance Co.; Gerald L. Phillippe, board chairman of the General Electric Co., and Henry Ford II, board chairman of the Ford Motor Co.

Labor representatives included Walter Reuther of the United Auto Workers; George Meany, AFL-CIO president, and I. W. Abel, United Steelworkers president. From the religious community were Rabbi Jacob P. Rudin, president of the Synagogue Council of America; Archbishop John F. Dearden of Detroit, and Dr. Arthur Fleming, president of the National Council of Churches.

Local government was represented by the top men—the mayors: Richard J. Daley of Chicago, Milton Graham of

After session, Johnson joins chat with (l-r) Bishop James W. Montgomery, Chancellor Norman Parker and Mayor Daley.

(MORE)

Workshop panelists included such Negroes as Bourgeois (l) and Mrs. Williams and Dr. Deton Brooks who aired views.

Panelist Henry criticized city governments. John Cardinal Cody congratulates Naftalin after speech.

Urge Forming Local Coalitions To Solve Problems

Phoenix, John F. Collins of Boston and Joseph M. Barr of Pittsburgh, president of the U. S. Conference of Mayors.

Keynote speaker at the session was New York Mayor John V. Lindsay who told the 1,000 delegates that local coalitions must be formed to help raise the standards of housing, education, job training, welfare and raise the employment rate. No time was wasted on isolating the problems; everyone there knew quite well what problems exist in cities. Also no time was wasted on deciding which groups in the cities this new coalition program should help. The answer was obvious: The same alienated, poor people who had used molotov cocktails to destroy the business establishments of unfair merchants and their own rat infested homes in sub-standard buildings.

Convocation delegates left the one-day meet charged with the responsibility of returning to their urban communities and establishing local coalitions between civil rights, labor, business, religion and government. The national Urban Coalition promised help and advice whenever needed. Urban Coalition headquarters in Washington, D. C., said it does not plan to dictate how local groups should be organized. Officials there said each urban area has its own personality and it will be more practical for each city to do its own mobilizing of forces. But the national group did offer one strong bit of advice to the local coalitions: Poor people—Negroes, Puerto Ricans, White Appalachians—should be included in local groups, along with militants.

As part of the mobilizing of local groups, the national Coalition sponsored a one-day meet last week at the University of Illinois' Chicago Circle Campus. It was attended by 250 persons representing areas that were attempting to form their coalitions. There were representatives from 46 cities. Although they were from most parts of the country, there were more Mid-Westerners than any other geographic group. Because of this the Washington office plans to hold three other such meets to make sure every urban area has a chance to benefit from the advice of experts.

The opening general session of the Chicago meet was

Meaning Of America Is Urban Issue, Publisher Says

presided over by JET-EBONY Publisher John H. Johnson, co-chairman of the national Coalition's Task Force on Communications and Public Support. He helped set the tone for the day when he told the registrants: "We are engaged here in creating a will that speaks not so much to Negroes but to the fundamental issue of the meaning of America. Whatever we do, we must not deceive ourselves. The decision before us now is not a decision about the Negro but a decision about America. It is not a decision about civil rights but a decision about the future of the city."

Lindsay

Randolph

Spaulding

Young

One of the main objectives of the Coalition is to organize a force strong enough to move, shake, push and prod Congress into passing much needed legislation which can alleviate some of the problems faced by cities. These include retraining programs, the Model Cities plan and adequate welfare financing without strict, inflexible rules which prohibit funds going to those who need it most.

At the Chicago session registrants attended a series of workshops which included panels composed of top-flight Negroes in governmental agencies and social welfare groups. They included Vernon Jordan of Atlanta, director of the voter education project of the Southern Regional Council; Melvin Mister of Washington, D. C., director of the D. C. Redevelopment Land Agency; A. Donald Bourgeois, general manager of the St. Louis Model Cities program; Mrs. Frank Williams of Indianapolis, representing the League of Women Voters Education Fund, and Clifton W. Henry, a community services representative from the U.S. Mayors Conference, Washington.

Henry said that up 'til now there has been no will on the part of cities to deal effectively with their problems.

One of the big questions is, "Will The Urban Coalition be able to get cities to stop playing politics and start planning creative programs to help their ghetto residents become a part of the predominant affluent society?" In short, "Can America be saved?"

Ford

Rustin

Wheeler

Wilkins

Different cities are handling the mobilization of local coalition in different ways. Chicago, for example, is not planning to make an effort for such action. Its mayor, Richard J. Daley, said the city has always had such a coalition between business, labor, religion, etc. Then Daley ticked off a list of city agencies and commissions which he said encompass all walks of the city's life.

In Minneapolis, Minn., Mayor Arthur Naftalin admitted to some failures in his city and said members of the militant Negro community should be consulted and asked to take an active part in local coalition groups. "If we can't close the gap between young militants and the established community, it will destroy us," he warned.

Coalition Urges Congress

Move Now on Urgent City Problems

Andrew Heiskell (center) answers question at Washington press conference. Other Coalition participants were (left to right): Arnold Aronson, executive secretary, Leadership Conference on Civil Rights; Joseph D. Keenan, secretary, International Brotherhood of Electrical Workers; Norman Hill, representing Coalition Co-Chairman A. Philip Randolph; Mayor James Tate of Philadelphia; and Christian Herter, Jr., chairman of the New York Urban Coalition and vice president of Mobil Oil Company.

Spokesmen for The Urban Coalition urged the Administration and Congress last month to "move without delay" on a wide range of programs to ease the crisis in the cities.

Coalition Co-Chairman Andrew Heiskell, chairman of the board of Time, Inc., called a Washington press conference to emphasize 1968 legislative goals.

In a statement, also signed by Co-Chairman A. Philip Randolph, president, Brotherhood of Sleeping Car Porters, AFL-CIO, Heiskell said "the needs are massive and urgent, the hour is late, and the times are perilous."

In response to a question on where Congress would find money for needed programs, Heiskell said; "It would be cheaper to do it now than to wait for the cities to to blow next summer."

Text of Statement

The text of the legislative statement follows:

"Specifically, we call upon the Congress and the Administration to move without delay to provide solutions to urgent problems in the following areas:

"Definite steps should be taken now to assure a job for every citizen able and willing to work. We endorse and strongly support a three-part approach to this national challenge:

"(1) Private employers must greatly expand their efforts to employ and train the so-called "unemployables." The Urban Coalition will intensify its efforts to enlist business and industry in this effort.

"(2) The federal government and private employers acting in expanding partnership must provide jobs for the

unemployed and better opportunity for the underemployed. We would support, for example, the President's current proposal to more fully reimburse employers for the additional expense of employing and training the hard-core unemployed. We emphasize, however, that this measure is only a partial solution to the problem and that much more must be done.

(3) Congress must pass legislation in this session to provide government-generated employment to every citizen able and willing to work but unable to find private employment—not make-work but meaningful, socially useful jobs, which would provide public services now lacking in hospitals, libraries, recreation programs and other civic services.

The Administration's Open Housing legislation should be enacted into law now.

The Administration's Safe Streets and Crime Control Act and Juvenile Delinquency amendments were drastically altered in the House of Representatives last year to channel the programs and funds through a state planning and allocation process which would delay and frustrate their effectiveness. The original Administration version of these bills should be passed by the Senate so as to mount an efficient and effective attack on the root causes of violence, crime and delinquency, coupled with the development of improved local law enforcement.

A supplementary appropriation bill should be immediately introduced and enacted to fund fully the anti-poverty programs as authorized for this fiscal year.

"The needs are massive and urgent, the hour is late, the times are perilous"

Programs for low and moderate income housing, urban development, model cities, mass transportation and community facilities should be extended, expanded and adequately funded now.

The repressive welfare program amendments enacted last year, penalizing children born into one-parent homes and shifting the financing burden to local government, should be repealed immediately.

We know these legislative aims are more easily stated than accomplished. But we also know the needs are massive and urgent, the hour is late, and the times are perilous.

The substantial number of communities forming counterpart Urban Coalitions in all parts of the country is strong evidence that the citizens of our urban areas share the Urban Coalition's concern and its commitment.

With the commitment of its citizens, this nation has the capacity now to resolve its urban problems. A reordering of priorities and a renewal of national commitment to the well being of all citizens is overdue. We pledge our full support for the legislative action required.

300 Attend National Action Conference On Open Housing

Daley

Young

Cook

More than 300 people attended a National Action Conference on Equal Housing sponsored by the Coalition in Chicago last month.

Major speakers were Mayor Richard J. Daley, James W. Cook, President of the Illinois Bell Telephone Company, and Whitney Young, Jr., Executive Director of the National Urban League.

Concurrent workshop sessions were devoted to Fair Housing Legislation, Suburban Housing Development for Low and Moderate Incomes and the Role of Voluntary Programs to Achieve Fair Housing.

At the concluding afternoon general session, the Conference adopted recommendations from the Workshops to:

★ Express support for Fair Housing legislation now before the U.S. Senate (S. 1358), and for state and local Fair Housing legislation.

★ Urge The Urban Coalition to call on Congress to expand funding for rent supplements and use them in conjunction with Federal low market rate interest programs.

★ Urge the Federal government, in cooperation with state governments, to pass legislation to permit funding of tax abatements, with the Federal government assuming up to 50% of the tax abatements necessary to develop 221 (d) (3) housing.

★ Urge federal and state governments to provide seed money to non-profit entities to initiate housing development, and seek waiver of "Workable Program" requirements for suburban developments.

★ Urge The Urban Coalition to call on federal and state governments to adopt legislation modifying zoning laws to permit construction of low and moderate income housing in the suburbs.

The Action Conference was coordinated by Edward Holmgren, executive director of the Chicago Leadership Council for Metropolitan Open Communities.

Executive Committee to Meet in New York City

The new Executive Committee of the Coalition Steering Committee will hold its first meeting on February 9 in New York City.

The Steering Committee action in establishing the Executive Committee specified the proportionate representation of each segment of the Coalition, but permitted each group to select its own individual members.

The Steering Committee also stated that each of those designated to serve on the Executive Committee should subscribe to three methods of solving urban problems: What the private sector can do on its own; what the private sector can do in concert with government; and what the government must do to meet needs beyond the reach of private efforts.

The Executive Committee was instructed to consider the permanent organizational structure and program of the Coalition and make appropriate recommendations to the Steering Committee.

Following are the individuals designated to date to serve on the Executive Committee:

Business: Joseph H. Allen, president, McGraw-Hill Publications; Frederick J. Close, chairman of the board, Aluminum Company of America; J. Irwin Miller, chairman of the board, Cummins Engine Company; and Theodore Schlesinger, president, Allied Stores Corporation.

Labor: George Meany, president, AFL-CIO; and Walter Reuther, president, United Auto Workers.

Church: Dr. Arthur Fleming, president, National Council of Churches; two additional church representatives are to be named.

Civil Rights: Arnold Aronson, executive secretary, Leadership Council on Civil Rights; and Whitney M. Young, Jr., executive director, National Urban League.

Local Government: Mayor Joseph M. Barr of Pittsburgh; and Mayor James H. J. Tate of Philadelphia.

The Co-Chairmen of The Urban Coalition, Andrew Heiskell and A. Philip Randolph, are *ex-officio* members of the Executive Committee.

"*In his* NEW YORK TIMES *column of February 1, Tom Wicker described The Urban Coalition as "A group of the most powerful and public-spirited private interests in the nation." He added that the Coalition "is certainly on sound ground in urging immediate, emergency action to cope with the hard-core unemployed."*"

Coalition Holds Meetings In New York and Phoenix

Mayor John Lindsay addresses luncheon session at New York meeting. At left is Vernon Jordan, session chairman and executive director of the Southern Regional Council's Voter Education Project.

In New York City last month, at a regional meeting on mobilizing local urban coalitions, three nationally-known leaders in different fields made striking statements on the urgency of city problems:

James F. Oates, Jr., chairman of the board, Equitable Life Assurance Society of the United States: "Now is the time to act. Decisively. To cut through red tape. When human lives hang on whether or not there is a roof or shelter, how can we, the richest people in the world, let more time run by."

Mayor John Lindsay of New York: "It will make little difference what we do abroad, what we do about balance of payments, what we do in Vietnam, if the country is burning down at the edges."

Whitney Young, Jr., executive director of the National Urban League: "As important as is our pledge, far more important will be our performance. It will not be our promises that history will hold us accountable for. It will be our deeds."

The New York meeting attracted leadership from 82 cities in 21 states, despite near-zero weather.

In Phoenix the following week 175 people registered for a Western regional action meeting on expanding private employment. During the concentrated one-day session businessmen from seven states exchanged experiences and probed for answers to the problems of hiring and training the so-called "unemployables".

The Phoenix meeting was the second in a series of three dealing with private employment. The first was held in Atlanta on December 13 and the third will be held in Kansas City on February 21.

"The Country Watches . . . And Waits"

At the beginning of last month, The Urban Coalition National Coordinators, Ron Linton and John Feild, began their weekly report to the Steering Committee with the following evaluation:

"The Urban Coalition ends 1967—and the first four months of its existence—with a feeling of solid accomplishment and a high degree of optimism for the future. The Washington office has been established and staffed . . . Task Forces, manned by many of the country's most talented and concerned people, are already producing effectively . . . Local coalitions have been formed, or are being formed, in many critical areas . . . Press and public support of the concept of the Coalition and its goals are strong.

"For many people the Coalition has become a symbol of hope; other remain skeptical. Everyone is waiting to see if the powerful forces represented in the Coalition can indeed 'turn the country around' and solve the crisis in the cities.

"We think they can, and will. We can report that in the dead of winter the individuals who came together in a common commitment in the heat of August have lost none of their concern, determination and sense of urgency. The hard work of program building goes on. The country watches—and waits."

The Administration's decision to cut $75-million from last year's program for providing summer jobs for youth in the slums was announced on the same day the Youth Opportunity Conference sponsored by the President's Council on Youth Opportunity opened in Washington.

COALITION STAFF CHANGES

The Coalition has announced two staff changes, effective February 1.

John Feild, who has served as one of the two National Co-Coordinators, resumes his full time duties as Director of the Community Relations Service of the United States Conference of Mayors. Feild had been on loan to the Coalition from the Conference.

Ron M. Linton, will continue to serve as National Coordinator.

Christopher Mould becomes Deputy National Coordinator and Staff Director. Mould, who holds a Doctor of Law degree from the University of Chicago, joined the Coalition staff in September, 1967 as Associate National Coordinator.

Local Coalitions Being Organized In 27 Cities

Local urban coalitions have been organized, or are in the process of being organized, in 27 cities. Many other cities have expressed active interest and have requested information and help.

These are the 27: Atlanta, Ga., Baltimore, Md., Boston, Mass., Bridgeport, Conn., Dayton, Ohio, Denver, Colo., Detroit, Mich., Fresno, Calif., Gary, Ind., Huntsville, Ala., Indianapolis, Ind., Joilet, Ill., Kansas City, Kan., Kansas City, Mo., Los Angeles, Calif., Minneapolis, Minn., New York, N.Y., Norfolk, Va., Oakland, Calif., Pasadena, Calif., Plainfield, N.J., Riverside, Calif., Saginaw, Mich., San Diego, Calif., Stamford, Conn., Tacoma, Wash., Washington, D.C., and Winston-Salem, N.C.

John Gardner New Head of Urban Coalition

Former HEW Secretary Takes Executive Post

Co-Chairmen Andrew Heiskell and A. Philip Randolph announced last month that John W. Gardner had accepted the Executive Committee's request that he become chief executive officer of the Urban Coalition.

Mr. Gardner, who recently resigned as Secretary of Health, Education and Welfare, assumed his Coalition duties on March 1. He will serve concurrently as a consultant to the Carnegie Corporation of New York, with offices in Washington, but will be on loan to the Coalition, to which he will devote a major portion of his time.

In their announcement, the Co-Chairmen said the Coalition's Executive Committee agreed "enthusiastically and unanimously" to ask Mr. Gardner to take the new position. Of Mr. Gardner, they said: "Only a man with the exceptional stature and the rare combination of executive ability, intellect and idealism of John Gardner can provide the leadership needed to achieve the Urban Coalition's goals."

Mr. Gardner said he had discussed the new position with President Johnson and "he urged and encouraged me to accept." The day following the announcement, the President said he was "gratified" by the new appointment and had assured Mr. Gardner of White House cooperation.

The new Coalition executive was president of the Carnegie Corporation at the time of his appointment to the Cabinet by President Johnson on July 27, 1965. A native Californian, he holds A.B. and M.A. degrees from Stanford University, a Ph.D. degree from the University of California, and honorary degrees from a number of other colleges and universities. Before World War II he taught psychology at the University of California, Connecticut College for Women and Mount Holyoke College.

Mr. Gardner has been chairman of a number of Presidential task forces and commissions. He holds the U.S. Air Force Exceptional Service Award and the Presidential Medal of Freedom, the highest civil honor in the United States.

He is editor of President John F. Kennedy's book *To Turn the Tide*, and is the author of the books *Excellence* and *Self-Renewal*.

John W. Gardner

TEXT OF GARDNER STATEMENT

Mr. Gardner issued the following statement after accepting the Urban Coalition position:

"The hour is late. It is time for a major mobilization of private sector leadership to cope with the troubles that afflict the Nation.

"Every serious American understands the gravity of the problems confronting our cities today. Every thoughtful person comprehends the social consequences of violence and destruction on the scale of last summer's riots.

"Turning our backs on the problem won't help. Business as usual won't help. Neither hatred nor coercion on either side of the conflict will move us toward a solution.

"The cities cannot solve their problems without better mobilization of the talent, resources and leadership that exist in the cities themselves. We need new forms of collaboration between the various leadership elements in the city—city hall, business, labor, minority leadership and so on. The most significant effort to produce such collaboration today is the Urban Coalition."

Vol. 1 • No. 8 • April 1968

THE URBAN COALITION ACTION REPORT

Published by The Urban Coalition • Federal Bar Building West • 1819 H St., N.W., Washington, D.C. 20006

Lisle C. Carter, Jr. Joins Staff of the Urban Coalition

Lisle C. Carter, Jr., whose resignation as Assistant Secretary of Health, Education and Welfare became effective March 23, has joined the staff of the Urban Coalition.

In making the announcement, Chairman John W. Gardner said: "I have known for some months that Mr. Carter felt he might make a greater contribution toward the solution of our domestic problems in some private capacity. When I learned that his resignation was imminent, I asked him to join us in a top-level role at the Coalition, and I am delighted he has accepted."

Gardner said that Carter's full responsibilities will be spelled out later, but that he immediately will begin working on a variety of urgent tasks.

Carter was appointed Assistant Secretary of HEW for Individual and Family Services by President Johnson in February, 1966. He also served as Director of the Center for Community Planning, a post in which he supervised the Department's activities in the Model Cities program. He formerly was an assistant director of the Office of Economic Opportunity.

Two staff assistants to Gardner at HEW, Harold R. Levy and F. Robert Meier, had previously joined the staff of the Coalition.

Coalition Calls For More Jobs, OEO Funds, New Housing Programs

The Executive Committee of the Urban Coalition last month called for Congressional action on a supplemental appropriation for the Office of Economic Opportunity, expanded housing legislation, and emergency legislation to provide at least one million new jobs through public service employment.

In a statement released by Coalition Chairman John W. Gardner, the Executive Committee urged Congress to provide a total of $279 million in supplemental OEO funds. Of this amount, $104-million would raise current appropriations to the level authorized for fiscal 1968; $100 million would replace funds diverted to the Job Opportunities in the Business Sector (JOBS) program; and $75 million would be used for special summer employment, education and recreation programs.

The statement said "Federal funds now available are inadequate to meet even minimal OEO program needs in employment, education and recreation". These programs, it added, "can contribute significantly to enhanced opportunity for young people in the impoverished areas of our cities".

The statement cited the Report of the President's Commission on Civil Disorders to warn of the perils at hand in the cities unless such opportunity is provided.

The Executive Committee said emergency legislation to provide one million public service jobs is "urgently needed". It pointed out that the Coalition en-

Continued on Page 4

RIOT REPORT ENDORSED

This statement was released by the Executive Committee last month:

"The Executive Committee of the Urban Coalition strongly endorses the Report of the President's Advisory Commission on Civil Disorders. We commend the Report to the Nation's citizens and believe it merits the most serious consideration of leadership at all levels of both the public and private sectors."

The Urban Coalition
Report

September 1968

Crisis and Coalition

The urban crisis—an entanglement of poverty, unemployment, poor housing, inadequate education, racial tension—is an American insult spawned by neglect. The Urban Coalition is a platform from which men of prominence can speak out in unison, with the force of consortium, against continuing inactivity in the face of urgency. It is a framework within which they can forge new solutions, evaluate present alternatives and unite diverse powers for further action.

But crisis and coalition are more subtle. The crisis is a national abstraction drawn from the heart-rending experiences of our cities and ghettos—the Detroits, the Newarks, the Harlems, the Wattses. It is a crisis of block, neighborhood and city.

That's why, when the Urban Coalition was formally launched last summer at a convocation of 1,200 concerned leaders, one of the initial calls was for "local government, business, labor, religions and civil rights groups to create counterpart local coalitions." In large measure, the validity of the Urban Coalition idea will be demonstrated in the cities of this country. It will be proven by local leaders from all walks of life looking at their own problems and finding their own answers.

The Urban Coalition theme, of necessity, is one of many variations. It is the theme of different men in different places "doing their own thing." Given these variations, the range of program possibilities for Urban Coalitions can best be described by specific examples.

Most Urban Coalitions have started with task forces on employment, housing and education; others have been added on economic development which encourages entrepreneurship among ghetto residents, youth, problems of the aging and communications.

Baltimore. Concentrating its strongest efforts on helping the ghetto's small businessmen, the Baltimore Urban Coalition has formed a business task force to help establish a Small Business Investment Corp.—a high-risk, venture capital program with a projected $1-million operating fund. The task force has pulled together the talents of the Greater Baltimore Committee, a 102-member business organization, to advise on the creation of business cooperatives, and local associations of accountants, lawyers and retail merchants to give technical assistance to inexperienced ghetto entrepreneurs.

Washington. In the middle of its organizing process, the Washington (D.C.) Urban Coalition came into instant, full-grown existence in response to the April disorders which rocked the capital following the shooting of the Rev. Dr. Martin Luther King Jr. The Coalition appointed emergency committees on food, housing, employment and financial assistance; they made available 1,400,000 free meals, developed 1,000 job offers, found 800 dwellings for riot-displaced persons and collected $146,000 in emergency aid funds. This emergency effort was followed by a call to provide logistical support to the Poor People's Campaign: delivering food to Resurrection City three times a day and providing medical care, a recreational program and community service volunteers.

Minneapolis. Jobs have been the chief focus of the Minneapolis Urban Coalition, working with the National Alliance of Businessmen

and the Chamber of Commerce. The results have included pledges to the NAB for 1,100 summer jobs and the waiving of education-level requirements for line work by one of the area's major employers, Honeywell Inc.

Riverside. The Riverside (Calif.) Urban Coalition developed a Job Opportunities Council and persuaded eight of the city's largest employers to participate. With funding from the eight firms, the Council will find and get in touch with hard-core unemployed persons. It will provide or obtain necessary training to qualify these applicants to meet lowered minimum hiring standards, then refer them to the firms. The eight companies are planning to hire a number equivalent to 4 percent of their present work force.

Gary. A housing seminar sponsored by the Gary (Ind.) Urban Coalition led to the decision by two churches to sponsor the construction of lower-income housing under federal mortgage guarantees. Along with these efforts by the nonprofit sponsors, the area's major employer, U.S. Steel, announced its intention to build about 300 moderate-income housing units in the city.

Bridgeport. The Bridgeport (Conn.) Urban Coalition's acting Task Force on Education formed an educational consortium to ensure a college education for all qualified students in the Bridgeport area. The consortium includes the three presidents of private universities who make up the Task Force and the presidents of four other institutions of higher learning in the region. A committee of admissions officers from the seven participating schools screens each applicant and arranges for his admission to one of the colleges. The schools have applied jointly for funds to carry out the program.

Detroit. The record of Detroit, the first city to respond to the explosions of summer, 1967, by mobilizing its public and private leadership, illustrates the range of activities that an Urban Coalition can generate. Besides stimulating the hiring of hard-core unemployed through radically new procedures, the New Detroit Committee aided in changing attitudes and rules influencing the availability of mortgage money and loans for inner-city construction and rehabilitation. It attempted to persuade government—both in Lansing and in Washington—to act constructively in the cause of the alienated poor. It actively and persistently supported open housing on the state and local levels. Finally, it attempted to serve as an open channel for requests, demands and information in a frequently divided community.

Stamford. In Stamford, Conn., the Urban Coalition decided a good way to begin setting local priorities was to get a first-hand knowledge of problems as local residents saw them. Stamford is holding "gripe sessions." The city's most powerful people are trekking to neighborhoods where the disadvantaged live to hear residents complain, describe needs and suggest

programs. From these often lively meetings, the Coalition determines what action is required and, though a developing organization, strives to respond accordingly.

For example, one of the first sessions was held in Southfield Village, a high-rise public housing project with 500 families where anger and frustration had mounted to a point that many residents feared an outbreak of violence. The bitterest complaints centered on inadequate maintenance of the housing project, the lack of programs for training residents in the skilled crafts and a dearth of summer jobs.

The Coalition and the residents sat down together and tried to figure out how these problems could be solved. The Southfield Village Neighborhood Cooperative, an organization designed to improve maintenance by employing residents to do the repair work, was the result. Using their knowledge of the state capital, Coalition members helped the cooperative obtain a $225,000 grant from Connecticut's new State Department of Community Affairs to begin work.

Now, about 80 young men and women living in the project are working with skilled craftsmen who serve as teachers and supervisors. These young people provide the bulk of plant maintenance in the Village. Their salaries start at $1.60 and increase as skills improve.

Interfaith Action

Many Urban Coalition cities find that the religious groups in the community, working together, have a unique potential for initiating action.

The Interfaith Action Council (IAC) of Detroit, subsidized in part by the New Detroit Committee, the nation's first Urban Coalition, organized 80,000 to 100,000 people in May and June to discuss racial problems in small, at-home groups. The catalyst was a five-part television series the IAC produced with the help of a team headed by a producer from the Public Broadcast Laboratory.

This "Community Forum" was aimed at changing attitudes of white suburbanites.

The producers assumed that it is impossible to change attitudes and behavior unless people can participate, offer their reactions and ideas. So, discussion leaders were given a series of specific issues to raise with their groups. Later, reactions were re-examined. Though the series was so controversial that a commercial station withdrew its pledge of free prime time, the shows were ranked good to excellent by two-thirds of the viewers, most of whom had never been active in civil or human rights activities before.

The IAC's major aim was to spark suburban residents' interest in becoming more involved with problems of race or poverty. The final discussion guide listed dozens of human rights organizations throughout the metropolitan area seeking volunteers.

As a follow-up, Detroit's churches are donating the services of 30 priests and ministers to work full-time promoting better inter-racial understanding. These men will work from a dozen Interfaith Action Centers created outside of traditional church structures. Most will probably be located in suburban supermarket "store-fronts." To support the Centers, the IAC has pledged $45,000 from the Catholic archdiocese and $55,000 from Protestant faiths (in addition to the donation of ministerial salaries). The New Detroit Committee has pledged $12,500 and the Ford Foundation has made a grant for staff training.

The work of the Centers will depend on mobilization of volunteers seeking to relate suburban skills and resources with inner-city needs.

The centers will have three major objectives:

"To counteract the acknowledged movement towards polarization of society into separate black and white segments.

"To encourage and create opportunities for dialogue between black and white and create opportunities for joint action.

"To bring to bear the full force of moral suasion of member religious faiths to eliminate racism, and to use the personal and material resources of religious organizations to further that objective."

Media Task Force

New York's Urban Coalition has formed a working committee of communications executives to help guide a series of projects involving the media.

It plans to help evaluate and carry out

programs to hire, train and upgrade minority-group newsmen, and it will work to improve the coverage of minority community news.

The Coalition in New York is also thinking of establishing a network of Citizen Information Centers to inform the needy about community service resources available to them.

John Murray, the Coalition's Vice President for Communications, says the 10-member committee may eventually expand into a Communications Task Force with wider representation from the community and from specialized segments of the communications industry.

The Coalition and the Center for New York City Affairs of the New School for Social Research are cosponsoring study sessions and forums on minority problems for 25 editors and 25 newsmen.

As a part of this New School project, the media will be watched for specific weaknesses in reporting urban news.

The Coalition is also sponsoring, with the Columbia Graduate School of Journalism, a pilot program of 20 fellowships aimed at employing and upgrading the news skills of its participants. Fred Friendly, the Ford Foundation's media expert, developed the curriculum with help from an associate professor at Columbia, Melvin Melcher, and a Public Broadcast Laboratory producer, Gary Gilson.

Murray explained, "We decided to sponsor these two programs because we are of the firm conviction that our present crisis in race relations can be accurately described as a breakdown of communications. Neither through the mass media nor on a person-to-person basis are the races speaking effectively to each other."

Youthbridge

Paul Newman and several other well-known actors are devoting their talents to help the Bridgeport, Conn., Urban Coalition. Residents of suburban Westport, they wanted to offer their talents to fight inner-city problems of poverty and race. Sparked by actress June Havoc, Newman and other Westport dwellers decided to help Negro youths get into the theatrical world by giving them training and experience.

Miss Havoc first talked to James Tisdale, the Coalition's executive director, while he was working for Action for Bridgeport Community Development, the local antipoverty program. Tisdale took Newman and Miss Havoc on a tour of poverty areas in a sound truck. After a band commanded attention, the stars told the listening youths about the project. They were not requesting applicants, but they were still deluged with enthusiastic responses.

Encouraged, the actors returned to Westport to work on the project, which they call Youthbridge. They emerged with an ambitious plan which will use 673 disadvantaged youths as actors, singers, set designers, stage managers and business representatives.

The Connecticut Department of Community Affairs is providing $80,000 to start the program. More exciting is the expected result of this year-long program: a production which sponsors hope will be booked for a long-term tour around the country.

'Give a Damn'

Irony pervades the ghetto. A small child calls in an elfin voice, "Here kitty, here kitty." But the television camera sees the truth, scanning the litter of a Harlem tenement, finding the object of the children's attention—a rat.

Strong medicine? It's based on an actual incident and it's from one of two multi-media advertising campaigns in which the national Urban Coalition is participating this fall. In each case the creative concepts, the prototype ads and a great deal of technical assistance have been donated as a public service.

"Kitty, kitty" is from a national educational campaign called "Crisis in Our Cities." It was created by Ketchum, MacLeod & Grove Inc., under the direction of the Advertising Council. Urban America was the sponsor with the cooperation of the Urban Coalition. Last month the Advertising Council began distributing materials to approximately 11,000 media representatives, and with each packet went a letter of support from Urban Coalition Chairman John W. Gardner.

The other advertising campaign endorsed by the national Coalition takes a different tack and has a different target. This is the "Give a damn"

(Continued on page 9)

Action Council

The Urban Coalition

Party Platforms

America must ensure full justice and equality for all its people, or else it will not remain "the kind of nation we care about," John W. Gardner, chairman of the Urban Coalition, warned the platform committees of both major political parties.

"Everything we believe in—the phrases in our founding documents, the words on the monuments—say that every individual is of value," declared Gardner. But, he emphasized, "our past record of dealing with black Americans says something very different."

At a hearing in Washington on Aug. 21, Gardner told the Democrats' policy panel that they should pledge to:

—Bring full justice and equality to black people and other minority groups, including equal housing opportunity.

—Provide schools that fulfill the promise of a good education for all, vocational and academic, and work for the expansion of Head Start to make sure small children are ready for school.

—Build a strong partnership between the private sector and government to achieve the highest possible level of private industry recruitment, training and employment of hard-core unemployed, and create a public service employment program assuring a million jobs for Americans who want to work.

—Forge a partnership between government and business to build at least 30 million standard houses in the next decade and to secure full government funding for the model cities and urban renewal programs.

—Commit every available resource to making certain that no American is denied a chance to develop his full potential because he is undernourished, or is denied adequate medical care, or is enveloped by an environment of pollution, blight and decay.

The Coalition's chairman, in his speech to Republican platform drafters in Miami on July 29, said, "We have discovered that some of the obstacles to individual fulfillment, like racial discrimination, involve a degree of injustice that we cannot contemplate without shame." Such injustice, he declared, was bound to create conflict and "it has come in this generation."

He called on Republicans and Democrats alike to make the "patient, determined efforts" necessary to bring hope to millions of socially and economically deprived Americans—blacks, Indians, Mexican-Americans and all others.

Though racial or ethnic discrimination is itself intolerable, Gardner said, it has been "inextrica-

bly entangled with the problem of poverty." Efforts aimed at eradicating poverty and economic weakness among minority-group citizens are, in the long run, more likely to succeed than are traditional civil rights measures.

Therefore, Gardner pressed for commitments from the parties and, indirectly, their candidates, to work for an income maintenance program that sets a floor below which no American would fall. Such a program, he said, would involve unemployment insurance, Social Security and public assistance measures and would "ease the burden that abject poverty places on all the services and resources of the local community."

Goals for 1968

By the time Congress recessed for political convention season, the lawmakers had completed action on four major measures which the Urban Coalition Action Council had been strongly advocating—the landmark Housing and Urban Development Act, the 1968 civil rights bill with provisions for equal housing opportunity, the income tax surcharge and the supplemental appropriation for summer jobs.

President Johnson signed the far-reaching housing bill into law on Aug. 1, with members of the Action Council present at White House invitation.

Despite these major advances, Congress still faces some weighty tasks when it returns in September, including:

—The crucial appropriations bill (HR 18037) for the Labor and Health, Education and Welfare Departments and the Office of Economic Opportunity. The bill passed the House in June and awaits action by the full Senate.

The House made serious cuts in funds requested by the Administration for Title I of the Elementary and Secondary Education Act (aid to schools in impoverished areas), the Teacher Corps and OEO (which administers the antipoverty program). The House also adopted an amendment sponsored by Rep. Jamie L. Whitten (D Miss.) which was intended to prevent HEW from using its power under Title VI of the 1964 Civil Rights Act to cut off funds to school districts operating racially segregated school systems.

The Senate Appropriations Committee, in reporting its version of the bill, restored only a small portion of the funds for education and kept the OEO appropriation at the level approved by the House. It also approved a revised version of the Whitten amendment which would significantly lessen the potential harm but would still give encouragement to school districts not complying with the Federal guidelines for desegregation.

The Action Council is urging every concerned person to ask his Senators to make every effort to restore the House cuts in the HEW and OEO appropriations and to reject the Whitten amendment.

—The public service employment bill. In September, the Senate will consider a bill (S 2938) to extend certain expiring provisions of the Manpower Development and Training Act (MDTA). An attempt will be made, with bipartisan support, to add to the MDTA bill an amendment to create 600,000 public and private community service jobs in the next two years. The amendment would authorize expenditure of $500 million the first year and $1 billion the second. Sponsor of the amendment is Sen. Joseph S. Clark (D Pa.), and support for his effort to attach it to the MDTA bill has been promised by Sens. Jacob K. Javits (R N.Y.) and Winston L. Prouty (R Vt.).

A public service employment program is a priority goal of the Action Council, which urges others to communicate to their Senators their support for the Clark-Javits-Prouty proposal.

Under the amendment, community service jobs would be created in such areas as schools, hospitals, public safety, conservation and recreation. Fifty percent of these jobs would be funded through block grants to the states under a Federally approved plan. The remaining jobs would be created through direct Federal funding of community manpower programs. The measure would permit the Secretary of Labor to allocate 40 percent of the funds to support training and employment programs with private employers under MDTA and the Economic Opportunity Act, such as the Job Opportunities in the Business Sector (JOBS) program of the National Alliance of Businessmen.

The proposal would assure employment for urban and rural poor people in both the public and the private sectors by making jobs available in community service and development fields and by providing incentives to private enterprise

employers for hiring and training of the hard-core unemployed.

The Clark-Javits-Prouty proposal differs in significant respects from a public service employment measure defeated in 1967. The current proposal would authorize $500 million in the first year instead of $1 billion. In addition, the new plan would give a significant role to the states, it would place more stress on training and upward mobility and it would provide for encouragement of local service companies.

Letter to Congressmen

"We cannot allow this great nation to falter while things that can reasonably be done go undone," Action Council Chairman John W. Gardner said in a June 27 letter which went to each Member of Congress.

Gardner wrote "on the express instruction of 38 prominent Americans" who form the Action Council.

"This is not just any year. This is a year of sorrow, of confusion, of explosive anger. Congress must lead, and the only path compatible with our future greatness as a nation is the path of constructive action to combat known evils—crippling poverty, inadequate housing, educational disparities, discrimination and all the conditions that blight individual lives," he said.

Specifically, Gardner urged Congress to act favorably on a $75-million supplemental appropriation for summer jobs (Congress voted $13 million); a $25-million supplemental appropriation for Project Head Start ($5 million was approved); and a public service employment program (still pending). Gardner warned that cuts "should not be made in programs aimed at helping the nation's deprived with jobs, housing and education."

"The men who make up the Urban Coalition Action Council represent many different segments of American life," Gardner concluded. "They are realists who know the costs of the programs they are asking you to support. But they know the far greater costs to the nation of unproductive human beings and decaying cities. They appreciate as you do the vast range of requirements which you must consider as you set the priorities and allocate the resources of this country. But they believe that this is a time for extraordinary measures in behalf of the nation."

Baltimore Leaders' Visit

On a sultry day in mid-July, 100 of Baltimore's busiest people boarded a bus for the nation's capital to testify to the Maryland Congressional delegation "on behalf of the American city and the people who live in it." The move was without precedent. The impact was tremendous.

The gathering of these people in the same place—especially on a bus—was in itself extraordinary. Most of the corporate leaders of Baltimore participated—chief executive officers of the city's utilities, department stores, banks, insurance companies and manufacturing corporations. Also included were the presidents of Baltimore's five major institutions of higher learning, the present and past mayors, key Chamber of Commerce executives, union and civil rights leaders and a bishop or two.

Waiting to receive them in Washington was the entire Maryland Congressional delegation: Democratic Sens. Daniel B. Brewster and Joseph D. Tydings and the state's eight Representatives. Theodore R. McKeldin, chairman of the Baltimore Urban Coalition, later said of the meeting, "I have been Mayor (of Baltimore) twice and Governor twice. But never before have I seen a group like this together."

McKeldin made the opening remarks: "Every knowledgeable urban expert recommends a national reordering of priorities that recognizes the problems of the cities as our nation's number one domestic problem. The need for jobs, better education, decent low-cost housing and substantially increased social services to the residents of our inner cities has been acknowledged by our nation's enlightened leadership. There are measures pending before Congress today which provide funds to meet, at least in part, these needs. We want to demonstrate to the Maryland Congressional delegation that the business community, local government, religion, education, labor and civil rights groups are united in asking for support of these programs."

McKeldin was followed by the man most responsible for the gathering: James Rouse, builder of the new city of Columbia and a member of the Policy Committee of the national Action Council. "As a nation we have been struggling for so long with the problems of the city that it is difficult for us to be stirred to a sense of crisis," Rouse began. "We have come to look upon the

city as a burden to be shouldered—not as a victory to be won. And that is precisely why we are here: to shake up our state of mind about the city; to stir a new spirit; to raise new hopes; to mobilize new determination—about making our cities fit places in which to live, grow a family, run a business—and to unfold for all our people the opportunity to share in the fruits of this fantastic civilization. We hope that by getting up from behind the telephones and dictating machines . . . we may make more real for you the depth of our concern and the height of our hopes about the American city."

Action Council Chairman Gardner then made a few remarks. Finally, each member of the Baltimore delegation rose, introduced himself and made brief statements in support of federal aid for urban programs.

What impact did the visit have? It fired the enthusiasm of both the Members of Congress and the Baltimore leaders.

The Maryland Congressmen responded with full support for the group's objectives—though many warned against expecting too much during the current session of Congress. Republican Rep. Charles McC. Mathias said later: "We have lots of people beat on us who are anti-city, anti-poverty—really just anti. When you have a distinguished group like this support urban programs, it strengthens your backbone in dealing with the anti-people. We can say, 'Look, these are not just people looking for handouts.' "

Many of the corporate executives had had grave reservations or even fears about making the trip. None wanted to be part of any "demonstration." But the reception they received from the Congressmen seemed to turn their anxiety into pride of accomplishment, and their conversation on the trip home turned to ideas for follow-up programs. "Everyone's commitment deepened, and we won a few converts," said McKeldin.

Lowell R. Beck Named Executive Director

Lowell R. Beck, executive director of the Urban Coalition Action Council, assumed his new post in June.

For the past year Beck had been director of committee activities in the Chicago headquarters of the American Bar Assn. From 1960 to 1967 he was associate director of the ABA's Washington office.

At the ABA, Beck worked extensively on public service activities with Congress, agencies of the Federal Government and private groups. He played major roles in developing legal programs for the Peace Corps and the Office of Economic Opportunity, in drafting and promoting the 25th Amendment to the Constitution which establishes procedures to be followed in case of the disability of the President, and in the ABA's successful campaign for enactment of the Criminal Justice Act of 1964 and the Bail Reform Act of 1966.

As the ABA's director of committee activities, Beck helped initiate a program to provide pre-law training and law school financial assistance for needy minority-group members. He also assisted in the establishment of a special committee to encourage bar associations to take a more active role in improving housing and other urban conditions.

Beck has been a steering committee member of the National Complaint Center of the Citizens Crusade Against Poverty, program chairman of the Conference of National Organizations and a program committee member of the National Civil Liberties Clearing House. He is a graduate of Bradley University and the Northwestern University School of Law.

'Give a Damn' *from page 4*
campaign created by the Young & Rubicam agency for the New York Urban Coalition. It is very much a local action campaign created for a specific city and tailored to the needs of a local Coalition. The national Coalition worked with Young & Rubicam on adapting this campaign designed for New York to the needs of other cities. The result was a do-it-yourself conversion kit which the national Coalition has offered to make available to any Urban Coalition which wants to consider the campaign for local use. So far Coalitions in nine cities have indicated interest. Of these, Baltimore is the farthest along and is planning to kick off the campaign in mid-September.

An interesting sidelight to the "Give a damn" campaign was the commercial release of a song developed as part of the campaign. The song, "Give a damn," is sung by Spanky and Our Gang, the group which did the musical portions of the advertising campaign. A part of the proceeds will go to the Urban Coalition.

Alan Mink, product manager for Mercury Records, the releasing company, described the initial reaction to the record as "just incredible." Another record industry commentator called it "an attempt to counteract public indifference to community problems." This spokesman added, "The word 'damn' has previously been restricted on the air, but in this context it is not only acceptable but most meaningful in a constructive sense."

The centerpiece of the campaign, of course, is the phrase, "Give a damn." It stands alone on many of the elements of the campaign such as billboards, buttons, bus and subway cards and bumper strips. It is repeated in all the television and radio material. One of the most successful of the TV-radio spots has a number of youngsters talking about what they want to be when they grow up. One wants to be a fireman, one wants to be "a lady," one wants to be "29" and one just wants to be *"something."* Narrator Lloyd Bridges concludes by saying:

"There are kids in the ghettos with the same dreams as your kids. But they don't have the same chance.

"Give money. Give jobs. Give a *damn."*

Goals for Education

The Urban Coalition is moving with determination, at both the local and national levels, to implement its ambitious goals for education.

But James A. Kelly, the national Coalition's executive associate for educational affairs, cautions that these objectives cannot be achieved by Coalition efforts alone. Kelly's views are expressed in an article written for the September issue of *School Administrator,* the magazine of the American Assn. of School Administrators.

"What the Coalition is uniquely structured to do is to mobilize public and private segments of society to work intensively on the solution of urban problems and to provide leadership in designing and effecting solutions," says Kelly.

In addition to directing the education program of the Coalition, Kelly is an assistant professor at Columbia University Teachers College.

Important local efforts toward better schools around the country, Kelly says, include those of Detroit, where the New Detroit Committee is aiding the involvement of three local industries in public school programs, and of New York, where the Coalition is recruiting business sponsors for "Street Academies" administered by the New York Urban League. Already, International Business Machines Corp., Union Carbide Corp. and First National City Bank have pledged about $50,000 each over the next year to support such store-front schools.

On the national level, the Task Force on

Education is moving to devise specific strategies for meeting the Coalition's broad goals of equalizing educational opportunities, providing for universal early-childhood education, eliminating adult illiteracy and making a higher education available to all who are qualified. This task force is under the co-chairmanship of Roy Ash, president of Litton Industries Inc.; Arthur Flemming, president of Macalester College in St. Paul, Minn., and of the National Council of Churches and a former Secretary of Health, Education and Welfare; and Roy Wilkins, executive director of the National Assn. for the Advancement of Colored People.

In addition, notes Kelly, the national Coalition has contracted with the College of Education at Ohio State University for an assessment of citizen participation in education in 12 cities and is in the midst of preparing case studies of successful school projects to be made available to Coalitions in other cities.

The Hard Core

Jobs, it's widely agreed, are the keys to the ghettos' gates. "In America, what you do is what you are: to do nothing is to be nothing; to do little is to be little," writes Daniel Moynihan, the urbanologist. For the black man locked in the slum, he concludes, "the principal measure of progress toward equality will be that of employment."

Full employment is a goal of every Administration; government and private industry both are mapping ever more ambitious job-creation plans. For instance, the joint business-government National Alliance of Businessmen is striving in 50 cities to open 100,000 jobs for the "hard-core" unemployed by next summer; the Labor Department, through Plans for Progress, a voluntary organization with 420 corporate members, is working for equal employment opportunities in 80 of the nation's cities.

American Telephone and Telegraph Co., Chrysler Corp., General Motors Co. and Ford Motor Co. are among the giants of American industry seeking ways to meet what they've recognized as their own responsibilities in eradicating chronic, self-regenerating poverty in major cities.

All this initial experience has made one thing crystal clear. At least in the early stages, the problems of employing the hard-core unemployed usually outnumber the successes. "It's necessary not only to reach out to get them, but also to dip into their personal lives to keep them," a Radio Corp. of America spokesman recently told a *Wall Street Journal* reporter.

For business, one of the most vexing problems with hiring the hard-core unemployed is that they simply don't have the qualifications defined-in to most corporate job categories. This means an involved company is often required both to upgrade the potential worker's skills *and* to downgrade its own prerequisites—no easy task when you consider that each company owes its stockholders every possible effort to show a quarterly profit on their investment.

A corporate executive facing such a problem needs help: specific guidelines to aid him in determining and meeting social urgencies and still keep his corporation running smoothly and efficiently to meet its marketplace commitments.

Right now, there's almost nowhere an executive can turn for such guidance. Despite the experience this nation has already had in hiring and training people with no visible skills and glaring social handicaps, there are few, if any, central repositories for the results. Business is geared for competition, not cooperation. Open channels through which executives can tell each other of their experiences—successes and failures—in hiring the hard-core for the most part don't exist.

The Urban Coalition, which set employment as one of the pillars of its involvement from the outset, is moving to open such channels. With funds provided by the Ford Foundation, the Coalition is sponsoring two related studies aimed at gathering as much relevant information as possible about employing the hard-core, and at preparing a comprehensive, down-to-earth guidebook for involved businesses.

One phase of this project is being undertaken by E. F. Shelley and Co., a New York-based management consulting firm. Shelley's experts are sending detailed questionnaires to 300 employers across the country. Their aims: to find and evaluate existing programs for hiring and keeping hard-core unemployed, to create a central source for such information so the facts will be speedily available to those who need

them and to use the results of the extensive program evaluations to form models for future action.

Shelley's survey and analysis of hard-core hiring and training programs is scheduled to be delivered to the Coalition by mid-November.

Urban Research Corp., an organization with headquarters in Chicago, is working to prepare a 1,500-page manual for businesses on hiring and training—and adjusting to—the hard-core worker. As it's envisaged, this manual will have separate sections detailing the role and problems of top management, line supervisors, recruiters and trainers—even public relations departments. It will attempt to give specific answers, based on hard-rock experience. It will present case studies detailing successful efforts by both businesses and hard-core workers themselves.

These tasks are big ones. The Urban Coalition thinks they will be successful ones that will help more businesses cope more efficiently with the thorny task of helping transform ghetto prisoners into free, productive citizens. Concludes Chairman Gardner, "In a society that values work, there is the greatest possible strategic value in being able to say to every man, without qualification, 'If you want a job, there is one waiting for you.' "

Three Vice Presidents Named

John W. Gardner, chairman of the Urban Coalition, has announced the appointment of M. Carl Holman as the national organization's Vice President for Program Development.

Holman will succeed Lisle C. Carter Jr., who has resigned to accept appointment to the faculty of Cornell University.

Holman, whose appointment becomes effective on Sept. 9, served for the past two years as Deputy Staff Director of the U.S. Commission on Civil Rights. His writings on the conditions of the American Negro have been widely published. He holds degrees from Yale University, the University of Chicago and Lincoln University in Missouri.

Holman is a former editor of the *Atlanta Inquirer*. He joined the staff of the Civil Rights Commission in 1962 and became Deputy Staff Director in January 1966.

Carter will become visiting professor of Public Administration at Cornell, effective September 1. He served as Assistant Secretary of Health, Education and Welfare during the years Gardner headed the department, and joined the staff of the Urban Coalition shortly after Gardner assumed the chairmanship of the organization on March 1.

"Lisle Carter is an extraordinary person who has devoted many years to the furtherance of social justice," Gardner said. "I am indebted to him—and the nation is indebted to him—for the contributions he has made to our society, both in his years in government and in the formative months of the Urban Coalition."

Meantime, Gardner announced that F. Peter Libassi, director of relations with local Urban Coalitions, and Brian M. Duff, director of communications for the national organization, had been designated, along with Holman, as vice presidents of the Urban Coalition.

Libassi came to the Coalition in April from HEW, where he was special assistant to Gardner and director of HEW's Office for Civil Rights. He previously had been deputy staff director for the U.S. Commission on Civil Rights. He is a graduate of Colgate University and Yale University Law School.

Duff, a former Washington correspondent for The Copley Newspapers and the Copley News Service, came to the Coalition in May from the National Aeronautics and Space Administration, where he was Director of Special Events in the Office of Public Affairs. Duff is a graduate of the University of Michigan.

The Urban Coalition
Report

March 1969

Left to right: John W. Gardner, Bayard Rustin, Andrew Heiskell, Whitney M. Young Jr., Mayor John V. Lindsay, Donald S. McNaughton, and Arthur Flemming meeting with then President-elect Nixon in New York last December.

A Visit With Nixon

President Richard M. Nixon has urged business leaders throughout the nation "to lend active support to the Urban Coalition, both locally and nationally."

President Nixon said this in a statement from the White House shortly after he and his Urban Affairs Council had concluded a lengthy meeting with John W. Gardner and nine representatives of the Urban Coalition. In addition to the President, the meeting was attended by Vice President Agnew and Cabinet members with homefront responsibilities.

The President said in his statement that the session was "a most productive" one.

The Urban Coalition, said President Nixon, "represents the kind of citizen volunteer effort that will reinvigorate our cities and our nation."

The President said the 42 local Urban Coalitions around the country "reflect the best in grass roots leadership." He added, "These are

American citizens who care about their own communities—they seek to end divisiveness and to bind together the conflicting forces within the community and within the nation."

In addition to Gardner, who is Chairman of the national Urban Coalition, the delegation that met with the President and his urban affairs panel included: Bayard Rustin, executive director of the A. Philip Randolph Institute; Andrew Heiskell, chairman of the board of Time Inc.; Mayor James H. J. Tate of Philadelphia; Max M. Fisher, chairman of the board of Fisher-New Center Co., Detroit; Arthur Flemming, president of the National Council of Churches and president of Macalester College, St. Paul, Minn.; Frederick J. Close, chairman of the board of Aluminum Company of America; Walter Reuther, president of the United Auto Workers union; Joseph H. Allen, president of McGraw-Hill Publications Inc.; and M. Carl Holman, the Urban Coalition's Vice President for Program Development.

At a press briefing at the White House, Gardner, who is also Chairman of the Urban Coalition Action Council, said the delegation offered a series of specific proposals to the President, the Urban Affairs Council and its staff director, Daniel P. Moynihan.

Gardner stressed that the President hadn't made any commitments on these proposals, but that he seemed willing to "move affirmatively on a number of them."

The topics on the agenda for the meeting, which lasted an hour and a half, included: modification of federal welfare standards, full funding of the Housing Act of 1968, support and coordination of federal manpower programs and expansion of pre-school and early education programs.

President Nixon had requested Gardner and a delegation from the Urban Coalition's Steering Committee to meet with him and his Urban Affairs Council after a similar meeting at the President-elect's New York headquarters last December.

The Urban Coalition's delegation to the New York meeting included: I. W. Abel, president of the United Steel Workers of America; Mayor John V. Lindsay of New York; Donald S. McNaughton, president of the Prudential Insurance Company; Mayor Arthur Naftalin of Minneapolis; David Rockefeller, president of Chase Manhattan Bank and Whitney M. Young Jr., executive director of the National Urban League as well as Gardner, Heiskell, Rustin and Flemming.

One Year Later

On March 1, 1968, the National Advisory Commission on Civil Disorders told the nation that it was "moving toward two societies, one black, one white—separate and unequal." Has that movement slowed or intensified in the subsequent months? Are conditions of life in the slum-ghettos better or worse than when the Commission's report was issued?

On March 1, 1969, the Urban Coalition and Urban America Inc. issued an anniversary assessment of the national response to the report and to the problems which it stated. The contents range from specific institutional response in both the private and the public sectors to an examination of the state of black-white relations.

The Coalition appointed a review panel to serve as a resource in the anniversary document's preparation. The members were Jack T. Conway, president of the Center for Community Change; Washington, D. C., attorney David Ginsburg; U.S. Sen. Fred R. Harris

Coalition Leaders Join Nixon Administration

President Nixon has chosen the chairmen of three California Urban Coalitions to be members of his new Administration.

Floyd H. Hyde, mayor of Fresno and chairman of the Urban Coalition there, has been named Assistant Secretary of Housing and Urban Development for Model Cities and Intergovernmental Relations.

Lee A. DuBridge, president of the California Institute of Technology and chairman of the Urban Coalition of Greater Los Angeles, was chosen by the President as his science adviser.

David Packard, chairman of the board of Hewlett Packard Inc. and a co-chairman of the Stanford Mid-Peninsula Urban Coalition, was named Deputy Secretary of Defense.

Advisory panel for "One Year Later": Left to right: Sen. Fred Harris, Rev. Channing E. Phillips, Daniel Parker, Tom Wicker, Jack Conway, and David Ginsburg.

(D Okla.); New York Mayor John V. Lindsay; Dan Parker, president of the Parker Pen Co.; the Rev. Channing Phillips, Democratic National Committeeman for the District of Columbia; and Tom Wicker, Associate Editor of *The New York Times*. Harris and Lindsay were members of the National Advisory Commission on Civil Disorders and Ginsburg was its staff director.

Through the cooperation of the Public Relations Society of America, the Carl Byoir agency handled arrangements for release of the anniversary document to the press.

Housing Strategies

Over 100 representatives of 30 Urban Coalitions met in Washington on Feb. 6 and 7 for the Urban Coalition's first strategy conference. The participants discussed steps an Urban Coalition could take to improve a city's housing.

The conference was the first of a series of two-day strategy sessions to be held in 1969 for members of Coalition steering committees, task forces and staff members. The series is designed to help Coalitions develop strategies for action in various areas.

A highlight of the housing conference was a surprise appearance by George Romney, the new Secretary of Housing and Urban Development, who said the Coalition movement is crucial to mobilization of private resources to solve the country's urban problems. Romney stressed the need for massive efforts to meet pressing housing demands and stated his intention to intensify Federal assistance.

Also present at the conference were HUD's Assistant Secretary for Fair Housing, Samuel Simmons, and the Assistant Secretary of HUD for Model Cities and Intergovernmental Relations, Floyd Hyde. Hyde, former Mayor of Fresno, Calif., had been Chairman of Fresno's Urban Coalition. (See box, p. 2).

Following a talk on the role of Urban Coalitions by Chairman John W. Gardner, participants divided into groups to explore strategies for improving the performance of local housing resources such as urban renewal and public

housing agencies, Federal Housing Administration and Model Cities programs, financial institutions and private corporations. They also investigated the potential of non-profit housing developers, housing development corporations and the newly formed National Corp. for Housing Partnerships.

Assisting the participants in their strategy sessions were 15 experts in the field of housing. Lectures were delivered by the Rev. Channing E. Phillips, president of the Housing Development Corp. in Washington, D. C., and Richard Ravitch, a member of the National Commission on Urban Problems. James Rouse, a member of the Coalition's Steering Committee and Housing Task Force and the developer of the new town of Columbia, Md., delivered the closing address.

The conference was cosponsored by the National Institute of Public Affairs and was made possible by a grant from the Ford Foundation.

Federal Housing Programs. "All federally assisted low- and moderate-income housing programs currently produce a total of less than 100,000 units of housing for low- and moderate-income families. This is one-tenth of the one million annual production of houses for lower-income families which the national Urban Coalition called for in its August 24, 1967, Emergency Convocation."

Thus does one of two new publications of the national Urban Coalition illustrate the enormous dimensions of the nation's housing needs. *Guide to Federal Low- & Moderate-Income Housing & Community Development Programs* appraises current housing production in terms of goals set by two other distinguished bodies of Americans.

"It is one-twelfth of the 1.2 million annual production of houses . . . called for by the National Advisory Commission on Civil Disorders. . . . And it is one-sixth of the 600,000 annual average production . . . called for by the Housing and Urban Development Act of 1968."

Written by Herbert M. Franklin, executive associate of the Coalition, the *Guide* reflects the significant changes resulting from that act. The law generally broadened the scope of federally assisted housing programs and added notable innovations in financing.

While the new housing act should increase the development of such housing, says the report, "the outlook is unpromising for a six-, 10- or 12-fold increase unless far greater efforts are made in communities throughout the nation by local housing and urban renewal authorities and by limited-profit and nonprofit corporations and cooperatives to build and rehabilitate more housing for low- and moderate-income families."

Agenda for State Action. *Agenda for Positive Action: State Programs in Housing and Community Development* is a report of the Urban Coalition's Task Force on Housing, Reconstruction and Investment. Besides examining effective existing programs, the report explores opportunities for additional state efforts to meet housing and urban development goals.

Urban Coalition Chairman John W. Gardner describes the report's proposals as "practical methods of putting the weight of the states behind our national goals. They are aimed at spurring swift, effective action, and do not call for extended studies, added layers of bureaucracy or radical constitutional changes. Most of them seek to make maximum use of federal assistance and private investment."

Agenda was compiled by John H. Betz, a staff associate of the Coalition, on the basis of task force studies and recommendations.

Copies of both publications can be obtained from the Urban Coalition, 1819 H Street, N.W., Washington, D.C. 20006.

Task Force on Health

Hunger and disease abound in the ghetto, for the innercity environment is itself capable of causing disease. Air pollution casts a pallor over the city while indoors its disadvantaged inhabitants crowd together in cold, damp quarters. Often their limited space is shared with rats, and disease-producing garbage goes uncollected for long periods of time.

Can anyone wonder at the disproportionate rate of sickness and death in the central cities? Consider that among the poor, minority and disadvantaged groups illness occurs twice as frequently as elsewhere; infant mortality is twice as high among the non-white as the white; four times as many non-white mothers die in childbirth as white mothers. In spite of the desperate need for health care among the poor, services in the inner city are woefully inadequate. Clinics are often located far from innercity neighborhoods and are made more inaccessible by insufficient public transportation. When they are available, the clinics are usually overcrowded, understaffed and run at incon-

THE MINNEAPOLIS TRIBUNE, MONDAY, JANUARY 6, 1969

Urban-Coalition Weight Gives Poor New Leverage

Group cited among best in U.S.

By Howard Erickson
Minneapolis Tribune Staff Writer

When Mayor Arthur Naftalin vetoed the City Council's limited expansion of a public housing program last week, his decision was influenced heavily by the Urban Coalition of Minneapolis. To those familiar with the power the Coalition packs, that is no real surprise.

The Coalition had met Thursday night, only hours before Naftalin announced his veto Friday and urged that the City Council expand scattered-site, low-income housing into all parts of the city, not just four new neighborhoods.

"When I walked into the Coalition meeting Thursday night, I figured I'd probably sign the thing, with a suggestion that it be expanded city-wide very soon," Naftalin told a reporter Saturday.

"But when the Coalition voted to endorse city-wide expansion right now, there was only one dissenting vote," the mayor said.

No one can say, of course, that Naftalin might not have decided for some other reason to issue that veto.

Nor can anyone prove that any of a number of other key decisions made during the past 12 months might not have been made as they were, without the existence of an organized Urban Coalition.

But the Minneapolis Coalition, that year-old grouping of 70-some business, religious, labor, education, civil-rights and local-government agencies—bolstered with the continued interest and support of men like Donald Dayton, John S. Pillsbury Jr., Gen. Edwin Rawlings, John Cowles Jr., Judson Bemis, Atherton Bean, F. Van Konynenburg, Earl Ewald and others—in effect, the local Establishment, carries a weight that cannot be dismissed lightly.

As a result, there is at least a casual link between Coalition members—deeply involved community leaders who often wear several hats—and these steps at removing the deeply rooted potential causes of racial disorder:

The two-month campaign to persuade five Republican aldermen to switch their votes and confirm Ronald A. Edwards, a controversial young black man with a police record, as a member of the city's new Commission on Human Relations a year ago.

The recent new roster of YMCA programs, and last month's switch in emphasis by the United Fund in the programs and agencies it supports, both geared to greater attention to inner-city problems.

The naming of Negro leader Harry Davis to the city's Civil Service Commission, which sets hiring policies for city jobs—including the all-white, 562-man Fire Department and the nearly all-white Police Department.

Moving up from 1969 to last summer the landscaping and equipping of 10 children's playgrounds in poverty neighborhoods.

Local support for the California grape boycott, reaffirmed last week, though no local grocery chains have stopped stocking grapes.

Hiring of 14 additional building inspectors by the city, to check complaints of substandard or unsafe rental housing.

A new city ordinance to prevent tenants from being evicted for reporting their landlords' building-code violations to the city.

Lobbying by Coalition members with local Congressmen to fight attempts to cut federal anti-poverty, Model Cities and food-stamp appropriations.

Stephen F. Keating, president of Honeywell, Inc., was the Coalition's president last year. Dean McNeal, group vice-president of the Pillsbury Co. succeeds Keating for 1969. Both agree the major accomplishment for the Coalition's first year was getting organized on a broad base with good representation from important segments, and gaining early and continued support from key community decision-makers.

What may have been just as important was the selection of Harry Davis, a Negro spokesman respected equally by both races, as a vice-president—and last July as full-time executive director of the Coalition staff.

National Urban Coalition officials now consider the Minneapolis group one of the best organized of 40 or so coalitions in major American cities, along with those in Detroit, Mich., and New York, N.Y.

Mayor Naftalin, one of 40 members of the National Coalition's steering committee, goes further.

"There's no doubt in my mind, from what people in other cities tell me, that Minneapolis has the best-functioning coalition in the country.

"When I tell them that we have a full-time staff of 12 persons, they're just amazed," said Naftalin. He has spoken about the Coalition to groups in Cleveland, Ohio, Chicago, Ill., and Kansas City, Mo., in hopes of spurring formation of coalitions in those cities. Davis has made similar speeches in Milwaukee, Wis., and St. Louis, Mo.

For all of Minneapolis' apparent success, however, it is not hard to find an opposite man-on-the-street view. That view says the city's Establishment has done little to solve the real roots of poverty and discrimination. It says the Coalition's efforts are a short-term, "cool-it" gesture, whose major success was in the city's freedom last summer from the racial disturbances that marked 1966 and 1967.

Not so, replies Keating, the powerful, handsome, 50-year-old executive who directs a 75,000-employee, world-wide organization.

"If we just wanted to put out fires, we would have closed down in September," Keating said quietly with just a trace of irritation.

He has never said, he adds, that the problems the Coalition faces are anything other than complex ones that demand long years of attention to solve them.

"It's true, we could have done more last year. We operated for a long time with almost exclusively volunteer help and a very small staff. We weren't as efficient as we should have been."

McNeal adds some criticisms of his own.

"In finding jobs for the hard-core unemployed, we feel we were successful, but the summer jobs for youth—we weren't quite ready for it.

"We hadn't really recognized the importance of transporting these kids to the job. And the follow-up—if a kid misses two or three days on the job, sending somebody out to ask why—that wasn't as good as it should have been," the Pillsbury executive said.

How does the Coalition work?

"We decided, right at the start, that we would not become just another agency, piled on top of all the other agencies," said McNeal.

"We merely planned to encourage, aid, cooperate with—and prod, too, if you want—existing agencies, to urge them to do more," said McNeal, who as vice-president the first year did vast amounts of legwork in setting up the task forces and meetings where much of what the Coalition accomplished was planned.

For 1969 McNeal foresees these extensions of the Coalition's program:

"Jobs were the first thing the inner-city representatives wanted to talk about in 1968, and they will continue to be important in 1969," he said. So, while the Coalition-aided National Alliance of Businessmen placed 1,121 hard-core unemployed persons in permanent jobs last summer, and placed 748 youths in summer jobs (despite 1,785 openings lined up), this year the goals will be higher.

The Housing Task Force, which in 1968 used $30,000 in donations from Minneapolis-based charitable foundations as down-payments for 81 poverty-level families to buy houses, will solicit new money to continue it in 1969.

The 75 minority-race young people who were enrolled in Minnesota colleges through Coalition efforts in 1968 will grow in number this year, McNeal expects. The Education Task Force is also informally running the current effort to raise $100,000 in public donations to expand the Minneapolis Head Start program for 4-year-olds.

The Business Development Task Force will expand the effort that rounded up $225,000 in contributions from 17 local foundations last year and approved "seed money" loans to eight Negro small businessmen who now await approval of additional loans from the U.S. Small

Business Administration.

Sensitivity training sessions for employees of major corporations, and measures to attack the latent white racism uncovered by last May's survey of Hennepin County church-goers in 238 congregations, will be continued in 1969 by the Community Information Task Force.

Discriminatory practices will be attacked, and young lawyers will be recruited to aid poor people, by a new Legal Aid Task Force, which prominent lawyer Peter Dorsey will head. Basis for his work is an October study by volunteer lawyers James T. Halverson and John J. Held Jr., which recommended changes.

Another possible new task force, to deal with the worsening problem of police relations with minority races, is being studied by a committee headed by Rabbi Max Shapiro. His group will also look into ways in which the city and county attorneys' offices can be of greater assistance to poverty classes.

"At least, during 1968, we got a meaningful, continuing dialogue going," McNeal said, "Sometimes, at the start of the year, we'd sit and talk with poverty or minority-race groups for two or three hours—and get nowhere.

"That doesn't happen any more. Now we're moving."

THE NEW YORK TIMES, THURSDAY, DECEMBER 5, 1968

New York Coalition Scoring Its First Dramatic Gains in Slums

By Sylvan Fox

A grimy foundry in Harlem changed ownership recently, and with the transaction, all the talk about giving Negroes a "piece of the action" took a small but profound step toward reality.

The foundry, at 402 West 126th Street, was sold by its two white owners, Frieda Bogorod and Ernest Kruezer, to the Harlem Commonwealth Council, a Negro economic development corporation.

Behind the sale lies an important part of the story of what the New York Urban Coalition is all about; for it was with the help of the Coalition — a group of some 160 business, labor and community leaders who believe life in New York's slums can be improved by private effort — that the deal was accomplished.

The story of the Coalition also lies in the help it gave to a Negro man who wanted to open a shoe store in Harlem.

And it lies in the dedicated activities of the city's street academies, which seek to salvage high school dropouts from lives of ignorance and degradation.

NOT AN 'ILLUSION'

It even lies in a little vacant lot on 118th Street and Park Avenue, which in a few months will become the first of dozens of miniparks created with coalition aid.

"We're not under the illusion that the private sector can turn the city around," said Saul Wallen, the president of the New York Urban Coalition, as he reviewed its first-year accomplishments. "But we can have an impact."

Except for the trumpeting of its slogan — "Give a damn" — the Coalition has operated quietly during the year, possibly because it did not seek publicity for its first tentative steps and avoided controversial areas until this week.

But on Monday the Coalition purchased newspaper advertisements strongly backing school decentralization under the headline: "If it works in Scarsdale, it can work in Ocean Hill." The text of the advertisement included a decentralization resolution approved by the group's board of directors after some vigorous private debate.

Officials of the United Federation of Teachers said yesterday that the union was preparing a statement "rebutting some distortions" in the advertisement.

A DRAMATIC STEP

The sale of the Acme Foundry to the Harlem Commonwealth Council is, perhaps, the most dramatic tangible step the Coalition has yet made toward changing things in the depressed black and Puerto Rican communities.

The Harlem Commonwealth Council was organized 18 months ago by Roy Innis, now the national director of the Congress of Racial Equality and a firm believer in black economic development. Mr. Innis is also a member of the New York Urban Coalition, which is the local arm of the National Urban Coalition.

His simultaneous role in both groups made it natural for the Urban Coalition and the Harlem Commonwealth Council to cooperate, and when Miss Bogorod and Mr. Kruezer informed the Coalition they wanted to sell their foundry, the wheels were quickly set in motion.

The price the foundry owners had set was

$45,000 plus about $70,000 in cash on hand, accounts receivable and inventory.

The Coalition marshaled the needed assistance to complete the deal. Allen Herzig of Kidder, Peabody & Co., the investment banking firm, did a financial analysis of the foundry. Stuart Goldman, a Wall Street lawyer, handled the legal work involved in the purchase.

The Abex Corporation, a manufacturer of control equipment and the owner of several foundries, agreed to provide technical aid and arranged for the new president of the foundry, Rozendo Beasley, to attend a training course given by the American Foundrymen's Society.

EXPANSION PLANNED

Through the efforts of the Coalition, the Morgan Guaranty Trust Company lent the Harlem Commonwealth Council $50,000. The Coalition's Venture Corporation — one of the two economic development corporations it has established to help black and Puerto Rican business enterprises — put up $20,000, and the Episcopal Diocese of New York provided a loan of another $20,000.

Under its new ownership, the foundry employs 27 persons and does a gross business of $500,000 a year.

But Negro ownership of the plant, while an important step, is just the first, according to Mr. Beasley, a dynamic, mustached 33-year-old business administration graduate of Michigan State University.

When the foundry has paid off its $95,000 debt, he explained, the Harlem Commonwealth Council plans to sell shares to Harlem residents at a price they can afford to pay.

"Our aim is economic development," he said, "spreading the equity within the community. That's what we're shooting for."

As a corollary objective, he said, the Harlem Commonwealth Council hopes to prove that Negro businessmen can run an enterprise so successfully that investment will be attracted to other black-operated businesses.

"A lot of financial institutions say there are no businesses in ghettos worth investing in," Mr. Beasley said. "We want to prove that is wrong. A lot of financial institutions say there isn't enough black managerial talent available in the ghetto. We want to prove this wrong, too.

"Our main function is to get in there and make dough."

SHOE STORE OPENED

Cooperation between the Harlem Commonwealth Council and the New York Urban Coalition has also led to the establishment of a shoe store under Negro ownership at Lenox Avenue and 134th Street. The Tru-Fit Stride Rite store, which is owned by Al Jackson, opened in September.

Mr. Jackson, who had been the manager of a Miles shoe store in Harlem, was chosen from among eight possible owners whose names were submitted to the Green Shoe Company by the Harlem Commonwealth Council. The Green Shoe Company put up about 90 per cent of the needed investment, Mr. Jackson the rest.

The New York Urban Coalition helped Mr. Jackson refurbish the store, provided legal

assistance in the preparation of his tax and insurance papers and is providing managerial and technical assistance through its Development Corporation.

COMPANIES BACK ACADEMIES

Another aspect of the New York Urban Coalition's work is evident at a street academy at 259 West 64th Street, where 30 youngsters who have dropped out of high school are getting an education.

The first street academies were established by the New York Urban League several years ago to deal with the problem created by the growing number of high school dropouts.

Recently the New York Urban Coalition moved in, convinced businesses to invest in the education of high school dropouts, and won pledges from 15 companies of $50,000 a year each to support a street academy. Twenty-three are now in operation or soon to be opened.

Among the companies recruited by the Coalition to support street academies are McGraw-Hill, American Airlines, Pan Am, International Business Machines, Time Inc., Celanese Corporation, Sinclair Oil Company, Union Carbide, First National City Bank, Chase Manhattan Bank, Burlington Mills and American Express.

At the McGraw-Hill Street Academy on West 64th Street, five teachers work with 30 youngsters. McGraw-Hill found the site for the academy, provides teaching material, puts up the money that is needed to run the school and conducts regular conferences with members of the academy staff to discuss the work being done there and to sound out the teachers on how educational materials and textbooks can be improved.

'BEAUTIFUL COMMUNICATION'

"We've become, in a sense, a laboratory for them," David Rathbun, a 26-year-old teacher at the academy, said of McGraw-Hill. "There's a very healthy, beautiful kind of communication."

At 118th Street and Park Avenue, a small lot lies vacant. Next to it stands an abandoned five-story building slated for demolition. In a few months, it is hoped, the site will be transformed into a minipark.

Again, the New York Urban Coalition has been the catalyzing agent behind the project. Last summer the Amalgamated Clothing Workers of America gave the coalition $40,000 for the construction of miniparks.

The Coalition turned about $27,000 of this money over to the Upper Park Avenue Community Association, which has been working on a neighborhood rehabilitation program. The community association bought the lot and commissioned plans for the minipark. It is expected to be completed in early spring.

NEWS JOBS FILLED

These are a few of the Coalition's activities. There are others. In the South Bronx, the New York Urban Coalition has given the United Bronx Parents, Inc., $50,000 to conduct a training program, now in progress, on school decentralization. After serious internal debate, the Coalition strongly endorsed the program.

Last summer, with coalition financial help, 20 Negro and Puerto Rican young people attended a course in radio and television journalism at the Columbia University Graduate School of Journalism. All have been placed in news jobs.

The Coalition has committed $150,000 for four housing projects that needed money to go ahead with their construction plans. It has provided $20,000 to the East Harlem Skills Training Center, which is conducting a training program in the printing trades for at least 200 Negroes and Puerto Ricans. The Coalition has obtained, in conjunction with the National Alliance of Businessmen, pledges of 19,000 jobs for hard-core unemployed, and already has filled 9,000 jobs.

The national Urban Coalition was formed in August, 1967, by a group of private citizens who were convinced that private business, labor and community leaders could make a significant contribution to improving life in the nation's slums.

John Gardner, the former Secretary of Health, Education and Welfare, heads the national organization.

SLOW, SUBSTANTIAL GAINS

The New York Urban Coalition was organized last October with Christian A. Herter Jr., vice president of the Mobil Oil Corporation, as its chairman, and Mr. Wallen, a labor mediator, as its president.

At first, progress was slow. It still does not come at breakneck speed, but Mr. Wallen attributes this to the organization's "democratic character" and to the complexity of the problems it confronts.

Yet there have been some substantial gains in this first year — both of a tangible and an intangible nature, Mr. Wallen says.

"One of the major accomplishments," he said as he sat the other day in his 35th-floor office at Coalition headquarters, 60 East 42d Street, "is maintaining a continuing dialogue between blacks and Puerto Ricans, business and labor. We don't have anything like that anywhere else in the city.

"And we've built an organization and conducted a public-relations campaign that articulated the concern of the white establishment about ghetto problems.

"A year ago, when the Coalition was founded, it was an idea. Now we're starting to emerge."

The Coalition, which has 48 full-time clerical and professional employees and about 100 volunteer workers, raised $4-million in a fund drive this year. It hopes to raise between $6-million and $10-million next year, Mr. Wallen said.

A third of its income has been earmarked for Mayor Lindsay's summer program. But short-term racial peace is not the main objective of the New York Urban Coalition.

"I can't say we can take any credit for keeping the summer cool," Mr. Wallen said. "As a matter of fact, that isn't even our purpose.

"We hope to involve the private sector in some of the basic problems of preventing urban blight, and that's going to transcend the summer. It's a long-term, long-pull proposition."

Task Force on Health *from page 4*

venient hours. They tend to be operated as categorical units, such as diabetes clinics or heart clinics, and they dispense care on an emergency basis rather than continuously and comprehensively. Little, if any, attention is given to preventive services. Where Medicaid is not available, the high cost of private physician care is also a deterrent to proper health care.

More money alone will not solve ghetto health problems, according to Dr. George A. Silver, recently appointed Executive Associate of the Urban Coalition. Silver, formerly Deputy Assistant Secretary of the Department of Health, Education and Welfare, is directing the Coalition's effort in the area of urban health problems. Silver is on loan to the Urban Coalition from the Yale University Medical School, where he recently accepted an appointment to the faculty.

"From my work in government I found a number of obstacles not attributable merely to lack of money," Silver noted. "For instance, fragmentation of funding makes it difficult for local communities to attack the problems in a concerted way." Competing activity at the local level is also a major problem. "This lack of efficiency offers the greatest opportunity for change and improvement," Silver says.

Thus, he feels, "the Urban Coalition can play an instrumental role in the health field by promoting efficiency in the use of existing funds, by creating a climate for more cooperative community effort at the local level and by involving the community itself in decisions on improvement and extension of health services."

These tasks will be the primary concern of the new Urban Coalition Task Force on Health which held its first meeting on Feb. 13. The 36-member Task Force is composed of community leaders with firsthand knowledge of inner-city needs, experts in the health field and representatives from local Urban Coalitions. Task Force expenses are being underwritten by a $75,000 grant from the Commonwealth Fund. Meetings will be held on a regular basis and steps will be taken to ensure implementation of recommendations. Task Force programs will be continuously evaluated.

First on the agenda of the new Task Force is development of a handbook of alternatives available to local communities for action. Task Force subcommittees, Silver explained, are studying various facets in an attempt to pin-

George Silver

point the areas of Coalition action. Based on subcommittee recommendations, the Task Force on Health will set its priorities and goals.

While Silver expects that emphasis will be placed on ways to improve health care by maximizing resources available through existing programs, he notes that more money will also be needed if meaningful progress is to occur. Thus the Task Force on Health will also associate itself with efforts to seek additional funds to finance medical care for inner-city residents. In addition, he expects to give assistance to local Urban Coalitions in setting up health committees and generating local health actions. The new Urban Coalition Task Force on Health looks forward to becoming a catalytic force on the national health scene.

Manpower Director

Malcolm R. Lovell Jr., director of Michigan's Employment Security Commission, has been named Executive Associate for Manpower of the Urban Coalition.

Before joining Michigan Gov. George Romney's staff at the beginning of the 1962 Michigan gubernatorial campaign, Lovell, 48, was manager of employee services at American Motors Corp. Romney is now President Nixon's Secretary of Housing and Urban Development.

Lovell was appointed Director of the Employment Security Commission July 1, 1965, and was reappointed on July 1, 1967, for a second two-year term.

Before assuming this position, he was a Special Assistant to Romney and the first director of the Michigan Economic Opportunity Office. He served in this capacity from Sept. 10, 1964, until he assumed his position with the Commission.

Malcolm R. Lovell, Jr.

Lovell served as a member of the State Labor Mediation Board from February, 1963, through September, 1964. Romney named him Chairman of the State Labor Mediation Board on July 1, 1963.

During 1962 he served as Assistant Manager for the Republican Gubernatorial Campaign Committee.

Lovell was American Motors' Manager of Employee Services from 1958 to 1962 and served on the concern's National Labor Bargaining Committee in 1958 and 1961.

He is a 1946 graduate of the Harvard Business School with a master's degree in Business Administration. He also attended Brown University in Providence, R.I.

Annual Report

A year ago last April, the Urban Coalition and its legislative advocacy counterpart, the Urban Coalition Action Council, were incorporated—one month after John W. Gardner, the former Secretary of HEW, agreed to become chairman of both organizations.

Before that time much good work had been done, first by those local Urban Coalitions that had been formed immediately after the emergency convocation of concerned Americans in Washington in August, 1967, and second, by the national Urban Coalition's steering committee of eminent leaders from many walks of life.

But as a vital, continuing organization capable of moving with determination on many fronts, the Urban Coalition will mark its first anniversary this Spring.

It's a time for summing up—outlining accomplishments of the first year and detailing goals for the second.

So, later this month, the Urban Coalition and the Action Council will publish their first annual report, a 40-page, extensively illustrated report prepared for the national organization by the Barton-Gillet Company of Baltimore and New York. The report, a result of more than a month of intensive research, is being distributed to all Urban Coalition constituents and donors. Extra copies will be available at cost, if the demand is sufficient to justify additional printings. We hope it will be.

The annual report includes up-to-date charts and financial statements illustrating the growth of the Urban Coalition in the last year.

It also includes a full list of the Urban Coalition's steering committee, which was expanded in February to reflect the broadening constituency of the Coalition.

More importantly, the annual report tells the story of the Urban Coalition movement—a movement that encompasses increasing numbers of leaders and citizens in cities across the land. The report's photographs are of people in action, people working in a variety of ways to make their lives and the lives of others more meaningful.

Case Studies

The first in a series of case studies based on local Urban Coalition activities has been published by the national Coalition.

It describes the Job Opportunities Council of Riverside, California, an organization sponsored by a group of 15 employers that provides employment counselling and placement services to the disadvantaged.

The Job Opportunities Council had its origins in the employment task force of the Riverside Urban Coalition.

The study, prepared for the Coalition by Edwin C. Kepler, contains a timetable of the Council's development as well as a description of program objectives and operations.

Future case studies in this series will be announced in *Report*. Single copies are available without charge from the national Urban Coalition office.

Mark Rosenman

Youth Advisor

Mark Rosenman, the Urban Coalition's Program Associate for Youth and Student Activities, has been appointed to President Nixon's Committee on Employment of the Handicapped.

Rosenman, who joined the Coalition as a consultant last spring, was also named Chairman of the Committee's Youth Subcommittee.

Harold Russell, Chairman of the Committee on Employment of the Handicapped, said he expects the Youth Committee to become a "valuable" part of the President's Committee under Rosenman's leadership.

A former Director of the Youth and College Division of the NAACP, Rosenman is also Executive Vice President of the United Youth Council. He is a 1965 graduate of Brooklyn College in Brooklyn, N.Y., and he received a master's degree from New York University in 1967.

Report

June 1969

President Hosts Dinner for Coalition

President Nixon hosted a dinner for the Executive Committee of the Urban Coalition at the White House on May 12. More than 100 guests, among them many of the Nation's most prominent corporate executives, heard the President urge that they support the work of the Coalition, which he termed "vitally important" to the solution of the problems of the cities.

Quoting Alexis deTocqueville's admonition that "the success of a democracy may be measured by the quality of functions performed by private citizens," the President told his guests in the State Dining Room that by supporting such activities as the Coalition, they could provide "the kind of assistance that we need and the kind of assistance without which we cannot solve our common problems."

Vice President Agnew and seven members of the Cabinet also spoke briefly.

The White House dinner was an outgrowth of two meetings which members of the Coalition's Executive Committee have had with the President since his election last November. Chairman John W. Gardner and a group representing the Coalition met with Mr. Nixon in New York prior to the inauguration. In February, Mr. Gardner and several members of the Coalition staff and the Executive Committee met with the President and his Urban Affairs Council in the Cabinet Room of the White House.

Guests at the May 12 dinner included, in

addition to members of the Executive Committee, several businessmen and mayors who have been active in the work of local coalitions. Also present were a number of black, Puerto Rican and Mexican-American business leaders.

Cabinet members present at the dinner were Secretary of the Treasury David M. Kennedy, Attorney General John N. Mitchell, Secretary of Agriculture Clifford M. Hardin, Secretary of Labor George P. Schultz, Secretary of Health, Education, and Welfare Robert H. Finch, Secretary of Housing and Urban Development George W. Romney, and Secretary of Transportation John A. Volpe.

Also attending were Robert P. Mayo, Director of the Bureau of the Budget; Arthur F. Burns, Counsellor to the President; John D. Ehrlichman, Counsel to the President; H. R. Haldeman, Assistant to the President and Daniel P. Moynihan, Assistant to the President.

In their remarks, several of the Cabinet members commended the Urban Coalition for its efforts to deal with the problems of the cities. "I don't know of any group that is in a better position to make a contribution in coping with these problems," Secretary Romney said.

Mr. Gardner, who was introduced by the President, summarized the objectives of the Coalition. "At the heart of everything we are trying to do is the principle of coalition," he said. "Many people think of the Coalition as just another organization tackling the tough urban problems of the day. We are not just another organization. We're unique, and our uniqueness lies in the fact that we bring together elements of American life that do not normally collaborate in the solution of public problems."

Declaring that "the most serious problem facing this country" is the establishment of communication and mutual trust between minority communities and the dominant elements of the city, Mr. Gardner said: "I have to emphasize as strongly as I can that when a crisis strikes it is too late to begin the long, arduous process of building channels of communication. If we're to have fruitful collaboration between minority communities and the other elements in the city, it must begin and it must be tested in a non-crisis atmosphere. Then when trouble strikes, if it does, men who have worked together and learned to trust one another can go into action together."

Mr. Gardner added: "We are facing a deadly serious problem in the cities. It is deeply rooted, it is immensely complex, and will not be solved soon." Telling the guests at the dinner that "we need your help," Mr. Gardner said, "I know that you are worried about these problems; I don't know if all of you are as worried as those of us who spend our days working on them. We are shaken by what we see. We don't want the American people to have to learn in sorrow and conflict what they could foresee and prevent through timely action."

Coalition Conference on Reform of The Criminal Justice System

On April 27 and 28, the national Urban Coalition brought representatives of 10 cities to New York for a close look at a new—and apparently successful—approach to big-city problems in the administration of justice.

What they saw was a cooperative venture between two unorthodox organizations: the private Vera Institute of Justice and the semi-public Criminal Justice Coordinating Council.

Vera had been founded in 1961 to lessen unnecessary detention of defendants unable to raise bail. It worked out a plan, tested it, got the city to adopt it, and went on to tackle other problems.

The Coordinating Council was set up in 1967 by Mayor John V. Lindsay for joint planning among separate, and sometimes conflicting, city agencies. Vera now serves as advisor to the council.

Some 70 participants in the Coalition conference were told, at an evening banquet, how the two groups work in tandem—devising solutions for specific problems, coordinating pilot projects, and lending each experiment city-wide support.

At Gracie Mansion the next morning, Mayor Lindsay and council members explained in detail a score of their projects to improve law enforcement, lighten the burden on courts and police, and give the defendant a better break.

The conferees made field trips to two active projects—one providing medical care instead of jailing for Bowery alcoholics, the other offering employment and counseling as an alternative to prosecution for selected offenders. The conference ended with a two-hour session for questions and review.

Attending were city and coalition represent-

Mayors meet at Coalition conference. From left: Ben H. Lewis, Mayor of Riverside, Calif.; M. Carl Holman, Vice President of the Urban Coalition; Gustav Heningburg, President of the Newark Urban Coalition and Hugh J. Addonizio, Mayor of Newark.

atives from Cleveland; Denver; Detroit; Fresno, Calif.; Gary, Ind.; Minneapolis; Newark, N.J.; New Orleans; Riverside, Calif.; and Washington, D.C.

The conference was made possible through a Ford Foundation grant to the National Institute of Public Affairs. Also participating were representatives of the Justice Department and the Lawyers Committee for Civil Rights Under Law.

The national Urban Coalition will soon issue a descriptive manual on the New York approach to the reform of the criminal justice system.

Urban Coalition Adds New Members to Its Steering Committee

Twenty one new members have been named to the Steering Committee of the national Urban Coalition. In making the announcement, Mr. Gardner said that the enlargement of the Steering Committee would "significantly broaden and strengthen" the Urban Coalition's policy-making leadership.

The new members are:

—Mrs. Bruce B. Benson, President, League of Women Voters of the United States, Washington, D.C.

—Mrs. Amalia V. Betanzos, Executive Director, Puerto Rican Community Development Project, Inc., New York.

—Honorable Julian Bond, Georgia Legislature, Atlanta.

—Paul W. Briggs, Superintendent of Schools, Cleveland.

—Gov. Daniel J. Evans, Olympia, Washington.

—Herman E. Gallegos, Executive Director, Southwest Council of LaRaza, Phoenix.

—Ernest Green, Director, Joint Apprenticeship Program, Brooklyn, New York.

—Mrs. Fred R. Harris, Chairman, Women's Council on Poverty, Washington, D.C.

—Honorable Patricia R. Harris, Professor, Howard University School of Law, Washington, D.C.

—Mayor Richard G. Hatcher, Gary, Indiana.

John W. Gardner (foreground) at a working session with some new members of the Steering Committee.

—Miss Dorothy I. Height, President, National Council of Negro Women, Washington, D.C.

—Dr. Vivian W. Henderson, President, Clark College, Atlanta.

—Mrs. Aileen C. Hernandez, San Francisco.

—Gov. Richard J. Hughes, Trenton, New Jersey.

—Roy Innis, National Director, Congress of Racial Equality, New York.

—Dr. Howard W. Johnson, President, Massachusetts Institute of Technology, Cambridge, Mass.

—Edgar F. Kaiser, Chairman of the Board, Kaiser Industries Corporation, Oakland, Calif.

—Robert S. Powell Jr., President, National Student Association, Washington, D.C.

—Dr. Mark Shedd, Superintendent of Schools, Philadelphia.

—Mayor Carl B. Stokes, Cleveland.

—Rev. Andrew J. Young Jr., Executive Director, Southern Christian Leadership Conference, Atlanta.

The new members of the Steering Committee were also designated to serve on the Policy Council of the Urban Coalition Action Council, a separate organization engaging in direct advocacy of legislation to aid the cities.

A complete list of the Urban Coalition Steering Committee appears on page 13.

Urban Coalition Strengthens National Executive Staff

The Urban Coalition's executive staff has been strengthened in anticipation of "rapidly expanding activities," it was announced by John W. Gardner, Chairman of the organization.

Gardner said that the Urban Coalition had "outgrown" its original administrative structure in a year during which the professional staff has increased from 5 members to 40. With local coalitions now functioning in 44 cities, Gardner said that "the year ahead will be marked by rapidly expanding activities, both locally and nationally." He said the reorganization of the executive staff "will significantly improve our capacity to carry out our responsibilities."

Gardner appointed Peter Libassi to the newly created post of Executive Vice President and named Libassi and M. Carl Holman, Vice President (Policy & Program Development), as members of a newly established Policy Committee. Gardner will serve as chairman of the Committee.

Libassi has served for the past year as Vice

President (Local Coalitions) in charge of the national organization's field staff. Prior to joining the Urban Coalition he was Director of the Office of Civil Rights, and Special Assistant to the Secretary, Department of Health, Education and Welfare.

Holman, who was former Deputy Staff Director of the U.S. Commission on Civil Rights and editor of the *Atlanta Inquirer,* joined the Urban Coalition in September, 1968.

Gardner also announced the appointment of John A. Buggs as Director of the Local Coalition Division and Thomas R. Mathews as Director of the Communications Division.

Buggs comes to the Coalition from the Department of Housing and Urban Development where he was Deputy Director of the Model Cities Administration. Previous to that he was Executive Director of the Commission on Human Relations of Los Angeles County.

Mathews was Director of Information for the Peace Corps and, most recently, Director of Public Relations for Lincoln Center in New York and senior vice president of a public relations consulting firm.

New Deputy Director of the Policy and Program Development Division is John Gloster. He was formerly Deputy Director of Program Operations in the Model Cities Administration and, prior to that, with the Department of State.

Law and Government Task Force

Nicholas DeB. Katzenbach, former Attorney General and now Vice President and General Counsel for IBM, is the chairman of a new 22-member Urban Coalition Task Force on Law and Government.

The Task Force is made up of lawyers, judges, consumer representatives, community representatives, educators, former government officials and experts in state and local government.

At its first meeting on May 1, the Task Force defined three principal areas in which it expects to concentrate.

First, *The Administration of Justice:* The Task Force noted that the public is rightly concerned with obvious defects in the operation of police departments, courts and correction institutions. Recent federal legislation provides ample funds for reforms, and what is needed now is the development of new sources of expertise and technical assistance to insure that the money will be wisely used. In addition, states and cities must provide for citizen participation in the planning for reforms.

The Task Force discussed a staff study of 12 states' planning for grants under the Safe Streets Act.

Second, *The Broad Area of Urban Law:* The Task Force will provide legal advice and assistance for other Urban Coalition programs. The application of legal skills can be helpful in housing, education, employment and any other area where existing practices discriminate against the poor and disadvantaged, including the exploitation of consumers. The Task Force has agreed to sponsor a study on the ways state laws impede reform of state education systems.

Third, *Government Reform:* The Task Force will be asked to consider strategies to insure that state and local governments across the country are made more responsive to urban needs.

The Task Force will meet again this month. Staff support for the Task Force is provided by Mrs. Sarah Carey, Program Associate for Law and Government in the Urban Coalition's Policy and Program Development Division.

Winston-Salem Urban Coalition: Its First Year

"One of the features which in the beginning seemed important about the Coalition—its large

war chest—in retrospect has not been that significant."

This is one of the most striking conclusions of a detailed case study of the Winston-Salem, North Carolina, Urban Coalition prepared by Edward K. Shanahan, a reporter for the *Winston-Salem Journal.* It will be published this month by the national Urban Coalition.

What has been much more important than money in the Winston-Salem experience has been the leadership of men who have the personal power to bring about change. Money, available in substantial sums, has been used sparingly.

Yet in the first year of its experience, the Winston-Salem Coalition has found solutions to a number of touchy problems, has a well-defined program and is on its way toward becoming one of the city's most respected organizations. Certainly it is one of the country's most interesting Coalitions.

Since its formation on April 10, 1968, the Coalition has helped provide new recreation facilities for the poor, created an experimental youth counseling program, set up a city-wide day-care organization, completed a full-scale study of vocational education and helped ease the city's transit problems at a crucial point.

It has effectively stepped into such controversial problems as the administration of the food stamp program, coordination of services for the victims of urban renewal and snags in the Model Cities program.

It has joined in a study of the quality of education in the county and has a plan to set up an Economic Development Corporation.

And, most ambitious of all, the Coalition has pledged $850,000 over the next three years to finance the operations of the non-profit Winston-Salem Housing Foundation, which will seek to expand housing for low-income families.

To the surprise of many, the drive behind the Coalition approach to these social problems comes from a group of industrialists with relatively conservative reputations.

The Coalition was launched, for example, with a pledge of one million dollars from the R. J. Reynolds Tobacco Company, and this was quickly followed by a $250,000 gift from the Hanes Corporation. The eventual total was just shy of $1.8 million.

The spearhead of the Coalition has been its Chairman, Mayor M. C. Benton. It is doubtful that any other man in the city could have rallied such support. Mayor Benton is a millionaire trucking executive with high standing among leading businessmen, but he also has a widely respected civil rights record.

While it is significant that the formation of the Coalition was announced two days after the burial of Dr. Martin Luther King, Winston-Salem had had a brush with racial violence the year before. An incident of police brutality had triggered rioting serious enough to cause the governor to send in the national guard.

Other problems were also building up in the city, including inter-agency friction over the administration of a variety of programs. To Mayor Benton, the Urban Coalition concept seemed to offer the most hope for bringing the resources of the city leadership to bear on these problems.

One of the key decisions of the Coalition was to employ young activist Mark H. Freeman as its executive director. A dynamic man whose words can scald a corporate president or a black militant with equal ease, Freeman has a unique ability to enlist both in finding solutions to problems.

His standing among businessmen was well expressed by Gordon Hanes who said, "Mark is always fighting the power structure and is always frustrated that the power structure does not fight back." He noted that the power structure named Freeman Winston-Salem's Man of the Year in 1968.

Freeman sees last year's recreation issue as "a perfect example of all the aspects of what a coalition can do. We took a look at a specific problem, then suggested changes and solutions and came up with the money for local matching funds."

The recreation issue began with a leak to the press (not by the Coalition) of a 16-page report which charged that the city's Recreation Department deliberately provided inferior recreation facilities and services to the black population.

Faced with mounting public criticism of a major department, the city manager decided to turn for assistance to the Coalition.

A special Coalition Task Force reviewed the charges, inspected every park and playground in the city and found that the report was not only accurate but that Negroes were completely excluded from the decision-making of the Recreation Department. The task force also pointedly noted that all seven of the Department's

administrators are white.

But the Coalition did more than report. It offered to put up $45,000 to improve play areas and "tot lots" in low-income neighborhoods if the city would put up a like amount.

The city readily agreed and a program called the Experiment in Self-Reliance contributed another $20,000. With this pool of $110,000 in new funds, the city was able to get another $55,000 in Federal matching funds for five new tot lots. Eventually, the city administration was persuaded to create a new supervisory position in recreation and name a Negro to the job.

Nobody involved in the Winston-Salem Coalition thinks a panacea has been found, or even that a significant dent has been made in the city's problems. The recent disturbances in the city underline this sense of realism.

And the Coalition, as an organization, has problems of its own. It needs to find, and is searching for, a better way to involve the Negro poor in its deliberations and activities. Only one labor representative is on the steering committee. Some old-line professionals in City Hall are still suspicious about the whole thing and some in the county government are downright hostile. Freeman worries about taking on too much too soon.

"We're a little ahead of ourselves in terms of my expectations," is the way Mayor Benton views the Coalition's work to date. "Whether we can maintain the pace is another thing."

Copies of the Winston-Salem case study are available on request from the Urban Coalition.

St. Paul Report: Labor Day Weekend 1968

On Labor Day, 1968, St. Paul, Minnesota, suffered the first outbreak of racial strife in its history. Reacting immediately, the local Urban Coalition impanelled a special, broadly-based committee to find the causes of such violence and to propose measures to assure it would never happen again.

This special group spent six months delving into the grim aspects of the city. Its report, released on the March 1 anniversary of the Kerner Commission Report, is an unsparing checklist of hometown problems and an agenda for action.

By design, the committee members were chosen from outside the Urban Coalition structure. What the Urban Coalition wanted was a broadly representative, independent study which would tell both the city and the Urban Coalition the specific tasks which must be met.

The committee was headed by Dr. Arthur Flemming, president of both the National Council of Churches and Macalester College in St. Paul, and a member of the national Urban Coalition's steering committee.

Members of his committee were Mrs. Leroy Favors, a housewife and mother of nine children, a woman of the ghetto; Catholic Archbishop Leo C. Byrne, religious leader of the city; the Rev. Denzil A. Carty, a black minister considered a leading force in his community; Lyle Fisher, head of the Minnesota Mining & Manufacturing Co., St. Paul's largest single employer; and Gustav A. Larson, former Chamber of Commerce president and one of the city's leading corporate attorneys.

These representatives of often widely divergent interests worked together to study their city. By talking to citizens and to police, by seeing for themselves where the greatest problems lay, the group achieved new insights into their city.

Their 94-page report, "The 1968 Labor Day Weekend in St. Paul: The Events and Their Causes," outlines the history of second class citizenship dealt to St. Paul's black community —in housing, education, recreation, employment. It matches the city against the expectations and recommendations in the report of the National Advisory Commission on Civil Disorders, published exactly one year before.

According to the report the highest priority in the community must go to low-income housing. Among other recommendations of the study were that a citizen's council be established (at the initiative of the St. Paul Urban Coalition) to meet on a continuing basis with police officials in an effort to improve police-community relations; that police recruitment be designed to add more blacks to the force; that citizens must show greater respect and support for the police, that effort be made at citizen participation in education, and that there must be increased progress in providing jobs for minority groups.

Just as the *One Year Later* report of the national Urban Coalition and Urban America found that little had been done in the nation since the warnings of the Kerner Report, so too did the study committee find that few efforts had been made in St. Paul since the Labor Day disturbances to alleviate the hardships of ghetto life. This report, it is hoped, will be a blueprint

for action.

Copies of the report are available for $1.00 each from the St. Paul Urban Coalition, 588 Endicott-on-Robert Building, St. Paul, Minn. 55101.

Case Study Series

Six new case studies of programs in local Urban Coalition cities have been prepared by Edwin C. Kepler for the Urban Coalition. The first of the series, published earlier this spring and described in the March *Report,* dealt with the Job Opportunities Council in Riverside, California, which provides employment and counseling services to the disadvantaged.

Municipal Mortgage Guarantee Program: Fresno, California. In Fresno, California, ghetto homeowners who want to rehabilitate or rebuild their homes may receive a mortgage guarantee through the Housing Finance Board, a component of the Fresno Urban Coalition Housing Task Force. This Municipal Mortgage Guarantee Program, described in the second case study, goes directly to the heart of the ghetto homeowner's problem: It is difficult for him to find either a bank or lending institution that will make loans on property in his part of town, or even if he can borrow, there is likely to be a substantial difference between the cost of rehabilitation and the amount of the loan. To fill this gap, without getting a second mortgage or having to come up with the difference, the mortgage guarantee enables him to borrow what he needs.

Fresno Youth Council: Fresno, California. Also in Fresno, more than 100 black, Mexican-American, and white youths, ages 15 to 22, have formed the Fresno Youth Council, in association with the Fresno Urban Coalition, to tackle community problems affecting youth. In this way, young people are familiarized with community planning processes and are given a chance to participate in community decision-making and community service. The Fresno Youth Council, described in the third case study, has chosen five areas of concentration: police relations, drug abuse, community dialogue, youth in government and youth centers.

Racine Model Education Assistance: Racine, Wisconsin. Since the fall of 1967, the Racine Environment Committee has been grappling with the social problems of this midwestern, industrial city. The fourth case study focuses on the Racine Environment Committee's Model Education Assistance Program, which helps minority group youth to go on to higher education. In addition to intensive individual counseling, students receive remedial and financial assistance. The colleges and technical schools attended by these students are encouraged to respond to their particular needs by allowing reduced course loads, special coaching or other such arrangements.

United Black Federation, Inc.: Miami, Florida. An untraditional response to the summer riots in Miami, Florida, was the formation in 1968 of the United Black Federation, Inc., whose purpose is to unify the black community so that it can deal more effectively with the white community. An important part of the UBF's plan has been to develop leadership among blacks. The Federation has set up 11 task forces covering the gamut of urban problems, which correspond to, and work with, similar task forces set up by the Greater Miami Urban Coalition. The United Black Federation's progress is discussed in the fifth case study.

Human Relations Workshop: Tacoma, Washington. Pacific Lutheran University in cooperation with the Tacoma Area Urban Coalition and other groups conducted human relations workshops as a means towards opening lines of communication and promoting inter-racial cooperation in a city which was in danger of polarizing around two extremes. Participants representing all major elements in the community were first given sensitivity training through group discussions. Time also was devoted to discussions of community problems and recommendations were drawn up to help alleviate some of these problems. Case study number 6 describes in detail the first two workshops.

Economic Development Office: Tacoma, Washington. As a direct result of the human relations workshops mentioned above, two participants, a banker and a dentist, resolved to do something about the plight of the black people in Tacoma. Out of this commitment grew the Economic Development Office which helps establish and expand minority business enterprises. While the Tacoma Urban Coalition is the over-all coordinator of the program, it is sponsored and operated by the newly-formed Black Businessmen's Association with the active support of the Urban League and other groups. The Economic Development Office is described in the seventh case study as "a result of a series of carefully planned steps which brought together

individuals and organizations from across the community in a splendid example of the coalition principle at work."

Single copies of any of the above case studies are available without charge from the national Urban Coalition.

Niagara Coalition Foreseen Rekindling Pioneer Spirit

By Carole Harris
Gazette Staff Writer

Reprinted from *Niagara Gazette*, March 2, 1969

It's really no surprise that in this area rich in the tradition of pioneering and trailblazing that a group of latter-day pioneers—those who have been instrumental in the formation of Niagara Coalition—should once again be caught up in the spirit of exploring new paths and uncovering hidden resources—of going a new route.

The early pioneers recognized the advantages of and need for community spirit, volunteerism and the pooling of resources and talent.

In much the same way, the individuals and groups in the newly formed Niagara Coalition have come to the realization that what is needed to get to the root of the urban crisis and really start to right many basic social wrongs is a coalition of existing institutions and organizations.

They envision a true coalition—not just a restatement of the "let's work together" theme that has all but lost its meaning since it has been very seldom, if ever, practiced.

If you have the opportunity of speaking to someone on NC, such as Owen W. Mahony, executive director or the Rev. Eugene A. Walsh, C.M., associate executive director of the Action Division of NC, you'll notice that a certain word keeps cropping up in the conversation—process. This, actually, is one of the keys to understanding Coalition and its uniqueness.

Coalition is a process, they will say, not a thing. "It is a way we are thinking," says Mr. Mahony, "not just something we are doing. Coalition is a process, an enabler, a catalyst. It's a very old concept in a new attire. It's as old as man."

Some of the things Coalition is trying to do involves bringing together all the available resources and seeing who's doing what in order to eliminate useless and costly duplication of effort and service; determining the areas where there is a need and defining exactly what that need is; developing programs that will help solve the problems that are identified, and organizing task forces to tackle existing problems such as housing, employment and education.

One of Coalition's basic principles is the idea of getting involved with the problem itself and with the individual, not with a program. It is concerned with getting down to the reasons why a situation has become a problem. For example, coalition officials contend that just giving a hard-core unemployed man a job won't correct his basic situation. Most likely, he can't adapt psychologically to a job he is offered since he may be handicapped, an alcoholic, have complex problems at home, or any number of other factors which, if they are not solved or at least helped, will make it practically impossible for him to keep his job let alone perform well on the job.

Coalition will have various persons and agencies at its disposal who can help such a man and his family and, consequently, help his employer and the total industry.

Coalition came into being as a result of a June 1968 letter to the boards of the United Givers Fund and the Council of Social Agencies from William H. Wendel, president of the Society for the Promotion, Unification and Redevelopment of Niagara (SPUR). He urged the two groups to unite with the local Urban Coalition for a "coalition of community effort."

In July the executive boards of UGF, CSA and UC along with SPUR agreed to form a 20-man steering committee which was to draw up a statement of purpose and formulate the framework for the union.

Niagara Coalition was formed Sept. 24, 1968, and a new board elected Dr. Courtland Van Deusen as president and appointed Mr. Mahony executive director.

In February 1969 papers were signed making final the legal incorporation of NC as a membership nonprofit corporation. Coalition is broadly based with membership open to interested individuals, as well as organizations and

Monthly Monitor

As part of its Information Service for Coalitions, the Urban Coalition now prepares the *Monthly Monitor*, a digest of newsclips on the activities of Coalitions. The *Monitor* series may be ordered free of charge from the Urban Coalition's Communications Division.

religious groups and educational and governmental units in Niagara County.

There is a structure to NC but it is important to remember that it is not a "superagency" that has risen out of the urban crisis.

It is unique in the fact that it is a coalition of three organizations that were separate and distinct—United Givers Fund, the Council of Social Agencies and Urban Coalition.

UGF will continue to conduct drives and serve some 40 agencies in the community. Social planning will continue as a fundamental part of NC, as will budgeting and agency relations, not only of UGF member agencies but also all human service agencies in our area community.

There are several parts to NC. Overseeing Coalition operations is the New Niagara Committee, a group of more than 150 individuals and group representatives. Committee members elect a portion of the board of directors and are among the leaders and workers in Coalition's functional division.

The 45-member board of directors acts for the committee and sets policy for the organization and divisions and supervises the professional staff.

Carrying out the work of Coalition are three functional divisions, each with an associate executive director, each with separate but interrelated responsibilities.

The planning division has the task of bringing together all the available information necessary to start and carry out long- and short-range programs for NC, its member agencies and the community.

A part of this division is the budgeting and agency relations section which is composed of about 150 volunteers, headed by Mary Lou Considine.

The resources development division, led by Herbert E. Clauson, is responsible for raising the funds Coalition needs. This includes UGF funds and grants from public and private sources.

The new dimension, the action division, is headed by Father Walsh and is charged with overseeing ongoing programs and bringing together task forces of professional and nonprofessional men and women as needs arise.

"The first task force to be established was the task force for employment, headed by Robert Quayle," said Father Walsh. "It is actually in the process of being formed. Its job is to find out what is being done in the area to help the hard-core unemployed get jobs and to better the labor market for the unemployed and the underemployed, that is, those who are not able to get better jobs and work themselves up."

He says that in addition to actually finding jobs for these people, the action division's employment task force is attempting to find out where society, more specifically our area, has failed in this respect and why. The task force is working with the Board of Education to try to work out job opportunities for graduates and potential dropouts.

Another task force, one concerned with housing, is headed by Robert Greenberg. "Niagara Coalition has been asked by the City Council," said Father Walsh, "to help develop housing in the Lehigh Valley site. City Hall wants to work with the Urban Development Corp. to develop low and middle class housing there. Coalition will explore the development of housing with the city planning office and UDC. The housing task force will help the city and the Urban Renewal Agency plan ahead for subsequent sites where UDC will build."

The education task force, says Father Walsh, has been having fruitful discussions with the Board of Education and school administrators in an effort to stem the tide of future unemployed.

"About 25 per cent of the city's students drop out before graduation and many become the future unemployed. The Coalition is trying to have industry work with the Board of Education in an effort to give kids the motivation to stay in school.

"Besides basic education, Coalition will give people help in advisement and counseling to help them grow into a meaningful work experience.

"There will be preparatory and on-the-job training. Coalition will be able to help industries make their efforts in helping the unemployed to be more effective."

Father Walsh cited the need for leadership training and for grassroots neighborhood leadership and participation. "The Niagara Community Action Program (NiaCAP) has done a great deal in this direction but more participation and leadership is needed. The Council of Churches and the Religious Fellowship are looking at this problem, too. People are beginning to see that we should be conducting programs and workshops to develop leadership to

improve organizational performance."

Total community involvement is what NC is aiming at. The almost limitless possibilities and the advantage of opening up of the lines of communication between individuals, groups, city, county, state and federal agencies have excited many persons not only in this area but throughout the nation, according to Niagara Coalition officials.

The philosophy of Coalition is one of the strongest factors going in its favor. "Coalition is not another organization, but a re-ordering of existing organizations and resources."

In the process of carrying out the programs of the Action Division, it is hoped that the ideas that led to the urban crisis and old prejudices will give way to the new spirit of volunteerism and cooperation, real cooperation between all phases and persons in the community.

"We're committed to the assumption that change is needed," said Mr. Mahony. "We should seek change and determine the alternatives. Attitudes must change. The urban crisis has caused us to pay attention to the problems right under our noses.

"We'll look back upon the urban crisis 10 to 15 years from now in a grateful way. We'll say it had to happen. It helped to meet our problems and taught us how to work together.

"Every time one of us cooperates with another agency, we lose or gain something, depending on your outlook."

Logotypes

Logotypes are used by some Coalitions to facilitate identification. Here are a few examples.

September 1969

Urban Coalition Action Council States Views on Administration's Welfare Proposals

The Urban Coalition Action Council praised President Nixon's welfare programs but recommended ways in which they could be improved.

The Executive Committee of the Action Council, the independent legislative arm of the Urban Coalition, met in Washington, D.C., in mid-August to review the Administration's proposals. John W. Gardner, Chairman of the Council, issued the following statement on the committee's behalf:

▪ President Nixon has taken the initiative to reform America's outmoded welfare system. The Urban Coalition Action Council welcomes this major departure and commends the President for moving to correct the serious deficiencies of the current system.

The President's proposals are significant on several counts;

(a) They will provide assistance to the millions of working poor who are totally ignored by the present system.

(b) They will provide income to unemployed parents who are seeking work or training, thereby keeping families together. (In most states today unemployed fathers have to desert their families to make the families eligible for aid.)

(c) They remove the powerful barrier to work which is a gross defect of the present system, and introduce a positive incentive for the individual to enter the job market.

(d) Though the level of support is modest, they take the enormously important step of accepting federal responsibility to place a floor under the income of those eligible for assistance.

(e) They will provide national eligibility standards for those receiving federal assistance under the new program.

We have strongly advocated such measures and we will do all that we can to make them a legislative reality. If that is to come about, all who are concerned for the nation's future must work together to ensure that the best program we can devise is finally written into law. To assure the ultimate success of the program, it must be strengthened in every way possible during the public debate and the legislative deliberations to come. Here are some of the ways in which strengthening could be accomplished:

1. The Administration proposals could be further strengthened by raising the level of funding in order to increase the level of minimum income, to afford relief for those states and municipalities which are being crushed by the spiraling welfare burden and to include single persons and childless couples who are not now covered.

2. The plan proposed by the President ex-

Executive Committee members John V. Lindsay, and Frederick J. Close.

empts mothers of preschool children from the provision requiring recipients of assistance to register for work and training. This is a step forward over the present law and should be retained. But the plan could be strengthened further if it recognized that even mothers of children *over* six might serve the society best by staying home and doing a good job of bringing up their children. It is a decision for the mother, not the government, to make. All evidence indicates that the number of mothers who want to work exceeds our capability to provide jobs and daycare facilities.

3. The Administration proposals can be effectively strengthened by the formulation of explicit federal standards governing work referral and wages to be paid, and by provisions to assure that present welfare recipients do not end up with a lower level of benefits than they presently receive.

4. The proposals could be made more effective if they were supplemented by a job creation program. There is a danger that the new training opportunities proposed by the President will simply become a revolving door through which potential employees pass without obtaining employment. The Coalition has long advocated a public service employment program which would solve the problem.

5. Finally, the proposal should assure that the food stamp program only be phased out as cash payments approach the minimum necessary to lift a family out of poverty.

The Urban Coalition Action Council looks forward to joining with other concerned citizens in the monumental task we now face of winning the public and political support necessary to assure enactment of constructive measures to meet these problems. ▪

Those present at the executive committee meeting at which the statement was approved were: Joseph H. Allen, President, McGraw-Hill Publications; Arnold Aronson, Secretary, Leadership Conference on Civil Rights, and National Community Relations Advisory Council; Joseph M. Barr, Mayor of Pittsburgh; Frederick J. Close, Chairman of the Board, Aluminum Company of America; Dr. Arthur Flemming, President of the National Council of Churches and Macalester College; Dr. Vivian Henderson, President, Clark College; Andrew Heiskell, Chairman of the Board, Time Inc.; John V. Lindsay, Mayor of New York; and Andrew Biemiller (representing George Meany), AFL-CIO.

Statement of the Policy Council of the Urban Coalition Action Council

An effective independent review of the military budget and a cut in defense spending of between $5 and $10 billion dollars were advocated in a recent four-point policy statement by the Urban Coalition Action Council's Policy Council.

The other three stands taken by the Council were:

1. To support a new, federally administered system of income maintenance which would involve full federal financing of assistance.

2. To oppose the Ways and Means Committee's proposals to bar foundations from directly or indirectly supporting voter registration drives and to restrict foundations from engaging in any activity intended to influence the decision of any governmental body.

3. To urge Congress to extend immediately the 10 per cent surtax on income and to act immediately to correct inequities in the tax laws.

The council's statement was made public by its chairman, John W. Gardner. Mr. Gardner said the urban crisis and defense spending are interlocked and that the bulk of the funds to help the cities must come from reductions in the military budget.

He reported that in adopting its policies the Policy Council had charged its members, Task Forces and Coalition staff to carry out ap-

Saul Wallen Dies

Saul Wallen, President of the New York Urban Coalition and a noted labor arbitrator, died on August 4. Mr. Wallen, who was 59 years old, had been president of the Coalition since January 1968.

Among the many paying tribute to Mr. Wallen was Andrew Heiskell, Chairman of the New York Urban Coalition and Chairman of Time Inc., who said: "Saul Wallen took on a supremely important and supremely challenging job. Few men would have had his courage. He steered the Coalition from a difficult start-up stage to a going operation. He displayed remarkable qualities of patience and foresight. Most important he succeeded. The directors and staff of the Coalition are saddened by his death. Our city has lost a rare and gifted man."

propriate action. He said two special committees will be formed to make specific recommendations on defense spending and income maintenance. These committees will receive staff support from the national Coalition headquarters and are expected to provide detailed programs in the near future.

On the defense budget, the Policy Council said:

"We cannot solve the desperately urgent internal problems of this nation without money. But when we ask where we can turn to obtain money, we find our path blocked in one direction by the dangers of inflation and in the other by the great political difficulty of a rise in taxes.

"There remains one possible path: a reordering of priorities that would lead to cutbacks in other areas of Federal spending. One can identify a few possibilities for cutbacks in the domestic budget, but they fade to insignificance before the possibilities inherent in the vast and inadequately controlled defense budget.

John W. Gardner addressing members of the Urban Coalition Action Council's Policy Council.

"We need not compromise our national security. Defense experts both inside and outside of government assure us that $5 to $10 billion can be cut from the defense budget without diminishing the level of the nation's security. Given that fact, it is clear that non-essential expenditures must be eliminated and the funds devoted to high priority domestic programs.

"But if we are to cut the waste and the non-essential items from the defense budget, we are going to have to revise the system of review that has protected defense spending from the checks and balances which reduce waste in other Federal programs. Every department of government would expand its budget without limit were it not subject to rigorous and painful controls. In the case of defense those controls have failed. Neither Congress nor the Budget Bureau, nor successive Presidents have felt it politically feasible to exercise a tough-minded scrutiny. The time for such scrutiny has now come."

It recommended that:

a) The Congress and the Administration excise $5 to $10 billion in savings from the defense budget, and reallocate these funds to urgent domestic programs.

b) New institutions and procedures be established within the Congress and the Executive Branch to provide a continuous and independent review of the defense budget in light of total national priorities.

c) Immediate and specific steps be undertaken to advance this position with the Administration and Congress.

"The twin crises of the city—human and fiscal—make prompt action to change America's outmoded and unsatisfactory welfare system a high priority for the Urban Coalition Action Council. The present welfare system

Policy Council members (from left) J. Irwin Miller; Vivian W. Henderson; David Rockefeller; and Theodore Schlesinger.

contributes to family breakdown and promotes dependency; allows shockingly low payments to persist in some places; and, due in part to its categorical approach, ignores the working poor," the Policy Council said and recommended that a campaign be initiated immediately to assure enactment of a comprehensive income maintenance program.

The Policy Council said the Ways and Means Committee's proposal to bar foundations from directly or indirectly supporting voting registration drives is "a direct slap at legitimate efforts to draw minority groups into fuller participation in the democratic process. The Urban Coalition Action Council strongly supports efforts to insure the broadest possible opportunity for all citizens and groups to participate fully in shaping and directing the society. Voter registration drives clearly are essential to broadening those opportunities." They also opposed the Ways and Means Committee's proposals that would prohibit foundations from cooperating with government agencies.

The Council directed the Action Council to strongly oppose these restrictive proposals and mobilize the influence of the Council to assure their defeat.

Strongly urging extension of the 10 per cent surcharge on income, the Council said:

"The Administration and Congress must also act immediately to correct the obvious inequities in our tax laws. The American public will not continue to tolerate a system of taxation that allows some upper-bracket taxpayers to pay less than they rightfully should or to escape taxation altogether. If the American people are to bear the costs of essential urban programs through Federal taxes, then they must have the confidence that the tax system is fundamentally fair and equitable."

Arnold Aronson; Albert Arent (representing Jordan Band); Mrs. Bruce B. Benson; and Mrs. Amalia V. Betanzos.

Law and Disorder: State Planning Under the Safe Streets Act

Initial findings of a 12-state study revealed that the states were ill-prepared for the difficult task of planning action against crime under the Safe Streets Act. Most of the states, however, are "conscientiously laboring to overcome their limitations."

These conclusions were reached by the Urban Coalition and Urban America in a joint study entitled *Law and Disorder: State Planning Under the Safe Streets Act.*

More than 4,000 copies of the report have been distributed in response to interest from Congress, state planning agencies, city governments and a broad range of private groups. More important, the report has sparked widespread efforts to overcome the weaknesses it cited.

Plans prepared under the 1968 Act and financed by $19 million in planning funds will spend some $29 million in action money this year; nearly $200 million for fiscal year 1970; as much as $1 billion later.

Here, in capsule, are the major conclusions of the six-month study and report and notations of the impact it has had:

1. There has been practically no involvement of the private sector, including businessmen, community agencies and residents of high crime neighborhoods in planning. Instead, planning for the most part is the work of a small number of professionals from the field of law enforcement, the courts and correctional institutions with a sprinkling of elected public officials. Cities have not been given an opportunity to participate fully.

The Justice Department has stressed the need for citizen participation; it will cooperate with Coalition staff in designing program models to achieve that end. Locally, (for instance in California, Maryland, Mississippi, Florida) organizations, alerted by the report, are shooting their way into the planning process.

2. Planners have not worked to bring together the various elements of the criminal justice system into a comprehensive, system-wide plan of attack. Instead, each element has worked pretty much alone without reference to other elements. Fragmentation results.

No great gains yet although the Justice Department is addressing the problem in planning.

3. Most states accept the Act's concept of a regional approach to law enforcement but fail to define the role the regions should play. In some states, regional planning mechanisms exist only on paper. Because municipal participation in planning generally comes through regional structures, this has led to an absence of city involvement in planning action that will take place in the cities.

To improve city participation immediately the Justice Department gave the Nation's 11 largest cities special funds for planning. For the long run, the department is spelling out regional structure requirements in its revised guidelines.

4. There is a shortage of skillful assistance to state planners both in how to plan comprehensively and in understanding problems of substance with which the planners are dealing. In some cases, this has led to a complete subcontracting out of planning to private consultants, thus subverting the Act's insistence on local plans locally arrived at.

The department has agreed to expand the technical assistance function of the National Institute of Law Enforcement and Criminal Justice beyond academic research.

The states surveyed are California, Florida, Illinois, Indiana, Massachusetts, Michigan, New Jersey, New York, North Carolina, Ohio, Pennsylvania and Texas.

Copies of the report are available from the Urban Coalition, 1819 H Street, N.W., Washington, D.C. 20006.

Call For Action

The telephone conversation began just like all the others. The person placing the call was looking for the same thing as everyone else who had called before him—help.

In this case a 16-year-old youngster was having trouble finding a summer job. When the conversation concluded about four minutes later, its ending was not much different from many of the calls that New York radio station WMCA has received in its *Call For Action* program.

"I think you people are great," said the voice from the other end of the line.

The headquarters for *Call For Action* in New York City, where more people than in any other metropolitan area need help with such problems as poor housing, crime, narcotics, hospital care, garbage disposal, pot holes and

air and water pollution is a 12-by-15-foot, green and blue wall papered room in the Madison Avenue offices of WMCA.

It is a room where for two hours a day, five days a week, half a dozen or so volunteers thumb through bright red vinyl notebooks with cross references on more than 500 topics running from anti-rabies clinics to the whooping cough.

It is a room whose library comprises books with such non-Book-of-the-Month-Club titles as "You and Your Landlord," "Your Right to Welfare," "Law and Justice," and "It Can Make a City Move."

Call for Action volunteers at WMCA, New York.

It is a room from which hope has sprung for the more than 100,000 persons who have sought aid in dealing with the problems of urban living since the program was launched more than six years ago.

And it is also a room that serves as the model for the program sponsored by the national Urban Coalition which will reach out across the country through radio stations in about a dozen cities by the end of the year.

Call For Action now functions in New York, Philadelphia and Washington, and the cities developing programs include Chicago, Cleveland, Cincinnati, Denver, Pittsburgh and Duluth. *Call For Action* is yet another manifestation of the role of the Urban Coalition as a kind of marriage broker.

Through *Call For Action,* the Coalition is trying to "combine the microphone and the telephone" in the words of Mrs. R. Peter Straus, co-chairman and founder of WMCA's program.

Under the Coalition's sponsorship, volunteer chairmen will be trained at WMCA or another *Call For Action* station. The first *Call For Action* Training Conference was held in New York City in May at the WMCA Studios, and a second took place in July. In addition a team of two experienced WMCA volunteers is available for training on request by a station. The Coalition underwrites the expenses of the volunteer training. Coordination and guidance for the program are provided from the Coalition's Washington headquarters.

"What we've done here can be done in any city in the country—whether the problem be schools, streets, taxes, unemployment—whatever needs to be corrected," says Mrs. Straus, the vivacious wife of WMCA's owner. "When a broadcast medium and private citizens get together, it can be a very powerful team. It can make a city move." And in New York City it has done just that.

Among its accomplishments, *Call For Action* has:

—Moved City Hall to set up its own telephone referral service to take individual complaints and channel them to the proper departments.

—Through its housing campaign, caused the city to revise its building code enforcement procedures.

—Exposed an illegal slumlord syndicate and gathered information that led to four federal grand jury indictments of slumlords.

In the first three years of operation some 45,000 people contacted *Call For Action* and some 20,000 were helped. But while statistics may be dry, the human element, such as the case of Mrs. Violet Jones, does not lie.

Mrs. Jones occupied a two-room slum apartment in Harlem. It lacked heat and hot water. The ceiling was crumbling and rats beat a path across the floors. Time and again Mrs. Jones implored the city's buildings department for help. It never came.

She finally contacted *Call For Action,* who not only told Mrs. Jones whom to contact, but also followed through. Within weeks Mrs. Jones' apartment was livable.

Although any city can have a *Call For Action* program, it helps if a local urban coalition sponsors it. Its responsibilities include mobilizing groups to provide volunteers for the radio station, resolving the problems and taking action on the issues that are surfaced by the *Call For Action* program.

When *Call For Action* has uncovered an important problem, it brings the problem to the attention of the appropriate institution. Should *Call For Action* fail to get a satisfactory response, then the coalition must step in. The coalition must use its resources and influence with the community institutions to bring about the necessary change.

If it determines that no institution in the community is capable of fulfilling the need that has been revealed, the coalition must then work to create the means for providing the necessary services.

So far as the *Call For Action* volunteers are concerned, there are no chic charity balls, no door prizes and no financial compensation connected with their work. They never give their names to callers, in accordance with *Call For Action* policy that volunteers remain anonymous. A volunteer's sole reward is knowledge of a job well done, a job that in the words of one of them, "takes a good amount of dedication."

John W. Gardner, head of the Coalition and former Secretary of Health, Education and Welfare, believes that *Call For Action* has a major national role to play. "When I was in government," he recalls, "I was struck by the need for some procedure that would enable people to place their grievances before those in authority and get prompt action. Sweden has the widely praised ombudsman system in which a single office receives citizen complaints. But Sweden is a small country. In Washington

the Department of Health, Education and Welfare alone receives many hundreds of thousands of complaints and inquiries each year. Multiply that by other departments and agencies and levels of government and the mechanics of an American ombudsman system become immensely complex.

"Furthermore, from what I have seen of government, a letter of complaint often ends up on the desk of the official who made the original mistake.

"On the other hand, *Call For Action* stands apart from government or any other vested interest and thus is able to concentrate on getting results. It is an enormously constructive idea which can help all kinds of people cope with all kinds of problems. More importantly, it can help combat the sense of powerlessness that is so prevalent in our large cities."

Regional Health Conference

The Urban Coalition sponsored the first in a series of regional conferences on urban health issues and action in San Diego, August 24-25.

The format in San Diego relied heavily on residents of poverty communities—the people with the problem—in identifying health issues and priorities for action.

The conference focused national Coalition resources on assisting local coalitions to organize health task forces and hammer out action strategies.

Invited to the San Diego conference were the chairmen, executive directors, health task force chairmen (or persons likely to draw that assignment) and community residents from the eleven western region coalition cities.

The national Coalition sent George Silver, M.D., its executive associate for health, to be chairman of the conference. With him he took Coalition staffers and consultants to assist local coalition members in working through local health problems. The conferences were audited by medical students and students interested in health organization matters.

The takeoff point for this session and future ones is the Coalition's preliminary report on national urban health issues entitled "Health Wanted: for Millions of Americans." A more detailed study of urban health problems "R for Action" will be published later this month by the Urban Coalition.

What They Are Saying

Andrew Heiskell, Chairman of Time Inc., and Co-Chairman of the Urban Coalition, to the Edison Electical Institute Convention:

"We businessmen must lead the way to a resolution of the urban crisis. Many businesses will not prosper for much longer if they are not attuned to and concerned about conditions around them. I find this to be true increasingly in publishing, and I am told it is becoming evident in many other places. Recently, the executive vice president of one of the country's largest manufacturing companies showed me a piece of paper with a list of 37 major business problems he faced. Each one of them involved external factors: problems with his community, city and state officials, the federal government. Each problem would not have existed 30 years ago. Each had to be resolved by the top management of his company. In simple economic teams, we cannot afford to remain uninvolved in matters which will confront us with increasing frequency and urgency."

Joseph B. Nelson Jr., Executive Director of the Racine Environment Committee Inc. at the annual meeting of the Beloit Area Community Council:

"The current crisis also carries a challenge to white Americans to act responsibly. I'm not concerned with the 10 per cent of the people in this country who are bigots or the 10 per cent who are anxious to help. The burden of assuming responsibility for the society in which they live falls upon the 80 per cent who, in this time of testing, are guilty of indifference and apathy. It is their silence which allows bigots to speak for them, and it is their indifference which allows the ghetto to exist."

Chuck Hall, Mayor of Metropolitan Miami, Florida, at a United Fund dinner in Lehigh Valley, Pa.:

"If this audience needed to bring together all the leadership elements of Allentown on a moment's notice to tackle a critical problem—a racial disturbance as an example—would you be able to respond that quickly? How would you communicate with the black community and bring together *all* its leadership elements? What about the business community, labor, religious leaders and the local government leadership? Under what auspices would the action be taken in order to provide a neutral ground—

an independent forum—which could serve as a communicating device and a planning coordinator without being criticized as a political tool or a hand-picked 'voice of the establishment?'

"If you would have difficulty completing the above task at a moment's notice, you can then appreciate the need for an urban coalition in your community."

Communications Skills Bank

A nationwide program to help members of minority groups find editorial jobs in the communications industries has been launched with headquarters in New York City.

The Communications Skills Bank for Minorities is a project of the New York Urban Coalition with the cooperation of the national Urban Coalition. The program, nationwide, is recruiting and placing members of minority groups in editorial jobs on newspapers, magazines, radio and television stations, and in advertising, book publishing and public relations.

New York Coalition Vice President John Murray said the Skills Bank has two key functions:

1. To provide the media with a centralized source of editorial talent among members of minority groups, mainly Negroes and Puerto Ricans, drawn from across the country.

2. To serve as a nationwide clearing house for minority group members interested in editorial jobs, training, evaluation, counseling and information.

"The Skills Bank is registering black and Puerto Rican people with basic qualifications who have had no experience or previous contact with communications as well as those who now hold editorial jobs and who are qualified for advancement," according to Mr. Murray.

The Skills Bank will provide the media, nationwide, with candidates for immediate employment as well as for the numerous training programs across the nation being operated by the industry or individual businesses. It is being directed by Stuart Dim, former Deputy Director of Public Affairs for the New York City Human Resources Administration. Mr. Dim is also a former reporter and editor of *Newsday* on Long Island, the Middletown (N.Y.) *Times Herald-Record,* and the Camden (N.J.) *Courier Post.* He holds a Bachelor's degree in journalism from New York University.

Each candidate in the Skills Bank has a file that contains a resume, work samples where available, and an evaluation of the candidate's aptitudes and abilities. The evaluation and counseling are done by members of a nationwide Skills Bank Advisory Panel, which includes working newsmen, editors, educators, and editorial representatives of the communications industries. In addition, a Steering Committee—comprised of high ranking representatives of the industry—is being established to advise on policy for the Skills Bank and to work within the media to open more opportunities for members of minority groups.

Dim looks forward to cooperation from other coalitions across the country. "I hope they will work within their own communities to inform the local communications industry that there is a Communications Skills Bank based in New York City that can provide them with editorial talent." Posters and brochures about the Skills Bank have been mailed to all local coalitions. For further information contact Stuart Dim at the New York Urban Coalition, 55 Fifth Avenue, New York, New York. Phone 212-691-8210.

REC Industries Inc.

In Racine, Wisconsin, the Racine Environment Committee (REC), the local urban coalition, has developed programs in fields such as employment, education, job training and housing.

Along with its attempts to provide summer employment for inner city youth, REC began to investigate ways to provide meaningful on-the-job training and job opportunities for Racine's hard-core unemployed.

Its committee on general employment originated a small manufacturing concern, with a built-in training unit and on September 9, 1968, REC Industries Inc., was born. It invited seven youths, from 19 to 23, into a training program in skilled machine production work.

Racine's largest employer, the J. I. Case Company, was also the largest benefactor of the program, donating the plant space for the non-profit enterprise, supplying most of the machine tools and fixtures and advancing much of the working capital for the undertaking.

Eight other firms in the town also helped with services and materials. The Manpower Development Training Program supplied some machine tools while classroom equipment came

from the Racine Vocational, Technical and Adult School.

Currently, REC Industries has 21 trainees working and learning under the supervision of a three-man staff provided by J. I. Case.

"What we are really doing is training these youths to be trained," said Robert Ward, a Case employee who helped set up the training company. "We try to avoid the image that we are turning out a complete product here."

Ward said that it took about $22,000 to create the company. Total cost of the program to date is more than $100,000. The company has a contract with the Manpower Development Training Program, which provides salaries, training and counseling for the trainees.

Most of the youngsters in the program are high school dropouts. They are referred to REC by the Wisconsin State Employment Service. The Service conducts a two-week employment motivation and orientation course, which is designed to educate potential employees in the requirements for getting and keeping a job.

While REC does not guarantee anyone who completes the six-to-ten month course a job, the participating companies have agreed to give first consideration to the trainees when suitable positions open.

Of the first seven persons to go through the program, two have become part of REC's staff, two have gone on to jobs in industry, two have taken jobs in areas outside their training and one has returned to the program for more training.

Charlie Smith, 23 years old and a 1965 high school drop out, was one of the original trainees. A Racine native, Charlie is now a foreman at the training plant.

He held several jobs after leaving school, and then, in his words, "sort of wandered around for a year and a half," before joining the training program. Charlie now makes $2.60 an hour at his job.

"They've got something swell going here, and I think it's helping people," said the black youth. "I got a chance, and there's the same chance for other guys out there on the street."

REC Industries Inc.: "Training youths to be trained."

The Urban Coalition
Report

December 1969

The Urban Coalition Calls For Health Care Reforms

The Urban Coalition has called for a combination of national and community action to bring about sweeping medical reforms aimed at improving health care for all Americans, particularly those in the cities.

In a comprehensive 76-page report prepared by its health task force, the Coalition maintained that while the United States spends a bigger proportion of its gross national product on health than any other country, its health services are inadequate. The report, *Rx for Action,* was prepared under the direction of Dr. George A. Silver, the Coalition's Executive Associate for Health.

According to the report, Americans spend more than $53 billion annually on a "potpourri" of public and private health programs. If these funds were spent more efficiently, the report concluded, many more people would be served and better services could be assured for all.

Poor health affects all Americans, regardless of income, the report said. Not only the poor, but middle income families, blue collar workers, welfare mothers, and all city residents—black, white and brown — suffer from substandard health care.

Community action, according to the Coalition, can generate more immediate improvement for its citizens than almost any national effort. Local successes would also stimulate needed national reforms.

The report urged the local urban coalitions that have been formed in nearly 50 cities to establish their own health task forces. But the Coalition emphasized that the study's findings and recommendations could be used in whole or in part by any local community organization concerned with the quality of health care.

These would include local chambers of commerce, labor and religious groups, local bus-

Dr. George A. Silver, Coalition Executive Associate for Health; John W. Gardner, Urban Coalition Chairman; and Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs of HEW at press conference to announce Rx for Action.

inessmen and women's organizations. The same consultant and technical assistance services that the national Coalition intends to make available to its local health task forces would be available to these groups. The Urban Coalition will consult with the major voluntary health organizations to obtain their cooperation.

The Coalition also plans to meet in a series of regional health conferences with local coalitions and other groups.

The report decried the lack of participation of the poor and the non-poor in health services planning and said that no serious effort had yet been taken to train individuals outside of professional groups in this area.

"In both the long and short runs," the report stated, "advances in the health field depend on the will of the American people."

The study emphasized that the "middle-class white community has been too infrequently represented in hospital board membership and in public health bodies, or even on the boards of voluntary agencies."

It said that the poor, specifically blacks, Mexican-Americans and Puerto Ricans, had been left out of the decision-making process. The Coalition urged more representation from these people on hospital boards, health and welfare councils, insurance bodies and public health advisory councils.

Following are some of the principal findings and recommendations of the report:

Malnutrition: With estimates placing the yearly cost of the consequences of malnutrition to the economy at substantially more than the $3–4 billion needed to eliminate hunger, coalitions should work to make more of the proper food more readily available to the public.

Environment: The well-being of the urban poor is being directly threatened by bad housing and air and water pollution. Citizens groups should be formed to educate the poor on such basic matters as housing and health code requirements, their legal rights to services, safety practices and rat and vermin control.

Access to Facilities: More local money is essential to help meet the need of the many communities for more health facilities. Transportation systems and emergency ambulance services could be studied to see if they are geared to the needs of the poor.

Interpreters: Interpreters could be used in clinics and information centers for Spanish-speaking people.

Occupational Health Clinics: Hospital boards could arrange for the development of occupational health clinics to serve local industry and provide advice for health and safety programs for working people from the local community.

Manpower Deficiencies: Through the system of routine volunteer assignments, medical societies could undertake to supply doctors in areas where sufficient numbers are not available. Sub-professionals could be trained to handle many of the duties involved in health care.

The Coalition's study emphasized that many local programs could be immediately launched without waiting for action by the Federal government. But it also pointed out that effective local action will always have to be supplemented and strengthened by effective Federal action. The report called for a national system of financing medical care costs that will give every American access to services without any economic barrier.

Dr. Roger O. Egeberg, who is the Assistant Secretary for Health and Scientific Affairs, commented on the Coalition's recommendations. He said: "The country should be grateful to the Urban Coalition for this type of analysis of the nation's health needs, and planning for the nation's health services.

"The Coalition's proposal recognizes that solving the medical needs of America is not the job of the Federal government alone, but also requires effort and change by everyone."

In compiling its *Rx for Action* the health task force of the Urban Coalition has laid down a battle plan for the war against poor health care in the United States.

Copies are available from the Urban Coalition, 2100 M Street, N. W., Washington, D.C. 20037.

New Members Added to Coalition Steering Committee

Fourteen new members have been added to the Steering Committee of the Urban Coalition. The new additions to the Coalition's policy-making body include businessmen, mayors, a state senator and a physician.

The new members announced by Urban Coalition Chairman John W. Gardner are:

State Senator Joe J. Bernal of San Antonio, Texas. Senator Bernal, an educator and social worker as well as a legislator, is executive director of the Guadalupe Community Center in San Antonio.

Mayor Frank Curran of San Diego, California. Mayor Curran is president of the National League of Cities.

Hector P. Garcia, M.D., a Corpus Christi, Texas physician and a former commissioner of the U.S. Civil Rights Commission.

Ben W. Heineman of Chicago, president of Northwest Industries Inc. Heineman is chairman of the President's Commission on Income Maintenance.

Samuel C. Johnson, president of S. C. Johnson & Son Inc. and president of the Racine Environment Commitee, a local urban coalition.

Mayor Eric Jonsson of Dallas.

Stephen F. Keating, president of Honeywell Inc., and former chairman of the Minneapolis Urban Coalition.

Donald M. Kendall, president of Pepsico, Inc., and chairman of the National Alliance of Businessmen, New York.

Mayor Richard Lugar of Indianapolis.

Donald S. MacNaughton, president of Prudential Insurance Co. and former chairman of the Newark Urban Coalition.

Mayor Jack D. Maltester of San Leandro, California. Maltester is also president of the U.S. Conference of Mayors.

James Roche, chairman of the board of General Motors Corp., and member of the board of trustees of the New Detroit Committee, an urban coalition.

H. I. Romnes, chairman of the board of AT&T, New York. Romnes is also vice-chairman of the National Industrial Conference Board and is a member of the Urban Coalition's task force on education.

Martin Stone, president of Monogram Industries Inc. and chairman of the Los Angeles Urban Coalition.

Mr. Gardner said the Urban Coalition adds to the Steering Committee periodically to assure broad and dynamic representation from the Coalition's constituent elements—local government, business, labor, minority groups and religion.

M. Carl Holman, vice-president of the Urban Coalition for Policy and Program Development; Peter Libassi, Coalition executive vice-president; and Nicholas de B. Katzenbach, former U.S. Attorney General and chairman of the Coalition's law and government task force discuss new approaches to the reform of the criminal justice system spelled out in the Coalition's report Taking the Blindfold off Justice.

Urban Coalition Action Council Supports Welfare Reform

"The time has come to discard the existing patchwork of ineffective and in many ways destructive public assistance programs. You have the opportunity to replace them with a national system of income maintenance that will help people to help themselves but preserve individual dignity in aiding those left behind by society."

With these words, John W. Gardner, Chairman of the Urban Coalition Action Council, began his testimony last month before the House Ways and Means Committee, which is considering President Nixon's proposals to reform the nation's public assistance programs.

At the same time, Mr. Gardner said the Urban Coalition and the Urban Coalition Action Council will give the issue top priority for the months ahead. "It is of the highest importance," he said, "that such lingering myths as the one that the poor in America are people who don't want to work—able-bodied loafers—be erased and that our public assistance programs be overhauled."

In his congressional testimony, Mr. Gardner termed the Administration's reform proposals "extremely important and on the whole well designed," but suggested strengthening them at several crucial points.

"If the proposals are accepted," he said, "the Federal government will for the first time in history accept responsibility for providing a minimum level of payment throughout the nation and for financing it. I would have been very proud had I been able to establish that principle during my tenure as Secretary of Health, Education and Welfare. It is an historic step."

Mr. Gardner also praised the proposals for their emphasis on children, their work incentive features and their greatly broadened coverage.

"Of special significance," he said, "is the inclusion of the working poor for the first time. The complete omission of the working poor is surely one of the strangest anomalies of the present system. A society which values work should surely make some provision for the six million adults who work full-time, year-round, and yet cannot earn enough to bring themselves above the poverty line."

"The strengths of the President's proposals," he said, "could lead us on to an immeasurably sounder and more equitable system of income maintenance. But if the promise of the proposals is to be realized, they must be strengthened at a number of points," among them:

1. Provision should be made for "a nationwide increase in benefits to the poverty level over a specified period of time," with the $1,600 floor proposed by the President serving as a starting point for a phased program.

2. "Adequate provision should be made for 'one-stop' administration of the proposed Federal-state system."

3. While "the improved benefits for the aged, disabled and blind are a welcome step," Mr. Gardner's statement said, "it may be that our ultimate goal should be a single income maintenance system which provides for uniform adequate assistance for all of our impoverished citizens, including needy individuals and couples without children."

4. "Given the elasticity of its tax base, and the economies of scale and efficiency offered by Federal administration, a shift of the welfare burden to the Federal government is clearly one means of resolving the fiscal dilemmas of state and local government."

5. The work requirement provisions of the legislation "should specify job standards and wage rates for 'suitable employment.'"

Finally, he said, "I would emphasize that there must be provisions for job creation, so that the training opportunities won't be a revolving door into continued unemployment. The ideal solution is a public service employment program."

While Mr. Gardner praised the work requirement proposals, he made it clear that there are limits to what can be expected of it.

"Many Americans sincerely believe that people living in poverty are people who don't want to work—or people who don't want *steady* work," he said. "In other words, able-bodied loafers. That is a long way from the truth. Of the 25 million persons living below the poverty line, 15 million are either under 18 or over 65."

"Of the remaining 10 million, nine million fall within the scope of the Administration's family assistance proposals (as being adults in poor families that include children).

"Let us look at that nine million. The Administration estimates that 7.9 million are already working, but earn too little to bring them above the poverty level, or are the wives of such men, or are disabled, or are women who must stay home because of very young children.

"That leaves 1.1 million adults who the Administration feels can significantly help themselves and would thus be required to register

for jobs or work training—600,000 men and 500,000 mothers of school-aged children."

Mr. Gardner also emphasized that "no welfare program can cure underlying conditions."

"The poverty that makes a public assistance program necessary," he said, "is rooted in a variety of historical and contemporary conditions; discrimination, the pathology of the urban and rural slum, inadequate education, insufficient job opportunities in the locality, low pay in jobs not covered by the minimum wage, inadequate social insurance benefits, inadequate provisions for manpower training and so on."

"If we are to get to the root of the problem we shall have to do so through education, health and nutrition programs, the creation of job opportunities, the elimination of slum conditions and similar measures."

Mr. Gardner's testimony, delivered by Ambassador George McGhee, special representative of the chairman, elaborated on the position taken in late June by the full Policy Council of the Urban Coalition Action Council.

Copies of Mr. Gardner's testimony and of the Action Council booklet on welfare reform "Toward A Full Opportunity" are available from the Urban Coalition Action Council, 2100 M Street, N. W., Washington, D. C. 20037.

Coalition Begins Probe of Credit Practices to Low Income Consumers

A preliminary study which examines efforts by commercial banks, credit unions and retailers to make credit available to low-income consumers, has been made public by the national Urban Coalition. The study, entitled, "Consumer Credit and the Low Income Consumer," was prepared after more than five months of field and research work by William G. Kaye & Associates, consultants in the area of consumer affairs.

A major finding showed that the poor can and do pay their bills. "The low-income consumer may at times encounter some difficulty in paying bills when due, but in the end, his performance in paying his full obligation is nearly as good as his more affluent suburban counterpart," the report said.

The 105-page study formed the basis of a November meeting called by the Coalition to look at models that may be successful in extending credit to the poor. The meeting was chaired by Edward C. Sylvester, Jr., former Assistant Secretary in Community and Field Services, Department of Health, Education and

On a recent visit to the Greater Miami Urban Coalition, Chairman John Gardner met with Coalition leaders. He is shown here visiting with some of the minority representatives of the Miami Coalition.

Welfare, and attended by approximately 100 leaders from retailing, the poor, Federal agencies and the White House, banks, organized labor, social action groups, lawyers and consumer and credit organizations.

The report will be further considered at a series of regional meetings, the first of which took place in Minneapolis, December 7-8.

Mr. Kaye, former executive director of the President's Committee on Consumer Interests, stated that "Hopefully, this report—in addition to increasing the availability of low-income credit—will shed some light on the realities and mythologies about the performance of the low-income person in seeking, utilizing and repaying consumer loans and other forms of consumer credit."

Local Coalitions Get Fund-Raising Guidelines

Fund-raising guidelines will be the subject of two national Urban Coalition conferences for local coalition chairmen, fund-raising chairmen and executive directors.

At these "how-to-do-it" sessions members of the national Coalition's Financial Development Advisory Council and other experts will share their expertise in raising money—a vital ingredient behind any successful coalition program—with local leaders.

The first conference, to be held in Philadelphia in December, is for coalitions in the northeast and southeast regions. The other is planned for January for coalition representatives from the midwest and west.

Conference speakers will highlight the keys to successful fund-raising: identifying community leaders; developing a "case"; organizing volunteers for fund-raising, and the "nuts and bolts" of solicitation.

Based on these guidelines, workshops will enable coalition representatives to pinpoint areas for further guidance and to exchange experiences.

The 29-member Financial Development Advisory Council comprises top financial development officers from colleges and universities across the country. One of its primary roles is to counsel local coalitions in organizing successful fund-raising programs. Thus far Council members have individually advised coalitions in 13 cities.

Coalition staff support for the Advisory Council and national fund-raising efforts is provided by David M. Thompson, Assistant to the Chairman; Douglas Lawson, Financial Development Officer; and Walker Williams, Associate Financial Development Officer.

Newark Love Festival Salutes "The Summer Thing"

Through efforts of the Greater Newark Urban Coalition, New Jersey's largest city had a Love Festival on October 5th. A video tape replay of the event was shown on an hour-long, prime-time, NBC national telecast on November 14th.

Based on a series of free, outdoor concerts first given in Harlem, the Love Festival was brought to Newark by WNBC-TV, which secured the help of the Harlem Festival producer, Tony Lawrence. The Love Festival was WNBC's way of honoring Newark's Recreation Planning Council, better known as *The Summer Thing.*

The Newark Love Festival turned out to be quite an autumn event. It turned on as one of the largest happenings in the city's 302-year history. Between 70,000 and 100,000 "beautiful, beautiful people" attended.

Not a single incident marred the massive outdoor spectacular held in Newark's Weequahic Park. For six hours, rock bands, folk and soul singers, comedians and mod entertainers gave performances. Twenty thousand phonograph records were given away. WNBC said the Love Festival was "a major community relations project."

The community effort grew out of Newark Coalition president Gustav Heningburg's plea to New York television stations, just 10 miles away, to devote some coverage to Newark's brighter side. The city had received considerable adverse publicity since the 1967 riot. In response, WNBC-TV Channel 4, asked Heningburg to suggest an activity worth televising that might offset coverage of Newark's problems. Heningburg's recommendation was the Recreation Planning Council or *The Summer Thing,* a program which involves ghetto youth in recreational opportunities.

The Summer Thing was born in late May as Newark looked toward another long hot summer with little in the way of programs to offer out-of-school, inner-city youth.

Supported by the Newark Coalition's Steering Committee, Heningburg put together a prestigious, five-man, voluntary group of co-chairmen. It included both deputy mayors, Paul

Reilly and Lewis Perkins. The representative of business and industry was Al DeRogatis, a Prudential Insurance Company vice president and former football great. John Scagnelli, a vice president of the Council of Social Agencies, served as delegate for more than 150 United Fund agencies and State Assemblyman George Richardson, a black legislator, represented the coalition.

Office space was donated by the Newark Housing Authority. One of the local manpower programs donated office equipment. The Newark Chamber of Commerce agreed to raise $234,000.

The Summer Thing contacted more than 100 community organizations asking them to submit their recreation proposals. Through careful screening and much negotiation, the co-chairmen approved 29 proposals for funding.

In less than six weeks, an office was set up, a volunteer staff was secured, work began on fund raising and a directory was compiled of more than 70 community-sponsored youth programs, public and private. A communications center was established to which anyone could call on any given day and get a listing of recreational activities going on in town. The center also published a daily newsletter listing special events of the day for distribution to almost 100 points in the city. Local radio station WNJR taped and broadcasted daily events all through the summer.

By the end of the summer, the Chamber of Commerce raised almost $200,000. The Engelhard Foundation provided the first $1,000 and an additional $57,000 came from the New Jersey State Department of Community Affairs.

More than 50,000 youngsters participated in *The Summer Thing*. By Labor Day, it was clear that partially-polarized Newark could get diverse people to work together and get things done well and fast.

NBC, impressed with *The Summer Thing*, looked for a fitting salute. It hit upon the Love Festival concerts in Harlem that had attracted hundreds of thousands of New Yorkers. Tony Lawrence agreed to get the talent and WNBC promised to film the gala for television.

The Recreation Planning Council was asked to secure a suitable outdoor location and help attract crowds that would reflect the black/white cooperation that made *The Summer Thing* so meaningful to Newark.

In a scant three weeks, hundreds of details had to be handled. For the first time, the Newark police cooperated with the Black Panthers in crowd control. The city administration and participation of social agencies "was a joy to behold," stated Heningburg. Medical school interns worked with welfare mothers, hip teenagers manned lost and found stations with senior citizens, radical students and conservative professionals joined hands to organize shuttle buses. Ideological, age, language, and racial differences seemed unimportant and for that afternoon friendship, love and pride prevailed and *everybody* "Gave A Damn!"

Shortly after the November 14th national telecast, Gus Heningburg went down to Fayette, Mississippi to help black Mayor Charles Evers plan a Thanksgiving Day, Love Festival for his town.

Call For Action Director Named

R. Alexander Grant, the former national director of recruitment for VISTA (Volunteers in Service to America), has been named as the Executive Director of "Call for Action".

"Call for Action" is a project in cooperation with the national Urban Coalition, and is operated by a radio station and a staff of volunteers in a number of cities.

Mr. Grant was born in Newark, N. J. in 1933. He has a B. A. from Bloomfield College and an M. A. from Montclair State College.

In announcing Mr. Grant's appointment, John W. Gardner, the Coalition's Chairman, said the Coalition hoped to have "Call for Action" programs working in 8-10 cities throughout the country by the end of the year.

Under the project, individuals may call local radio stations for referral to the proper agencies for help with such problems as poor housing, crime, narcotics, hospital care and sanitation disposal.

"Call for Action" was begun at radio station WMCA in New York City by Mrs. R. Peter Straus, wife of the station's owner and co-chairman of the nationwide program.

The project is now on the air in New York, Chicago, Denver and Utica.

Mr. Grant's duties will include policy formulation and coordination for the various "Call for Action" projects.

R. Alexander Grant

Grass Roots News

The Greater Kansas City Urban Coalition has inaugurated a program of tours of the inner-city to give interested citizens, particularly white suburbanites, a first hand view of inner-city housing, schools, business development and recreation facilities. Small groups travel in a modified bus, are given a running description of inner-city conditions, and told of the activities of the Urban Coalition. The tours began with the Greater Kansas City Urban Coalition board of directors and has since included members of the Real Estate Board and service clubs.

The Greater Kansas City Urban Coalition has formed a women's task force, believed to be the first such among local coalitions. The task force is involved in a project with the Welfare Rights Organization and will concentrate in the housing field in 1970.

The Greater Kansas City Urban Coalition is publishing a voter information booklet for the January 20 school board elections, reviewing the qualifications of the candidates and containing their views on key issues.

The new South Bend Urban Coalition already has received preliminary reports from five task forces and this month expects final reports outlining action programs for 1970. The task forces are for education, housing, employment, racial attitudes and conflict, and youth.

Mayor Carl Stokes of Cleveland has announced plans for a "Call for Action" program on station WERE under the coordination of the Cleveland Urban Coalition. "Call for Action" programs, now in operation in several cities, enable listeners to call volunteers at the station to register complaints about deficient city services. The Cleveland program will begin early in 1970.

The Urban Coalition of Minneapolis has a new president, Phillip Harder, senior vice president of the First National Bank. He succeeds Dean McNeal, vice president of the Pillsbury Company, whose term expired.

The Mayor of Winston-Salem, North Carolina proclaimed the week of December 8-12 as "Family and Child Development Week" in conjunction with a project sponsored by the Day Care Association of the Urban Coalition with the co-operation of other child-related agencies. Symposiums on child development and educa-

tion were held throughout the week for parents, school administrators, businessmen, representatives from social service agencies and other interested groups.

The housing task force of the Greater Miami Coalition has completed development of a curriculum for a new course offered at the University of Miami on housing management. The 15-week course followed by on-the-job-training will open up new careers for disadvantaged persons in the management of housing complexes. Key feature of the plan is job commitments for those finishing the course.

The El Paso (Tex.) Urban Coalition has been holding open forums each month on problems affecting the El Paso community. The forums, officially known as Area Council Meetings for Public Information, have dealt with such matters as police protection, street paving, housing, schools and public safety.

The Riverside (Calif.)Coalition, under its vivacious and energetic executive director, Mrs. Ruth Pepe, has convinced the school system that it doesn't have to keep going to such faraway places as Arizona and Texas to hire minority teachers. Through a program set up as a result of coalition efforts five black instructors have been trained and hired from within the Riverside community.

The bail reform program of the Riverside Coalition, operating since mid-September, has reduced the average length of jail stay from 37 to 4 days. Five coalition representatives were among the Riverside officials attending the national Coalition's briefing on new approaches to criminal justice in New York in April; liked what they saw, convinced the Riverside police department to give bail reform a try and since its inception, nearly 60 persons have been released on their own recognizance under the project.

In San Ysidro (Calif.), a small, green colored stucco house has been converted into a health clinic for some 7,000 Mexican-Americans. The clinic treats about 150 persons a week and operates with one full-time nurse, Miss Jeannie Powers. The San Diego Coalition played a major role in creating the clinic and also refurbished and furnished the entire house.

In San Antonio, (Tex.) the coalition has formed a group that it calls the "clearinghouse committee." The committee is interviewing ghetto residents to determine their major grievances. This information is presented to the businessmen on the coalition's steering committee, who then take it to the city agency that can do something about the problems uncovered in the interviews.

Three VISTA lawyers, working under a program co-sponsored by the national Urban Coalition began working in Denver in mid-October. They're working on bail reform.

"Call for Action" got off to an action packed start in Denver in late October with radio station KLZ getting about 150 calls in its first week of operation.

New Urban Coalitions

Since the end of the summer local coalitions have sprung up all over the map. The five newest are South Bend, Rhode Island, Wilmington, El Paso and Chattanooga.

Officially the South Bend (Ind.) coalition is known as the St. Joseph County Urban Coalition. The local Chamber of Commerce in South Bend is staffing the coalition while the search goes on for a full-time executive director. The coalition's chairman is Frank Sullivan, chairman of the board of Frank Sullivan Associates, an insurance firm.

Rhode Island shows there may be some advantages to being small, at least in the sense of coalition. The Rhode Island coalition is the only statewide coalition. It has an executive director-designate, Anthony Agostinelli and a president, Elwood E. Leonard Jr. Leonard is president of the H & H Screw Company, and also chairman of the United Fund Drive.

Wilmington (Del.) is looking for an executive director. Rodney Layton, a Wilmington attorney and vice-chairman of the United Fund in that city is chairman of the new coalition.

In the west Texas town of El Paso they call the coalition the Council for Social Action because that was what it was called before it became a local urban coalition in the beginning of September. Three weeks after it was recognized as a coalition by the national, William Pearson, El Paso's executive director was in Washington with 30 other local executive directors. They met with John W. Gardner.

The Reverend James I. Oliver is the chairman of the coalition, which is the third in Texas.

The others are San Antonio and Corpus Christi.

In Chattanooga they had to wait more than two years before a coalition was actually formed. Interest in creating a coalition in that southern city began with the August 1967 convocation of 1,200 of the nation's leaders that gave birth to the national Urban Coalition.

Co-chairmen of the new Chattanooga coalition are John Slack, general manager of Combustion Engineering and Roy Noel, city youth coordinator. One of the members of the Steering Committee is Mrs. Ruth S. Golden, publisher of the *Chattanooga Times* and sister-in-law of Andrew Heiskell, chairman of the board of Time, Inc. and co-chairman of the national Urban Coalition.

See page *11* for complete list of established urban coalitions.

Miami Case Study

Last fall there were some 340 serious disturbances in high schools in 38 states. One of the most serious—in terms of potential consequences—occurred in Dade County(Miami), Florida, where an integration dispute at Palmetto High School threatened to escalate into a black student boycott of the entire school system.

Trouble was averted, however, when the school board asked the Greater Miami Coalition to step in, establish the facts and make recommendations. A panel of inquiry named by the Coalition did so—quickly and decisively. Its report resulted in important reforms not only at Palmetto, but at other schools in the district, prompting one newspaper editor to comment that "a major breakthrough in better race relations" had been made in Miami education.

A case study of the episode and its aftermath will be published by the Urban Coalition this year. The study will describe the dispute, its resolution, and the key role played by the Greater Miami Coalition.

Copies will be available from the national office of the Urban Coalition.

Miami Coalition Panel of Inquiry members Garth Reeves, publisher of the Miami Times; *Henry King Stanford, president of the University of Miami; and John Halliburton, president of the Greater Miami Urban Coalition and a vice president of Eastern Airlines.*

What They Are Saying

Frederick J. Close, chairman of the board of the Aluminum Company of America, to the annual meeting of the American Mining Congress:

"All [urban coalitions] offer the businessman a unique opportunity to involve himself in a grass-roots, down-to-earth operation that enables him to apply his problem-solving abilities to problems that demand solution as much as they often seem to defy it. They help him to really understand what the problems are and what it will take to get at them. In short, they give the businessman a chance to show that our system can work for everybody. It's a chance that many more businessmen ought to take. I think they are taking a far bigger chance if they don't."

Ambassador George C. McGhee, special representative of the chairman, the Urban Coalition, to the St. Louis Round Table:

"A turn-around must be made and a start towards a reordering of the priorities which will bring up to adequate levels the basic requirements for our national life. In this process other public expenditures, which have hitherto enjoyed high priorities, must be reduced."

Charles W. Bowser, executive director of the Philadelphia Urban Coalition, to a conference of the National Municipal League:

"The direct involvement of the corporate citizen in the initiation and formation of the national Urban Coalition was clear evidence that the corporate commitment to help was emanating from self-interest, rather than the traditional charitable concern. This recognition of self-interest in the solution of the nation's urban problems is, in my opinion, the most dramatic result of the urban crisis of the sixties."

Martin Stone, chairman of the board of Monogram Industries Inc. and chairman of the Greater Los Angeles Urban Coalition, at com-

mencement exercises of Immaculate Heart College:

"Each day that we postpone reconciliation of our actions with objectives motivated by a desire to restore quality of life to our nation, we come a step closer to inevitably extremist solutions. Almost invariably we hide our heads in the sand until our problems become crises which cannot be solved without painfully extreme remedies."

Charles B. Wade Jr., vice president of R.J. Reynolds Tobacco and chairman of the education committee of the Winston-Salem Urban Coalition, at the First Anniversary Meeting of the Norfolk Urban Coalition:

"Leadership is an attitude, an ability to size up a situation, and then make a decisive move rather than sitting back and doing something after the fact. It's easy to find leaders after something happens, they rise to the occasion, but it's something else to marshal people with foresight, with the ability to see an oncoming crisis and make a concrete move for the good of the community to avoid a potential problem."

Arthur Naftalin, professor of public affairs, University of Minnesota, former mayor of Minneapolis, and Coalition Steering Committee member, to the conference of the National Association of Housing and Redevelopment Officials:

"A few months ago the housing authority submitted a request to the city council to increase from 250 to 500 the number of homes it might acquire under the low-rent housing program for scattered site housing and that acquisition be permitted citywide. The council approved the increase but refused to allow citywide acquisition, restricting the program to officially-declared renewal areas. This action struck me as a rather open act of discrimination and I vetoed the entire measure, risking the loss of the additional units. At this point our Urban Coalition of Minneapolis, in which many top business leaders actively participate, called upon the council to sustain my veto and to accede to the authority's original request. The council accepted the coalition's urging and we accomplished a social gain that simply would not have been possible without the interest of key businessmen. We may be the only city in the nation in which public housing is possible on an unrestricted citywide basis..."

March 1970

The Urban Coalition and Urban America Merge

The early March merger of the Urban Coalition and Urban America Inc. into the National Urban Coalition "gives us one body better able to define and clarify the highest priority problems of urban areas," said John W. Gardner, chairman of the combined organization. "It will help us in our effort to make the nation aware of those problems and to initiate significant action on them," he added.

Urban America Inc. was formed in January, 1965, as a continuation of the American Planning and Civic Association, and in December of that year merged with the Action Council for Better Cities. Its major programs have been in the areas of information gathering and dissemination, technical assistance in housing, and urban design and planning. Last year it adopted an organizationwide focus on the subject of urban growth policy.

Urban America was one of the groups which stimulated formation of the Urban Coalition, along with the U.S. Conference of Mayors, National League of Cities, and Potomac Institute. Organized in the summer of 1967, while smoke still hung over the streets of Detroit and Newark, the Coalition represented a coming together of national leaders in business, labor, religion, local government, and civil rights both to ask and to offer a greater commitment to improving the conditions of urban life which had bred civil disorder.

The Coalition at first focused its attention on immediate remedies to these conditions (in such areas as employment, housing, and health.) More recently it has broadened its concern to encompass changes in the national attitudes, priorities, and institutions; the systems of urban government and development, by which these conditions are created and perpetuated.

The merger represents a continuation of this broadening process, Gardner said. It means that the Coalition will be more involved in problems of urban development and environment—*in addition to* its root concern with problems of urban life, not *instead of* this concern, he emphasized.

In particular, he said that the National Urban Coalition would continue Urban America's major program in the field of urban growth policy.

The need for such a policy has risen rapidly on the national consciousness, Gardner said. It has become increasingly clear that America must take a positive hand in shaping its future.

William D. Eberle, former chairman of Urban America, is one of the four co-chairmen of the combined organization. He and Whitney M. Young Jr., executive director of the National Urban League, join Andrew Heiskell, chairman of Time Inc., and A. Philip Randolph, who have been co-chairmen of the Urban Coalition. Heiskell has been chairman of the board of Urban America and Young is on the board. These four men also serve on the executive committee, which determines policy for the new organization.

Peter Libassi, executive vice president of the Urban Coalition, retains the same title under the new formation. He is responsible to Gardner for the direction and supervision of the merged staffs of the two organizations.

City magazine, the bi-monthly review of Urban America, will continue publication in expanded form under the direction of its present

editor, Donald Canty, who joined the Urban Coalition as its editorial director on January 1.

Initially, the National Urban Coalition is operating out of two headquarters, the Urban Coalition's at 2100 M Street, N.W. and Urban America's present offices at 1717 Massachusetts Avenue, N.W. Eventually, the entire operation will shift to the M Street location.

The Urban Coalition has 66 professional staff members and Urban America has a staff of 48 professionals. The Urban Coalition's budget for 1970 is $4.7 million. Urban America has a budget of $1.5 million. Libassi emphasized that the combined budget would be less than the $6.2 million total for the two bodies.

Ten of the board members of Urban America have been added to the National Urban Coalition's steering committee, joining the five from the board of Urban America who were members of the Coalition's steering committee prior to the merger.

The steering committee provides the membership of the smaller executive committee, which meets when the steering committee is not in session. The new steering committee will have 74 members. The membership of the new executive committee will now total 19.

New Appointments

The beginning of the 1970s witnessed some key staff additions and changes at the National Urban Coalition. These occurred partly in response to the merger of the Urban Coalition with Urban America Inc., and partly to strengthen the capacity and effectiveness of the organization.

John W. Gardner, chairman of the Coalition, announced the appointment of Donald Canty as editorial director. A 41-year-old native of Oakland, Calif., Canty had been director of the Urban Information Center of Urban America.

At the National Urban Coalition he is in charge of publication services and the reference service for the press on urban affairs. In his previous position, he supervised the production of Urban America publications and was editor of Urban America's bi-monthly magazine, *City*.

Canty was managing editor of *Architectural Forum* before joining Urban America's Washington staff in March, 1967.

An author, he wrote "One Year Later," a first anniversary assessment of response to the report of the Kerner Commission, prepared by Urban America and the Urban Coalition.

He also edited "The New City," a book published by Urban America for the National Committee on Urban Growth Policy. Canty wrote "A Single Society," which was published in November.

In another recent appointment, James O. Gibson has taken a leave of absence from the Potomac Institute to head the Coalition's newly created policy and planning committee staff. The 35-year-old Gibson brings extensive experience to his new position.

He has been with the Potomac Institute, a nonprofit organization concerned with human relations, for more than three years. Prior to that he served as a consultant for the planning session for the White House Conference on Civil Rights. His other positions in the area of urban affairs have included director of the Neighborhood Development Center of the United Planning Organization and program consultant for the Board of Fundamental Education in Indianapolis.

Donald Canty

James O. Gibson

The Coalition's policy and planning committee, established in early January, serves as a central policy unit for all phases of Coalition activities and has final staff responsibility for the development of issues on which the Coalition should act. The committee explores and develops new lines of growth for the Coalition, including such areas as urban growth policy and the setting of national budgetary priorities. It also evaluates all existing activities.

The policy and planning committee comprises Gardner, Peter Libassi and M. Carl Holman. Libassi continues as executive vice president of the Coalition. Holman's new title is vice president for policy and planning and chairman of the Urban Coalition policy committee.

In other key personnel developments, Gardner designated two new vice presidents for the Urban Coalition. Thomas R. Mathews, formerly Coalition communications director, was named vice president for communications, and John A. Buggs was named a vice president for field operations. Buggs had been director of the local coalitions division. In announcing the appointments Gardner stated, "Both Tom Mathews and John Buggs have proven their value to the Coalition and have demonstrated a high degree of skill and talent. We are fortunate to have them as key members of the staff."

Coalition Television Message Premiered

An Urban Coalition public service television message, featuring some 120 well-known people in America of all races and persuasions, was given its world premiere this month on the Ed Sullivan Show.

The message will be shown on network and local television stations throughout the year as the top-priority campaign of the Advertising Council, which coordinates messages in the public interest for the television industry. The Council has called the Coalition public service mes-

sage "the most important campaign in America" as well as the best technically and the most exciting of any it has sponsored.

Scores of concerned Americans from the fields of government, industry, entertainment and the arts, athletics, civil rights, and social action responded to an invitation from Urban Coalition Chairman John W. Gardner to participate in the December filming. All donated their time.

The film, which will be shown in 30-second and one- and two-minute versions, shows the group joined by the cast of the musical "Hair," singing "Let the Sun Shine In," from that show.

Former Supreme Court Justice Arthur Goldberg was there, and opera star Leontyne Price, Fannie Lou Hamer, Chet Huntley, Dan Blocker, Whitney Young, Andrew Heiskell, Ray Charles, Roy Wilkins, David Susskind, Bayard Rustin, John Gardner, Henry Fonda, Jack Dempsey, Ossie Davis, Ali MacGraw, Johnny Carson, Mildred Dunnock, and too many more to list.

It was, as John Gardner said, "a cross section, as varied as the country itself."

The project was part of the Urban Coalition's effort to reverse the forces of divisiveness and anger in America and foster constructive attitudes toward people and the problems of the cities. A complementary print campaign will run simultaneously in magazines and newspapers across the country.

Joshua Logan directed the filming. Mitch Miller was the musical director. Ketchum, MacLeod & Grove is the ad agency. Tom Mathews, Urban Coalition vice president for communications, coordinated the project.

The television message cannot be described in words. Watch it.

Police Reform Conference

How can police departments become more effective, and at the same time more fair, in dealing with crime? This was the two-pronged subject of a February 5-6 conference on police reform held in Washington under the cosponsorship of the National Urban Coalition and the Lawyers Committee for Civil Rights Under Law.

During the two-day meeting, participants discussed both the underlying causes of current inadequacies in police departments and strategies for overcoming them, including ways to administratively restructure police departments, to decentralize some of their activities, and to involve citizens more actively in law enforcement.

"When you talk about police-community relations, what you're really talking about is the hostility between the police and the black community," said Mark Furstenberg, of the International Association of Chiefs of Police. As one means of overcoming this hostility, Furstenberg suggested establishing neighborhood advisory boards and bringing civilians into the stations to work.

Gerald Caplan of the Urban Institute raised the possibility of a civilian chief of police, and Bruce Terris of the Center for Law and Social Policy in Washington, D.C., discussed that city's efforts—and the first real national attempt—at a model police precinct, governed by a recently elected board made up of members of the community and the police.

Sheldon Krantz, executive director of the Committee on Law Enforcement and the Administration of Justice in Massachusetts, placed much of the blame for police problems on mayors, many of whom, he charged, have abdicated their policy-making responsibility in the field of criminal justice. As a result, Krantz said, the police have moved into the vacuum, making decisions about everything from selective enforcement to a city's firearms policy.

"Right now," said Krantz, "if I were going to give a grant as a state agency to a city to do planning in criminal justice, the mayor would turn it over to the police because he doesn't have anybody at the city level thinking about crime control. Somehow we have to remove the police from the center of the universe and have to centralize within the mayor's office responsibility for policy making as it relates to police and crime control services."

Lawyers at the meeting shared their legal experience in tackling police problems. Richard Sobol of the Washington Research Project described a suit brought against the District of Columbia Police Department charging discrimination in the hiring and promotion of minority officers. Henry diSuvero reviewed his efforts to put the Newark Police Department into "receivership" (control by the federal district court) because of the department's failure to act in accordance with either state or constitutional law. From Chicago and California came lawyers involved in defending such political radical clients as SDS and Black Panther leaders. Charles Garry, defense attorney for Black Panther leader Huey Newton, told of the importance of defending dissident members of society, and the difficulty of achieving justice in what he called a "racist judicial system."

A complete report of the meeting will be available at the end of March upon request from the National Urban Coalition's law and government division.

Local Coalition Chairmen Meet

Ten local urban coalition chairmen came to Washington on February 16 to meet with John Gardner and other National Coalition staff members. The session provided an opportunity for free exchange of opinions and ideas on the potential of the coalition concept with special focus on local issues.

At a luncheon meeting members of the National Coalition staff outlined national programs and priorities for the group. Attention was given to possible linkage with local coalition programs.

The potentials within a community as well as the problems faced by local coalitions were the topics of a subsequent session with John Gardner. Not surprisingly, the major problems faced differed from city to city and the discussion ranged from operational difficulties to questions of broad policy.

Based on the apparent success of the meeting, the National Coalition hopes to repeat the format in the future.

Coalition chairmen attending were: R. Stewart Rauch Jr., president, Philadelphia Saving Fund Society, Philadelphia; John Brundage, president, Bankers National Life Insurance Co., Montclair, N.J.; Martin Stone, president, Monogram Industries Inc., Los Angeles; Edward L. Ginzton, chairman of the board, Varian Associates, Palo Alto; Phillip Harder, senior vice president, First National Bank of Minneapolis; Philip Nason, president, First National Bank of St.

Paul; John Milton, president, Peck Paper Specialties Co., St. Paul; Samuel C. Johnson, chairman and president, S. C. Johnson & Sons Inc., Racine, Wisc.; and Max Fisher, chairman of the board, Fisher-New Center Co., Detroit.

Housing Task Force Program

The National Urban Coalition housing task force is completing work on a far-reaching set of proposals designed to help break federal program bottlenecks and stimulate more low- and moderate-income housing.

Task force cochairmen Joseph Keenan, Walter Reuther, and David Rockefeller said the recommended program will call for:

—Restructuring of the "upside-down" housing subsidies system which makes it possible for many localities to ignore the housing needs of lower-income families while entangling localities that want to move with self-defeating red tape.

—Reorganization of lower-income housing programs to enable them to operate regionally or statewide, thus improving both production and process.

—Federal powers to cut through restrictive codes on federally assisted housing and to meet housing needs directly when other levels of government fail to do so.

—Adoption of a massive land banking program to acquire, in advance of need, land for public purposes, including subsidized housing.

The task force, acting on authorization from

Housing task force members the Rev. Channing Phillips; James Rouse

David Rockefeller chairs a recent meeting of housing task force. From left, Rockefeller, chairman of Chase Manhattan Bank; Gerald Rothenberg, professor at MIT; Herbert M. Franklin, Coalition executive associate for housing; Solomon Robinson, Coalition executive associate for open housing; and Walter Reuther, president, United Auto Workers (in foreground)

the executive committee to develop these points, discussed a first draft of the program early this year. The cochairmen are now considering refinement of the draft.

In a parallel effort, with the aid of experts from IBM and the Massachusetts Institute of Technology, a task force subcommittee is developing three computer models to analyze housing cost variables in the case of single projects, a metropolitan area, and the economy at large.

The task force is also reviewing its long-term mission with respect to new towns and other urban growth issues.

New members who have joined the group are John Z. DeLorean, vice president of General Motors Corporation and general manager of the Chevrolet division; Governor Daniel J. Evans of Washington; the Rev. Channing Phillips of Washington, D.C.; Charles M. Tucker of Tucker Realty Company, Pontiac, Mich., and Jerry Wurf, president of the American Federation of State, County, and Municipal Employees, AFL-CIO.

From the Locals

■ The health and welfare task force of the Greater Miami Coalition sponsored a second annual communitywide legislative briefing on February 24. At the meeting, which was open to the public, private and public agencies presented proposals on a variety of issues to members of the Dade County delegation to the state legislature.

■ New president of the Miami Coalition is Edward G. Grafton, an architect and long-time advocate for the development of low-income housing. Outgoing president is John H. Halliburton, a vice president with Eastern Airlines.

■ Judge Ralph Kelly, federal referee in bankruptcy, and former mayor of Chattanooga, Tenn., has agreed to serve as chairman of Chattanooga's education task force. Kelly was a participant in the emergency convocation which created the Urban Coalition in August of 1967.

■ Joseph Wyke, new executive director of the Wilmington (Del.) Coalition, reports that the Coalition sponsored a public meeting in February on the police-community relations issue. Community members made a number of specific suggestions for improving the situation. Following the meeting, members of the Coalition's task force on police-community relations met with the Wilmington public safety commissioner and the chief of police to present the recommendations and explore further steps. Coalition chairman there is Rodney M. Layton.

■ In the same vein, the San Diego Coalition's law and justice task force has compiled a study on the image of the San Diego police as seen by the people of the community. The Coalition is presenting the study to the police department so it can take a look at itself and perhaps make some changes.

■ Insurance executive and former state senator Laurance Eustis Jr. was elected president of New Orleans' Metropolitan Area Committee for 1970, replacing Sam Israel Jr.

■ Walter N. Rothchild Jr., former president of the Abraham & Straus department store chain was named chairman of the New York Urban Coalition. He succeeds Andrew Heiskell, chairman of the board of Time Inc.

■ The New Bedford (Mass.) Urban Coalition, along with Police Captain Harry Kenyon, who is a member of the Coalition's planning committee, has been instrumental in setting up a Rumor Control Service. Talks before Rotary and women's clubs are producing court observers that will help to cool tensions and lay to rest rumors or possibly validate charges of alleged police misconduct against black and Puerto Rican youth.

■ An all-day welfare seminar sponsored by the Newark Urban Coalition was hosted by Prudential Insurance Company on February 17. Each of the 100 business leaders and top local, county, and state welfare officials attending was paired with a hostess—all members of the Newark Welfare Rights Organization. The Nixon Administration welfare reforms and their potential impact plus state and local welfare programs were explained in layman's language.

■ The Urban Coalition in El Paso (Tex.) has been continuing with its monthly open forums on the problems of that community. Early this year the Coalition held one forum entirely in Spanish. About 55 per cent of the city's population is Spanish-speaking.

■ In Los Angeles, the board of education's Mexican-American Education Commission has urged the substitution of parent-teacher consultations for report cards. At the beginning of the year, a parent-teacher consultation was held in lieu of report cards. Forty-five thousand ele-

mentary school children, mostly Mexican-Americans, were involved. About 90 per cent of the parents participated in the project.

The chairman of the Mexican-American Education Commission is the Rev. Vahac Mardirosian, who is a member of the board of directors of the Los Angeles Coalition and of the Coalition's education task force.

■ The New Detroit Committee has voted $1.6 million to its housing component, the Metropolitan Detroit Citizens Development Authority, to accelerate the authority's lower- and middle-income housing program.

The authority, with 905 construction starts and commitments for 423 more, is believed to have generated more lower-income housing last year than any other nonprofit authority or state or city government in America. It hopes to roughly double that record in 1970.

■ A Black Leadership Conference was sponsored by the Greater Kansas City Urban Coalition March 11-13. Representatives of some 25 community organizations were invited to help shape the Coalition's economic development program and to discuss the community's voice in the political structure.

■ The first full-time executive director of the new Sacramento Urban Coalition is Tony Vasquez, who was formerly with the Office of Economic Opportunity. Vasquez has a simply expressed goal for the new coalition: "To get it into action."

■ The Stanford Mid-Peninsula Urban Coalition has embarked on a $1-million fund raising drive to capitalize a housing development corporation, which will act as a parent, or umbrella agency, for smaller nonprofit sponsors of low- and middle-income housing.

Coalition Executive Director Ira Hall says the corporation's goals will be construction of 350 new units the first year, 450 the second, and 700 in the third year.

GI's Tithe Pay for Social Reform

John W. Gardner gets approximately 400 letters a month. Some offer advice. Some complain about urban problems. Some thank him and the Coalition for the job they're trying to do to solve some of these problems. Some say the Coalition is not doing enough.

A letter dated December 18, 1969, from Monterey, Calif., was different from the rest.

"We are a group of servicemen who are deeply concerned about the future of this country," it began. Before it ended, two single-spaced, typewritten pages later, the signers, 10 servicemen from the Defense Language Institute in Monterey, had put forth a proposal for radical social change in the United States.

The servicemen, most of whom had assignments for Vietnam duty, proposed that in the decade of the '70s, individual citizens reallocate $20 to $50 billion of personal income for programs of social reform to supplement whatever the federal government is willing to finance.

They urged that if one-tenth of the nation's population could be persuaded to tithe 10 per cent of their income after taxes for the 10-year period, than $50 billion could be raised.

"In truth, a tithe is not all that much," the young men wrote in their letter to Gardner. "It would not mean that we middle-class Americans would starve or even lead a marginal existence. It would not mean we would have to interrupt our careers or change our life styles. It would only mean that we would have to deny ourselves some of the luxuries of modern America."

To back up their unusual proposal, the 10 enlisted men each submitted checks amounting to 10 per cent of their month's pay, made out to the Urban Coalition. In the letter they emphasized they would continue to send one-tenth of their monthly checks to those organizations that they felt were working toward the goals they would like to see achieved through a program of social reform.

The soldiers envisioned such a program as having the following effects:

1. Money would begin to move into depressed areas. This money could help to build a power base for blacks, browns, and other minority groups.

2. An atmosphere of hope might replace the sense of futility they believe now characterizes the nation's social climate.

3. The cause of social moderation might be revitalized. The 10 enlisted men believe that the country is now without clear leadership or direction. They feel that a decade of personal sacrifice by "liberals and social moderates" might help such elements to regain leadership in the nation.

In closing, the soldiers wrote:

"Some straightforward and aggressive attack on the social ills of America must be taken if we are not to be pronounced incurably sick. We have had more than enough reports, we have read more than enough books to realize how

critical the situation is. Somebody has to do something. Who is it going to be if not us?"

Early this year Gardner visited the soldiers in Monterey to thank them personally for their concern and action. At that time he also agreed to convey their second month's checks to Meharry Medical College, a Negro institution in Nashville, Tenn.

Nine of the 10 men were studying Vietnamese at the language school. All are college graduates and all describe themselves as "social moderates."

"We are acting as individual citizens, not as soldiers," said Richard Olsón, 23, a Dartmouth College graduate from Burlington, Iowa. "We see this as a challenge to the liberal-moderate leadership, an answer to the question, 'What can we do?' "

Gardner spoke with the group for two hours and said he would try to assist them in their objectives.

"It seems to me that when 10 individuals get together and decide they're going to take 10 per cent out of their paycheck for something they believe in, that's something," said Gardner. "That's really something."

An Answer to "What Can We Do?": John W. Gardner with serviceman Richard W. Olson

John W. Gardner addressed a Call For Action press conference at the offices of McGraw-Hill Publications in New York on January 29th in which he announced that Call For Action projects were in operation in eight cities and were developing in 13 more. From left: Mrs. R. Peter Straus, founder of Call For Action; Joseph H. Allen, president of McGraw-Hill Publications and co-chairman of Coalition communications task force; and R. Alexander Grant, executive director of Call For Action.

Recent Publications

Urban Coalition

Miami School Integration: Someone Finally Listened . . . adds a positive note to the national debate over integration. The Coalition study tells of a crisis in education in Florida's Dade County and of the steps taken to resolve it. Although the results are not all in yet, it is agreed that "a major breakthrough in better race relations" was made in Miami education. Copies available from National Urban Coalition, 2100 M Street, N.W., Washington, D.C. 20037.

Richard Hatcher, mayor of Gary, Ind., and Julian Bond, member of the Georgia legislature —both Coalition steering committee members —delivered eloquent addresses at the meeting of the Urban Coalition steering committee on December 10. Because of their significance, the speeches have been reprinted and are available from the Coalition.

It's annual report time again. The Urban Coalition's *Second Annual Report* makes its debut this month. If you want to find out what we're all about, this report will fill you in on our priorities, programs, and achievements in 1969. Copies will be mailed to all those receiving *Report*. Additional single copies available from this office.

Others

John Gardner's speech before the National Press Club in December has been published by the Urban Coalition Action Council. The speech, entitled "The 1970s: Time to Wake Up," challenges us to "make a heroic effort to alter both our mood and our state of inactivity" as we enter the new decade. Available from the Urban Coalition Action Council, 2100 M Street, N.W., Washington, D.C. 20037.

The Urban Institute has put out an invaluable directory of *University Urban Research Centers* which lists all such centers and details the type of research being carried out. It describes each center's purpose, past and present projects, and major fields of emphasis. Copies are $3.50 from the Institute at 2100 M Street, N.W., Washington, D. C. 20037.

Business Week has reprinted its special report on business involvement in social problems from its November 1 issue. The 12-page report, "The War Business Must Win," looks at projects underway and assesses businesses' contribution to urban improvement to date. Fifty cents per copy from Reprint Department, Business Week, 330 West 42nd Street, New York, N.Y. 10036.

What They Are Saying

Richard G. Hatcher, mayor of Gary, Ind., and Coalition steering committee member, to a meeting of the committee:

"Cities urgently need the influence, power and prestige of business, labor, church, and minority leaders on behalf of efforts to improve conditions in the cities. . . . If joint and coordinated action can take place, the end of the urban crisis will be in sight and a true coalition of concerned and responsible Americans will have been born."

Julian Bond, member of the Georgia legislature and of the Coalition steering committee, to a committee meeting:

"The problem for those interested in political change achieved through political action is how to get these people [from all segments of the political spectrum] to act in concert—to vote together, let us say, or to march together, or to demonstrate in unison that they seek common solutions to their common problem, the inhumanity of 20th-century American life. . . ."

David Rockefeller, chairman of the board of Chase Manhattan Corp., Coalition steering committee member and cochairman of its housing task force, to a Buffalo Chamber of Commerce dinner:

"Good corporate citizenship does not mean feeling guilty about making profits. Quite the contrary, abandon that measure and you won't be a corporate citizen for long. Profit is not now and never has been a measure of the businessman's morality; it is a measure of his efficiency, and there is no substitute for it. However, good corporate citizenship does mean taking the longer view of what is and what isn't efficient. . . . The businessman must realistically calculate the social costs and benefits of his actions to keep his business profitable. In short, he must learn to do good if he hopes to do well."

The National Urban Coalition
Report
March 1971

Urban Study Begins

The National Urban Coalition's Commission on the Cities in the '70s, formed to evaluate implementation of the recommendations of the 1968 Kerner Commission, launched its study of the state of the nation's cities with Atlanta, Ga., at the end of February.

Senator Fred R. Harris, Democrat of Oklahoma, who is co-chairman of the commission with Mayor John V. Lindsay of New York, led a delegation of six commissioners on a two-day visit to the Southern city. Other cities in the study will be Newark, Detroit, Los Angeles, El Paso, and Tucson.

In addition to Senator Harris and Mayor Lindsay, the 13 members of the commission are: Mrs. Lucy W. Benson, president, League of Women Voters, Washington, D.C.; Robert V. Hansberger, president, Boise Cascade Corporation, Boise, Ida.; the Rt. Rev. Geno C. Baroni, director, Center for Urban Ethnic Affairs, Washington, D.C.; Jacob Clayman, administrative director, Industrial Union Department, AFL-CIO, Washington, D.C.; Denis Hayes, national coordinator, Environmental Action, Washington, D.C.; Daniel J. Evans, Governor of Washington; Mrs. Aileen C. Hernandez, president, National Organization for Women, and western regional director, National Committee Against Discrimination in Housing, San Francisco; the Rev. Jesse Jackson, national director, Operation Breadbasket, Chicago; Henry Santiestevan, executive director, Southwest Council of La Raza, Phoenix; J. Irwin Miller, chairman, Cummins Engine Company, Columbus, Ind., and Whitney M. Young Jr., executive director, National Urban League, New York.

The commission will reveal its findings and make its recommendations in a written report in May to the Coalition steering committee.

From the Locals

■ Gustav Heningburg, president of the Greater **Newark** Urban Coalition, has entered a dispute between the Newark Teachers Union and the Board of Education as a "moderator."

The coalition arranged four special telephone lines to receive information and keep the public informed of the latest developments in the teachers' strike. Phones are manned 24 hours a day by staff members and volunteers and a strike report is broadcast over a local radio station at least once a day.

■ As a result of a probe by the **Sacramento** Metropolitan Urban Coalition that revealed discriminatory hiring practices in the canneries in the area, and subsequent urging by the coalition, the California Fair Employment Practice Commission says it now finds justification for conducting a formal investigation of its own.

The commission had earlier received complaints but delayed hearings until the coalition findings were made known.

■ The **San Diego** Urban Coalition has been instrumental in developing a proposal for a community relations board through which citizens' input can be channeled into the formulation of police programs.

The board will be composed of model neighborhood residents, students, policemen, and professionals in the areas of correction, probation, and other law and justice related areas.

The body is expected to supply the names of prospective nominees for membership on civil service boards related to the hiring and promotion of police officers in the model neighborhood, review existing police facilities and recommend new ones, and also recommend the transfer or retention of police officers operating in the model neighborhood.

■ The **Philadelphia** Urban Coalition has received two federal grants, totaling almost $650,000, for the recruitment and training of 180 minority workers to be placed in the five construction trades.

The goal of the coalition is to train men as sheet metal workers, steamfitters, electricians, plumbers, and elevator constructors. Under the contracts, the coalition will recruit, evaluate, counsel, and provide additional follow-up services for trainees with full or partial journeyman construction trade experience.

■ The Urban Coalition of Greater **Flint** (Mich.) will form at least five task forces to study race problems in Flint. The task forces will assess the needs of Flint, study what is being done, and make their own recommendations.

■ The NUC affiliate in **New Orleans,** the Metropolitan Area Committee, has been investigating, along with other interested groups, ways to ease low-income housing problems in the city.

At the end of 1970, MAC recommended to Mayor Moon Landrieu that a cooperative effort to develop a "new and progressive overall housing strategy for New Orleans" be launched.

Early last month the Mayor announced the appointment of a committee to achieve that goal. Within 90 to 120 days the committee is to develop a basic approach to solving New Orleans' housing problems. Implementation of the recommendations is expected to be a major MAC project in 1971.

Meeting on Urban Problems

A three-day conference entitled "Our Governments in Trouble or Transition: Closing the Accountability Gap," held at Airlie House in Warrenton, Va., drew more than 100 experts to discuss solutions to urban problems.

Sponsored by the Coalition and financed by a Ford Foundation grant, the conference was addressed by Governor Nelson A. Rockefeller of New York, George Romney, Secretary of Housing and Urban Development, and Richard Gordon Hatcher, Mayor of Gary, Ind.

Follow-up meetings are scheduled for Illinois, Maryland, Massachusetts, North Carolina, Texas, and Washington.

Alternative Budget Released

"Counterbudget," the alternative national budget study directed by Robert Benson of the Coalition, was released to the public on February 21.

The report will be published on April 30 in hard-cover and paperback by Praeger Publishers. Advance copies of the paperback edition will be available by the end of March.

The study outlines proposed shifts in federal revenues and spending from 1971 to 1976. It represents the most comprehensive effort undertaken by a private organization to study competing needs set against limited available funds.

Sol M. Linowitz, chairman of the Coalition, emphasized that NUC would seek to use "Counterbudget" as a vehicle to persuade a broad segment of the American public to become involved in the shaping of national priorities.

Steering Committee Expanded

The steering committee has reached a membership of 73 with the addition of four Mexican-Americans. The recent additions are Tony Lovato, assistant director of the Latin-American Research and Service Agency in Denver; Gumecindo Salas, coordinator for the Spanish-speaking intensive teacher-training program for the Detroit Board of Education; Marta Schlatter, a member of the faculty of the School of Social Work at San Diego State College; and Lorenzo Patino, president of Sacramento Concilio Inc. Patino, 23 this month, becomes the youngest member of the steering committee.

Housing Center Spins Off

At a luncheon early last month attended by HUD Secretary George Romney, Coalition President Jack H. Vaughn, announced that the Coalition's Nonprofit Housing Center had become an independent affiliate.

"The Center has become an effective and successful organization on a national basis and no longer needs direct, day-to-day involvement from The National Urban Coalition," Vaughn said. "Therefore it will remain a closely affiliated partner of the Coalition."

The Center is the nation's largest private organization providing technical assistance and seed money loans for community-based nonprofit sponsors of low- and moderate-income housing. Grants and loans to the newly incorporated affiliate total $1.15 million.

Workshop on CATV Held

The Coalition, in conjunction with Howard University, the Joint Center for Political Studies, and BEST (Black Efforts for Soul in Television) sponsored a workshop on urban cable television (CATV) for minority officials in Washington, D.C., last month.

The workshop, supported by a grant from the Ford Foundation, sought to clarify five important aspects of cable TV: legislation, financing, equipment, programming, and community development. Principal speeches were delivered by Dean Burch, chairman of the Federal Communications Commission, and Clay Whitehead, director of the Office of Telecommunications Policy at the White House. March hearings are planned by the FCC on federal regulation of CATV.

Bilingual Program Launched

The Coalition is participating with the Department of Health, Education and Welfare and the Hearst Foundation in a nationwide bilingual, bicultural program for children from Spanish-speaking families. Four centers to aid first- through third-graders will be set up—in the Midwest, Northeast, Southwest, and West.

The Coalition has $4 million in grants from HEW and the Hearst Foundation for the pilot project. The program, patterned after one established in Dade County, Fla., for Cuban immigrants, is designed to help youngsters adjust to the mainstream of American life.

Speaking Out

Coalition President Vaughn, before the 17th annual South Pacific Regional Conference of the Child Welfare League of America, in San Francisco:

"If in 1971 it is good politics to deny the real needs of poor people, then we must be able to say why it is right that one man in our country should expect to die at age 36 and another man should expect to see and enjoy his grandchildren.

"I happen to feel very strongly that it is terribly wrong, and that is why the Coalition is now deeply interested and involved in the complex problems of getting adequate health care to those in need in this country, and especially to the children—those millions of children who are neither seen nor heard."

Forming Urban Coalitions

ON AUGUST 24, 1967, in Washington, D. C., the Emergency Convocation of The Urban Coalition issued an urgent appeal to all concerned Americans to join in a national effort to fashion a new political, social, economic, and moral climate that will make possible the breaking of the vicious cycle of the ghetto. Action at the community level must now follow.

Community leadership is now called upon to use its commitment and ingenuity to muster the public support and involvement needed to bring about a major reordering of both national and local priorities in the face of the unresolved urban emergency.

At the conclusion of the August Emergency Convocation, The Urban Coalition adopted a comprehensive Statement of Principles, Goals and Commitments. It is this document which charts the course for our mutual efforts. It states:

> "We believe the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face. The crisis requires a new dimension of effort in both the public and private sectors, working together to provide jobs, housing, education, and the other needs of our cities.
>
> "We believe the Congress must move without delay on urban programs. The country can wait no longer for measures that have too long been denied the people of the cities and the nation as a whole — additional civil rights legislation, adequately funded model cities, anti-poverty, housing, education, and job-training programs, and a host of others.
>
> "We believe the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job-training, and hiring, and all that is necessary to the full enjoyment of the free enterprise system — and also to its survival . . .
>
> "This convocation calls upon local government, business, labor, religions, and civil rights groups to create counterpart local coalitions where they do not exist to support and supplement this declaration of principles."

THE NATIONAL STEERING COMMITTEE at the present time consists of thirty-six members. They are broadly representative of business, labor, local government, religion, civil rights, communications, and education.

The Coalition identified six specific areas of urban affairs calling for action. Emergency Task Forces have been created reflecting these problem areas:

Public Service Employment and Urban Legislation
Private Employment and Entrepreneurship
Educational Disparities
Housing, Reconstruction and Investment
Equal Housing Opportunities
Communications and Public Support

There must now be complementary action at the local community level.

What is a Coalition?

A "coalition" is an alliance, association or combination of persons, groups, organizations or constituencies drawn together for one or more specific purposes. A coalition is not necessarily a formally chartered, regulated and structured organization. Typically, coalitions emerge in time of crisis or emergency and endure for the period of that emergency. Development of a coalition which will include all civic interests is, therefore, most appropriate in the face of America's present urban crisis.

Local Circumstances

Local circumstances and the status of existing local organizations, of course, vary greatly from community to community. The Urban Coalition recognizes that the nature of the organized response to its call for local counterpart action will also vary from community to community. A local coalition can encompass a single city or an entire metropolitan area in which it is located, whichever is feasible and appropriate. The organization of an urban coalition may take several forms. It may involve individuals or organizations. It may embrace a large membership or be an organization centered on leadership.

New Coalitions

In those local situations where citizens determine that it is appropriate to form an essentially *new* coalition of community leadership, the immediate need is to assemble an organizing or steering committee. As is the case with the National Steering Committee, local steering committees will typically be made up of representatives from the community's business, organized labor, religious, civil rights, educational, local government and communications leadership. In order to insure that the local steering committee is broadly representative of the life of the community, it is essential that low-income neighborhoods of the community also be represented. It is the local steering committee which will serve as the initial link with the national Coalition.

Coordination of Existing Groups

In other communities, it may be that coalitions broadly representative of the life of the community have previously been formed around such single issues as jobs, schools, or housing. A local coalition in these communities may, under these circumstances, be an association of such existing single-purpose groups which should jointly establish a coordinating committee to serve as a local coalition with a *multi-purpose, comprehensive* concern. Through this mechanism, mutual agreement on goals, policy positions, and local needs could be developed. Equally important, a joint coordinating (steering) committee could also facilitate a complementary network of program efforts carried out through its member organizations. The full weight of community leadership could, thereby, be brought to bear on local problems without causing any existing individual organizations to surrender their identities or their program control. The coordinating (steering) committee would serve as the initial local link with the national Coalition.

Incorporation Not Necessary

In either kind of community situation, formal incorporation of a new local coalition or of an association of existing single-purpose groups is not necessary, although in some cases it may be desirable. The national Urban Coalition has chosen not to incorporate. In the case of unincorporated local coalitions, funds for technical support may be channeled through a separate fiscal agent, such as a cooperating organization.

Endorsement of Principles

The steering or coordinating committee in either kind of community situation should consider developing a draft Statement of Principles, Goals and Commitments, which (a) endorses the national Statement and (b) broadens and supplements it to include major local concerns. This approach will chart the course for local efforts in cooperation with the national Urban Coalition. Such a local statement, when formalized, will also serve to inform local citizens and focus their discussion and action.

Operating Structure

With respect to newly-formed local coalitions, it is anticipated that the local structure will include not only a steering committee but task forces to deal with urban legislation at both local and national levels, expansion of private employment, housing, education, and public support. Task forces in these problem areas would correspond with and could relate to the task forces working at the national level. Others can be created as needed.

In the case of an association of existing single-purpose organizations, the coordinating (steering) committee could look to its respective member organizations to serve the task force roles and treat those problem areas closest to their respective program concerns and organizational focus. This is in lieu of appointing new task forces as is recommended for an entirely new coalition. Each participating single-purpose organization could relate functionally to the national task force working in its subject area of concern e.g. a local community-wide employment committee could work cooperatively with the national Task Force on Private Employment and Entrepreneurship.

Assistance for Local Coalitions

It is strongly recommended that where a new coalition or a new association of existing single-purpose organizations is being formed, the local steering or coordinating committee arrange for *at least one* staff person to work full time for the new coalition venture. It is likely that this staff person could be borrowed from the staff of one of the participating groups of the coalition. While the National Steering Committee is not able to offer any financial assistance to local coalitions, it will provide other assistance in preparing and convening local coalition activities. The National Steering Committee will also provide speakers, where needed and requested, in any or all of the subject areas under consideration by The Urban Coalition Task Forces mentioned earlier.

The national task forces and the national coordinating staff are prepared to share with cooperating community leadership the results derived from their continuing surveys of available resources and evaluation of current programs dealing with urban problems. For example, local coalitions can be kept advised of the status, merits and relevance of pending national legislation pertaining to critical urban problems. Up to date information on the experience gained with new recruiting, training and employment activities or low-income housing development in the private sector can also be exchanged through the national task forces.

Affiliation with The Urban Coalition

The expectation of the National Steering Committee is that local coalitions will, when ready, seek affiliation with the national Urban Coalition. To be eligible for affiliation, a local group:

One: Must endorse The Urban Coalition's Statement of Principles, Goals and Commitments.

In the absence of common agreement between the local coalition and The Urban Coalition on the basic need for action on urban problems and the broad character of the action needed, affiliation would have little meaning. The Statement constitutes the agreement. Insofar as it is the product of the Emergency Convocation of The Urban Coalition and, therefore, received the endorsement of over twelve hundred leaders from across the nation, it should not be difficult for like-minded local leaders to support it.

Two: Must be a multi-purpose, comprehensively committed group.

By way of example, while a broad-based local organization devoted to promoting equal housing opportunity may, in effect, be a local leadership coalition, because of its single purpose it would not meet this standard. The purpose of the standard is to encourage local action on *all* major urban problems and a single-purpose organization such as a fair housing coalition is not organized or prepared to accomplish that end.

Three: Must be broadly representative of the life of the local community.

The ultimate significance and effectiveness of a local coalition's efforts will be dependent on the extent to which all sectors of the community participate in and support the local coalition. A coalition comprised exclusively of businessmen and labor leaders would not be in a position to accomplish nearly as much as a coalition involving, *in addition,* leaders from religion, local government, civil rights, education, communications and disadvantaged neighborhoods. This standard is a means of encouraging the degree of community involvement essential to major local accomplishments.

The Council of Urban Coalitions

The Urban Coalition is interested in continuing participation in its affairs by local communities and not just endorsement of its goals and commitments. The formation of a *Council of Urban Coalitions* is anticipated shortly after the beginning of 1968. Each affiliated local coalition should plan to designate two representatives to serve on this national Council. At its first meeting, the Council will elect two representatives to serve on the National Steering Committee of The Urban Coalition. Additional representatives may be added as the Council expands. In this manner, affiliated local coalitions will participate in and help shape the programs of The Urban Coalition. The Council will serve as a community-based national body working with the National Steering Committee.

Working Approaches

With any new effort, such as that being undertaken by The Urban Coalition, it may be expected that national organizational structure and methods will continue to undergo change. For this reason, The Urban Coalition is understandably following a flexible course of action. Among the working approaches currently being taken are the following:

1. *A supporting rather than operational emphasis:* The Urban Coalition is supporting efforts to solve ongoing problems at both the local and national levels.

It will stimulate new undertakings, for example, in the crucial area of expanding private employment of the hard-core unemployed, giving emphasis to effective training approaches, recruitment practices and facilitating assimilation of new employees into regular work forces. It is working cooperatively with such major new efforts as the $1 billion investment allocation of the Life Insurance Association for center city development.

The Urban Coalition's posture is that of a catalytic agent stimulating public discussion, communicating the need for national and local action, and supporting appropriate ongoing efforts. It is unlikely that it will, itself, initiate and administer programs on a continuing basis as this would tend to detract from the central and critical catalytic role. Given the multitude of existing national and local, public and private organizations capable of program implementation, that role, in most instances, is best left to them.

2. *Stimulating interest in successful examples of action.* Through its task forces, The Urban Coalition is attempting to identify, work with, and publicize successful efforts to expand employment, extend lower income housing and equal housing opportunities, new educational programs and the like. The task forces hope to serve as catalysts and convenors. They will further serve a clearinghouse function with respect to news of local action.

3. *Coordinating a national legislative campaign.* The Urban Coalition has called upon Congress for action across a broad front to meet the urban crisis. Interpreting and emphasizing the need for national action is as much a local obligation as it is a commitment of the National Steering Committee. Discussions with members

of Congress is as much a hometown affair as are appearances before Congressional committees.

4. *Working with the mass media.* Through its Task Force on Communications and Public Support and through counterpart committees at the local level, it is hoped that the mass media can be encouraged to focus greater attention on the needs of cities. Broad public understanding of the need for greater resources, of the complexities of the problems involved and the need for urgent action are essential, if the goals of The Urban Coalition are to be achieved.

Principles
Goals
Commitments

Statement adopted at the Emergency Convocation
August 24, 1967, Washington, D. C.

We are experiencing our third summer of widespread civil disorder. In 1965, it was Harlem, and the disaster of Watts. In 1966, it was the Hough area of Cleveland, Omaha, Atlanta, Dayton, San Francisco and 24 other cities. This summer, Newark and Detroit were only the most tragic of 80 explosions of violence in the streets.

Confronted by these catastrophic events, we, as representatives of business, labor, religion, civil rights, and local government have joined in this convocation to create a sense of national urgency on the need for positive action for all the people of our cities.

We are united in the following convictions:

We believe the tangible effects of the urban riots in terms of death, injury, and property damage, horrifying though they are, are less to be feared than the intangible damage to men's minds.

We believe it is the government's duty to maintain law and order.

We believe that our thoughts and actions should be directed to the deep-rooted and historic problems of the cities.

We believe that we, as a nation, must clearly and positively demonstrate our belief that justice, social progress, and equality of opportunity are rights of every citizen.

We believe the American people and the Congress must reorder national priorities, with a commitment of resources equal to the magnitude of the problems we face. The crisis requires a new dimension of effort in both the public and private sectors, working together to provide jobs, housing, education, and the other needs of our cities.

We believe the Congress must move without delay on urban programs. The country can wait no longer for measures that have too long been denied the people of the

cities and the nation as a whole — additional civil rights legislation, adequately funded model cities, anti-poverty, housing, education, and job-training programs, and a host of others.

We believe the private sector of America must directly and vigorously involve itself in the crisis of the cities by a commitment to investment, job-training, and hiring, and all that is necessary to the full enjoyment of the free enterprise system — and also to its survival.

We believe the sickness of the cities, including civic disorder within them, is the responsibility of the whole of America. Therefore, it is the responsibility of every American to join in the creation of a new political, social, economic, and moral climate that will make possible the breaking of the vicious cycle of the ghetto. Efforts must be made to insure the broadest possible opportunity for all citizens and groups, including those in the ghetto, to participate fully in shaping and directing the society of which they are a part.

This convocation calls upon the nation to end once and for all the shame of poverty amid general affluence. Government and business must accept responsibility to provide all Americans with opportunity to earn an adequate income. Private industry must greatly accelerate its efforts to recruit, train, and hire the hard-core unemployed. When the private sector is unable to provide employment to those who are both able and willing to work, then in a free society the government must of necessity assume the responsibility and act as the employer of last resort or must assure adequate income levels for those who are unable to work.

Emergency Work Program

This convocation calls upon the federal government to develop an emergency work program to provide jobs and new training opportunities for the unemployed and underemployed consistent with the following principles:

—The federal government must enlist the cooperation of government at all levels and of private industry to assure that meaningful, productive work is available to everyone willing and able to work.

—To create socially useful jobs, the emergency work program should concentrate on the huge backlog of employment needs in parks, streets, slums, countryside, schools, colleges, libraries, and hospitals. To this end an emergency work program should be initiated and should have as its first goal putting at least one million of the presently unemployed into productive work at the earliest possible moment.

—The program must provide meaningful jobs — not dead-end, make work projects — so that the employment experience gained adds to the capabilities and broadens the opportunities of the employees to become productive members of the permanent work force of our nation.

—Basic education, training, and counseling must be an integral part of the program to assure extended opportunities for upward job mobility and to improve employee productivity. Funds for training, education, and counseling should be made available to private industry as well as to public and private nonprofit agencies.

—Funds for employment should be made available to local and state governments, nonprofit institutions, and

federal agencies able to demonstrate their ability to use labor productively without reducing existing levels of employment or undercutting existing labor standards or wages which prevail for comparable work or services in the area but are not less than the federal minimum wage.

—Such a program should seek to qualify new employees to become part of the regular work force and that normal performance standards are met.

—The operation of the program should be keyed to specific, localized unemployment problems and focused initially on those areas where the need is most apparent.

Private Employment, Assistance and Investment

All representatives of the private sector in this Urban Coalition decisively commit themselves to assist the deprived among us to achieve full participation in the economy as self-supporting citizens. We pledge full-scale private endeavor through creative job-training and employment, managerial assistance, and basic investment in all phases of urban development.

The alternatives to a massive and concerted drive by the private sector are clear. They include the burden of wasted human and physical potential, the deterioration of the healthy environment basic to the successful operation of any business, and the dangers of permanent alienation from our society of millions of citizens.

We propose to initiate an all-out attack on the unemployment problem through the following steps:

—In cooperation with government, to move systematically and directly into the ghettos and barrios to seek out the unemployed and underemployed and enlist them in basic and positive private training and employment programs. We will re-evaluate our current testing procedures and employment standards so as to modify or eliminate those practices and requirements that unnecessarily bar

BEST COPY AVAILABLE

many persons from gainful employment by business or access to union membership.

—To create a closer relationship between private employers and public training and emergency employment programs to widen career opportunities for our disadvantaged citizens. To this end, we will proceed immediately to promote "Earn and Learn Centers" in depressed urban areas that might well be the joint venture of business, labor and local government.

—To develop new training and related programs to facilitate the early entry of under-qualified persons into industrial and commercial employment.

—To develop large-scale programs to motivate the young to continue their education. Working closely with educators, we will redouble our efforts to provide part-time employment, training, and other incentives for young men and women. We also pledge our active support to making quality education readily accessible to deprived as well as advantaged young people.

—To expand on-the-job training programs to enhance the career advancement prospects of all employees, with particular emphasis on those who now must work at the lowest level of job classifications because of educational and skill deficiencies.

We pledge to mobilize the managerial resources and experience of the private sector in every way possible. We will expand part-time and full-time assistance to small business development. We will strive to help residents of these areas both to raise their level of managerial know-how and to obtain private and public investment funds for development. We will work more closely with public agencies to assist in the management of public projects. We will encourage more leaders in the private sector to get directly and personally involved in urban problems so that they may gain a deeper understanding of these problems and be of greater assistance.

We pledge our best efforts to develop means by which major private investment may be attracted to the renovation of deteriorating neighborhoods in our cities. We will explore and encourage governmental incentives to expedite private investment. We will develop new methods of combining investment and managerial assistance so that the residents may achieve a leadership position in the development of their areas.

Housing, Reconstruction, and Education

This convocation calls upon the nation to take bold and immediate action to fulfill the national need to provide "a decent home and a suitable living environment for every American family" with guarantees of equal access to all housing, new and existing. The Urban Coalition shall, as its next order of business, address itself to the development of a broad program of urban reconstruction and advocacy of appropriate public and private action to move toward these objectives, including the goal of rehabilitation and construction of at least a million housing units for lower-income families annually.

This convocation calls upon the nation to create educational programs that will equip all young Americans for full and productive participation in our society to the full potential of their abilities. This will require concentrated compensatory programs to equalize opportunities for achievement. Early childhood education must be made universal. Work and study programs must be greatly expanded to enlist those young people who now drop out of school. Financial barriers that now deny to youngsters from low-income families the opportunity for higher education must be eliminated. Current programs must be increased sufficiently to wipe out adult illiteracy within five years.

This convocation calls upon local government, business, labor, religions, and civil rights groups to create counterpart local coalitions where they do not exist to support and supplement this declaration of principles.

This convocation calls upon all Americans to apply the same determination to these programs that they have to past emergencies. We are confident that, given this commitment, our society has the ingenuity to allocate its resources and devise the techniques necessary to rebuild cities and still meet our other national obligations without impairing our financial integrity. Out of past emergencies, we have drawn strength and progress. Out of the present urban crisis we can build cities that are places, not of disorder and despair, but of hope and opportunity. The task we set for ourselves will not be easy, but the needs are massive and urgent, and the hour is late. We pledge ourselves to this goal for as long as it takes to accomplish it. We ask the help of the Congress and the Nation.

When The Southern Negro Moves North

By ROBERT COLES

SINCE this century began, and particularly in the last three decades, millions of Negroes have abandoned the rural South to go North. Voteless, only recently declared "free," incredibly poor and heavily illiterate, they were nevertheless hopeful enough to risk a long trip into strange and not always friendly territory.

Had Northern cities received hundreds of thousands of immigrants from Europe in the past few decades no doubt all sorts of emergency provisions would have been made to help settle the newcomers, make them welcome, provide food, clothing and shelter for them, and enable them to find work. Southern Negroes obtained no such courtesy, and what recognition they did get was calculated to remind them that white Americans may fight among themselves but in the clutch know how to stand together as a race. Called "in-migrants" rather than immigrants, the newcomers were quickly made to know their "place."

Still, for a few years it had all seemed clear-cut: America was divided into the oppressive South and the promising North, a "land of freedom," or a place "up there where it's better," as I've heard rural Negroes from the Mississippi Delta put it. When the civil-rights struggle of the early nineteen-sixties came along, that seemed to offer even more hope. Whites flocked South to help change things faster, and in 1964 I heard this from a Negro in Alabama:

"I wish I had left here a long time ago. When

ROBERT COLES, a child psychiatrist, is the author of "Children of Crisis," based on many years of research among families in the South. He is now at Harvard.

"A lot of people standing around, no place to sit or take a walk, nothing but the sidewalk to rest on and the police to hide from. . . . A lot around my street are like me—and there isn't one who can get a good job. Mostly I just meets my buddies and we try to get out of the way of our women."

Boston's South End.

In the Carrolls' Boston neighborhood.

"It's different up here, different than down South, because there's so little room. There's the rats to keep away and they bite, and it's a picnic the mosquitoes have. With me it's just trying to keep us all alive. I'm locked in here sunrise to sunset, except I never see the sun, and I've forgot what it looks like. I never see a tree or hear a chicken or a bird. The other day I woke up dreaming there were some chickens in the house, and of course it was the old place, down there."

On a Southern cotton farm.

my brother went up to Chicago I told him he was a fool for going there, because it's the same all over, a little better here or there, but not really, only the frills. Now, I figure I was wrong. These whites keep coming down here, and I guess they must like us; and if they do, then it must be better up there, where they live all the time."

He never did leave Alabama; and now he has little reason to envy his brother up North, though he lets you know how mean and hard life is for him. Recently he told me: "We went up there, a lot of us colored people like my brother and his family, and it was the way I first said it was, it was a hoax if you ask me. It's as if you've been cheated—you know, led down the wrong road.

"Now my brother says *I'm* the one who is lucky. I live poorer down here, but up there they don't live at all. They have more money than we can get down here, but they're packed tight into the buildings and they can't do anything, not even dream of going North, the way I do when it gets rough. It's bad, real bad; and they hate it."

The Northern sanctuary has turned out to be little more than a different kind of hell

APPARENTLY they do—hate and resent the Northern sanctuary that has turned out to be little more than a new and different kind of hell. In June of this year, as riots broke out yet again in one Northern city after another, an interesting and carefully done report from Brandeis University's new Center for the Study of Violence offered evidence that "a high proportion of Southern-born Negroes living in the ghetto increases the possibility that a city will have a riot"—particularly when they feel themselves aggrieved, insulted, put upon and in general reminded of the "old days." My own work with individual families in a Boston ghetto confirms that finding almost daily—to the point that at times I have wondered not why we have riots regularly each summer but how so much anger and frustration manages to stay under reasonable control most of the time, week after week.

One family I have come to know rather well after three years of visiting can be called the Carrolls. They now live in the very center of a Boston slum, in a building that has been condemned again and again for its rats, its faulty plumbing and heating systems, its poorly lighted halls, its garbage-strewn yard that takes up the slack when two—exactly two!—cans become filled with the refuse of 10 families. The Carrolls have lived in that building for five years now, ever since they came North from Marengo County, Ala.

Why did they leave? What has happened to them since they came to Boston? Why did two young men in the family take part in a serious riot that took place in Boston early this summer? I ask these questions not to "answer" them with all sorts of sociological and psychiatric "explanations" and "conclusions," eagerly awaited by a public that wants things simplified and generalized. The obvious "answers" are that the Carrolls left to improve their lot; they eventually became disenchanted in Boston because they remained poor, still put down and looked down upon by the white man; and they rioted because they are sick and tired of losing, of wanting, of traveling, of searching, or being pushed aside and scorned.

All that is true, yet the whole truth is more complicated and I fear both more ambiguous and more horrible.

MRS. CARROLL, for instance, never wanted to leave Alabama. She is 40, the mother of eight children, two of them in their early 20's: "I was born down there, and I wanted to die down there. I never could picture us going up to a place like Chicago, or here in Boston. There would be the people you knew and grew up with, and suddenly they'd be gone, and you'd hear they were up in Detroit making automobiles or something; but my daddy had a good deal going with 'the man.' He would work in the field, like everyone else, and he could pick his cotton faster than anyone in the county, people would say; but he used to take care of the missus, too. He did errands for her, and if they wanted someone around, real fancy-like, to open the door and take their coats and things like that—well, Daddy would do it. When I was a little girl I heard someone say to my mother that my daddy was a 'house-nigger' who was sent to spy out there in the field, and that was why he was there, to make sure the others did their work.

"Well, I know that wasn't so. Poor Daddy didn't get a cent more for

Southern Negro *(Cont.)*

(*From Page 27*)

going up there to the House, just some of the food they had left over, and it wasn't fixed the way we like it, I can remember that. But when they started getting the machines in, and telling the colored people, one after the other, that they'd have to be getting off the land, then we figured we had it pretty good, because 'the man' came over and said we could stay—'until forever and a day' were his words.

"And that's how I thought it would be. And a lot of other colored people down there felt like me, too. We knew we had it real bad down there, but to tell the truth we didn't want to leave, if we could help it. A lot of us had relations up there, and they'd write and tell us it was different—oh, yes, we sure knew that—because you were in the city, and there wasn't the sheriff to beat you up if you waited a second before obeying a white man. And you could get more relief money, and the big city hospitals took you in if you were real bad sick, whether you had a dollar or not.

"But we also heard it was bad up there, worse even. They'd write and say they were glad to be out of the South and up there, but they wished they could get out of where they were, too, and come home. 'Now I ask you,' my mother would say, 'where will they go next? Move to the North, maybe, where there's ice and snow all year long, and where no one hates the poor colored man because there's no one around, period?'

"THAT'S the way I thought, just the way she did—until I got married. I was 15, and I started worrying about feeding my babies. And my husband Fred, he started looking to the future and wondering what we'd be doing 10 years ahead, and if we could even stay alive that long. But we thought we'd try, where we were, like all the people that had before us, right in Marengo County, down there—and we did. We lived through 10 years and more even, and we lost three children that might have lived, but the others did stay alive with us—and you can see I have eight—even if it's hard to know what tomorrow will bring. (Usually, nothing is what it brings!)

"Well, it was five years ago we left, and I'll tell you how it came to be. My sister's husband, he was in the war—the Korean war it was—and hurt there so bad he was on full retirement when he came home. He'd have to go into the V.A. hospital all the time for treatments, and then they would send him up to Washington for a doctor to look him over and maybe operate on him. And his brother was in Boston or nearby I think, and he went to visit him after the doctor said he could go, because there wasn't any more a hospital could do. And when he came home he said Boston wasn't so bad, and we should go see. He said he thought they're better to colored people in Boston than in New York or Chicago, and there were less of us there, and you get polite treatment most of the time.

"My 7-year-old boy, he's all mixed up: One minute he says he wants to be a policeman, and shoot down all the niggers who cause trouble. The next he says he's going to kill a white man one day."

"We didn't know whether to believe him or not. I wanted to stay and my husband said, no, let's go. He was working on the land alongside my Daddy, and he was helping clean the House, and 'the bossman,' he said my husband could take over when my Daddy would pass on—so no need to worry about work. That was O.K. by me, but not for Fred. He said he wanted to try it up there, and we could go back if we didn't like it.

"So, we agreed to go on trial—for a vacation, I kept telling myself. I'd say it out loud, to make Fred hear, and not forget. We told Daddy we'd be gone a while and he said good-by like it was forever. I said it wasn't—we'd be back. He said, no, we wouldn't. Fred said we'd see. We told them up at the House that we had sick relations to see up there, and they needed our help. I don't know

"THANK YOU— CALL AGAIN"

That's a Merrill Lynch Account Executive talking as you leave his desk.

Maybe you're a customer and you've just placed an order, or maybe you've just finished going over your holdings with him one by one and discussed various buy and sell suggestions that might improve your portfolio performance.

But, maybe you're not a customer at all—in fact, maybe you never bought a single share of stock.

You just came in to ask a few general questions about stocks and bonds, find out if you should begin an investment program of your own, discuss specific possibilities with someone trained and qualified to help start you on your way with your best interests at heart.

In either event you came to the right place.

Because Merrill Lynch Account Executives—all three thousand or more of them—are expected to provide truly personal service—service geared to your needs and requirements—never your pocketbook.

High-sounding?

If you have any interest in investing yourself, may we invite you to put us to the test?

Just come in any time during a working day and ask to speak with an Account Executive.

Or, if that's not convenient, we'll be happy to arrange a personal appointment after hours or over the weekend—at your convenience.

There isn't any charge; you needn't feel obligated in any way to open an account or do a dime's worth of business.

Just remember that whenever you do come in and whatever you want, when you leave you can always count on that "thank you—call again."

if they believed us or not. They said we could come back if we wanted, and they wouldn't burn our house down for one year—but after that we'd have to stay away. I said we'd be back in a month or so; but I was wrong, as you can see."

She has never returned, though she has sent her children back on various occasions to visit their grandparents and other relatives in Alabama. The children are put on buses, with food and token presents and waved off. I saw a boy and girl go a year ago, right after school was out. For all the world they might have been going back to Ireland or Germany or Italy—to see the homeland their parents had left, yet still kept in mind. "You tell them we may come back yet," I heard Mrs. Carroll say as the bus left. She spoke those words in a quiet voice—as if she were uncertain enough not to shout, but definitely moved to declare something, perhaps only an impossible yearning.

They will stay in Boston, the Carrolls and others like them who have steadily come into Northern cities in recent years. Maybe it is presumptuous of me to be so sure, yet *they* are. "What can we do, go back? I tell my husband I'd *like* to, but we know it's worse there, even than here. Here my husband has to stay away and hide so we can get the welfare check; but down in Alabama they don't give a lot of us a cent, and if you speak back to them, you're a poor insurance risk, I'll tell you."

MRS. CARROLL spends her days taking care of her children. She has friends at all. Her husband comes and goes. He is not unfaithful to her, but only if he is gone can they qualify for relief. From what I can gather the social worker is particularly sensitive and flexible: "She knows he's around—I can tell—but she don't ask too many questions. She's better than the last one, who kept at me all the time, asking this and asking that, and wanting to know about everything, until I told her she was worse than my 4-year-old girl, with her questions. I said, 'Don't you ever get tired of asking?' And she said I was being rude and ungrateful, and I said she should go bother someone else with her asking, and I didn't care if we starved to death. So she called me a lot of names, and I told her I was going down to the Mayor's office and report her. And believe it or not, she got switched. I didn't do anything. All I knew was that a new worker came. I guess I scared the old one, or maybe she just got worried, finally. That's what she needed, to worry herself and not make us worry."

Mr. Carroll cannot keep as busy as his wife. She has eight children to tend. He cannot find work. He is essentially illiterate. He is no loafer, though; he tries. When he first came to Boston he immediately called on relatives, his wife's brother-in-law and a cousin of his own. He came North first, found a three-room apartment near his cousin, put just about everything he had into the first month's rent ($60) and sent for his wife and children, who came by bus. He borrowed everywhere, in Boston and Alabama, to pay for their tickets. He got a job helping his cousin, a janitor's assistant I suppose the "position" could be called.

"It wasn't bad," he recalls. "At least I was doing something, and it wasn't like back home in Marengo County where you worked for nothing and all the time, like you were a pet. (They'd be good to you if they liked you, but if they didn't you might as well be dead.)

"It was old buildings, like a lot of them in Boston, that I had to mind, and I took care of the garbage and tried to keep things clean and if someone had something wrong I reported it and they sent people right over to fix it. But then they sold the buildings, and the new 'bossman'—well, he was a company and had a 'janitor service,' they called it. So I was let off, and my cousin, too, and ever since then it's been hard, real hard—and touch and go. I'll pick me up a job washing dishes and they'll get a dishwasher. I'll try sweeping out the movie theater late at night and in the morning, and they'll get a company to come over with machines.

"I joined some group they had, part of the war on poverty, and they wanted to get us in shape, they said. That was last year. They told us to keep clean, and be careful of what we wore and everything like that, you know. I told my

"If they don't kill us, we're human, and it's only natural we'll try to get ours"

wife they could sink me in a tub of lye if they wanted, so long as I could get a job out of it. They had us talk in the right words, and we were supposed to get real good jobs.

"But it never worked out. They told me I needed more education, and being from the South it would take a long time, and they could only help people who were further along than me, so I had to drop out of the program. I had good 'initiative,' they said, but too many strikes against me—out of my past, they said. Well, a lot around my street are like me—and there isn't one of us who can get a good job. They only want our wives, to clean the white man's home and take care of his kids. And my wife has eight of our own. And the city, they only want to give money to the women, and only if the man leaves home, so they can call the woman a 'dependent.'

"So that's how I'm doing—real bad. I sit around and go look for a job and hide when the welfare lady comes, even the good one. I play cards. (I've learned since coming up North.) I get me a beer or two, and when the welfare check comes in I settle with the bartender. I'm not supposed to do it, but a man has to have something to do, just like his wife and kids, and I don't allow myself more than two beers a day, and mostly one; and I don't smoke, I never could. Mostly I just meets my buddies and we try to get out of the way of our women."

MRS. CARROLL has a lot in her way, apart from her husband. She is up at 5:30 in response to her infant's crying, and she is the last one to bed, about 11 o'clock at night: "All day long it's go, go, go. It's different here, different than down South, because there's so little room. Three rooms for 10 people. Beds piled up. There's the rats to keep away and they bite, and they don't give us screens that work, so it's a picnic the mosquitoes have. I have to worry about food, where it's coming from. There's always something short, always. And clothes, they're the worst to find. They cost a lot and you really need them up here. You have to have shoes for everyone.

"With me it's just trying to keep us all alive. You don't have friends up North, you just see a lot of people, but you don't know them one bit. A lot of the time I wish I was back South, but I know my kids have it better here—maybe. They can go to the city hospital if they falls sick, and we see more money here—even on relief—in a month than Daddy saw all year. You use it up fast, and you need a lot that you have no money to buy, but at least you don't starve, and we was near to it, I do believe. And we was more afraid, that I sure know.

"Up here I feel like I was on the moon, or a strange place somewhere. I mean I'm still not sure how to go about things. You don't know the store people and they insult you with their remarks as bad as they do in Alabama. You don't even get to know your next-door neighbor too much. Everyone is to himself, and it's only the kids who meet other people.

"I'm locked in here sunrise to sunset, except that I never see the sun, like I used to, and I've forgot what it looks like, and the lake we used to go visit. The only time I get out is to get the food, or take myself and the kids to the hospital. I never see a tree or hear a chicken or see a bird. The other day I woke up dreaming there were some chickens running through my house, and of course it was the old place, down there.

"The kids would never go back even if I wanted to, which I don't really, I guess. The little ones are already used to it here, and the big ones, they'd be killed down there for the way they talk. The way things are going, they may even get killed up here, I'll tell you. At night, when I have a little time to clean things up I hear them talk to one another in bed, and believe me it's terrible what they pick up on the street. Up here the colored man lets it all out of his system, that's what I believe. They been beating on him and

lynching him ever since the beginning, and he goes from South to North and he feels at last he can talk back, the young colored do. I try to tell my kids to be good and watch their behavior, but they don't listen. They're not afraid, like I was. They've gone from Alabama, they say, and I'm still there, they tell me."

THE Carroll children are indeed most in touch with Boston—with its aged, crowded schools, its dense and growing ghetto, its nervous, angry police, and its threatening white backlash that may determine who becomes the city's next Mayor. Their mother's life is in the home; if the children are quiet she watches television and cooks. (The living room is a bedroom with a television set; even the kitchen has a bed in it; and then there is the bedroom itself.) The older children, however, ignore their home. They eat and sleep there, but little else. They wander all over their neighborhood, and have no interest in falling back on memories, on nostalgic reveries, to deal with the kind of life Boston offers. Nor do they feel their parents's fear or restraint.

"Why should we?" the oldest one, a man of 22, recently asked me. "Why should we beg and bow and scrape? What did it do for us, ever? The more you 'yes' whitey, the more he kicks you, pushes you, takes things from you and slurs you. That's it. That's it."

His words frighten his mother. She cannot account for them, for what has happened in a few years to him, for what is happening before her eyes every day to her younger children:

"They tell me they're ashamed of us, and they want to tear up the certificates we have that says they were born in Marengo County, Ala. They say we never should have lied down before the white people and let them walk all over us. I try to explain, but it does no good. Even my 7-year-old boy, he's all mixed up. One minute he tells me he wants to be a policeman and he'd shoot down all the niggers who tried to cause trouble. Imagine talk like that! Then, the next minute, he says he's going to kill a white man one day, he just knows it, and

Italian Line

when he does it'll be about time. I scream him down and I hit him sometimes. I've got to. But I don't understand. I don't. We were brought up to live with the white people, because you have to, and now my children want to be away from them, and get rid of them. Maybe you can up here, where they live outside the city and we're inside, but they're still on top, I know that, and no matter what the kids say, that's true."

Her two sons took part in the riots that seized the Boston ghetto this summer. Why? How did they get involved? Their mother cannot answer these questions. To her they were "two quiet boys." They had never taken part in any civil-rights activity in Alabama—as some children and young teen-agers in the region had—nor have they done so since their arrival in Boston. Years ago they were both called "proper" by the Southern schoolteacher who taught them in a two-room, rural school. ("It wasn't the best school, but they're not so good up here either," was Mrs. Carroll's way of making a comparison. "Actually, I think the school buildings here are twice the age of those we had in Alabama.")

It didn't take long for her "proper" boys to change: "First, they were kind of made dizzy by the street. They'd want to stay inside, or they'd come back from outside full of stories of what they saw; there'd be drunken men, and people on dope, and there'd be a lot of sex, and just a lot of people standing around, and they'd see knives and things. Guns, I guess, too. You know, in the country it's not like that. We have a lot of bad colored people in Alabama, but they're not living all together, with no place to sit or take a walk, and with nothing but the sidewalk to rest on and the police to hide from.

"Well, my kids began to forget about everything they once knew—just like that! The streets grew on them, and

Oh, to have a little house

. . . to own the hearth and stool and all. Would the Irish poet's modest needs satisfy 400 families that Homerica houses happily each month? Most of these family heads are under job-transfer pressure to areas about which they may know only the name. But Homerica, thoroughly familiar with that and 4000 other communities, has on-the-spot Realtors (a hand-picked national network). They stand ready to take you to the right house in the right suburb as soon as your family requirements and desires are made clearly known. For this and other invaluable help, Homerica charges you *nothing*. Little house, big house, just tell us which you need, and where. Phone or write A. M. Brice for latest brochure.

they'd come and tell me all the stories, and then they stopped. That's when I knew they were *really* changed—it was all second nature, and they were all just part of the scenery down there, I guess. So when the riot came, they joined like everyone else."

Her sons don't quite put it as she does. The oldest youth speaks bluntly and sarcastically. He asks me as many questions as he answers: "Why do *you* think we riot? Don't you know? You must by now, or you're pretty slow on the draw, pretty slow. We've had enough. They push you so far, then you can't let it go further. That's it. In Alabama they keep us down with guns. Here they say we're 'free.' But if we try to act free, then they pull their guns, anyway."

I knew him well enough to risk asking him what he meant by "acting free." Well, he meant acting like "whitey." "Look. You're upset by something, so you go raise your voice and get it stopped. We're told we can't. That's what they taught us in Marengo County; be quiet, obey the 'bossman,' and wait until heaven for your kicks. Here they teach you in school about that 'equality' stuff, and Washington and Lincoln and how they freed us, and everyone is the same—American. Then you look around and you see what a lot of lousy lies they peddle to you.

"In the South you couldn't look around much, or they'd take care of you for life—I mean they'd kill you. Well, up here they say they're not going to kill us. Maybe they should. If they killed us, every one of us, they wouldn't have their trouble any more. But if they don't kill us, we're human, we're men, and we'll catch them in their lies, and it's only natural we'll try to get ours. That's what you're supposed to do in America, isn't it—get yours?"

THAT is that. I hear it again and again from him when I stupidly try to ask—once again—what angers him, and how he became involved in the rampant violence that destroyed so much of his own neighborhood: "First of all, it's not *our* place. We came there, and they soak us for rent. Whitey owns the place. It's *his* place. And besides, we're trying to get ours, like you have yours. We hear a fight and, man, we rush to the scene. We figure, this is our chance to do something. Sometimes I see the cops go by, and I wish I was them, I wouldn't mind the uniform and the car with the siren and all that. But I know the cops are here to keep their eyes on us, and they won't do a thing for us but shoot us."

Like his younger brother, he can identify for a moment with the police, the armed white man, the only white man he really knows today. I've even heard him echo his parents' sentiments—"maybe it's better down South." But he knows it "really" isn't better in Alabama, and he knows he can never be a white policeman or, in view of his "educational background," a Negro one.

When I ask him what he'd like to be and do, I hear this: "Maybe a pilot, or a president of something, or an official of some kind. But, no kidding, something even half good, even half good; something that I could hold in my hands and know it'll stay there, like anyone else's job." ■

There are over 600,000 words in the English language. But not one can really describe just how good J&B is. So when it comes to *anyone's* word on J&B—don't take it.

Take a drink of J&B instead.

Savor its special taste for yourself. You'll discover the flavor of J&B is unique. Far better than any words can convey. Far better than the scotch you used to think was great.

And you'll be anxious to pass the good word along. When you do, do it right. Forget all the superlatives; all the glorious adjectives. And simply insist they taste J&B for themselves.

Because now you know that only tasting is truly believing.

no man can really tell a woman about it

The unique flavor of J&B Rare Scotch

Measuring Airport Noise

Sophisticated national standard needed for planning, damage suits

The roar of airplanes taking off and landing near populated areas increasingly concerns environmentalists as well as residents who live within earshot of the din. The courts have awarded damages to some property owners as compensation for airport noise, most notably in California where the Los Angeles Airport is reportedly spending $300 million to purchase some 2,000 homes which are adversely affected by airport noise.

Robert L. Spaeth has been conducting research for The Urban Institute to better define measures of airport noise and their legitimate uses, and to assess current methods for determining the amount of damages to be awarded to residents who suffer from the noise.

The best current measure of airport noise annoyance, Spaeth believes, is the Noise Exposure Forecast (NEF). As he points out in the Winter issue of *City* magazine, the Federal Aviation Agency proposed adoption of NEF as a national standard but then backed away from that action, a decision he considers unfortunate. He describes NEF in the following manner:

NEF is a composite measure, the components being: the decibel level of aircraft noise, the frequency spectrum of the noise, the time-duration of each flight, and the day-night distribtuion of take-offs and landings. Values of NEF are usually plotted on a map of the airport vicinity; lines connecting points of equal NEF are called "noise contours."

Living within NEF 50 contour or higher is almost unbearable, whereas most people would find a home in the NEF 25 contour acceptably quiet. Although Spaeth concedes that NEF has been misused, he thinks such misuse can be corrected. Examples of uses that are questionable—and proposed modifications—include the following:

—NEF has been used on occasion to establish absolute critical thresholds of annoyance. One California judge held that landowners in the NEF 40 contour should be "entitled to recover damages" (although he ruled that the amount of damages should be based on detailed appraisals). Because people's noise tolerance varies, Spaeth urges that NEF provide general guidelines, not invariable rules, in condemnation suits.

—NEF has been used to divide the area around an airport into three distinct NEF zones (above 40, 30 to 40, and below 30) with housing in these zones rated, respectively, totally unacceptable, partly acceptable, and acceptable. Insofar as this has triggered demands that airport authorities purchase all land inside the NEF 40 contour, Spaeth finds the three-zone distinction unwarranted. He recommends, instead, a five-zone differentiation (used in England) that gives policy makers and land users a wider range of reasonable options.

In general, Spaeth objects to actions based on rigid or overly legalistic reliance on NEF numbers, preferring instead that the numbers be considered in ways that can be tempered with judgment. He argues that complete abandonment of NEF leaves decision makers and environmentalists without a useful tool for reducing noise problems at existing airports, and for planning future airports with a minimum of cost and annoyance to surrounding communities.

In an article in the *Appraisal Journal*, Spaeth analyzes methods of estimating damages caused by airport noise. He detects weaknesses in the particular method used by a U.S. District Court in Connecticut to calculate the amount of property value depreciation due to noise from the nearby New Haven airport. Seven property owners were awarded a total of $18,400 in this case.

To estimate damages in this case, the court used a so-called "factor formula" relying on three measurements from each property in question to the runway and to glide angles used by incoming and outgoing planes. *(Continued on page 7)*

Cities' Financial Choices

Predictive capability among goals of detailed, complex analyses

In trying to reverse urban decline, an excellent case is often made for expanding particular city services. But what other services will have to be cut back? What new taxes will be imposed? Meanwhile, can we look for a general expansion or contraction of revenues? Will expenditures rise or fall in relation to these revenues?

An Urban Institute study is attempting to deal with such questions in a unique simultaneous framework and thereby help unravel the complex fiscal behavior of central cities.

Harvey Galper, Claudia Scott, and Hartojo Wignjowijoto are working with data for 10 large cities, exploring how municipal expenditure and revenue policies are related to numerous social, economic, demographic, and environmental factors. Their hypothesis is that the ability to predict future spending patterns requires statistical explanations of how past expenditures were related to the age, race, income and other characteristics of the local citizenry.

Among the major considerations the researchers are taking into account are the following:

—Federal and state grants to munici-

(Continued on page 2)

Cities' Financial Choices
(Continued from page 1)

palities. Fiscal studies commonly lump all grants together as simple additions to revenue. This fails to distinguish the varied conditions attached to grants and the different local responses such conditions generate. Many grants mandate, through a range of prescribed matching ratios, that cities may qualify for funds only by expending certain portions of their locally raised revenues for the same purposes. Grants without these matching requirements or other preconditions have a distinctly different fiscal impact.

—*Local choice.* Cities are frequently assumed to be essentially free of constraints in tapping their tax resources and in devising spending policies. The Institute researchers believe, however, that the metropolitan environment may present significant restrictions. The competition of affluent suburbs presses the central cities both to hold down taxes and to increase the quality or amount of public services.

—*Regional differences.* Serious distortions in city fiscal studies of a national scope may occur from using the dollar as a constant measure of service costs. This study will adjust for regional differences in dealing with individual city prices and wage rates.

—*Tax base effects.* Because of the heavy reliance of local government on property taxes, attempts will be made to chart the consequences of changes in the market values of commercial and residential properties on revenue and expenditure patterns.

Equations for these intricate factors are being estimated statistically. They will then be used in a computer model for simulations and predictions. Projections, for instance, may show the budgetary effects of changes in revenue sharing and other grant programs. The model also can be used to explore the effect of direct federal financing of services such as welfare. The intent of this work is to understand more fully the budgetary choices confronting the nation's central cities and to examine the consequences of alternative policies on these choices. An important by-product will be the assembly of an extensive city data bank. □

Nation Begins Weighing Impact of Revenue Sharing

How funds spent, and with what results, to be scrutinized

There is a tendency, natural enough, after passage of a new governmental program as massive as the five-year $30-billion revenue-sharing act to heave a sigh of relief and say, "That's that!"

The controversies that accompanied the long debate over the legislation, however, do not suddenly grind to a halt. A number of forces—including prevailing social and economic conditions and the ways in which revenue sharing is handled—will determine whether revenue sharing to state and local governments is to be expanded, contracted, or restricted in the coming years. How these unearmarked funds are used will be a major determinant of the future of revenue sharing.

No sooner had President Nixon signed the legislation than localities began deciding how to spend their grants. Many municipalities favor city halls; others sewer and water facilities. Still others intend to use the money for such diverse ends as mass transit subsidies, tennis courts, open space for recreation, and scenic preservation. Property tax reduction is planned in many states and localities. Because federal aid for social services was held in check, some state and local spokesmen urge that revenue-sharing funds fill this breach.

If localities are guided by earlier promises that the new grants would bring property tax relief, some members of Congress are likely to observe: "If cities can simply take federal funds and put local funds back in their pockets, where is the 'severe fiscal crisis' they described?" To the extent that localities invest the money in facilities and services, other members of Congress are certain to keep a sharp lookout for waste or "misguided" priorities.

Considering the uncertainty of a new program, some local officials express reluctance to tie revenue sharing to major on-going programs. If the resources are curtailed, localities might have to cut services or raise local taxes. Yet too much "incidental" or "one-shot" spending might hasten the very things that are feared—the tightening and earmarking of revenue-sharing money.

The President has assigned the Advisory Commission on Intergovernmental Relations the difficult task of tracking revenue sharing; this wise decision places the monitoring task in competent and logical hands. What are the uses and impacts of the new program? How does a revenue-sharing approach compare with the more traditional direct grants for specific federally-determined purposes? How do the public benefits compare with those that would accompany federal tax reduction?

Such questions are especially difficult to answer because of the fungibility of resources. That is, public expenditures from revenue sharing easily get mixed with those from other federal, state, and local funds. Whatever the handicaps, the attempt to understand a large new government program is as vital as it is rare. Government can achieve a more rational level only when, instead of relying on reviews that are impressionistic, self-serving or demagogic, it calls for systematic assessments of its own actions.

Recent Commerce Department findings indicate that state and local governments, in general, are enjoying annual budget surpluses totaling almost $15 billion. This will be noticed by Congress as it wrestles with big federal deficits. But more than money is at stake in revenue sharing. At issue is a growing political conviction that decentralization is needed to counteract excessive governmental concentration in Washington. How this issue is resolved may shape American urban government for years to come.

William Gorham

Multi-Family Housing:

Keys to Good Management

Examining the human equation in good housing operations

Is it not true that when management invests more money in services, the occupants of multi-family housing will be more satisfied? No, money is not the answer. Successfully managed housing is typically operated more economically than housing where tenants are discontented. Effective management is the critical factor that makes residents happier and, at the same time, holds costs down.

Is it not true that housing managers must choose between strict, highly disciplined adherence to rules, on the one hand, or responsiveness to the special, personal needs of individual families? No. On the contrary, successful housing management requires a blend of several approaches including *both* firmness and responsiveness.

These are among the findings of The Urban Institute's research into housing management. The focus to date has been on apartments for low- and moderate-income families in an urban environment.

Before discussing the results of this research and their possible applications, some explanation should be given to the still somewhat unfamiliar term, *housing management.*

HOUSING MANAGEMENT CONCERNS the human equation of housing—how the various people involved in housing interact to provide housing services in the context of residential buildings and grounds and the surrounding environment. These people include the owners, hired managers, and maintenance staffs, the individuals and families who occupy the apartment units, and the government officials who create or carry out policies affecting housing.

This human side of the housing question has always existed. In the United States for most of the past half century, however, attention was concentrated on the physical defects—the unsafe and unsanitary conditions that typified slum housing: No plumbing or inadequate water and toilet facilities . . . breeding places of rats and roaches . . . poorly lighted and ventilated quarters . . . damp, cold, or overheated rooms . . . dangerous stairways. . . .

The list of housing ills is well known, and fairly intense public action has been directed on these physical defects for several decades. Slum clearance and urban renewal programs were launched. Public housing was built in various forms—low rise, high rise, and projects for the elderly.

The physical job is far from finished, but many of the worst structural defects of the nation's housing stock have been removed or repaired, and some of the most stringent shortages of decent housing are being alleviated.

Yet housing for the urban poor remains a serious issue. Many apartments, many neighborhoods, and many large sections of cities, although essentially sound from a structural viewpoint, are becoming blighted and undesirable. A somewhat new phenomenon, at least in its present proportions, is the wholesale abandonment of housing by owners.

To find the reasons and the possible remedies for such problems, one turns to the subject of human behavior. This is what housing management is all about, and why it is no longer a matter for the back burner.

WORKING UNDER MORTON L. ISLER, the director of the Institute's housing studies, a team of social scientists headed by Robert Sadacca has been studying the manifold inter-

actions underlying housing management. A recently completed Institute housing management study conducted by Margaret Drury attempted to answer two main questions:

—Does the form of ownership lead to differences in the quality of management?

—What specific characteristics of management lead to success?

The multi-family housing investigated did *not* include public housing projects. Rather, the three major ownership types that are insured by the Federal Housing Administration and subsidized by the Department of Housing and Urban Development through below-market mortgage interest were studied. To assure maximum comparability, the housing projects considered were limited to those with at least 35 units in buildings of no more than four stories.

No iron rule links successful management to particular forms of ownership

The three ownership types are as follows:

—*Limited distribution.* The sponsor is a private developer or investment company. In exchange for a 90 percent mortgage, the sponsor agrees that, on his 10 percent share of the original capital investment, profits or returns will be no higher than 6 percent.

—*Nonprofit.* The sponsor, typically a church group, labor union, or volunteer service group, receives mortgage financing to cover 100 percent of the development cost. The sponsor may receive no return or profit above operating costs.

—*Cooperative.* Also benefitted by 100 percent mortgage financing, a cooperative is owned by the occupants. Each household has one share in the ownership. This entitles the family to occupy one housing unit and to have a voice in the management of the entire development.

About half of these three kinds of developments (fitting the height and size limitations cited earlier) were found to be located in 10 regions. For study purposes, the Institute selected two of each type from each region, providing a sample of 60 developments, 20 of each type, spread geographically around the country.

A random sample of households was selected for interviewing at each development, the number varying with the number of housing units but totaling 1,004 households in all. Managers in each development also were interviewed. Observations about the development were made on site. Finally, HUD files were used to obtain information on income, expenditures, vacancies, turnover rates, rent levels, five-year profit and loss analysis, and physical features of the developments.

The household survey questionnaire (361 questions) required from 50 to 80 minutes to complete. The management survey (444 questions) required two-and-a-half to three-and-a-half hours per interview. About 85 questions asked of the heads of households and the managers were identical.

The major findings related to the question of ownership form may be summarized fairly simply:

—*The form of ownership, alone, does not predetermine how well housing will be managed.*

—*Nevertheless, some ownership forms seem more conducive to certain good management practices. Cooperatives and nonprofits most frequently revealed effective management. Limited distribution developments made the least impressive showing.*

Within each ownership type, it should be stressed, large variations occur. Thus, while cooperatives *on the average* give evidence of more effective management than limited distribution projects, some cooperatives would have to be judged low according to the various criteria used. Similarly, some of the profit-making projects rated high.

Much recent opinion about how to improve housing has stressed ownership form. This work puts that theory in perspective, showing a moderate correlation but no iron rule associating sure success with one form or sure failure with another. The most significant finding, therefore, is the following:

—*The way housing is managed is the key to the success of any particular project.*

WHAT, then, are the management principles that are most consistently associated with successful housing?

Before giving the answer, the meaning of successful housing should be clarified. It includes *financial achievement*—that is, providing a high level of housing services for the money. It includes *occupant satisfaction* as measured by their stated opinions and as revealed by their behavior. And it includes the *physical condition* of the property—that is, the units and development as a whole are being maintained and not allowed to deteriorate.

Using these measures of success, four major principles of good housing management have been identified:

ONE—Firmness in enforcing rules. This implies that the rules must be made known and enforced consistently and strongly. Examples of housing rules are: requirements that rent be paid on time; that pets, if allowed, must be cared for in certain ways; and that apartment units have no more than a fixed limit of occupants.

TWO—Responsiveness to residents' needs. This means, first of all, that maintenance requests are dealt with promptly and satisfactorily. It also includes flexibility. For instance, although there may be stringent rules against delinquency in rent payments, good management recognizes when illnesses or other emergencies require a deviation or exception from the rule.

THREE—Occupant responsibility. This does not necessarily mean that residents must take charge of the general operation of a housing project. It does mean that they should take an active role in making the project a better place to live. They should assume responsibility for keeping their units well kept and become interested and effective in furthering community and neighborhood development.

FOUR—Owner participation. In the best run projects, the operation and major decisions are not simply turned over to a management firm. The owner himself often is observed getting involved in some of the important phases of operation.

Analysis revealed that these good management principles are most effective, not in isolation, but when all four are blended together. For example, strictness in enforcing rules is much more effective when coupled with responsiveness to resident's needs.

Just as the good management principles appear together, so do the measures of housing success. The better the management is, the *higher* will be the degree of occupant satisfaction, the *better* the cleanliness and maintenance of the grounds and buildings, and the *lower* the expenses. The total management expense per unit per month averaged $29.15 in the high performance projects, $41.27 in the medium category, and $53.53 in the projects rated poorest.

"The conclusion from this," according to Isler, "is that you cannot buy your way to good management."

This point, important as it is, should not be twisted. It does *not* mean that good management follows as a consequence of a low level of investment in housing services. And it does *not* mean that, since money is not the key, minimum costs may be ignored; on the contrary, even the best management, faced with insufficient funds to meet basic occupant requirements, would probably fail.

As noted in a recent issue of the *Housing Affairs Letter*, "(These) discoveries made in recent studies by The Urban Institute may keep good projects good, turn bad projects around, and affect the quality of multi-family life for years to come."

Those are big orders, and they remain to be proven. But the next steps of the Institute's housing program are aimed at determining how far the results to date may be used in these directions. Several phases are underway:

If multi-family housing is poorly run, manager can't "buy his way" out of trouble

Training managers. Many managers of private housing, according to the researchers who have spoken with them, express considerable uncertainty about how they can best function. One of the first efforts, therefore, is to translate the Institute's research findings into nontechnical language that is readily usable by housing managers themselves. This finished material is anticipated early in 1973.

A related project is work with the new National Center for Housing Management in Washington that was set up by a presidential executive order in 1972 for the major purposes of recruiting, training and placing of housing managers, and promoting enlightened management practices which protect both the interests of residents and owners.

Peggy W. Spohn on the Institute housing staff is assisting the center in developing a curriculum that would be used in training programs for housing managers.

Public housing. There are too many differences between the kinds of publicly-assisted private housing that have been studied and public housing to assume that the same conclusions necessarily apply. Public housing clients are chosen differently, the federal and local governments apply different rules and requirements, the neighborhood environment often is dissimilar, and the financing arrangements are

not the same. Therefore the public housing aspects of the Institute's management studies take several forms.

—Survey. Surveys have been designed by Suzanne Silverman and other members of the housing staff to test whether the non-public housing findings are applicable. A review has begun of 120 public housing authorities. At least 40 of these will be examined intensively over a two-to-three-year period.

—Expense formulas. Paying for public housing has become a major problem. The old formula in which operating expenses were met with rent payments has been changed. Poor people's maximum rents have been set at 25 percent of their income. Federal operating subsidies to help local authorities meet their expenses have been rising. How to control this funding without encouraging poor management or drastically lowering occupant services is among the problems on which the Institute is assisting HUD.

Future management research aimed at improving public and private sector housing

—Special evaluation. HUD is funding the activities of 13 housing authorities to enable them to make major alterations in their management structure. During the next two years the Institute's measures of housing management will be adapted for an evaluation of the management changes made. Particular emphasis will be placed on identifying management improvements which can be transferred to other authorities.

—Future planning. Because management characteristics involve certain physical aspects of housing design, attempts will be made to use the Institute findings in the development of new projects. Considerations of how a public housing project is to be managed should affect certain aspects of how buildings are designed as well as the overall layout of projects.

IN the future the Institute will attempt to extend its research from the management of public and federally-assisted housing to private sector housing. In their earlier study, Drury, Sadacca and Isler found that, just by knowing how a project rated on the four major management principles, they could predict with over 80 percent accuracy whether that project would be in a high, medium or low performance group. The long-term research aim is to be able to help all public and private housing operate at a high performance level. □

Local Transportation Quality

System for measuring how well citizen needs are being met

Until the goals of a public service have been defined carefully enough to permit their measurement, attempts to improve that service are likely to be a hit-or-miss affair. The state and local government research project of The Urban Institute has been addressing itself to this matter, developing definitional-measurement tools to help officials responsible for providing public services. The latest effort along these lines deals with local transportation, following two earlier projects devoted to local recreation and solid waste collection services.

Richard E. Winnie and Harry P. Hatry of the Institute staff take note of the substantial amount of statistics already obtained about local transportation. Nevertheless, a community may tabulate its miles of paved streets and highways, its number of public transit vehicles and their passenger capacity, its off-street parking spaces, the peak and off-peak traffic volume on major arteries, and the number of highway maintenance man-hours—and still not know whether the local transportation services are adequately meeting the needs of its citizens.

Systematic ways to assess local transportation services are suggested in the recent Institute publication, *Measuring the Effectiveness of Local Government Services: Transportation.* The proposed approach includes the following steps:

—Identifying a general set of citizen-oriented objectives to be achieved by local transportation activities. Individual communities may modify these to suit special circumstances.

—Defining one or more measures of effectiveness that will indicate how well each of the objectives is being attained. Twelve such measures are described in detail.

—Collecting the data for each of the measures. Attention is given to data collection requirements that are practical and inexpensive, relying whenever possible on data sources that already are generally available. (The suggested data collection procedures are offered tentatively, pend-

ing an opportunity to subject them to substantial field tests.)

—Tabulating the data in meaningful ways. The researchers underscore the need to obtain data that will portray (1) the service performance in the entire city or county, (2) the quality of transportation for different neighborhoods, and (3) the quality of transportation for various segments of the population such as old and young, rich and poor, and the handicapped.

—Analyzing the measures periodically for their implications on local transportation budgeting and policy making.

Without a systematic assessment program of this sort, communities may be ignoring the transportation needs of certain groups of people. Winnie and Hatry are particularly concerned that citizens who depend entirely or frequently on public transportation are often neglected in local planning.

Once the effectiveness measures are applied regularly, useful comparisons may be made to check whether the community is progressing over time, and whether different sectors of the community are being given equitable service. Findings from the measurements also are intended to help officials pinpoint the most serious transportation problems at a given time. □

About the Institute: The Urban Institute is a nongovernmental, nonprofit research organization established in 1968 to study problems of the nation's communities. It cooperates with federal agencies, states, cities, associations of public officials, the academic community and other researchers.

About Search: A bimonthly that supplements and summarizes many of the reports, papers, reprints, seminars and other communications of the Institute. Research findings and opinions, representing a broad range of interpretations, reflect the views of particular authors and are offered as an independent, nonpartisan educational service. Editor, Walter Rybeck. For publication lists and other information, write: B. J. Stiles, Director of Publications.

Measuring Airport Noise

(Continued from page 1)

Spaeth has detected a serious mathematical flaw in this formula: namely, that two parcels of land subjected to equal levels of airport noise could show different losses of value. Even if this defect were corrected, the formula fails to take account of other important aspects of noise disturbance, such as the frequency of take-offs and landings or the type of aircraft in use.

Because the factor formula was relied upon in the precedent-setting 1971 New Haven case, the importance of Spaeth's finding is apparent. Although this research does not spell out an alternative formula, Spaeth has defined the characteristics of an improved formula. Instead of relying only on distance factors, it should include the more sophisticated acoustical and psychological measures of noise, such as the components incorporated in the Noise Exposure Forecast.

Federal adoption of NEF as a national standard would, in Spaeth's opinion, go far to create some clear ways of dealing with the growing disturbance from airport noise. □

Ethnic Minorities Project

Facts to be gathered about variety of American groups

Thomas Sowell, director of The Urban Institute's newly launched Ethnic Minorities Research Project, is convinced that "shaky assumptions with little if any basis in fact" explain why many of the nation's racial policies and programs have had limited success.

"One example is that generalizations are made about the family structure of black Americans, supposedly caused by their slave background," Sowell explains. "Yet the West Indians, who also were enslaved, have a very different family structure and culture. Why?"

The new research project will examine not only blacks but about a dozen ethnic minorities to seek more reliable insights. Among the project's early aims are the following:

—Development of a bank of statistical and historical information on ethnic groups.

—Analysis of income and expenditure patterns to measure the economic status of various minorities and the economic climate in which they function.

—Investigation of educational opportunity, with attention to the validity of testing devices and to the revived debate over heredity and environment.

According to Sowell, who has taught economics at the University of California at Los Angeles, Brandeis, Cornell, and Howard universities, the new project intends to develop a set of findings that can be drawn upon by others of varying viewpoints who are studying and developing programs for minority groups. □

New Trustees, Staff Positions

Vernon E. Jordan, Jr., executive director of the National Urban League, and Herbert Scarf, professor of economics at Yale University, have been elected to The Urban Institute board of trustees, Chairman Arjay Miller announced after the fall meeting.

Jordan, a lawyer, headed the Voter Education Project for the Southern Regional Council between 1964 and 1968, conducting a massive registration drive that added 2 million black voters to the election rolls. He served previously as executive director of the United Negro College Fund, as field director for the NAACP in his native Georgia, and as consultant to the Office of Economic Opportunity.

Scarf, author of many books and articles on mathematics, econometrics, and economics, was formerly an associate professor at Stanford and visiting professor at Cambridge, England, and at the University of Rome. He has served as a consultant to RAND, TEMPO and the Defense Department, and as director of the Cowles Foundation for Research at Yale.

The board of trustees also named Worth Bateman and Robert Harris of the Institute staff as senior vice-president and vice-president respectively. Bateman has been vice-president for operations and

(Continued on page 8)

New Trustees, Staff Positions

(Continued from page 7)

director of research since 1969. He was formerly deputy assistant secretary for program analysis in the Department of Health, Education and Welfare. Before joining the Institute in 1971, Harris was executive director of the President's Commission on Income Maintenance Programs and deputy administrator of New York City's Health Services Administration. □

to change a city !

Business and the urban crisis

"Absolutely terrifying. No wonder people riot."

So said William Day, president of Michigan Bell Telephone, looking over the ghettos in Detroit after last summer's riots.

Bill Day said it well. The urban ghettos are terrifying—in Detroit and in dozens of other cities. And until positive steps are taken to solve the ghetto problem, this country of ours faces social and economic chaos.

And unless business takes the lead—now—the problem will not be solved.

Yet what business can do is neither easy nor immediately clear. The problem of the cities is complex, of long duration, and made up of issues that range from lack of jobs to bad housing, from faulty education to inadequate police protection.

In some areas of the problem, business has already made a fine start. In others, there still are only glimmers of what can be done.

This special report, distributed through McGraw-Hill publications to their millions of business and professional readers, focuses on what must be done in the three most critical areas: jobs, housing, and education. It was written by a task force of McGraw-Hill editors, drawing upon the editorial resources of our 44 business publications and 19 U.S. news bureaus.

We believe we are especially qualified to gather, edit, and disseminate vital information on this subject—what companies and industries have done, are doing, plan to do. Hence this report. We hope to convey some of our own feelings about the terrible urgency for action, and thus to stimulate and encourage other business organizations to do what each is best qualified to do.

We would like to hear of action your company has taken or plans to take. We shall continue our reporting on this subject, and we offer the editorial pages of all our publications as a forum for the exchange of constructive thinking on this massive problem we share.

We all face this urban crisis together; together we must solve it.

Sincerely,

JOSEPH H. ALLEN
PRESIDENT
MCGRAW-HILL PUBLICATIONS

of said system. The Assistant Attorneys General appointed by the Governor shall not be compensated at a rate in excess of the highest rate of compensation established by the Attorney General for the Assistant Attorneys General appointed by him. Any Assistant Attorney General, Deputy Assistant Attorney General, Law Assistant or other employee not under the Merit System may be removed by the appointing authority."

Section 3. Said Act is further amended by striking section 4 in its entirety and inserting in lieu thereof a new section 4 to read as follows:

"Section 4. The Department of Law is hereby vested with complete and exclusive authority and jurisdiction in all matters of law relating to the executive branch of the government and every department, office, institution, commission, committee, board and other agency thereof. Every department, office, institution, commission, committee, board and other agency of the State government is hereby prohibited from employing counsel in any manner whatsoever, unless otherwise specifically authorized by law."

Duties of department, etc.

Section 4. All laws and parts of laws in conflict with this Act are hereby repealed.

Approved February 18, 1966.

STATE REVENUE COMMISSIONER—EQUALIZATION OF TAXABLE VALUES BETWEEN COUNTIES.

Code Chapter 92-70 Repealed.

No. 31 (House Bill No. 468).

An Act to provide that the State Revenue Commissioner shall examine the tax digests of the several counties to compare said digests for the purpose of ascertaining whether the valuation of the various classes of property for taxation purposes as made in the respective counties

is reasonably uniform as between the counties; to provide for the equalization of the taxable values of property between the counties by the State Revenue Commissioner; to provide for the return of tax digests found to be unreasonably out of proportion; to provide for the correction of tax digests so returned; to repeal Code Chapter 92-70, relating to the duty of the State Revenue Commissioner to examine tax digests of the several counties; to repeal conflicting laws; and for other purposes.

Be it enacted by the General Assembly of Georgia:

Section 1. Beginning with the tax digests which are prepared for the calendar year 1967:

Duties.

a. It shall be the duty of the State Revenue Commissioner to carefully examine the tax digests of the several counties filed in his office pursuant to the provisions of Code section 92-6917, and to compare said digests for the purpose of ascertaining whether the valuation of the various classes of property as made in the respective counties for taxation purposes is reasonably uniform as between the various counties and to ascertain compliance with Article VII, Section I, Paragraph III of the Constitution.

Intent.

b. It is the purpose and intent of this Act to bring about as far as practicable an equalization throughout the state of the values of the various classes of property subject to taxation in accordance with Article VII, Section I, Paragraph III of the Constitution.

Adjustment of values.

c. If it shall appear to the State Revenue Commissioner that in any one or more of the counties the taxable values fixed upon any one or more classes of property are not reasonably uniform with the values fixed upon the same classes of property in other counties, the Commissioner shall investigate and inquire as to the reason therefor, and after making such investigation and comparison, shall have authority to adjust and equalize the same, either by adding a fixed per centum to the county valuation of any class of property in any county, if he finds the county valuation too low, or by deducting a fixed per centum from the county

valuation if he finds the county valuation too high, as may appear to be just and right between the counties. After making such adjustments, the State Revenue Commissioner shall notify by United States mail the chairman of the county board of tax assessors of the county affected that the county valuations upon the classes of property specified in said notice shall be raised or lowered by the per centum fixed by the State Revenue Commissioner, and the State Revenue Commissioner shall thereupon return to said county its tax digest for correction accordingly.

Duties of county tax assessors.

Section 2. Upon the giving of notice by the State Revenue Commissioner of changes or corrections to be made in the county tax digest, it shall be the duty of the chairman of the county board of tax assessors of the county affected, to call immediately a meeting of said county board, and at said meeting the board shall correct the county valuation upon the class or classes of property specified by the State Revenue Commissioner, so as to make the same conform to the findings of the Commissioner by applying uniformly to the specified class or classes of property the fixed per centum of increase or of decrease specified by the State Revenue Commissioner and by raising or lowering all the individual returns of all the taxpayers of the county upon the specified class or classes of property accordingly.

Code Chap. 92-70 repealed.

Section 3. Code Chapter 92-70, relating to the duty of the State Revenue Commissioner to examine the tax digests of the various counties filed in his office, as amended, is hereby repealed in its entirety.

Section 4. All laws and parts of laws in conflict with this Act are hereby repealed.

Approved February 18, 1966.

WARM AIR HEATING CONTRACTORS ACT AMENDED. —APPLICABLE IN CERTAIN COUNTIES (45,274-45,364).

No. 34 (House Bill No. 385).

An Act to amend an Act, relating to the licensing of warm air heating contractors, approved February 25, 1949 (Ga. L. 1949, p. 1622), as amended, so as to provide that certain counties shall come within the terms and provisions of said Act; to repeal conflicting laws; and for other purposes.

Be it enacted by the General Assembly of Georgia:

Section 1. An Act, relating to the licensing of warm air heating contractors, approved February 25, 1949 (Ga. L. 1949, p. 1622), as amended, is hereby amended by adding a new paragraph at the end of section 1, to read as follows:

Where applicable.

"All counties in the State of Georgia having a population of not less than 45,274 and not more than 45,364 according to the U. S. Decennial Census of 1960 or any future such census shall come within the terms and provisions of this Act and shall be subject to the regulation of the board herein provided for to the same extent and for the same purposes as those counties originally included."

Section 2. All laws and parts of laws in conflict with this Act are hereby repealed.

Approved February 28, 1966.

REVENUE BOND LAW AMENDED.

No. 105 (House Bill No. 387).

An Act to amend the Revenue Bond Law (formerly known as the Revenue Certificate Law of 1937), approved March 31, 1937 (Ga. L. 1937, p. 761), as the same has been here-

MARCH 1969

Our Poor Cities: Broad Fiscal Action or Bankruptcy?

THE NATION has become acutely aware of the extent to which poverty permeates our society. Almost daily, new statistics and editorial revelations document the hunger, malnutrition, and unemployment which constitute the personal crisis of millions of Americans.

The national response, albeit tardy and often minimal and diffused by red tape, offers hope that in time every American will be assured a recognized minimum standard of living.

The form in which such assurance will finally exist is still subject to much national debate. Proposals abound for a negative income tax, a guaranteed minimum income, a revision of the public welfare program with minimum national standards, a public service employment program, and other proposals to eliminate abject poverty. The fact that they are regularly debated by a wide spectrum of political spokesmen indicates an awareness of the problems of individual poverty and the need for a national plan to eliminate it.

The poverty of the nation's cities has not yet reached a similar level of public awareness. Unless it does, however, many cities face severe restriction of public services and potential municipal bankruptcy. The very local environment in which our economic and social system must function will approach chaos.

There are signs that some state and national leaders are finally becoming aware of the financial plight of the cities. There is growing evidence to support the fact that cities are not capable of raising sufficient revenues locally to finance public services needed by all citizens *and* to finance solutions to the many crucial social and physical renewal problems which plague urban centers.

THE CONGESTION and the high density use which typify the core of most major metropolitan areas convinces the casual observer that the city must be financially well-off. As a community, it may well be. But as an institution, to serve the needs of its people, the city is poor. The physical plant, which is the visual measure of the city, provides an inadequate yardstick for the modern community's ability to support its public institutions. True, to the extent to which it can provide support, its definition as a tax base and the administration of taxes applicable to it could be better conceived and administered.

But the real wealth which flows through the economic veins of the communty—the flow which makes the community and the wealth which benefits by the existence of the community—cannot be adequately tapped by the city to support itself.

The reasons are numerous. Such wealth is mobile. If a city assesses wealth out of proportion to the assessments levied by its neighbors, such wealth readily finds a new locale. (Note the recent threats by the New York and Philadelphia stock exchanges to leave those cities if city taxes on stock transfers were imposed.)

State restrictions on city income sources have generally prohibited the use of taxes to assess other than property or have kept such taxes at such an unrealistically low level as to make them inadequate to provide a reasonable and reliable revenue base. States and the federal government have pre-empted the revenue systems which most realistically reflect wealth and economic growth by their extensive and almost exclusive use of excise and income taxes.

ON THE OTHER HAND, state and federal programs to distribute funds to cities have given only minimal attention to the unequal fiscal capabilities and needs of local units of government. Per capita allocation, for example, assumes every citizen is an equal cost citizen and that every community has equal assessable resources behind each citizen. Grant-in-aid programs which rely on applications generally assume that all communities, or the first to file an application, are in equally critical need. Most federal grant-in-aid assumes that local resources are limited to achieve the objectives that the federal programs seek to stimulate, but adequate to match the federal aid and to finance all other ancillary activities which are generated by the national emphasis program.

National policies must be devised and adopted which will strengthen the revenue bases of cities. This issue of NATION'S CITIES deals with federal, state, and local actions which could help resolve the problem of the fiscally destitute cities of this nation. Specifically, priority should be given to:

- The sharing of federal revenues with all cities on a formula equalizing basis.
- The assumption by the federal government of the cost of public assistance.
- A major increase in the federal and state share of the cost of elementary and secondary education.

The alternatives for many cities is a disastrous deterioration of social and physical development programs which rely on local resources. In some instances, municipal bankruptcy is not beyond anticipation. ■

How Would Revenue Sharing Work?

The National League of Cities' Proposal Could Benefit States and Municipalities

PETER B. HARKINS

■ OBSERVERS of the local government scene no longer doubt that America's cities are in serious financial trouble. Local resources, primarily from the property tax, are in many communities about milked dry. The specter of taxpayer revolt looms ever larger. So time-consuming is the search for additional local tax money, many mayors would probably readily agree with one who said recently: "You spend all your time convincing the taxpayers you aren't stealing their money and pleading with them to fund vital increases in the budget."

Unfortunately, cities must go on levying property taxes for decades to come since this is the only major tax available for their use. This fact goes to the heart of the urban fiscal problem since the financial plight of the cities is primarily an intergovernmental fiscal problem. In terms of the revenue directly available to the three levels of government, the federal and —to a lesser extent—the state governments are the "haves" and local governments are rapidly becoming the "have-nots." And the haves are not sharing their resources with the have-nots in relation to the magnitude of local problems and responsibilities.

The concept of revenue sharing has captured the imagination of many urbanologists in the last few years. They reason that because the major problems facing the cities today are in reality national problems, the national government should—because of its superior revenue collection machinery—return some of this revenue to the states and cities.

Since 1964, when economists Walter Heller and Joseph Pechman first proposed their federal revenue sharing plan for the states, many hundreds of similar proposals have appeared, with some 300 introduced in the 90th Congress alone. But not until late last summer was a bill, sponsored by Sen. Vance Hartke (D-Ind.), introduced which featured revenue sharing directly with cities.

The National League of Cities, as the spokesman for America's municipal governments, naturally has been concerned over the various revenue sharing ideas. In 1967, the NLC adopted a series of principles, the most crucial of which stated that federal funds should be shared directly with the cities.

Then in December 1968, after extensive study and negotiation with other interested parties (including the

National Governors' Conference) to attempt to find a common ground, the NLC approved in principle a compromise plan of its own for sharing federal revenues with states, cities, and urban counties. By this action at the NLC's annual Congress of Cities in New Orleans, the approach and the bounds have been established within which those responsible for securing implementating legislation on Capitol Hill could negotiate.

During the many months of debate and negotiations over the shape of a revenue sharing plan best suited to the cities, the NLC's Revenue and Finance Committee (headed by Mayor Travis Tomlinson of Raleigh, N.C.) kept this as the prime goal: to secure a substantial source of additional revenue for the cities with no strings attached on how it would be spent. This was to be accomplished through a revenue sharing formula based on the cities' own fiscal need and tax effort.

The NLC committee—and its industrious nine-member steering committee—was confronted with many alternative approaches as it worked to arrive at an equitable allocation method. Here are three of these alternatives and some of the pitfalls inherent in each:

• *An allocation based on population:* This is a simple and readily understood distribution system, but it fails to meet the criteria of recognizing financial need or the extreme financial disparities found among local units of government. To a large extent, this method tends to compound such disparities.

• *An allocation that returns taxes to the point of collection:* This creates far greater fiscal disparities by returning larger amounts to communities with large concentrations of wealth and returning relatively little to those already suffering from lack of resources, and in the case of larger cities, those with proportionately greater problems.

• *An allocation only to cities above a specified size:* This may channel critical resources into some large cities that have difficult fiscal problems. But it fails to recognize that not all large cities are equally poor or that other smaller cities also suffer from a loss of population and declining tax base.

Other objectives in coming up with a workable revenue sharing plan included these considerations by the committee:

• The distribution of the additional federal funds to the cities should encourage states to increase their own aids to local governments.

• Any formula should recognize the availability of state and local resources and the extent of efforts to use them.

• Any formula should promote the use of general purpose governments to provide urban services.

Just what sort of a revenue sharing plan did the NLC's committeemen come up with? And how would it work? Here, in brief, are the details:

Appropriation Authorization: To finance general support grants, Congress would authorize for each fiscal year a sum equal to, say, 2 per cent of the individual income tax base calculated in the nearest year for which statistics are available.

On this basis, the amount of appropriations for revenue sharing in 1970 would be $6 billion to $7 billion. This amount, of course, would increase in later years with the growth in the individual income base, now going up at the rate of about 10 per cent a year.

Involving States as well as Cities:

NLC Revenue Sharing Plan Highlights

• All cities would be eligible to participate in federal shared revenues based upon sharing plans developed by each state.

• All cities over 2,500 population would be eligible to take part in the direct federal-local allocation if they are exerting a relatively high level tax effort in relationship to their resources.

• States would find it easier to work out plans to share funds received from federal revenue sharing or from other state tax sources because severe hardship fiscal conditions in the localities would have been substantially modified by the direct federal-city allocation.

• States would be encouraged to use their broad-based taxing power to raise revenue for (1) allocation to local governments or for (2) financing programs shifted from local to state responsibility.

• States and cities not making a tax effort equal to a national norm would be encouraged to key their revenue programs nearer the norm while those cities exceeding the norm would have pressure to tax at higher levels reduced.

• The inclusion of state revenues raised and allocated for educational purposes in the state revenue effort formula would encourage states to assume a greater share of local educational costs. Exclusion of such revenue in the local revenue effort formula eliminates a structural condition (i.e., whether schools are a part of the city government) that would otherwise create major disparities among cities nationally. Exclusion would increase local pressure for state assumption of educational costs.

• Governmental structural differences would have a direct effect on the amount a state and/or its cities receive. A state which has favored extensive use of special districts would deprive both itself and its cities of the right to include revenue raised for special districts in either the state or city revenue formulas. A state with a simplified organizational structure (resulting from full use of city government) would benefit. Thus shared revenue is not directed precisely on the basis of need since governmental structure is a factor, but a factor which can be modified.

How Tax Effort Index for 12 Cities Might Work

City	Tax Effort Index	Revenue Share per Capita
A	2	not qualified
B	2.5	not qualified
C	2.7	not qualified
D	3.0	not qualified
E	4.0	$ 5.00
F	5.0	10.00
G	5.5	12.50
H	6.0	15.00
I	8.0	25.00
J	9.0	30.00
K	10.5	37.50
L	11.0	40.00

While it was impractical to envision a revenue sharing plan dependant entirely on state reallocation to fully meet the needs of hard-pressed cities, it was equally unrealistic to ignore completely the important potential role of the states.

The NLC proposal, therefore, provides a revenue sharing fund for states and a similar fund for cities and urban counties. The state part of the plan would give the states authority to reallocate federal funds to subunits of government or to otherwise use the shared revenue as they see fit. The second element of the plan sets up a fund for certain cities and urban counties on a formula designated by Congress.

All cities, whether or not they participate in the second part of the plan, would be eligible to share in the state-controlled allocations.

Amount and Basis of Allocation to States: Initially, half of the 2 per cent federal individual income tax base (or 1 per cent) would be earmarked annually for initial allocation to the states. This would amount to about $3 billion. By dividing this total allocation by the civilian population of all the states, an average per capita sum for each state would be determined. The actual per capita sum for each state then would be increased or decreased in proportion to the tax effort of each state or the relative effort each state makes to collect revenue from its own sources for general expenditure purposes.

To provide an incentive for state action to utilize their revenue raising capacity to either aid local governments or assume a greater share of statewide programs, all revenues collected by the state (including those shared with local governments) would be counted for this purpose. Thus on the basis of $3 billion, or half the $6 billion appropriation, the per capita allocation among the states would amount to about $15—$3 billion divided by 200 million people.

For a state which exerted, say, a tax effort 10 per cent above the average for all states, the per capita payments would be increased accordingly. It would therefore receive $16.50 per capita instead of $15. Conversely, a state which had a tax effort rate 10 per cent below the national average would receive $15 less 10 per cent, or $13.50 per capita.

Amount and Basis of Allocation to Cities: Initially, the remaining half of the estimated $6 billion revenue sharing "pie" would be set aside for allocation on a per capita basis among eligible units of local government: incorporated municipalities of more than 2,500 population and urban counties (as defined by the Bureau of the Census).

A tax effort index would be determined for all these eligible units. The basic formula would be: per capita locally-raised revenue *divided by* per capita personal income and per capita value of the property tax base *equals* tax effort. All units would then be ranked in ascending order according to their tax effort index.

Next, from a list of tax effort indices of all eligible governmental units, a "norm" or "base" would be established to determine which units would participate in revenue sharing and which would not. While the norm would be somewhat arbitrarily established, it must generally reflect a cutoff point below which units would not participate whose tax efforts are not great in relation to the rest of the cities.

As an illustration of how the plan would work, suppose that out of a list of cities whose tax effort indices range from a low of 1 to a high of 12, a norm or cutoff was fixed at 4. Those cities with an index of 4 or above would take part. Those with an index below 4 would not.

To then determine how large an allocation each participating city would receive, a base allocation of, say, $5 per capita would be paid to each one with a tax effort index equaling the base or norm, in this case, 4. For each additional one point that a city's index lies above the norm, it would receive an additional $5 per capita. Where the city's index lies between two whole numbers, it would receive an appropriate fraction of the $5 per capita sum. In no case, however, could an individual city receive a total amount of money in one year in excess of 33⅓ per cent of the revenue it raised from its own local sources. This provides a leveling off feature and encourages continued tax effort by the city. The accompanying table illustrates how the allocation system would work with 12 hypothetical cities.

It should be noted that just as the state per capita allocation would increase in proportion to the growth of the individual income tax base, so also would the per capita allocation to participating municipalities and urban counties. If after distribution of funds to cities and urban counties a surplus remained in the city fund, it would be transferred in the next immediate fiscal year to the state fund for supplementary distribution among the states.

This exact plan may not ultimately appear in legislative form. Establishing the plan's principles was more important to the committee than the detail. In reality the National League of Cities' adoption of the above approach is viewed as the easy part of the procedure since now it must be sold to others. Much more negotiating and just plain horse trading on the issues will take place before revenue sharing is a fait accompli.

In addition, many economic and political changes must occur before Congress will feel inclined to take action, including most importantly the end of the massive expenditures in Vietnam.

But revenue sharing does hold great promise for cities and its proponents can be expected to make every effort to secure authorizing legislation at an early date. ■

financing our urban progress

A PANEL OF EXPERTS ANALYZES THE CITIES' FINANCIAL CRISIS

Introduction

ON THE NEXT 31 pages you will find the consensus on what to do about the urban financial crisis worked out by representative leaders from the

National League of Cities
U.S. Conference of Mayors
National Association of Counties
Council of State Governments
National Governors Conference
Committee on Economic Development
Advisory Commission on Intergovernmental Relations
National Commission on Urban Problems
Ford Foundation
Chamber of Commerce of the U.S.
National Industrial Conference Board
National Association of Manufacturers
National Housing Center
Regional Plan Association
New York Economic Development Council
Small Business Administration
Tax Foundation

The roundtable conference at which this consensus was developed was held shortly before the presidential election under the joint sponsorship of the first five of the above organizations in association with *Time, Life, Fortune,* and the Robert Schalkenbach Foundation. The precise wording of the subject they met to consider was: "The Financial Crisis of Our Cities: What Should the Federal Government Do To Help?; What Should the State Governments Do To Help?; and What Must the Cities Do To Help Themselves?"

The two-day roundtable was assisted in its deliberations by three outstanding university economists and by a former U.S. Commissioner of Education.

The word "consensus" should not be understood to imply unanimity. It implies only broad and general agreement; and the fact that these leaders were invited to the conference to represent their organizations does not mean that their organizations have officially approved the content of this report.

What the individual panelists said at the roundtable was off the record; otherwise it would have been impossible to get frank talk leading to such a sensible consensus.

URBAN FINANCIAL CRISIS REQUIRES REVENUE SHARING, OTHER BROAD REMEDIES, SAYS PANEL OF LEADERS IN SPECIAL REPORT

WASHINGTON, March 8---America's urban financial crisis can be solved, a panel of 34 leaders from various fields has concluded, but only if a broad range of actions is taken at each level of government: federal, state, and local.

The panel's findings and recommendations are contained in an exclusive 32-page report, "Financing Our Urban Needs," in the March issue of NATION'S CITIES, the magazine of the National League of Cities.

The suggested solutions include federal revenue sharing with states and larger local governments, federal assumption of welfare costs, more federal and state funding of public education, more emphasis on taxation of land instead of improvements, revamped public educational systems, and more local government action to improve efficiency of operations.

Noting that America's larger cities are staggering under a heavy burden of welfare, education, and regional facility costs, the panel participants said:

"The question is no longer whether the state and federal governments should allocate more of their own tax revenues to meet local government needs, but how that allocation can best be channeled and directed so it will reach those places where it is needed instead of being dissipated where it is not.

"But," the panel members added, "central cities should not kid themselves that the state or federal governments or the suburbs can or will come through with enough aid

(More)

and relief to close the whole gap between local spending at the present rate of increase and local revenue from today's tax practice. . . .The question is not whether cities must do far more to help themselves financially, but how best the cities can hold down their own local costs and step up their own local revenues."

"Financing Our Urban Needs" is the consensus report from a two-day roundtable conducted late last year under the joint sponsorship of the National League of Cities, U. S. Conference of Mayors, National Association of Counties, Council of State Governments, National Governors Conference, Time, Inc., and the Robert Schalkenbach Foundation.

Among the participants in the roundtable were mayors, federal and state officials, businessmen, professors, and association and foundation executives. (For a complete list of the panel members, see the second page of the enclosed reprint of the special report.)

Here are some of the dozens of suggestions contained in the report:

- All federal categorical grants to local governments should be reorganized and consolidated along functional lines (such as health, transportation, housing) so that each city could choose their own priorities for programs within each area. "Local residents are better able to decide what they need most than officials far away in Washington," the panel members said.

- Every state should repeal its constitutional limitations on local taxing power to enable more revenues to be raised locally.

- The costs of education should no longer be treated as local costs or paid for out of local revenues (except where local taxpayers may choose to impose additional taxes on themselves to pay for added educational advantages for their children). State and federal governments should assume much bigger shares of basic education costs.

- Tax costs of poverty should be spread over a broad geographic base and most of these costs should be borne by the federal government. "Freed from paying the costs of poverty and education," the report notes, "most cities could raise through a better-applied property tax alone all the money they would need to meet their remaining money

(More)

needs, improve all their other services, and make city living more attractive."

• "The hope of federal subsidies could be the most effective inducement to get local governments to get together and consolidate or at least combine their operations. Local government needs to be broadly restructured to perform its proper functions well, but this restructuring will be far too slow in coming without the bait of federal aid. If metropolitan-area government units below a certain size were declared ineligible for federal bloc grants, we might be surprised by how many too-small units decide to get together."

• In order to stimulate more state and local tax efforts, a larger credit for state and local income taxes should be permitted on federal income tax returns.

• Heavier property taxes on location could put effective pressure on owners to put their sites to better use and recoup for local governments some of the substantial public investment in streets, water and sewer lines, schools, etc., that goes into making a parcel of property valuable.

• Along with higher property taxes on land should come reduced taxes on the improvements on the land. Said the panel members: "Almost every city collects two or three times as much money from taxes on improvements as from taxes on land. In fact, many cities tax improvements more heavily than the combined local, state, and federal taxes on any other product of American industry except hard liquor, cigaretts, and perhaps gasoline."

• The panel members were unanimous in urging more cities to make greater use of service charges in lieu of raising tax rates. A few of the panelists favored abolishing the property tax and substituting "carefully-cost-accounted service charges to pay all the costs of local government except education, poverty, and traffic police (which they would shift to the state or federal levels)."

• "We are unanimous in urging that in most cities a broad review and reorganization of local government operations to improve productivity and hold down costs is now overdue. This review should also consider what savings could be achieved by making it worthwhile

(More)

for private enterprise to take over many functions (like garbage collection) that are now performed by city employees."

- "Many of us consider education a backward industry." With that statement, the panel called for a broad review of public education costs and methods with particular emphasis on (1) education research, (2) standards of professional pay, (3) development of reliable education performance evaluation techniques, (4) use of team teaching and new gradations of teacher classification, (5) greater use of visual aids (particularly TV) and their relationship to arbitrary teacher-pupil ratios, and (6) a review of modernizing English spelling.

- More states should follow Maryland's example of encouraging its counties to "piggyback" local income taxes on top of the state levy. "This is one good way to discourage local competition to see which community can offer the lowest taxes as bait to catch more business and more people," the report said.

- "Any allocation of urban aids and subsidies should give heavy consideration to how hard the needy local government is trying to meet its own needs....We are unanimous that all cities and all states should be encouraged to do as much of their own taxing as they can before asking Washington to do the taxing for them."

- Cities should no longer be expected to give state and federal government a free ride on local services by giving all state and federal property a multi-billion tax exemption.

SATURDAY, MARCH 8 AT 6 P.M.

MUNICIPAL GOVERNMENT BANKRUPTCY POSSIBLE UNLESS BROAD NATIONAL ACTION IS TAKEN, NATIONAL LEAGUE OF CITIES SAYS IN EDITORIAL

WASHINGTON, March 8---Municipal government bankruptcy is not beyond anticipation unless national policies are adopted to strengthen the revenue base of America's cities, the 14,600-member-city National League of Cities said today.

In an editorial in the March issue of its monthly magazine, NATION'S CITIES, the NLC said priority should be given to:

(1) The sharing of federal revenues with all cities on a formula equalizing basis, (2) the assumption by the federal government of the cost of public assistance, and (3) A major increase in the federal and state share of the cost of elementary and secondary education.

In the same issue, an article entitled "How Would Revenue Sharing Work?" explains the National League of Cities' own revenue sharing plan which, in effect, would set up two equal funds: one to be shared by the states and the other to be shared by cities over 2,500 population. Amounts to be dispensed from both funds would be based on tax-effort formulas.

Both the editorial and the article on revenue sharing (reprints of which are enclosed) accompany an exclusive 32-page special report entitled "Financing Our Urban Needs" in the same magazine. The report is a consensus statement of 34 leaders from various fields and contains dozens of suggestions for action at all levels of government to ease the cities' financial burdens. Included in the report are recommendations similar to those made by NLC in the editorial entitled "Our Poor Cities: Broad Fiscal Action or Bankruptcy?"

MIDWEST RESEARCH INSTITUTE

1522 K STREET, N.W., WASHINGTON, D.C. 20005 - - - AREA CODE 202-659-2680

Dear Sir:

Midwest Research Institute is charged with developing plans for a national Urban Information Clearinghouse Network which will be operated by the U.S. Department of Housing and Urban Development.

The network contemplated will serve the needs of public and private groups involved in housing, urban development, and urban affairs. Its organizational form may conceivably be multi-centered, with some information centers and services operated by HUD and other federal agencies, while others may be contracted to outside groups.

An important part of the MRI design study is the identification of major participants in urban activities and the "mapping" of their involvement, information needs, and capabilities as sources for information.

This questionaire is one aspect of our mapping effort. It is being sent to some 600 carefully selected organizations which, in are view,represent key groups in urban affairs. With so small a sample, it is vital for us to obtain your cooperation in filling out this questionaire. Your answers will be treated confidentially, and no specific mention of your organization will be made in any report or publication in connection with this questionaire.

Later in the study, we plan to visit a number of the responding organizations to review capabilities and interests in more depth.

We would appreciate receiving this questionaire as soon as possible. If you have any questions, please call us and we shall be pleased to give you further information.

Very truly yours,

Peter L. Shoup
Project Manager

PRINCIPAL LABORATORIES: 425 VOLKER BOULEVARD, KANSAS CITY, MISSOURI, 64110, 816-561-0202

I. ORGANIZATIONAL PROFILE

A. Please check one or more of the following which describe your organization:

- ☐ University/college
- ☒ Not-for-profit research institute
- ☐ For-profit consultant
- ☐ Foundation
- ☒ Regional Council
- ☐ Planning agency or commission
- ☒ Economic development agency
- ☐ Civic group (patriotic, ethnic, social service, educational)
- ☐ Citizens' action group
- ☒ Civil rights group
- ☐ Religious group
- ☐ Labor federation
- ☐ Labor union
- ☐ Association of governments
- ☐ Association of government officials
- ☐ Professional association
- ☐ Commercial, trade, or industry association
- ☐ Private corporation
- ☐ Other _____ (specify) _____

B. Please give a brief statement of your organization's purpose and/or attach a descriptive brochure or pamphlet: See Brochure

C. Please estimate the number of organizations in the United States with the same purpose as described in Question I.B. above: None

D. Please characterize your service population (clientele, customer group, membership, people you serve) and show its size:

____ (No.) Individuals _____ (characterize, e.g. public officials, engineers, etc.)

____ Governments _____ (state type, e.g. states, counties, special districts)

____ Corporations _____ (state industry or commercial sector, e.g. insurance)

____ Other _____ (specify and characterize)

E. What type of management sets policy for your organization? Please check below:

- ☐ Partnership
- ☐ Elected Public Officials
- ☒ Private Board of Directors
- ☐ Parent Institution, Agency, or Organization (please name) _____

Other (please specify) _____

F. Please characterize the current financial size of your organization. Show whether you are reporting ☒ annual budget; ☐ annual sales; ☐ annual revenues.

- ☐ $100,000 or below
- ☐ $100,000 to $500,000
- ☐ $500,000 to $1 million
- ☒ $1 million to $5 million
- ☐ $5 million and above

Percent of current resources related to urban affairs _____%

1975 estimate $_____

Percent of 1975 resources related to urban affairs (estimate) _____%

G. Please characterize your staff and its size: Number of professionals 15
1975 estimate of number of professionals _____. Number of clerical and support personnel at present 30.

II. YOUR SUBJECT MATTER INTERESTS

Shown below is a subject matter breakdown. Please mark (with an X) all major and minor categories which relate to the activities of your organization. Insert additional categories as you see fit.

Next, circle six (or fewer) categories -- major, minor, or both but no more than six all told -- in which your organization has a vital interest and experiences a need for more and better information.

[X] EDUCATION

- [X] Preschool
- [X] Elementary
- [X] Secondary/Vocational

III. HOW YOU WOULD LIKE TO GET INFORMATION

Insert subject headings you circled in Section II into the blanks in the extreme left hand column of the table below.

For each subject heading, show the types of information you need (top horizontal column of the table) and the form in which you would like to recieve the information (coded tabulation on the bottom of the page). To do this, insert the code letter or letters from the bottom tabulation into the appropriate cell or cells for information types in the body of the table

Example: You circled "Housing" in the previous Section. Write the word "Housing" in the first blank of the extreme left hand column headed SUBJECT. Your need is for Statistical Information. You will find Statistics as the third column under TYPES OF INFORMATION. You would like to recieve information in the form of a computer tape. Computer tapes are coded with the Letter Y in the tabulation of FORMS at the bottom of the page. Insert the letter Y under Statistics in the topmost line of the table.

You may select more than one type of information under each subject and more than one format under each type.

SUBJECT — Types of Information You **NEED** About Subject

Insert Subject Headings You Circled in the Previous Section in the Blanks Below:	Federal Pre-application Program Information	Post-application Program Information, Policy Trends, Agency Regulations, Legal Matters	Statistics	Planning and Management Information	Operating Experience of Other People	Names of people, experts, consultants	Technological Information and Data	Basic Scientific Research Findings and Data

V. HOW YOU SUPPLY INFORMATION

In this section, please report on your information supplying activities. Follow the same procedure as you did in the section on information need characterization. Insert the subject headings you circled in Section IV in the blanks on the extreme right hand column of the table headed SUBJECT, then proceed as before.

Example: You supply information on "Water Pollution." Write "Water Pollution" in the first blank of the extreme left column headed SUBJECT. You supply information about Federal Programs. You will find Federal Program information as the first column under TYPES OF INFORMATION. You supply this information in the form of a newsletter. Newsletters are coded with the Letter K in the tabulation of FORMS at the bottom of the page. Insert the letter K under Federal Program Information in the topmost line of the table.

You may show more than one type of information that you supply under each subject and more than one format under each type.

SUBJECT — Types of Information You **SUPPLY** About Subject

Insert Subject Headings You Circled in the Previous Section in the Blanks Below:	Federal Pre-application Program Information	Post-application Program Information, Policy Trends, Agency Regulations, Legal Matters	Statistics	Planning and Management Information	Operating Experience of Other People	Names of people, experts, consultants	Technological Information and Data	Basic Scientific Research Findings and Data

VI. MORE QUESTIONS ABOUT YOUR ORGANIZATION AS AN INFORMATION SUPPLIER

A. Does your organization have its own library? ☒ Yes ☐ No. If "No," please go on to Question D. below.

B. Estimate current holdings, in number of documents 800 (see attached)

C. Estimate acquisition rate, in documents yearly _____

D. Indicate the library facility or other information resource outside your organization on which you rely for information by checking one of those shown below. If you check more than one, please rank (1, use most; 2, use less than 1; etc.)

1 ☒ Public Library ☐ City Hall Library 3 ☒ Federal Agency Library
☐ Association Library ☐ Other (please specify) 2 University Libraries

E. Does your organization operate an information system (inquiry service, manual or computerized data bank, etc.) for the benefit of outside clientele or membership?
☐ Yes ☐ No. If "No," please go on to Question L. below.

F. Please characterize the information system by checking one of the descriptions shown below. If more than one applies, please rank in order of importance (1. most important function; 2, less important than 1; etc.)

☐ Management Information System ☐ Statistical Data Bank 1 ☐ Manual or computerized Literature Storage and Retrieval System ☐ Graphic Materials Storage and Retrieval System 2 ☐ Other (please specify) Special Reports

G. Please describe the subject coverage of the information system Race Relations and all related subjects (See Attached)

H. Estimate the number of transactions (inquires processed) in one year 750 per month

I. Estimate the number of users in one year 9,000

J. Estimate the percentage of users who are:

25% ☐ Policymakers (legislators, members of boards, trustees, etc.)
25% ☐ Administrators (executive officers, department heads, etc.)
25% ☐ Practitioners (engineers, scientists, social workers, teachers, etc.)
25% ☐ Clerical and support personnel

K. Please enclose particulars about your fee structure or other financial arrangements, together with information about annual operating budget, if available.
Charge for reproduction only

L. Please name information systems operated by others that your organization uses, if any. Please list in order of most frequent use Universities, Southern Education Reporting Services

VII. ESTIMATE OF EXPENDITURES ON URBAN INFORMATION

Please estimate the amount of money spent by your organization on the acquestion of urban information. Base your estimate on:

(1) Purchase of subscriptions, books, documents, directories, films, tapes, and the like.

(2) Salaries of personnel directly engaged in information acquistion--for instance, librarians.

(3) Direct salaries and other expenses of personnel engaged in one-time or periodic interviewing or polling activity directly connected with information acquisition.

(4) Value of contracts granted by you to others to generate information for your organization.

$1,000 or less
$1,000 to $5,000
$5,000 to $10,000
$10,000 to $50,000
$50,000 to $100,000
$100,000 to $500,000
$500,000 to $1million
$1 million or over

VIII. INVOLVEMENT IN SELECTED HUD PROGRAMS

Shown below are five programs of the U.S. Department of Housing and Urban Development. These programs have been singled out for special emphasis in the Clearinghouse Design Study.

A. Please rank the programs to show the relative importance of each to the activities of your organization (1, most important; 2, less important than 1; etc.)

1 Model City Grants
2 Neighborhood Facility Grants
5 Rent Supplement Program
3 Urban Planning Assistance Grants
4 Urban Renewal Project Grants

B. Using the table shown below, please characterize the nature of your involvement in each program, if any.

HUD Programs	NATURE OF INVOLVEMENT						
	Direct			Indirect			
	Conduct Planning For Program	Operate Program	Supply Goods Or Services	Supply Information About Program	Supply Information About Skills and Expertise Required In Program Implementation	Participate In Planning Process	Conduct Reserch and Development Related to Program
Model City Grants				1	2	3	4
Neighborhood Facility Grants				1	2	3	4
Rent Supplements				1	2	3	4
Urban Planning Assistance				1	2	3	4
Urban Renewal Project Grants				1	2	3	4

M. Please estimate the total number of information transactions that you have with your information users, in one year, by inserting the appropriate figure next to the specific transaction descriptions below:

Copies of newsletter or magazine mailed 20,000

Telephone inquires answered 5,000

Letter inquires answered 5,000

Copies of reports, books, or films distributed 30,000

Attendees at seminars, lectures, or conference held 15,000

N. Please select, from the list shown below, FIVE types of organizations to which you SUPPLY the most information (Column A). Next, select FIVE types of organizations from which you OBTAIN most of your information (Column B). They need not necessarily be different, of course.

Select Five in each column

Column A Supply To	Column B Obtain From	Please Show an example in blanks

The Research Department of the Southern Regional Council has a wide variety of information dealing with every aspect of civil rights, from peonage, Negro veterans of World War II, and Smith vs. Allright in the 1940's to the poverty program, the northern and southern urban riots, census reports, school directories, law reports, government publications, the Urban Coalition, and Black Power in 1968. The collection of material, the best in the South, is distributed in the following manner: The library has approximately 800 titles. The books contain information on the subjects mentioned above, as well as Negro history, southern history, civil liberties issues, and the like. The pamphlet collection consists of 280 4" x 8" "bins" containing several thousand pamphlets. The newsclip and "material" (magazine articles, agency and other publications) files occupy 132 file drawers and cover the years 1944-68. Earlier research material is housed at the Atlanta University Library. A collection of materials, newsclips, notes, manuscripts, posters, and pictures dealing with the revival of the Ku Klux Klan remains in the SRC library. At the present time the research department receives information from approximately 20 newspapers per day, about 20 magazines a week, along with several weekly newspapers, occassional papers from community or voter registration organizations, publications of the Center for the Study of Democratic Institutions, the Citizens' Council, SNCC, Negro Colleges, Scholastic Journals, law reviews, student organizations, and church groups.

A REPORT FROM THE URBAN INSTITUTE

Volume 1, Number 1 January-February, 1971

Public Housing Crisis

Inflation brings problems for management, hardships for tenants

Public housing authorities in major cities across the country are in the midst of a worsening financial crisis caused mainly by price and wage inflation.

This was the principal finding of a study of the operating costs of public housing units in 23 cities conducted by Frank de Leeuw of the Institute Senior Research Staff. His report, *Operating Costs in Public Housing: A Financial Crisis,* shows that since 1965 the gap between operating costs and income from rentals has been steadily widening. About 80 per cent of the increase in costs is directly related to general inflationary trends.

Operating Costs and Receipts In Public Housing, 1965-68

(Average of 23 Cities)

COSTS AND RECEIPTS PER UNIT PER MONTH

The financial crisis leads to friction between public housing management and tenants. Faced with mounting deficits, management must cut back on maintenance and services or increase rents. Either course meets with strong resistance from tenants. Rents have been rising, but not nearly enough to absorb increased costs.

In reviewing these findings for the Senate Banking and Currency Committee, Mr. de Leeuw said that in 1965 public housing authorities in the 23 cities were, on the average, covering their costs from rents and other receipts. By 1968 inflation had caused a deficit in the average city, and this trend has been continuing.

As he summed up the dilemma: Increasing rents to a level sufficient to meet operating costs would place a growing burden on low-income tenants; steps to attract a higher income group of tenants would defeat the purpose of public housing; further cutbacks in maintenance would create new hardships.

De Leeuw favored an increase in federal subsidies for public housing operations. Congress enacted legislation in this direction in late 1969, but new approaches that dispense aid without encouraging uneconomic management still need to be developed. This study was funded by the Department of Housing and Urban Development. □

Campus Unrest: No Single Cause

Better communications is biggest need

College administrators and heads of faculty organizations cited the Indo-China war most frequently as the major cause of recent campus unrest. No single cause, however, dominated the list of reasons given.

Student body presidents considered the Indo-China war the second most important factor, giving greater weight to poor communications. Federal unresponsiveness to domestic problems was a close third among the reasons given by students.

Campuses with enrollment of 10,000 or more, those in the East, those with ROTC units and those with a liberal arts emphasis were found to have experienced the greatest number of incidents and more serious incidents (involving major disruptions, injuries or property damage) than did other colleges during the wave of unrest from May through August of 1970.

These are among the findings of an Institute survey prepared for the President's Commission on Campus Unrest and released by the Commission in November.

Garth Buchanan and Joan Brackett of the Institute staff, responding on a crash basis to meet the Commission's request for data within a tight deadline, managed to obtain responses from about two-thirds of the nation's accredited colleges. Because of the summer months when the survey was conducted, more college administrators than faculty leaders or student body presidents responded.

Survey questions focused on the history and causes of campus disturbances, anticipations of further unrest during the 1970-71 school year, and potential means for amelioration of further disruptions.

Responses also were tabulated on the kind of action taken to deal with incidents. Were the National Guard and off-campus police called in? Were arrests made? And what types of reprimands were used to deal with students involved in incidents? Were students suspended or expelled? Were they taken before the institution's judiciary body? Was their financial aid withdrawn? To see the data in better perspective, responses to these questions were matched against campuses according to the amount and seriousness of incidents, and according to the size and other characteristics of the colleges.

By far the most frequently mentioned recommendation for easing campus unrest was to improve communications —among boards of trustees, campus administrators, faculty and students, between parents and students, between politicians and campuses, and between local communities and colleges.

Because of the importance of the subject, the authors of the report are making further analyses of the material. □

A Time to Reflect and Write

Former New York City budget director is first occupant of chair of urban management

Frederick O'R. Hayes, who recently resigned the position of Director of the Budget in New York City, has been named the first occupant of the Institute's new Chair of Urban Management.

Under the program, supported in part by the Alfred P. Sloan Foundation, the chair will be filled by individuals who have achieved eminence as elective or appointive officials, offering them an opportunity to spend from six months to two years in recording conclusions drawn from their experiences.

Fred Hayes

The very success of first-class public servants often prevents them from reflecting on their experiences and sharing their knowledge with new generations of public managers and students of public affairs. When they are ready to leave government they are eagerly sought after for other positions which then keep them completely occupied.

The Chair of Urban Management will provide an interlude and an environment in which insights can be highlighted in ways that will be useful to the nation's urban managers. Mr. Hayes is writing a book analyzing his work in New York City and describing major problems of the nation's largest city as seen from his perspective.

Before accepting the New York budget position in 1966, Mr. Hayes was a top official in the Office of Economic Opportunity and the Urban Renewal Administration. For ten years he was with the U.S. Bureau of the Budget.

During his years with Mayor Lindsay, Mr. Hayes prepared and administered operating budgets of nearly $8 billion and capitol budgets of over $1 billion. His use of budgeting as a focal point of policy/program development attracted national interest. □

About *SEARCH*

Plus some observations about urban experiments

Search is a new bi-monthly report that will share the findings, insights, data, and further questions that turn up in the research work of The Urban Institute.

Research is not really complete until whatever emerges from an investigation is made widely available to possible users. In addition to federal agencies which sponsor much of our research, these users include the policy makers and administrators who manage cities day after day and officials at the state and federal level. They include also the citizens, action groups, scholars and researchers, business and labor organizations, writers and others whose concerns and enthusiasms somehow get reflected in the kinds of cities we have.

The brief descriptions of the Institute projects reported here may stimulate an interest in the more extensive studies from which they are drawn. Usually material on these studies is available and requests should be addressed to our publications office.

* * *

Each issue of *Search* will feature a detailed account of one of the Institute's projects. In this first issue we look at the Beat Commander project in Detroit, Michigan.

The nation's present shortage of knowledge about how best to fight crime exemplifies one of the most frustrating problems of public policy. Serious crime plagues most major cities. Money is being given to states and localities to fight rising crime. But the experts in this field say they don't know how to use the money to best effect. When the nation has spent the money, the public still won't know which of all the things being tried have worked and which have been a waste of effort—because almost none of these things is being measured.

The Detroit police project is an attempt to change that situation. We think that if its basic concept can be implemented, the communities and the police will be better able to control crime while preserving domestic peace. To find out if this works, to measure whether crime control is changed by what we do, we are conducting an experiment in the field, under conditions controlled as rigorously as we know how.

Opportunities to do this are rare, and it is hard to do. Even if the Beat Commander idea fails to reduce crime, we will have gained something from knowing how it failed. If, as we expect, the concept succeeds in practice, we will gain much more. In either event, the development of useful measurements will help build a sound empirical base for devising theories and evaluating strategies to improve urban society.

William Gorham

It Can Pay to Move

An estimate of income gains of rural-to-urban and south-to-north migrants

An analysis of the monetary benefits of migration within the United States raises serious questions about widely-held assumptions about the migration phenomenon.

The Monetary Rewards of Migration Within the U.S., by Richard Wertheimer II, of The Urban Institute, concludes that migration to the cities does not at this time pose problems serious enough to warrant the alarm expressed by many people. As the author states:

"Migration is commonly viewed as massive, mostly rural in origin, and disproportionately black. Migrants are commonly viewed as poorly educated, prone to unemployment, likely to be on welfare, likely to riot and rather unsystematic in their choice of destinations. Virtually all of these impressions are false."

(Continued on Page 7)

The Beat Commander

New concept of city crime control

Certain long established concepts of police operations have been challenged by the Beat Commander project, a bold experiment in crime control and police-community relations.

For the past nine months, in Detroit's tough Tenth Precinct, the theories and practices of the Beat Commander system have been subjected to feasibility tests. The project was devised by Patrick V. Murphy and Peter B. Bloch. Murphy at the time was director of the Urban Institute's Public Safety Studies; then he

Patrick V. Murphy

Peter B. Bloch

went to Detroit as Police Commissioner and subsequently moved to New York City in that same capacity. Bloch, as current leader of the project at the Institute, works closely with Detroit police officials in this Ford Foundation funded project.

Surprisingly, there has been no opposition to the program

Nobody is certain at this point that the Beat Commander system will stem the rising crime rate. But among the many strategies for dealing with crime, it holds considerable promise both for improving police crime-fighting techniques and for building substantially improved police-community relations.

How It Works

As the name implies, the Beat Commander system focuses on the beat—the small neighborhood equivalent to two squad car territories—rather than on the much larger precinct or entire jurisdiction of a police department. In Detroit a beat includes about 15,000 people compared to a precinct with 130,000 people. A key feature is that the Beat Commander Team is assigned on a permanent basis to this small beat. In Detroit such a team consists of about 23 foot and squad car patrolmen plus a commander, who holds the rank of sergeant. It was anticipated that police-community rapport would develop from this attachment to the physical boundaries of the small beat.

Once Murphy and Bloch propounded this idea, it sounded like such a useful approach that it became difficult for those who were not involved in police work to realize that it represents a distinct departure from common practice. The fact is, nevertheless, that this effort to instill a personal relationship between police officers and one small segment of the community runs counter to the established practice of frequently moving both patrolmen and their immediate commanders to many different beats and precincts. For many decades, familiarity between police and the people under their jurisdiction has been positively discouraged as a matter of policy in America's larger cities.

Part of the separation of citizens and police grew out of the change from foot patrols to squad car work. More important, widespread concern about police graft led to systematic devices for preventing familiarity. Those who designed the Beat Commander project are aware of the risks but believe they can be dealt with in other ways and consider the dangers of unfamiliarity to be even greater.

The policemen's intimate contact with their beat begins to give them a sense of the trouble spots and troublemakers so they can do a better job of crime prevention. Equally important for police effectiveness, the patrolmen learn to know who are the law abiding citizens with whom they can work.

This knowledge of what is going on in the beat is not allowed to remain the private asset of each patrolman. Rather, the Beat Commander makes the sharing of such information a central feature of meetings and other communications channels involving the entire Beat Commander Team. Such formal communications at this level of operations are rare among most police departments. In extending the par-

ticipation of policemen and lower level supervisors in crime control discussions and strategy sessions, the Beat Commander system assumes a faith in the ability of these men to take on broader responsibilities. It also assumes that the added responsibilities will improve their attitudes toward the job in this era when so many internal and external factors tend to undermine the policeman's image of himself.

In this respect the project involves a fairly drastic management change. The sergeant in command of the beat is given much more authority than is normally given to other sergeants, and in some ways more than officers in charge of entire precincts under the usual shift system. The Beat Commander has 24-hour responsibility for the operations of a team of men in a defined territory, whereas the other sergeants are responsible only during one shift for a changing group of men working in changing jurisdictions within the precinct. The traditional sergeant is not responsible, as is the Beat Commander, for the completion of various projects.

As with any new approach, not all ramifications of the Beat Commander system were anticipated. For example, detectives previously receiving cases from all over the precinct were assigned to specific areas so they too could participate in exchanges of information with the Beat Team, adding to and benefiting from the comprehensive understanding gained by the beat officers.

The sergeant has much more authority

Community Relations

Members of the team are encouraged to meet community residents in their own activity centers. The police have been attending meetings of block clubs, schools, churches and other local organizations. They are encouraged to take the initiative in referring a young person to a job training program, in helping alcoholics and narcotics addicts to take advantage of medical aid programs and in other ways helping the people of the community.

Improving police services of this kind not only helps individuals and the community. Murphy and Bloch also are convinced that it will lead to citizen cooperation with the police. They explain the connection between crime control and community relations in this way:

First, *the small ratio of police to citizens makes it impossible for the police alone to deter crime. They cannot be visible or nearby at all times and in all places. For maximum crime prevention, therefore, a potential criminal must begin to know that every resident of an area is a potential assistant to the police.*

Second, *good community relations does not result from the public relations efforts of the police department headquarters or of some specialized unit or bureau under the chief, useful as these efforts may be. Rather, good community relations is the product of* all *the various encounters between citizens and police personnel. Thus, the individual officer must understand that his actions will affect the amount and degree of cooperation—or opposition—he will receive.*

Improved public relations, of course, would make sense for any kind of local government service. But it is essential in the instance of police and public order in order to overcome the serious—some would say almost hopeless—barriers of misunderstandings, mistrust, ill will and histories of friction that have built up over the past decades. The Beat Commander project evolved out of creative analysis and searching for ways to surmount these barriers. The project aims to rebuild a relationship based on the common interests of both police and citizens in having more peaceful, secure places to live and work.

The Beat Commander demonstration project in Detroit's Tenth Precinct shows evidence of improved police procedures, more cooperation between members of the police force within the beat and favorable community reaction. The system has been in effect long enough to indicate that it is operable and that it ap-

pears to yield certain benefits.

The favorable comments of some Detroit police officials about the results were buttressed by the Institute's own observations. To get a different perspective, the Institute asked Ralph R. Smith, a law student at the University of California, to make his own assessment. Smith, a black who brought considerable initial skepticism about the ability of police to serve constructively, was given a no-holds-barred assignment to report on the project as he saw it. Meanwhile, Sergeant Leroy Charrier, a conservative 19-year veteran of the police force, was appointed Assistant Beat Commander. Voluntarily, Smith and Charrier provided the Institute with a combined report of their findings about the project from May through September of 1970. Despite an admitted continued hostility toward police in general, Smith became quite optimistic about aspects of the Beat Commander project. Charrier overcame a strong attachment to traditional approaches to reach similar conclusions. Both were critical of the Institute and the police department for moving too slowly to expand the experiment. They urged extending it immediately to the entire Tenth precinct.

Test Results

More Crime Reported. Statistical data collected over the first five months of the demonstration indicate that the Command territory's reported crime rate rose during the five months from 18 percent of the precinct's total to 20 percent. The authors of the assessment said this was anticipated. The higher rate may be evidence of greater confidence in the police on the part of the community and a willingness to report crimes that otherwise would have gone unreported. They noted that burglaries, which usually are reported less than other types of crime, accounted for the largest increase in the total crime statistics for the period.

Quicker Service. The Beat Commander officers spend about 27 minutes per police call, well below the city average required time of 40 minutes. Also, although the personnel of the Beat Commander Team may be called by headquarters in an emergency to assist in other beats or precincts, the data show that the new system kept them more often within their regularly assigned area. The Beat Commander squad cars spent only 16.5 percent of their time on runs outside their area, compared with as much as 70 percent in the other police areas.

Job Attitudes. The Charrier-Smith report took as one measure of improved attitude the amount of sick leave taken. Over a four-month period, they found that the sick leave average throughout the entire Tenth Precinct was just under three days per patrolman. In the Beat Commander territory, the average was one day. The assessment also takes note of a tight-knit relationship of those on the Beat Commander team, with close rapport between the two supervisors and among the patrolmen. They point, further, to evidence of increased cooperation and communication between the uniformed and detective elements of the force.

Community Acceptance. The assessment shows significant improvement in community relations. Block clubs in the area invited Beat Commander personnel to explain their new concepts and approaches to crime control. The report says:

"Surprisingly enough, there has been no opposition to the program, even among the youth. And even more surprising have been the instances in which citizens have voluntarily produced supporting evidence for Beat Commander personnel who have been accused of improper conduct by arrestees."

One officer said he was convinced that several successful stake-outs for criminals would not have occurred before the experiment. He explained that people gave valuable information to the local Beat Commander team because they had gained confidence that these police were interested in providing protection; but the same citizens previously would have hesitated calling to a distant, impersonal headquarters which would be far less likely to respond.

Citizens who had hesitated to notify headquarters now call "their" Beat Commander

Letters from residents in the area give further testimony to the feelings toward Beat Commander personnel. Mrs. Tessie Bing, president of the 40 and 43 Hundred Block Club, wrote: "Of course, you have to live in this area to know the need. This patrol is doing a wonderful job, so please don't take these officers out of the area." William E. Booker, president of the Men's Club of St. Theresa's parish, commented in a letter, ". . . We know the good, the

bad, the hangouts. We see the peace-of-mind smiles when our patrolmen pass through. We know our people are grateful. . . ."

Experiment—Phase II

Despite these positive responses to the initial phase of the demonstration, Bloch considers it premature to judge it an unqualified success. It was known from the start that certain influences could generate seemingly favorable results that might not occur with full-scale use of the new system. For one thing, the first Beat Commander Team was composed of police volunteers, assuring a better than average commitment to make the pilot project work. Also, it is not uncommon for participants in *any* new program to perform better and to reveal higher morale, simply because they are the focus of attention.

Assuming that feasibility could be demonstrated, as it now has been, Phase II of the Beat Commander program was designed to provide a period of more rigorous testing. Beginning in May 1971, every effort will be made to eliminate extraneous influences favoring the beat system as compared with the older system.

For the new experiment, ten beats with high crime profiles have been selected. Over a 12-month period, it is anticipated that Beat Commander teams will begin operating in five of these areas. The other five, which are paired for similar demographic and socioeconomic features, will serve as control or comparison areas. It is anticipated that the officers assigned to Beat Commander areas may put forth extra efforts. Personnel assigned to control areas, therefore, will be notified of their role in the experiment to heighten their own motivation during the test period. This is expected to minimize differentials in effort or desire to succeed between the personnel in the ten areas.

The emphasis in Phase II will be on objective measurements to determine the value of the new approach. To test the degree of victimization or crime control, certain standard crime reporting methods may be utilized. However, certain crucial aspects would not show up in the usual statistics: Has fear of crime risen or fallen? Has observed police behavior changed? Have citizen attitudes toward the police changed? What about the policemen's own attitude toward their work? To measure the effectiveness of the Beat Commander system in matters of this kind, an extensive interviewing program will be undertaken. Three interview periods are planned—before the start of operations in each pair of experimental areas, at the end of six months, and one year later. The participating police and citizens in all ten beats will be among those queried during the interviews.

Impact on crime will be rigorously tested

There is a serious lack of techniques for measuring policing methods. So if the Phase II measurements prove workable and useful as evaluating tools, they will be a considerable contribution in themselves. Presumably they can then be applied in a wide variety of police innovations being undertaken around the country.

ANOTHER CITY FOLLOWS SUIT—New York City's first "Sector Commander" is to take office during January 1971, with powers and responsibilities patterned after Detroit's program. The Urban Institute again expects to assist as consultant and evaluator. Other cities have sent representatives to Detroit and to the Institute to discuss possible adaptations. The Beat Commander system, assuming positive results from these experiments, could become a major influence in future crime control.

It can pay to move

(Continued From Page 2)

As compared to the early Fifties, the average annual net out-migration from farms has dropped sharply (from 1,115,000 during 1950-55 to 711,000 during 1965-68). Net nonwhite migration from the rural South averaged 90,000 per year during the Sixties, compared to 145,000 per year during the Fifties. Only about one-third of the increase in Negro population in central cities is due to net migration; the rest is the result of the natural increase of the population already there.

The study described these characteristics of the migrants:

—On the average, they are younger and better educated than the rest of the population.

—Nonwhite rural-to-urban migrants are better educated than the average nonwhite resident at the origin, but somewhat less educated than the average nonwhite at the destination.

—Nonwhite rural-to-urban migrants are about as likely to be employed as other nonwhite urban dwellers.

—A higher proportion of whites than nonwhites migrate.

—In eight out of nine cities studied, the white rural-to-urban migration was significantly more than nonwhite.

Wertheimer's work concentrated on the income gains to various categories of migrants. He found that most rural-to-urban migrants have earnings of about $600 to $1100 per year more than comparable individuals who did not migrate. A significant exception is women who head families or live alone, who gain nothing.

As interesting as the picture of average earnings gains attributable to migration are the variations in the patterns for migrants of different characteristics—white and black, male and female, different educational backgrounds, rural or urban origin, and city size of destination. The accompanying chart shows some of these variations.

Although white migrants do not increase their incomes until five years after moving from South to North, nonwhites gain immediately. Five years after moving, migrants have earnings equal to those of Northern and urban nonmovers of the same education, age, race and sex.

The substantial income gains for migrants mean that programs to halt migration would have to provide substantially increased earning opportunities at the origin to be effective. Since the study shows that recent migrants to cities account for only a small part of the cities' population and that they earn about as much income as nonmover city-dwellers, programs to stem migration are not likely to have much impact on city problems anyway.

This research on migration is one of the Institute's urban employment studies that are funded by the Department of Housing and Urban Development. □

Annual Earnings Gains of Migrants from the Rural South to the Urban North, Compared with Rural South Nonmigrants of Same Education, Race and Sex

Evaluating Federal Programs

Do officials find the best way to spend all those dollars?

How does the administrator of a federal program costing millions or even billions of dollars know whether he is achieving worthwhile results? How does he know which individual projects are successful and which should be discarded?

Usually he doen't know; he just guesses, according to *Federal Evaluation Policy,* a recent Urban Institute report.

A team headed by Joseph S. Wholey spent a full year examining the evaluation procedures used by four agencies to determine the effectiveness of 15 federal programs. The agencies studied were the Department of Housing and Urban Development, which funded the study, the Department of Labor, the Department of Health, Education and Welfare, and the Office of Economic Opportunity.

The Institute study revealed that little systematic evaluation was being done in most programs. In several programs, a number of separate evaluations had been conducted that, for lack of proper overall direction, did not permit meaningful comparisons. Of the agencies investigated, OEO was found to have the most highly developed evaluation program.

The report does not stop at describing current deficiencies. It offers a set of detailed recommendations.

The recommendations were especially timely because of the Administration's current emphasis on improved management in the Executive branch. A proposal that the Executive Office assume greater responsibility for program evaluations, especially across agency lines, was incorporated in the President's guidelines for the new Office of Management and Budget. OMB activity should meet the need in the federal evaluation process for leadership at the highest level, which the Institute report describes as "critical."

The recommendations are aimed in large measure at assisting the managers of federal programs in using evaluation to upgrade their programs. For example, emphasis is given to the need for comparative assessments of local projects of the same type and for systematic testing of different programs with similar aims. □

The Oakland Project

Action and research linked in a city

The Urban Institute, the University of California at Berkeley, and the City of Oakland are cooperating in a unique experimental project to increase the relevance of research to practical urban problems.

Under the program, supported and coordinated by the Institute and administered by Professor Aaron Wildavsky of the Berkeley Political Science Department, a select group of graduate students works about two days a week for two years in key offices of the Oakland city government.

After the first few months, the students, the appropriate city offical and the Political Science Department agree on a research topic which shows promise of producing useful analytical data for the city and an acceptable dissertation for a doctorate from the university.

The project benefits both the city and the university. In contrast to many intern programs in which students perform "make work" activities, these deal with matters of substance. One student, Arnold Meltsner, designed and implemented a financial capability study which substantially increased the city's revenue base. He is now a member of the faculty of Berkeley's Graduate School of Public Affairs.

In the early stages of the project, students concentrated on budgeting in the city departments. Now their work embraces such topics as racial conflict, decentralization and community control and the problems of policing the central city.

The students are encouraged to design and teach undergraduate courses based on their practical experience.

The Oakland Project is now four years old. For the first two and one-half years it was supported by the National Aeronautics and Space Administration and is now funded through a grant from the Department of Housing and Urban Development. Joseph H. Lewis, director of the Institute's Urban Governance Studies, says the plan is being carefully evaluated for possible replication in other cities. □

A REPORT FROM THE URBAN INSTITUTE

Volume 1, Number 2 March - April, 1971

Anti-Inflation Strategy

Brake on price spiral by curbing duration, frequency of unemployment

Manpower training, now oriented primarily toward helping the unemployed and disadvantaged, should be vastly expanded and aimed at skill shortages as a major weapon against inflation.

Charles C. Holt, C. Duncan MacRae, Stuart O. Schweitzer and Ralph E. Smith set forth this proposal in their report, *The Unemployment-Inflation Dilemma: A Manpower Solution.*

"The structure of labor and product markets yields a relationship between the rate of inflation and the rate of unemployment such that aggregate demand policy alone is incapable of attaining full employment and price stability simultaneously," they conclude from their detailed research efforts.

Part of their research traces the postwar history in the United States of the trade-off between inflation and unemployment. The relationships they uncover explain why the low unemployment policies of the mid-1960's led almost inevitably to the high inflation problems of the past year, and why fiscal and monetary policies may reduce either unemployment or inflation, but not both at the same time, to satisfactory and stable conditions.

Their proposed manpower approach emerges from research findings about several aspects of unemployment, including the high rate of turnover in the labor market, the duration of time that people remain unemployed, and the fact that unemployment and job vacancies both can be "too high" as the result of market frictions.

Through theoretical and statistical analysis it appears that a high ratio of job vacancies to unemployment contributes to wage inflation and this is further aggravated when labor shortage bottlenecks occur in the high-skill categories. The wage inflation in turn contributes to and interacts with price inflation.

Some of the primary manpower approaches recommended by the authors are better understood in the context of the nation's existing manpower programs. These are geared almost entirely to helping people at the low end of the job ladder. The Institute researchers argue, first of all, that this aspect of manpower training should be enlarged, and that it would be unacceptable to help workers further up the ladder unless everything possible were done to help those with the greatest economic need.

But they note that programs oriented *only* to the lowest level have a tendency to displace or threaten the security of other workers, especially when jobs are scarce.

One thrust of the recommended solutions is to focus on training to relieve skill shortages. Pulling workers up a grade to fill these middle-level job positions of a technical or even subprofessional nature should unclog the labor market and permit upgrading all along the line.

Another thrust is to devise more effective ways of matching workers and jobs. If the matching is done more quickly, it would cut down unemployment by shortening the long durations of joblessness. If the matching is done with more attention to placing right people in the right jobs, this will cut down on unemployment by reducing the rate at which workers later will quit or be laid off.

By tracing complex labor market adjustments as they relate to inflation and unemployment, the researchers were persuaded that the manpower approach could help solve one of the crucial economic puzzles of the decade and provide a means for reducing *both* unemployment and inflation without setting in motion forces that will have a long-run worsening effect. □

Metropolitan States Proposed

Nation's urban areas would gain from revitalized federal system

As a political-financial solution to the plight of urban areas, Richard P. Burton of the Institute's urban public finance group proposed a constitutional change to permit the creation of Metropolitan States. He testified recently before the Joint Economic Committee about possible advantages of this proposal.

Urban officials widely believe that states have been slighting cities and favoring rural or suburban interests. This has led cities increasingly to try to forge their own direct links with federal funds and programs.

This growing breakdown of normal federal-state-local relations gives rise to the Metropolitan State arrangement as a means of restoring vitality to the three-tiered federal system. Essentially, the plan would give full state rights and powers to new Metropolitan States embracing the major concentrations of urban population, industries and clusters of communities, and leave the present 50 states with their domain over non-metropolitan areas.

Unlike many metropolitan consolidation schemes, Metropolitan States would preserve within them the existing communities and their presumed sensitivity to constituent preferences. Blacks and other minorities who have lately gained political power in central cities or surrounding urban jurisdictions would not be threatened as they are by centralization.

Burton holds that this would give urban areas a constitutionally and fiscally viable form of government. And by strengthening local government, it should check the tendency toward centralism. The author is mindful, of course, that achieving this fairly radical departure would be likely to involve enormous political obstacles. □

Solid Waste Collection

Ways to measure quality of service

With the accumulation of solid waste growing at the rate of 4 to 6 percent a year, every community is faced with critical collection problems. Yet hardly any of them know whether they are really doing an adequate job.

The same is true about many urban services. Through a program aimed at improving management techniques for localities, the Institute is developing a series of guides to help communities assess the quality of their performance. The first of these guides, written by Louis H. Blair, Harry P. Hatry and Pasqual A. Don Vito, deals with solid waste collection.

Currently used measures of waste collection services typically focus on how many tons are picked up by how many employees. These are useful but far from sufficient. They do not indicate the effects of the collection activities on the community. They do not reveal whether neighborhoods all receive the same level of service or whether some are shortchanged. They do not relate collection practices to possible health or fire hazards.

The Institute guide provides eight specific measures that address such questions. It recommends what kinds of measurement data are necessary, and suggests appropriate data collection procedures. Inspections to survey city streets and alleys systematically are proposed. A major component of this is the development of photographic rating guides. Surveys to obtain indications of citizen satisfaction also are suggested to supplement incomplete and possibly misleading indications based solely on citizen complaints.

The proposed measurement system is devised to help local officials pinpoint weak spots in performance and to help them arrive at better judgments about what improvements are needed.

The authors of the report put a price tag on their proposed measurement-analysis system. Depending on the population of the city, they estimate that it would require from 1 to 2 percent of the annual solid waste management budget. □

Developing Instant Response Models

Research to aid lawmakers when issues are in legislative debate

One of the most important aspects of the Institute's work with the Family Assistance Plan, or FAP (described in the article beginning on the next page), has nothing to do with welfare reform itself, crucial as that is to the nation.

The aspect I want to underscore is the development and operation of what may be termed an *instant policy response model.* In nontechnical language this means that the Institute has given the executive and legislative branches a device for figuring out quickly what any proposed changes in the FAP bill would mean.

Anyone who has participated in the formulation of legislation—especially legislation that marks a new departure—will understand the significance and even excitement of this development. In fact it might best be explained by stating what usually happens in the absence of such a model.

First, policy makers accumulate ideas from knowledgeable people. The attempt to frame this into legal language as a bill raises many questions: What individuals or interest groups will benefit? By how much? Who will bear the costs and in what way? What (as members of Congress will be fast to inquire) will be the impact in various states and cities? What immediate or long-range adjustments may be necessary? And so on. A great deal of research may be undertaken to find answers. By the time a well designed bill is formally proposed, the implications are spelled out with considerable precision.

Then the bill goes in the legislative hopper. Innumerable items or nuances in the bill are objected to. Those who want more, less, something different or nothing at all begin debating and trading. This tug of war goes on until the arguments and power equations finally lead to what a majority find acceptable.

Unfortunately, care in projecting the effects of the bill typically is lost during this stage. The problem I want to stress is not that "good guys" lose out to "bad guys." Let's assume that a certain bill is modified only by "good guys" who have the public interest at heart. My point is that the implications of their new language may be far different than they realize. To take a case from another decade: in the course of enacting the Medicare program in 1965, Medicaid, the health services program for the poor, was adopted with virtually no analysis of the impact it would have on the costs of health care to the poor and everyone else. In bill after bill—on housing, taxation, manpower or whatever—the researcher frequently is left out of the action when he is urgently needed. At every turn in the debate, effects of the latest alterations should be estimated.

This is what the Institute model has provided in the lengthy FAP debate. New proposals can be simulated to show how they would affect the level of costs and the distribution of benefits compared to the present system or to some alternative plan. This model does not yield answers about FAP with the exactitude of an astronomer forecasting the moment of an eclipse, but it gives data "in the ballpark," reasonable estimates based on projections of pertinent recent experience. It does not make policy but gives those who do so better insights into what they are really proposing.

We believe this approach, applicable to many other fields, will raise the level of national debate and the quality of legislation.

Worth Bateman

(Editor's Note: The Institute President's column is taken over in this issue by Dr. Worth Bateman, Vice President for Research. He has been closely involved in the design and development of the FAP legislation, first as Deputy Assistant Secretary of HEW and then in an advisory role while at the Institute.)

FAP in "Operation" While Congress Debates It

Impact of various proposals simulated on computer

The Congress returned in 1971 to continue debate over enactment of FAP, a Family Assistance Plan proposed as a reform of the welfare system. But a large number of variations of FAP had already been "in operation" at The Urban Institute as part of a continuing effort to experiment with improvements in administrative and legislative policy making.

Through the long history of social legislation in the United States, fundamental decisions more frequently than not have been made on guesswork. Major public programs have become law on the strength of rule-of-thumb projections. Changes during committee meetings or amendments on the floor of the House and Senate have been adopted without anybody knowing what the ultimate effects of the new language might be.

Under the direction of Nelson McClung, the Institute has now developed a device for removing much of the guesswork from considerations of FAP. In essence, the device is a model of the people and funds involved in the nation's system of income transfers. This is programmed on a computer so that any tax or grant proposal such as FAP may be put into "action" and its impact determined through simulation.

Before it was put into service as a legislative tool, the computer model contributed to the early designs of FAP. It was originated in 1968 and first used by the Commission on Income Maintenance Programs, of which McClung was deputy executive director, to develop clearer understanding of income transfers. With John Moeller, Eduardo Siguel and others on the Institute staff, he has continued to perfect the model and used it to help the Nixon administration analyze tentative welfare reform proposals.

The model does not create policy. Rather, policies are fed into it, and then the policy maker may see what his proposals would cost, who would benefit, and how these costs and benefits would change over a period of years.

One of the complexities of welfare reform is that it involves costs to federal, state and local governments. Another is that it offers different benefits to various segments of society —people with different income levels and family sizes, for instance. A still greater complexity is that there is not one but a whole array of present welfare programs, each with its own criteria, form of grant and amount of payment.

Desk estimates—the hand calculations on which legislative designers and policy makers traditionally have had to rely—might provide a reasonable picture of changes in any one of these elements. The advantage of the computer model is that it is able to deal with all of the complexities and their interactions simultaneously. In other words, with its storehouse of facts, it can take account of ripple-like effects when the separate elements change and are changed by each other.

As a basis for judging between several proposed policies, the model can be used to compare their anticipated results while showing, as well, how and to what extent they differ from the present public assistance programs.

Who Is in the Model

The original model was constructed from statistics of the 1967 Survey of Economic Opportunity (SEO), a sample assembled for the Office of Economic Opportunity by the Census Bureau with data from 30,000 households. The

Census samples the population annually for information on income, work experience and other attributes. Using tested methods, a part of the SEO was composed of 18,000 households representative of the United States as a whole. In addition, to get more precise information about low income persons, another 12,000 poor and largely nonwhite households were added to the sample. For a model of the portion of the population requiring and most affected by welfare or income assistance programs, oversampling the poor, of course, was appropriate.

As further information became available about the sample "living" in the model, the Institute's income maintenance group developed procedures to reflect growth over time in population and income. Continuous updating of the sample was crucial for estimating the impact of FAP and related public assistance programs for the years ahead, since most benefits are closely tied to income levels.

Transfer of Operation Intended

The Institute model, when used to analyze the Administration's income maintenance proposals, yielded estimates of acceptable accuracy. Once it was seen that simulation could add significant dimensions in the process of writing social legislation, the Institute no longer considered it the role of a research organization to continue operating the model. The proper place to lodge the model seemed to be within the Social Security Administration, since it was thought for awhile that SSA would administer FAP. This idea was enforced when some findings derived from the model appeared to challenge FAP proposals as then written—findings that should have been immediately available through SSA to the Secretary of Health, Education and Welfare who is the President's top spokesman for FAP.

Steps were taken, therefore, to transfer the model—and the capability of carrying out simulations—to the Social Security headquarters in Washington. The Institute intended to concentrate its attention on developing models adaptable for a wider variety of policy issues.

Working nights and weekends to keep pace with queries

The queries from the Administration and Congress during the big 1970 debate over FAP started pouring in, however, before the transfer was completed, and the Institute found itself in the midst of a challenging test of its model.

There were periods when the computer operators and analysts were working nights and weekends to keep up with the queries. Typically the answers were requested instantly.

Test of Rapid Response

Administrative experts, congressional committee staff members and individual legislators came with separate questions. But they all wanted facts, facts about the impact of one income maintenance plan or another for the years 1971 to 1975: Who will benefit? If food stamps are changed, how will that affect FAP? For families of certain sizes and incomes, will they receive more or less total aid than at present? Will state and local contributions to FAP and other remaining public assistance programs be greater or less than under current plans? How will proposals affect particular states, metropolitan areas or regions? What of the racial impact?

Virtually all the numbers that have been used in the debates were developed by the Institute's simulation model. Republicans and Democrats, House and Senate, pro-FAP and anti-FAP, Administration and various nongovernment groups and individuals, relied on the same data. This does not take the excitement or conflict out of debates—as has been evident during many somewhat stormy sessions. But it does tend to focus the arguments on specific details and genuine differences of opinion about intended results.

It should be stressed that, as is made clear to all who use the model, the "facts" derived are not claimed to be "truth." Rather, they are statistical estimates accurate within certain limits. But insofar as they are based on the best currently available information, they nevertheless remove some of the uncertainty that clouds national debate over major legislation. Especially with comparisons, the absolute numbers or dollars are far less important than magnitudes of differences. These often can be expressed with a fair degree of confidence. In short, the model has emerged from early and strenuous tests as a sensible, practical device.

Congressmen and others who received overnight program estimates have been given a taste of what might well be an essential part of the legislative process in the future. Up to the time the FAP debate renewed this year, the

various amendments were projected for costs and benefits over the next five years. Simulation holds the promise that officials and the public can be spared the big surprises—too often unhappy and disappointing ones—that have emerged from much social legislation.

Back in the 1930's, for instance, when the nation passed federal housing legislation, nobody asked what the impact of the mortgage liberalization formulas would have on where people lived in terms of central city and suburb or in terms of economic and racial stratification. With a growing capability to answer such queries, of course it remains important to ask the right question—and no model guarantees that. Yet having the capability to work out the implications of complex matters on a very quick basis may encourage people to air issues or fears they would have hesitated to raise when there was no way of resolving them.

Research Tool

Beyond the immediate applicability of the simulation to the political and legislative process, the model and the analyses connected with it provide many insights to researchers working on long-range approaches to urban problems. Some useful findings or important questions brought to light may be cited as examples.

McClung and the income maintenance group find that poverty counts and poverty gaps now estimated by the Census and users of Census data tend to be significantly overstated—because of under-reporting of income from grants and from property. The under-reporting of grant income leads, further, to assessments showing present public assistance and Social Security programs to be less effective in dealing with poverty than they really are.

Although most estimates have been prepared under the assumption that 100 percent of persons eligible for income maintenance programs will take advantage of them, it is now evident that in fact many do not apply for benefits of present programs. How many? In what type of aid programs is nonparticipation more evident? What psychic or other costs of establishing and maintaining eligibility explain this phenomenon? When these questions are answered, the model is capable of making allowance for nonparticipation.

Safeguard against laws that yield unhappy surprises

Determining poverty according to annual income data is found to lead to unreliable forecasting of future dimensions of poverty, suggesting a need for refined definitions of poverty.

Those who designed the FAP or transfer income model have been working to extend its capabilities so it may be used to predict the results of tax policy, educational policy and manpower policy, not only in terms of immediate impact on income distribution but also in terms of indirect impacts through multiplier effects, changes in work efforts, health and family organization. □

To Finance Public Facilities

Subsidy plans analyzed

State and local borrowing at the end of the 1960's suffered serious setbacks and high interest costs led to cancellations or delays of critically needed public facilities. The immediate outlook became more favorable in the last half of 1970 when interest rates fell, but the longer-term prospects suggest that renewed difficulties for local government bonds may be in store over the next five years.

Three subsidy proposals for assisting state and local borrowing have been analyzed by Harvey Galper and John Petersen. Their study compares the effects of these plans—under different financial market conditions—on interest rates, credit flows, federal costs and state and local benefits.

The three proposals are as follows:

1. URBANK. This calls for a federally-created agency that would be given broad authority to lend to states and localities at preferential rates. Urbank would act as an intermediary, issuing its own taxable securities (in contrast to tax-exempt municipals) at rates required to attract investors. A federal subsidy, appropriated annually to Urbank, would cover the difference between lending receipts and borrowing costs.

2. TAXABLE MUNICIPAL BOND SUBSIDY. This approach calls for state and local governments themselves to issue taxable bonds in place of tax-exempts, with the added interest expense that this entails offset by federal subsidy. The subsidy would amount to a fixed percentage of interest costs on these taxable bonds.

3. RETIREMENT FUND SUBSIDY. This plan, originally suggested at the Institute by Selma J. Mushkin, would provide a federal subsidy so that state and local retirement funds (most of which cannot now benefit from the tax-exempt feature of municipals) would find these bonds attractive. The subsidy would go to the investing funds, leaving the municipals tax exempt and leaving their underwriting and marketing in the private sector. This would open to state and local borrowing a pool of $50 billion or more. This plan could be extended to private retirement funds as well if deemed advisable.

A principal finding by the authors, after analyzing these plans according to detailed interrelations of financial market behavior, is that each plan yields substantially the same results in terms of financial outcomes.

Under moderate conditions for debt financing, the federal costs would be as follows: $57 million in direct subsidies and $4 million in indirect costs from higher long-term borrowing rates, less $41 million in greater tax revenues for the federal government, or a net Treasury cost of $20 million a year. This would bring state and local benefits of $46 million in lower borrowing costs and would enable these governments to increase their long-term borrowing by $500 million a year.

If financial market conditions are poor, as they were until recently and as the authors expect will recur, the picture is quite different. Under all three plans, the federal costs would be $135 million in direct subsidies and $9 million in indirect costs, less $86 million in higher tax revenues, or a net Treasury cost of $58 million a year. This would lower borrowing costs for state and local governments by $105 million a year and induce a net increase in long-term borrowing of $1250 million a year.

Thus it is seen that there is a tendency of the plans to be self regulating, becoming more effective and productive as market conditions for state and local borrowers deteriorate, but decreasing in both costs and benefits as the market normalizes.

An important difference seen in the three plans is that Urbank alone would require substantially more administrative manipulating. The Taxable Municipal Bond Subsidy and Retirement Fund Subsidy both involve set subsidy rates, with operations carried out by the market. In the Urbank case, two major kinds of decisions would have to be made to assure effectiveness—how much to issue in securities to investors, and how much of a subsidy to give state and local governments. The administrative difficulties of arriving at these decisions are seen as disadvantages to the Urbank approach. □

Problems of Junk Vehicles

If action, what kind?

Six million automobiles are scrapped each year and a million are simply abandoned. But rather than assume that "we *must*" eliminate junk vehicles from the city streets and country-side and either reuse them or move them to less objectionable disposal areas, we should first determine whether anything *ought* to be done. Martin Wohl, director of the Institute's transportation studies, has examined this problem, alongside possible approaches to the collection and disposal of junk vehicles.

There is no obvious and certainly no simple way to determine the value of eliminating the ugliness and ill-effects of abandoned and junked vehicles. At a minimum, though, it would be unwise and perhaps economically inefficient for our legislative process to determine that "the junk vehicle problem" must be eliminated without first assessing the costs of alternative disposal means.

However, given the determination that something can and should be done, one potential solution might be a requirement that auto manufacturers collect and dispose of all junk vehicles that they produce.

Another approach would be to impose a special auto purchase tax, with the funds going to the local, state or federal agencies charged with handling the junk vehicles.

In both cases, the collection and disposal costs normally would be passed on to purchasers. But Wohl believes the first alternative might provide stronger incentives to the automotive industry to marshal its vast technical skills and facilities to find less costly solutions, including changes in vehicle technology and materials.

Another advantage to giving the responsibility to the industry is that the existing wide network of auto dealers could probably collect the abandoned vehicles more easily and cheaply than could a centralized government agency. A serious problem with the governmental approach is the difficulty of determining the proper amount of the auto purchase tax.

If any approach such as the two described here is put into effect, it may be inequitable to make present and future car buyers shoulder the collection-disposal costs of all previous purchases. A federal subsidy to assume those costs is one solution.

Making industry responsible for the junk vehicles, which Wohl favors, also involves several legal and compliance problems. Local police could be relied on for certifying that vehicles are legally abandoned. Manufacturers could be given reasonable time limits for collecting and disposing of the vehicles, and appropriate penalties could be imposed to enforce these limits. □

Off-Duty Patrol Cars

Indianapolis use of fleet weighed

After Indianapolis adopted an innovative Police Fleet Plan in 1968, designed to curb crime and traffic accidents, other cities wanted help in deciding whether to adopt it.

The plan itself is basically simple. Marked police cars are assigned to each member of the patrol force to drive while off duty as well as on duty. The patrolmen drive the cars to and from work and use them for personal activities. The city of Indianapolis bears all expenses of the cars. In return, the patrolmen are expected to maintain radio contact and respond to emergencies when they are using the vehicles even though they are off duty. Benefits were anticipated because of the greater public visibility of policemen.

Fort Worth, Texas, one of the cities that became interested in this Police Fleet Plan, called on The Urban Institute for assistance in determining what the potential benefits and costs would be. Donald M. Fisk of the Institute worked with Fort Worth officials to undertake an evaluation of the Indianapolis experience up to the time of his study. Indianapolis officials also agreed to the usefulness of an evaluation and cooperated fully.

Fleet Plan Impact on Traffic Accidents

Fisk concentrated on obtaining and analyzing data in four major areas—costs, reported crimes, police clearances and traffic accidents. His principal findings, as reported in *The Indianapolis Police Fleet Plan,* include the following:

—The initial cost of implementing the plan was $650,000, largely for adding 320 patrol cars. The annual operating cost is $450,000.

—*Total* reported crimes increased, as expected, from past trends. However, certain reported outside crimes (offenses committed outdoors that might be expected to be affected by the more frequent appearance of patrol cars) did decrease. Auto thefts, for instance, dropped 22 percent from what would have been anticipated according to previous trends, and purse snatching fell 21 percent below what had been projected.

—Clearance rates, an approximation of the percentage of crimes solved, remained essentially the same as they were prior to the new system.

—Decreases were reported in the number of traffic accidents, the total fatalities, and the total injuries.

In sum, the Police Fleet Plan involved fairly high costs but did appear to have some positive results.

Weighing these costs against their potential benefits was the subject of deliberations that took place in Fort Worth. On the basis of the study, officials there decided not to adopt the Indianapolis plan. The type of systematic evaluation undertaken proved its usefulness and appears applicable to a wide range of programs in many localities. □

Income Maintenance Tests

Gary, Seattle, Denver involved in controlled experiments

Extensive experiments on the way poor people respond to financial aid are being carried out by the Department of Health, Education and Welfare. The Urban Institute is providing technical assistance in designing the projects, monitoring them and evaluating the findings that emerge over the next three years.

Gary, Indiana, and Seattle, Washington, two of the test cities, are now entering the operating phase. The third test site, Denver, Colorado, was recently approved by HEW and the project there is expected to become operative within a year.

Nelson McClung, Jodie Allen and Terence Kelly of the Institute staff helped design the projects with rigorous controls in the hope of learning the effects of financial aid on work, incentives, spending habits, family stability, school behavior, community involvement and so forth.

The Gary experiment involves 800 families and an equal number in the control group, all from poor blacks in the central city. Families headed by a woman

About the Institute: The Urban Institute is a private, nonprofit research organization established in 1968 to study problems of the nation's communities. It cooperates with federal agencies, states, cities, associations of public officials, the academic community and other researchers.
About Search: A bimonthly that supplements and summarizes many of the reports, papers, reprints, seminars and other communications of the Institute. Research findings and opinions, representing a broad range of interpretations, reflect the views of particular authors and are offered as an independent, nonpartisan educational service. Editor, Walter Rybeck. For publication lists and other information, write: Publications Office.

predominate in the sample selected.

The experimental Gary families receive cash grants of a graduated work-incentive type. They also have available to them separately administered social services, such as day care and homemaker services, to determine the demand for these services when they are not required as a condition for receiving financial aid.

The Seattle experiment similarly is studying not only income maintenance but how it affects or is affected by other programs. Three types of manpower services to be included in the test are job training for young and unskilled workers, vocational counseling, and day care services for working mothers.

Because of the high and growing level of unemployment in the Seattle area, HEW recently decided to supplement the experiment there with a sample from Denver where employment is relatively stable. The Denver project will follow the Seattle design as closely as possible, serving as another control group and permitting analysis of the effect of income maintenance in a declining labor market compared to a normal market.

The Seattle famililes involved include 300 who receive financial treatment only, 600 who receive the manpower services only, 600 who receive both financial and manpower assistance, and 800 who receive no help (control group). One hypothesis is that families who receive both kinds of help will benefit by more than the sum of advantages associated with each kind of help separately. To the extent this may be true, the experiment also is set up to find out the ideal mix of manpower and cash aid as a guide to the efficient future use of government funds.

Jodie Allen explains that these experiments, in concept and amounts of benefits, go considerably beyond steps now being considered by Congress for a Family Assistance Program. Measuring the long-run effects of relatively substantial guarantee levels on individual economic and social behavior, and developing methods of integrating income maintenance with other cash and in-kind transfer programs, are among the major objectives of this work. □

A REPORT FROM THE URBAN INSTITUTE

Volume 1, Number 3 May-June, 1971

Public School Financing

Seeking ways to get more revenue and more equitable distribution

Twin problems facing more and more of America's public school systems are the provision of adequate levels of financing and the assuring of equal educational opportunity for all children. The first of these makes more difficult the resolution of the second.

Schools rely heavily on revenues from property taxation, yet property owners increasingly resist further taxation. Because children from disadvantaged families often are concentrated in areas where property values are declining, resources tend to be least adequate where educational problems are greatest. Moreover, most state systems of financial aid to education are not geared to overcoming these local fiscal imbalances.

The scope of the financing crisis and an analysis of possible solutions are the focus of a group of researchers, headed by Betsy Levin. They are documenting the way state and local governments raise money to pay for education and how the funds are spent. Those data will form the basics of a computer model which analysts can use to determine the effects of alternate methods of raising revenue and of distributing funds to school districts and specific schools.

A study is being made of seven states, four of which have historically provided a high percentage of state aid to elementary and secondary education. Relationships between school districts' expenditures and such factors as personal income, racial composition and teacher characteristics will be examined.

What is learned from these studies will be the basis for seeking ways in which the tax burdens and distribution of aid may be arranged more equitably.

Analysts believe use of the computer model will enable them to answer questions such as these: What would happen if a state-wide sales tax were used to finance education instead of a local property levy? If a state did shift to a sales tax scheme, which income groups would pay most? How would an existing state aid pattern be altered if funds were distributed on the basis of school district per capita income differentials?

The Institute is working closely with the President's Commission on School Finance and is briefing the Commission on the analysis and preliminary findings. The group plans eventually to assess the feasibility of making specific improvements in school financing at the state level. □

Whitney M. Young, Jr.

On behalf of the Institute's Board of Trustees, John W. Gardner wrote the following tribute to the late Whitney M. Young, Jr., who served as a Trustee from the Institute's inception until his death in Nigeria in March:

Whitney Young had qualities necessary to every great leader—enormous physical vitality, an unshakable sense of direction and the capacity to withstand criticism from his friends as well as his opponents. During years of great tension and conflict for his people and his nation, he was a rock of strength and steadiness.

Godzilla and Slippery Water

Technology to the aid of cities that use outmoded hardware

While the great urban social and political issues such as poverty, race and taxes are debated and headlined, cities go plodding along with their prosaic, unglamorous, every-day jobs. Cleaning streets. Fighting fires. Maintaining parks and buildings. Inspecting and licensing. Trying to untangle traffic jams.

Could not existing technology—inventions and hardware already developed for manufacturing, defense or space—be harnessed to help cities provide better services at significant cost savings?

In a symposium cosponsored by the Institute with the International City Management Association and the National Science Foundation, the participants determined that in many cases the answer is "yes." They also agreed that a major benefit of using technology to modernize city operations would be the freeing of substantial funds—even billions of dollars—for use in social programs.

A report inspired by the symposium, *The Struggle To Bring Technology To Cities,* details the obstacles that have kept local officials, industry and the scientist-technicians from working together to take advantage of the applied technology opportunities. But it also gives an account of two success stories to illustrate the potential benefits that may be attained.

Scottsdale, Arizona, taking a careful look at trash and garbage collection, discovered that a major cost was in the individual handling and hand-emptying of containers at private homes. Officials sold the residents on using larger containers that might be shared by several families, and designed them so they could be raised, emptied and set back in place by a mechanized loader. Unable to obtain help from industry, the city found local people to

tinker until both the containers and the truck, named Godzilla, proved highly successful. An improved version of the truck —named Son of Godzilla, of course—is now in operation. Even the men whose jobs were being replaced by machinery cooperated in the experimentation, and they were rewarded with better jobs in other municipal offices or local industry. Anticipated savings from an initial investment of $200,000 (which will be paid off in three years, including provision of $35 containers for all residences): a reduction of 45 percent in annual trash collecting costs when Scottsdale's system is fully implemented.

To assist New York City fire fighters, the city and the Rand Corporation developed slippery water, formed by a chemical that speeds water flow. This permits smaller, lighter hose requiring fewer men to handle. Projected manpower savings when New York extends this technology city-wide: $20 million annually.

Success stories, unfortunately, are exceptions. The use of computers to control city traffic has seemed like a logical innovation, but the attempt has encountered many snags. Some cities that got "burned" in early experiments are understandably leery of further modernization efforts. The lessons of frustrated projects as well as those of victories need to be learned if technology is to be brought to the service of cities.

Factors working against innovation are many. Modern equipment engineered to perform city functions is rarely available. To many officials, risks of failure loom larger than gains from innovation. Industry is often ignorant of cities' needs or unwilling to develop technology to meet those needs because the end products must be sold in a highly fragmented market.

A strategy to expedite effective use of technology in the 1970's has been outlined. Basically it involves prototype equipment development, market aggregation and a climate for innovation. These can be fostered in part by establishing a Product Evaluation Center as a "consumers' union" for cities, an Urban Applied Research Center to coordinate development, and a Technical Information Service to inform cities about new technology. □

Isolated Events Shape Government Programs

More reliable signals being sought with indicators

Attempts to develop social indicators, including the Institute's work described in the article on the next page, are quite new.

It was as recent as 1966 that the idea of providing yardsticks of social conditions first received presidential attention. At that time, picking up a notion that some scholars had been considering, President Johnson assembled a panel on social indicators.

Interest in indicators has been motivated by a desire to improve the way in which government policies, programs and priorities are developed. Governments can act when large numbers of people perceive a problem or an opportunity which they feel can best be handled—or only be handled—by public action. People's perceptions of what is important are based on what individuals see and hear, directly or indirectly. In this era of heavy media saturation, what the newspapers, television and radio are underscoring determines to a substantial degree what people become concerned about.

Are perceptions based on events that happen to dominate the headlines or evening television screens a sufficient basis for guiding policy makers? A strong feeling is that, no, these are not sufficient.

This is not to criticize the media. They are limited by what their reporters learn. Moreover, they specialize in the unique and unusual. Episodes described are rarely intended to give a balanced view of what is happening generally, and accounts of what certain people are for or against are not necessarily given as representative cross-sections of popular sentiment.

To supplement the signals received from individuals and the media, indicators are means of providing more reliable and balanced assessments of the domestic scene on a regular basis. The premise of indicators is that much of our social condition can be translated into objective, quantifiable terms.

The idea is not entirely novel. Crime statistics have been kept for many years. Despite serious limitations of these crime figures, their periodic appearances have become important to officials and citizens. No comparable organized data are assembled for assessing schools, traffic systems, citizen contentment with public services, or many other aspects of life.

In the absence of accurate, acceptable indicators, we are forced to rely pretty much on the impact of unusual events for generating citizen support for public action.

The presidential panel on indicators, mentioned earlier, took on an approach that was conceptual and directed largely to national aggregates. The Institute work differs in both respects. While our staff is deeply involved with the concepts that can lead to high quality indicators, their major thrust is actually to create specific indicators. And, instead of trying to distill data into single measures for the entire nation, they are devoting more attention to small areas closer to where people live—cities and metropolitan areas. We think that measures and comparisons at these levels may well have more immediate meaning and usefulness than would national aggregates.

Indicators appear to have a high potential for meeting a genuine need. But it should be emphasized that current work on them is still in the early trail-blazing phase.

William Gorham

Developing Urban Indicators: Some First Steps

A salient characteristic of America today is the criticism and questioning of society. The physical decay of cities and divisiveness between people contribute to this critical mood.

Are those who are talking, writing or acting on these issues too calm or too alarmist? Do critics focus on trouble spots that are merely passing phenomena? Can politicians and others be more selective about the issues that demand urgent attention?

Devising measures of social conditions

Despite the large quantities of data collected, they are seldom gathered and arranged in a fashion that provides adequate measures to help answer such questions. The nation lacks information that may enable people to reach closer agreement about what is happening. To help deal with this uncertainty and to give a clearer notion of trends and rates of change to both officials and the general public, the Institute is undertaking a series of pioneering efforts to construct social and urban indicators.

Indicators, of course, are not a new concept. Pulse and temperature are indicators of individual health. Economic indicators such as the gross national product (GNP) or consumers price index (CPI) have been used for many years. Economic indicators are widely relied on for comparing the well being of different people or groups. But such indicators alone fall short of telling the whole story, even about economic circumstances, and may be misleading or of little use in describing other social conditions.

The challenge has been taken up at the Institute, primarily by Michael J. Flax under the direction of Harvey A. Garn. With the assistance of Jill Bury, they are gathering and presenting social and urban indicators in a manner that will provide broader measures of quality of life for individuals, groups and society as a whole. The aim is to develop comparative descriptive indicators that give useful insights to both decision makers and the general public.

The indicator work at the Institute is characterized by practical efforts through the presentation of data for specific cities and population groups. The beginning exploratory attempts necessarily make use of what appear to be the best available data, but the best is often far from satisfactory.

Inadequate data are more easily spotted than another handicap—inadequate concepts of what is important. Without agreement on what constitutes a healthy city or society, one must grope for measurable aspects of life that seem to make a difference. The indicators generated may themselves help overcome this by stirring more pointed debate over what constitutes a good social environment and how to measure that.

The program staff feels that the best way to develop indicators is to start. The early results are meant to start the conversation in a very concrete way. They are presented to various specialists and the general public to show that comparative standards may spotlight significant variations in performance, and in some

instances to help dramatize the need for more and better data.

Urban Quality of Life

The first completed indicator study, in the experimental sense already stressed, is *The Quality of Life in Metropolitan Washington, D.C.: Some Statistical Benchmarks.* Published in 1970, it permits Washington and the nation's other 17 largest metropolitan areas to compare their standings.

Comparing urban areas with many indicators

In this study by Martin V. Jones and Flax, data were collected on 14 quality of life aspects, including health, housing, air pollution, and public order. These 14 are not the only or necessarily the most important aspects. Nor can they be lumped together to give a single meaningful ranking. The aspects chosen have two common characteristics—they included matters widely held to be of importance, and comparable data on them were found to be available for the 18 largest metropolitan areas for the same time periods.

Washington's Rank Among 18 Metropolitan Areas

QUALITY OF LIFE	INDICATOR DATA	WASHINGTON'S RANK
Poverty	% Low Income Households	2nd
Unemployment	% Unemployed	4th
Racial Equality	Non-White/White Unemployment Rates	4th
Mental health	Suicide Rate	5th
Health	Infant Mortality Rate	7th
Traffic Safety	Traffic Death Rate	7th
Air Pollution	Air Pollution Index	8th
Income Level	Per Capita Income	10th
Housing	Cost of Housing	10th
Social Disintegration	Narcotics Addiction Rate	13th
Community Concern	Per Capita United Fund Contributions	14th
Public Order	Reported Robbery Rate	16th
Education	Draft Rejection Rate	18th
Citizen Participation	Presidential Voting Rate	18th

Notes: Lower numerical rankings represent more favorable conditions as of most recent available data. In 3 cases, not all 18 areas are represented.

As a start, only one measurement was chosen as the indicator for each quality of life category in order to make the report relatively uncomplicated. Additional indicators may be added. The initial desire was to present an overall picture of many quality-of-life aspects to the nonspecialist reader. As examples, the data on known narcotic addicts per 10,000 population were used as the measure of social disintegration, and infant deaths per 1,000 live births were used as the measure of health. In the health field, as many as sixty indicators could have been chosen. In some other fields, the choice of pertinent data was quite limited. Specialists in each subject category advised on possible measures to use.

The metropolitan area indicators in this first study present three basic kinds of information:

- Between two recent periods of time, each metropolis can see whether it is progressing or regressing and at what rates.
- Each metropolitan area can compare itself with the other 17 areas (in the 14 aspects measured) according to the most recent data.
- Each metropolitan area can compare its rate and direction of change with that of the other 17 areas.

The Washington area, for example, may see that the quality of life between 1967 and 1968 appears to be improving in five aspects—income level, poverty, health, mental health and community concern. No change appears in education and citizen participation. Deterioration is found in seven aspects—unemployment, housing, air pollution, traffic safety, racial equality, social disintegration, and public order.

Compared to the other metropolitan areas, Washington is about midway, among the top or better half for seven of the indicators and toward the bottom for the other seven.

As to rates of change, Washington appears to be improving faster than the other metropolitan areas in four aspects, changing at a less favorable rate in five aspects, and changing at about the average rate in the other five aspects.

The narcotics addiction exhibit reveals that different aspects of a measure are useful. In 1968, Baltimore and Chicago were among the highest in known numbers of addicts, but it can be seen that the number has been increasing in Baltimore at a much more rapid rate since 1964 than in Chicago. (*See Table at right.*)

Public Response

The public interest in these metropolitan area comparisons was immediate and extensive.

Officials and others requested quantities of the reports. Leading newspapers in many of the areas measured featured the indicator story in detailed articles. The Institute's strong emphasis on the data limitations and the experimental nature of the indicators did not discourage news coverage, revealing a public hunger for indicators, for more facts about important current conditions and trends.

The considerable interest in this report and the fact that others are using it as a model for their indicator work gives the Institute confidence that the circulation of indicators is a useful approach for encouraging debate on urban conditions as well as the development of more accurate urban data.

Even when descriptive indicators stand up —that is, when they call attention in a fair and reasonably undistorted manner to trends and problems—they still raise questions. Why is a city falling behind? What should be done about disturbing findings? Providing the answers to these questions is not the exclusive province of those who construct the indicators, but it is a prime purpose of the indicators to bring such issues into the open.

Central Cities and Suburbs

The metropolitan area study led to queries about what the indicators would reveal if the data were broken down for central cities and suburban areas. Since local governments rarely serve entire metropolitan areas, indicators corresponding to large cities and their outlying subdivisions might be more meaningful for citizens or officials who are assessing conditions or considering new actions within the political framework.

It turned out that only 6 of the 14 quality of life aspects assembled for the metropolitan study could be separated into central city and suburban components. It was determined to follow through on these aspects—unemployment, poverty, infant mortality, suicides, robberies and traffic deaths—with indicators presented to show the following:

The rank of the 18 central cities and of the 18 metropolitan suburban areas.

The recent rate of change in each of the cities and in their respective suburban areas.

The ratio of performance between each central city and its suburban ring.

That these indicators generally reveal a higher quality of life in the suburbs than in the central cities only confirms what is already common knowledge. But the extent of the differences often is surprising. For instance, reported robberies per 100,000 population were more than 20 times as high in Baltimore city as in its suburban ring.

Some common notions confirmed, some surprises

Some interesting exceptions to the general superiority of suburban to central city conditions also are turning up. For example, the reported robbery rate in the Los Angeles suburbs is higher than that in the city of Milwaukee. And the infant mortality rate is higher in the Cincinnati suburbs than in the central city.

Some differences shown by these indicators simply reflect individual characteristics of the various areas. Those studying Boston's suburban ring must recognize that this territory includes several genuine cities such as Cambridge, while those studying Houston should note that the central city, through substantial annexations, includes areas that are more like suburbs elsewhere.

NARCOTICS ADDICTION AS AN INDICATOR OF SOCIAL DISINTEGRATION

Education and Racial Indicators

The draft rejection rate, used in the metropolitan area study as an indicator of quality of education, has certain advantages for comparability purposes, but is far from satisfactory. To arrive at a more comprehensive view, Flax is examining 12 different educational indicators for 21 central cities.

This work suggests caution in assuming that city by city differences in educational outcomes can be explained by factors such as per capita expenditures on education or pupil-teacher ratios. Neither, as is sometimes believed, are these differences explicable by differences in economic and racial characteristics.

Some educators oppose the release of reading test score data to the general public. Many of them particularly oppose use of such data to compare educational achievement in different cities. Educators are keenly aware that measurement techniques are imperfect, and that data may be misunderstood and misused. They also say they want to protect schools or school systems from being blamed for conditions over which they have no control. Such data, however, currently provide as good a measurement of educational performance as there is.

Blacks and Whites: An Experiment in Racial Indicators, by Flax, soon to be completed, deals with the sensitive question of racial equality and attempts to show trends over the past decade.

In these times, opposing points of view on racial issues are frequently expressed. Some feel that the nation has moved too fast toward equality and will have increasing tension unless it slows down; others feel that more danger lies ahead unless the nation moves more rapidly to eliminate barriers to equality. Is either viewpoint supported by the facts? Does the validity of the viewpoint vary from one measure of racial equality to another? Racial indicators can help policy makers and citizens get answers to such questions.

For the comparisons, 16 socio-economic characteristics were chosen. They do not include measures such as morale or sense of alienation which may be as important, or more so, than the aspects used. But they do consist of feasible indicators derived from data now available.

The racial indicators are being prepared to help answer the following broad questions:

Has there been progress from 1960 to 1968, in each of the 16 aspects measured, for blacks? For whites?

Has the rate of change or improvement been faster for blacks or for whites?

Dealing with Fear of Data

Even though there is widespread interest, many people are wary of indicators. The Institute staff does not think the way to deal with such concern is to suppress facts, but rather to construct as clear, meaningful and balanced sets of indicators as possible, documenting carefully their limitations. This conforms with the traditional view that officials and citizens alike function best when they have maximum understanding of what is happening in their society.

Work is underway on a study presenting comparative indicators describing the courts, correction systems, characteristics of the police and the extent of criminal activity in large U.S. cities.

Additional future plans of the indicator staff include working with individual cities to develop indicators comparing different sections of the same city, and publication of racial indicators showing comparative conditions across different cities.

Uses foreseen in setting of national priorities

As more reliable, comprehensive and acceptable urban and social indicators are developed, many possible uses for them can be suggested. For instance, under extensive use of federal block grants to states and localities, indicators could help reveal which problems are most in need of attention. Similarly, national priorities might be established more rationally with the aid of indicators comparing rural and urban America, blacks and whites, the young and the aged, and many other segments of society.

In general, comparative descriptive indicators have the potential of helping all Americans to better understand the conditions in their society and the directions in which it seems to be heading. □

New Research Center Directory

Shows rapid growth of campus urban studies organizations

The nation's colleges and universities continue to expand their number of urban research facilities. The Institute's revised edition of the *Directory of University Urban Research Centers* includes nearly 300 such centers—more than twice the number included in the original directory, published only 18 months earlier.

The Directory is a byproduct of the Institute's interest in bringing government policymakers and researchers closer together. It gives officials and educators the location of each center, its major types of work, the staff size, its source of support, the director, and related information.

Increased national concern about the environment is reflected in the listing. Editor Grace M. Taher points out that many centers are now devoted primarily to environmental issues while others have broadened their focus to include this aspect of urban problems.

The Urban Observatory program, sponsored by the Department of Housing and Urban Development and the U.S. Office of Education to develop closer cooperation between universities and mayors' offices, is described by its Staff Director at the National League of Cities, Lawrence A. Williams. The locations and directors of the 10 observatories are listed.

The most recent university response to the need for linking academic and urban action programs has been the development of graduate programs in policy sciences. Joseph H. Lewis, Director of the Institute's Urban Governance studies, describes the early stages of this development, indicates the wide variety of approaches being followed, and compares this new application of policy sciences in domestic affairs to the earlier application in national security affairs. □

About the Institute: The Urban Institute is a private, nonprofit research organization established in 1968 to study problems of the nation's communities. It cooperates with federal agencies, states, cities, associations of public officials, the academic community and other researchers.

About Search: A bimonthly that supplements and summarizes many of the reports, papers, reprints, seminars and other communications of the Institute. Research findings and opinions, representing a broad range of interpretations, reflect the views of particular authors and are offered as an independent, nonpartisan educational service. Editor, Walter Rybeck. For publication lists and other information, write: Publications Office.

Nashville N&D Child Care Study

A human resource program analysis

Neglected and dependent children—N&D cases, in social work terminology—pose serious problems to many communities. Some N&D children are abandoned, others have parents who become hospitalized or jailed, some are in homes where the emotional disturbances of the adults render them unfit to care for children, and others are the victims of abuse.

A team of Nashville and Urban Institute personnel led by Marvin R. Burt and Louis H. Blair of the Institute analyzed the N&D problem in Nashville-Davidson, Tennessee as a possible basis for improving the child care system there. Included in the study were the state and local welfare departments, police, Juvenile Court, Board of Education, and voluntary organizations. These agencies each undertake significant activities related to neglected and dependent children.

A central feature of the study is a method that shows the flow of children through various parts of this child care system over extended periods of time, focusing on what happens to each child. This permits conclusions to be drawn about aspects of the system that are harmful to the children or wasteful of financial resources. For example, it was found that large percentages of children are subjected to several weeks of away-from-home care only to learn that they could have been cared for in their own homes—as eventually determined in juvenile court hearings. This led to conclusions that 24-hour screening and related services, such as emergency caretakers, could be used to avoid unnecessary stress on both the children and the local child care system.

The researchers used the findings to construct several alternative improvement plans for Nashville-Davidson, depending on the decisions by local citizens and officials on how much money should be spent and how priorities should be arranged.

The research developed and demonstrated the use of a number of techniques that would enable governments to analyze major human resource type programs in a more systematic fashion. Findings that might benefit other communities also are set forth in the report of this program analysis, entitled *Options for Improving the Care of Neglected and Dependent Children.* □

Measuring Recreation

Data collection is worth the cost, if properly analyzed

How well does a community's recreation system serve the needs of its citizens?

Most local government decision-makers including recreation directors, city managers, and elected mayors or council members receive very little evaluation material. What they do get deals with matters such as acres of parks, numbers of playgrounds, pools and tennis courts, size of staffs and partial attendance figures. However, standing alone, these factors do not provide true measures of the effectiveness to the citizens of recreation programs.

Harry P. Hatry, Director of the Institute's Local Government Research studies, and Diana R. Dunn, Research Director of the National Recreation and Park Association, have outlined a series of more relevant measures. These are detailed in a report, *Measuring the Effectiveness of Local Government Services: Recreation.*

Suggested measures deal with participation and nonparticipation, accessibility, crowdedness, variety, safety, physical attractiveness, and perceived citizen satisfaction. Other measures deal wth the indirect effect of recreation on crime and delinquency, health, and the local economy.

Each measure of effectiveness is discussed separately with recommendations on appropriate methods of data collection. It is particularly important to obtain and analyze data according to the various "clientele groups" in a community—the separate neighborhoods and people of different age, race, sex, income level, and

so forth—to make sure some sectors are not neglected.

The minimum cost of maintaining a basic data collection, evaluation and analysis capability of the type proposed is estimated at roughly one to two percent of the annual park and recreation budget. Some federal funds are available for this purpose to cities on a matching basis. □

This booklet is about the urban crisis. It is based on the premise that, depending on the choice the nation makes, this crisis can bring either disaster or constructive change — that for our cities and their people it represents The Turning Point.

THE URBAN INSTITUTE 2100 M STREET, N.W. WASHINGTON, D.C. 20037 (202) 223-1950

April 7, 1970

Bro. Vernon E. Jordan, Jr.
Director, Voter Education Project
SOUTHERN REGIONAL COUNCIL
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Brother:

The enclosed materials describe a program by the Urban Institute aimed at recruiting outstanding graduate students to work at the Institute this summer. The Institute is interested in increasing its access to the range of knowledge, skills and research attitudes embodied in minority group students across the country, especially those from the Black and Spanish-speaking groups.

As you see, the number of spaces available this summer is small. We hope that this may be the beginning of a broader, long-term program so that, over time, the number of opportunities may be increased. But it should be clear that we are serious in our desire to attract the very best of those graduate students who have decided to dedicate themselves to urban research. We have a special interest in identifying undergraduate (senior level) and graduate students who have worked with community groups or otherwise demonstrated a commitment to use their skills for the advancement of the Black community.

We greatly appreciate any help you can give in putting outstanding students in touch with us concerning this program.

Sincerely,

Charles Tate/alt

THE URBAN INSTITUTE 2100 M STREET, N.W. WASHINGTON, D.C. 20037 (202) 223-1950

1970 SUMMER STUDY ASSISTANT PROGRAM

The Urban Institute, a private non-profit research corporation devoted to the study of urban problems, will select 10 outstanding graduate students to participate in the 1970 Summer Study Assistant Program. The purpose of this program is to identify and encourage young scholars who are committed to professional involvement in research aimed at developing meaningful solutions to urban ills.

Summer work at the Institute for Study Assistants will be related to the on-going research program of the Institute in areas such as:

* Black Economic and Political Development
* Income Distribution Simulation Studies
* Housing
* Labor Market Studies
* Public Finance
* Econometric Study of Transportation
* Evaluation of Social Programs
* Studies of State and Local Government Functions

In addition to research work, the Study Assistants will work with members of the Institute staff to develop and organize special interest activities -- seminars with urban leaders, visits to Federal agencies and meetings with Congressmen and Administration officials.

Study Assistants may work for a period of 12 weeks between May 15 and September 15, 1970. Selections of applicants will be based on the following criteria:

* Personal committment to the solution of urban problems
* Academic work relevant to the research program of the Institute
* Academic standing
* Interest in future professional involvement in urban research work

The deadline for applications will be April 20th. Final selections will be announced May 1st.

Graduate students will be paid $180 to $215 per week. Study Assistants will receive sick leave and holiday leave benefits. For participants not covered by a university-sponsored health and life insurance program, the Institute will provide employee insurance benefits.

Inquiries should be addressed to:

Mr. Reuben McCornack or Mr. Antoine Perot
Director of Personnel Project Manager

Atlanta, Ga. 30303

Dear Mr. Alexander:

The 60th Annual National Urban League Conference is scheduled for July 19-23, 1970 at the New York Hilton Hotel, New York City. We are expecting over 3,000 participants from throughout the United States, to come together to discuss priorities to which the League should address itself.

Because of your past involvement and assistance to the National Urban League, we would like to take this opportunity to invite you as a special consultant to our 1970 Conference.

Through your past association with our Agency, you have demonstrated certain expertise and creativity which we think will be applicable for our National Conference discussions. This letter comes then as a special invitation for you to join us in New York to serve in a consulting capacity to our national body.

As soon as more information is available concerning the conference format, program and structure, it will be provided to you. The enclosed registration card should be mailed directly to the Office of Conferences in New York. We look forward to seeing you in New York in July.

Yours very truly,

Clarence D. Coleman

CONTACTS FOR THE APPRENTICESHIP

TRAINING PROGRAM

SUBJECT: CONTACTS FOR INFORMATION AND JOBS FOR THE

APPRENTICESHIP PROGRAM - COMPANY AND AGENCY

ATLANTA AREA TECHNICAL SCHOOL
1560 Steward Avenue, S. W.
Atlanta, Georgia
Mrs. Strovier, Admission
758-9451

Comments: They have no direct relations with the Apprenticeship Program but they do give mechnical and theoretical backgrounds in trades related to apprenticeship training.

ATLANTA JOINT APPRENTICESHIP COMMITTEE
881 Piedmont Avenue, N. E.
Atlanta, Georgia
Mr. Baker
873-1805

Comments: This organization has basic information related to apprenticeship programs. They have contacts with unions and other related apprentice program.

LITHOGRAPHY AND PHOTE-GRAVERS (AFL-CIO) No. 251
881 Peachtree Street, N. E.
Atlanta, Georgia
Mrs. Evers, Secretary
872-9996

Comments: Information related to lithography and photo-graving trade. Possible job openings. Training is held within the plant and conducted by company staff.

REGIONAL OFFICE OF THE UNITED STATES BUREAU OF APPRENTICESHIP AND TRAINING
1371 Peachtree Street, N. E.
Atlanta, Georgia
526-5405

Comments: General information about apprenticeship program.

ATLANTA TYPOGRAPHICAL UNION - LOCAL 48 (AFL-CIO)
250 Tenth Street, N. E.
Atlanta, Georgia
Mr. Fred Holbrook
873-2732

Comments: This union will provide information for training a person in newspaper printing. Training is on the job and it varies from program to program. They will help a person with a union program or a regular job program.

THE ATLANTA CONSTITUTION AND JOURNAL

10 Forsyth Street, N. W.
Atlanta, Georgia
Mr. Robert Simonton, Personnel Director
Mr. Gary T. McIntyre, Personnel Assistant

Comments: They have possible openings in the apprenticeship training program. The basic requirements for entry level jobs are:

1. File an application
2. High school graduate
3. 18 years old or over
4. Must score:
   18 Wonderlic Personnel test
   17 Bennett Mechnical test

Positions:

1. Composing Room (this job requires some experience in typing but no mandatory. Salary starts at $96.00 for 37½ hours a week, with a 5% increase every six months. Will employ now.)
2. Mailer (will have opening in three years)
3. Sterotype (opening in July. Salary starts at $80.00 a week.)
4. Ingraving (opening in June 85.50 a week. In 1970 will be 179.00 or more.)
5. Pressmen (Position is not definite)
6. Fly-Boy ($2.00 per hour, 2% increase in six months)

Ditler Brothers, Inc. (manufactory printers)
1375 Seaboard Industrial Blvd., N. W.
Atlanta, Georgia 30318
William T. Rose, Director of Industrial Relations
355-3423

Comments: No specific openings but would be interested in a qualified applicant.

SUBJECT: Courses in the Printing Trade at Atlanta Area Technical School.

I. Theory of Printing

II. Fundamentals in the Printing Trade

III. Machine shop:

1. Hand pressure
2. Miehle-Vertical
3. Hiedlebury
4. Inter-type and set-type
5. A. B. Dick Machine
6. Paper Cutter
7. Multilifth
8. Harris-larger pressure
9. Proff-pressure
10. Bindery Machine
11. Jogger
12. Paper-folder
13. Camera
14. Efrod
15. Key Board

INFORMATION ON THE APPRENTICESHIP

TRAINING PROGRAM

MINIMUM MENTAL AND PHYSICAL REQUIREMENTS FOR

PLATE BOYS AND APPRENTICE PRESSMEN APPLICANTS

Mental Requirements:

All applicants must take the Wonderlic Personnel Test and the Bennett Mechanical Comprehension test.

Minimum scores considered:

Bennett Mechanical	17
Wonderlic Personnel	18

Physical Requirements:

Must be in good health.
~~Must not be less than 5 ft. 6 in. or more than 6 ft. 2 in. in height.~~
Must not weigh less than 130 lbs. or more than 220 lbs.

Personal Requirements:

Must be a high school graduate or have the equivalent of a high school education.
Must be capable of passing a screening interview by the Joint ~~Screening~~ Screening Committee.
Must not have a police record other than minor traffic violations.
Must want to pursue a career as a web pressman.
Must be acceptable to the Pressroom Foreman.

PRESSMEN'S JAC

JOINT APPRENTICESHIP COMMITTEE
A. P. P. & A. U. #8
UNION EMPLOYERS SECTION
PRINTING INDUSTRY OF ATLANTA, INC.

Selection of apprentices made under our standards shall be made from qualified applicants on the basis of qualifications alone and without regard to race, creed, color, national origin or sex or occupationally irrelevant physical requirements in accordance with objective standards which permit review, after full and fair opportunity for application; and this program shall be operated on a completely non-discriminatory basis.

I. REQUIREMENTS FOR SELECTION OF APPRENTICE ASSISTANTS, APPRENTICE PRESSMEN AND PREPARATORY APPRENTICES

A. Applicants for Apprentice Pressmen, Preparatory Apprentices and Apprentice Assistants shall pass the Printing aptitude test, S-40, administered by the Georgia State Employment Office and shall be a high school graduate or its equivalent. He must be physically capable of performing the work and therefore shall submit to the Committee a doctor's statement of satisfactory physical condition taken ten days prior to the beginning date of his apprenticeship.

B. The applicant must be of good moral character.

C. The applicant must be at least eighteen (18) years of age when beginning his apprenticeship.

D. The applicant to be accepted, must have a definite interest in the craft of printing, as evidenced by an approved aptitude test and approval by the designated screening committee.

E. Since apprentice pressmen will be selected from assistant pressmen who in turn come from apprentice assistants, the employer shall use the same standards in selection and hiring apprentice assistants as will be applied to the selection of apprentice candidates.

II. PROCEDURES

The following selection procedures will be used in hiring of apprentices:

A. Written application for employment form to be completed by applicant with prospective employer.

B. He must satisfactorily complete appropriate aptitude test administered by Georgia State Employment Service. Arrangements for test must be handled as follows:

1. List the openings with the Employment Service.

2. Send new applicants down to take the test. Applicants may also be referred by the Employment Service. In sending a new applicant down, please call in order -

Tom Tyler
Robert Smith
John Mobley

if you run into any problem.

3. To test a present employee who is to be considered call one of the above three people to schedule the test by phone.

C. He must appear before the Screening Committee and be evaluated according to the evaluation sheet which is a part of the Joint Apprenticeship By-Laws. The Screening Committee will consist of a designated representative of the Printing Industry of Atlanta and a designated I. P. P. & A. U. Local #8 Official with the screening interview to be held at the Printing Industry of Atlanta headquarters. However, an employer may establish a screening committee in his respective plant by securing permission from the Joint Apprenticeship Committee and have on record the two Plant Screening Committee members, one of whom shall be from management and one from the I. P. P. & A. U. Local #8.

D. The final interview and selection of applicants by the employer.

E. Apprenticeship indenture contract signed by respective parties and approved by Joint Apprenticeship Committee.

SELECTION PROCEDURE

A.P.P. & A.U. M/C & U.E.S.
JOINT APPRENTICESHIP COMMITTEE

A. Applicants must score 70 points to be accepted, and shall be accepted in order of their score, starting with the highest score. Records covering evaluation of applicants, including rating forms, shall be kept for 2 years to permit review.

B. Applicants must have completed high school. Extra consideration will be given for education beyond the high school level. They must be at least 18 years of age and may be obtained from several sources, such as the Employment Service public schools, trade schools and by direct application and inter-plant referral.

C. The Employment Service and local schools shall be informed when applications for apprenticeship are being accepted, and their cooperation requested in referring suitable applicants to the participating employers.

APPRENTICE APPLICANT EVALUATION

(Passing Score: 70 points)	Maximum Points	Points Earned
1. Education and Training	(15)	
-Required grade level (High School)	10 points	
-Additional education beyond high school	5	
2. Physical Factors	(10)	
-Doctor's Certificate of good health (No basic defects)	5	
-Appropriate physical characteristics for the trade	5	
3. Past Work Experience	(10)	
-Misc. jobs not related to trade	5	
-Misc. jobs related to trade	5	
4. References and Conduct	(10)	
-At least 2 favorable references from non-related persons	5	
-No public record of serious bad conduct	5	
5. Test Score	(20)	
-Applicants meeting established norms of the GATB of the Employment Service	20	
6. Military Service	(10)	(See D)

E. Ability to Work With Others					
TOTALS	( )	( )	( )	( )	( )

INTERVIEWER'S TOTAL
("A" through "E" above)_____(Carry total to line 7 above, "Points Earned".)

_____ Applicant's Score _____
(Name of Applicant) (Total of Lines 1 thru 7)

_____ _____
(Signature of Interviewer and date) (Signature of Interviewer and date)

PERSONAL INTERVIEW

A. In the personal interview the applicant will be rated in five (5) categories. Questions should be directed to the applicant which will enable the interviewer to rate the applicant on sincerity of interest, attitude toward work, attitude toward related training, ability to work under supervision, understanding of responsibilities as Apprentice, ability to work with others and why he wants to become an apprentice in the printing trade, and his attitude toward unions.

B. The applicant should also be rated on his personal references.

C. The applicant should be rated on his physical appearance. (An applicant who does not bother to be neat when appearing before the screening committee usually has little interest in what the screening committee thinks and is not interested enough in the trade to succeed.)

D. In the event the applicant is already employed by the employer and is not permitted to take the aptitude test administered by the Georgia State Employment Service, the applicant will be given five (5) points for each year of employment in the printing industry up to a maximum of four (4) years or twenty (20) points.

PERSONAL COMMENTS

James O. Greason is now employed at the Atlanta-Constitution and Journal.

He has the ability to learn and to work. He score 30 on the Wonderlic which was much higher than the requirements. He didn't graduate from high school but he is trying to ~~pass~~ prepare for the G.E.D. It is hopeful that he will continue to work in order to get into an apprenticeship program.

Urban League **Housing News**
Volume 1, Number 1 May, 1970
Published by the National Urban League 55 E. 52 St., New York, N.Y. 10022

Development Foundation to Spur Local Building

Incorporated January 8, 1970, the new organization will be the conduit for technical assistance and front money for local affiliates' development efforts. It is the outcome of a year-long study by the Housing Committee of the National Board of Directors, which included a questionnaire sent May 1969 to all 95 affiliates.

Based on the responses, the League's consultants made more detailed studies of programs in some 30 cities where affiliates responded to the questionnaire. The studies showed need for both technical advice and assistance and, in most cases, some source of short-term, low-interest funds for processing, design, legal fees, site options, and similar early outlays.

The Foundation's first order of business is now to select one or two pilot cities from among the most active, to launch demonstration programs. In the meantime, an initial two-year capitalization of $2 million is being sought from foundations and industry. The sum will go into a revolving seed-money fund for advances to League-sponsored projects. This should make possible immediate start of 1,800 units in a first round of projects, plus additional units in later rounds depending on cost levels achieved in the first. The sums would be recoverable from mortgage proceeds as the projects enter permanent financing, and then can be applied to new projects. Costs of technical assistance services provided by the foundation will also be recoverable from mortgage proceeds as allowable fees under FHA rules. In two years, on the projected timetable, the Foundation should be self-sustaining.

The Foundation should also be able to provide local affiliates with the back-up advice and assistance to influence local planning and land-use decisions as well, so as to avoid piecemeal answers to local housing problems that will prove unsound in the long run. It will also encourage affiliates to spark local economic development in the

HSP Graduates Form National Association

Thanks mainly to the efforts of a group of Urban League participants, the Housing Specialist Program sponsored jointly by the Foundation for Cooperative Housing and Urban America Inc., has spawned a new national organization to advance professional standards in housing.

Incorporated in Washington last month by the 40 members of the fall, 1969 HSP class as they held their post-internship meeting, the organization is The National Association of Housing Specialists, and is open to all HSP grads.

President David H. Snipe, Jr., housing director of the Rochester Urban League, says the group's ultimate purpose is to develop and promote criteria for professional qualification as Housing Specialist under FHA regulations on non-

A Message From Whitney Young Jr.

A newsletter on Urban League housing work at the local, regional, and national levels is another sign of the importance we all attach to the subject.

There are shifting fashions among social medicine men just as there are among ladies' wear designers. And just as the hemline can only go up, down, or sideways, so the diagnoses of our social ills, and the cures offered, tend to run the circuit around schools, jobs, and housing. In the search for social justice and equal rights, first one gets the spotlight, then another.

Now that we have been around that circuit a few times since World War II the light has begun to dawn that they are all linked together. And after trying one approach after another it gets clearer and clearer that whether we are talking about education, health, welfare,

(Continued on p. 5)

Subsidize Land, Not Money Urban League Tells Congress

Tinkering with mortgage interest rates may increase the number of homes built in the U.S. in the next year or so, but probably won't help the families — poor and minority-group city dwellers — who need better housing most. So Glenn Claytor, National Urban League Housing Director told the House Banking and Currency (Patman) Committee in a statement filed for its Emergency Hearings on Mortgage Finance in Washington last month.

Although not the first time the National Urban League has placed its views on housing before a Congressional hearing, the statement was the first ever to be made for the League by a professional housing staff member.

Acknowledging that both the supply of money and the cost of borrowing it for mortgages were important influences on overall housing production, and that the bills before Congress seemed likely to attack these problems adequately, Mr. Claytor told the committee that the League had grave doubts about the effectiveness of any of them for poor families. One bill (HR 13694) would provide more mortgage money, at a cheaper price, for middle-income Americans.

"If this is true," he said, "the legislation would only help those who can at least afford the cost of present housing. We register this concern because it is difficult to see how HR 13694 can be made to operate in behalf of millions of Americans who cannot afford the price tag of current housing construction."

A second bill (HR 14639) would supply cheaper mortgage money for development of housing units for low and moderate income families. But this only continues present programs of interest subsidy, he noted. "We have serious doubt as to whether this type of subsidy ever reaches low-income families. It can be argued that the interest subsidy approach only subsidizes the mortgage industry."

"We feel that another fundamental problem affecting housing must also be considered," he said. "The problem of land." According to the National Assn. of Home Builders, he said, land now represents 21 per cent of the total cost of housing construction*, and is a commodity that inflates (mostly due to speculation) at 15 per cent per year.

"We are presently locked in a speculative system which contributes a non-valid, added cost to land which then becomes a part of the cost of housing," Mr. Claytor said. "It is clear that we should now consider a national land-use policy. Such a policy should begin to balance the equities between public and private needs for land. The speculative system . . . is at one end of the spectrum of choices, and complete governmental control of land is at the other extreme. Neither system is wholly desirable. Nor is our present system."

Citing expropriation of land from the Indians, land grants and sales to homesteaders and railroads, and large Federal land holdings for public purposes as precedents for massive intervention in land allocation, use, and ownership, Mr. Claytor concluded:

"We see a need for a Federal agency which can effect an innovative land policy, an agency capable of purchasing large acreage of land across the nation and mandated to plan for an orderly growth of communities — new and existing — for both residential and industrial needs. The results would be a rationalized system which could eliminate local provincialism and begin the very serious business of planning for a population of over 300 million Americans in the year 2000."

The hearings were called in reaction to a report of the House-established Commission on Mortgage Interest Rates, which recommended raising the ceiling on FHA insured mortgage interest rates. Testimony, taken from civil rights groups and all segments of the housing industry, is expected to result in a report of the Committee shortly. Among advice received from other sources:

- From bankers and government economic advisors: stem inflation and improve flexibility and liquidity of mortgage instruments;
- From mayors (Lindsay of New York, Daley of Chicago, D'Alesandro of Baltimore): more subsidy to cities, especially direct payments geared to each city's output of low-rent housing (and, presumably, invasion of the real estate tax base thereby).

Among sobering statistics bandied about: to meet the nation's goal of 26 million new housing units by 1980, approximately $10 billion in new financing will be needed. Even if total private savings in the decade should be enough to meet this need, <u>and</u> business capital needs, <u>and</u> the Federal deficit (which they most certainly will not be), there is no assurance housing will get the <u>share</u> it needs: about 30% of the total pie, vs about 20% in the years 1966-69, and about the same as in the early 1960s.

*Other components: labor, 18 per cent; materials, 38 per cent; builders' cost and profit, 23 per cent. All according to NAHB Economist Michael Sumichrast in testimony before the Joint Economic Committee of Congress.

Seattle, Cleveland OE Grants Renewed

The Ford Foundation announced recently that it has renewed grants to the Urban Leagues of Seattle and Cleveland for their Operation Equality programs.

Seattle received $282,000 to expand staff and cover rising costs for the next three years. The Foundation cited its accomplishment as the first sponsor in the nation to rehabilitate dwellings under FHA Sec. 235 (J) providing 30 families, many on welfare, with three-, four-, and five-bedroom homes at an average cost of $13,750, and having some 30 more units in various stages of renovation. The Seattle affiliate's housing corporation aims to build 10,000 units in the next five years.

Seattle's program was launched with a $136,000 share of the original OE funds.

Cleveland, which has focused on eliminating discrimination through business support, community education, and court action, received $180,000 for staff salaries and administrative expenses over the next two years. The grant is supplemented by funds from the Greater Cleveland Associated Foundation and industry groups.

Cleveland's program received $177,000 of the initial OE funds over three years.

Multiple Milestones are represented by the garden apartments pictured above under construction in Gary, Indiana. They are part of the Oak Knoll Terrace development which has been co-sponsored by the Urban League of Gary and U.S. Steel Corp. When completed they will be owned and operated as a nonprofit rental development by the Gary League, under FHA Sec. 221d (3) financing. They are among the first new construction to be owned and managed by an Urban League affiliate. They also were hailed at groundbreaking by HUD Secretary Romney as illustrating the kind of mass-production efficiency operation his agency seeks through combining new technology and liberalized local codes and zoning. The units are built of modular components manufactured by U.S. Steel Homes Division in New Albany, Indiana, and shipped to the site for assembly.
Ultimately planned for 550 apartments in 96 buildings on a 44-acre site purchased from the Gary School Board, Oak Knoll Terrace offers apartments with from one to four bedrooms, at rentals ranging from $111 to $172 per month. Feasibility of the project was established by a study underwritten by U.S. Steel.

HSP Graduates. . . .
(Continued from p. 1)
profit sponsored low and moderate-income housing. It will operate a professional information clearinghouse for members, and plans a newsletter, problem-oriented educational meetings, and an annual national convention.

Directors, continued in office until the next annual meeting, include in addition to President Snipe four other Urban Leaguers: Clayton Pitre of Seattle, Rose Drake of Cleveland, Duane Milam of St. Louis, Jess Abrams of Oklahoma City. Other directors, all supported on Ford Foundation fellowships to the program and working in other housing agencies, are Barbara Kent of Washington, D.C., C. Peter Behringer of Detroit, Oscar Mello of Eagle Pass, Tex., and E. Pat Larkin of Fort Lauderdale, Fla.

The Housing Specialist Program was organized with Ford Foundation support in response to an urgent need for trained specialists in low- and moderate-income housing development and management to advise nonprofit sponsors being drawn into the field by opportunities created under the 1968 Housing Act. It combines a seven-week intensive seminar in Washington, led by government officials and private housing consultants, with a four-month on-the-job training stint. The seminar covers such matters as the role of housing in the community, site selection, project design, codes and zoning, financing and organizing housing companies, processing papers for various federal housing aid programs, developing community facilities, and rental, management and maintenance of completed projects.

Field training in using these skills is with established organizations involved in developing, marketing, managing low and moderate income housing — sales, rental, and/or cooperative.

Urban League participants are sponsored jointly by the National office, which pays their tuition, and their home town League affiliate, which pays their salaries. To date, including those now in the program, 20 League housing workers have entered the program, and returned to their local offices — often to assume new and larger responsibilities.

From the Field:

235/237: Potent Formula for Housing Service Impact

Experience in several cities suggests that FHA Sec. 237 credit counseling and promoting FHA Sec. 235 home ownership subsidies, either singly or in combination, are two effective ways for local Leagues to expand or start housing services with maximum impact. The reason: they involve minimum need for specialized housing know-how, and offer comparatively quick results for limited staff resources. Each is a direct, short-range intervention in local housing picture rather than long-range involvement in planning or development, but can be a bridge to these as well. Among notable programs to date:

Sec. 237 in St. Louis: The St. Louis Urban League Operation Equality office was approved by the Dept. of Housing and Urban Development as a Sec. 237 counseling agency last October. Approved agencies are empowered (but not paid) to help low-income families rejected for an FHA insured mortgage to gain reconsideration and approval after intensive individual financial review and advice aimed at enabling them to meet their mortgage obligations.

Through January, of 99 cases referred to the St. Louis League by banks and mortgage companies, 60 had been certified as eligible for approval by FHA. Says Mrs. Carrie E. S. Bash, housing director: "Often a family has an emergency situation, such as illness, which caused poor credit. This is less difficult to certify than situations of repeated credit problems. Families in these circumstances need additional counseling for debt management."

Among items which may be worked on in continued counseling (49 families to date) are budgeting, the importance of timely payments, part-time work opportunities. Local mortgage leaders credit the program with playing an essential role in housing families for whom the St. Louis rental market offers no accommodations (e.g., extra-large families).

In addition to a well-structured proce-

dure for processing cases and providing counselling, the St. Louis office has developed a particularly useful credit counseling report form. It presents, in easily-read tabular form, the relevant caseload information by week within the month, and cumulative totals to date. For information about either write to Mrs. Bash, OE, 4710 Delmar Boulevard, St. Louis, Mo. 63108.

Affiliates interested in Sec. 237 counseling but aware of another agency already FHA-approved and active in the field in their locality, may find the experience of **Pittsburgh's** League of interest. There FHA refused approval on grounds ACTION-Housing Inc. was already providing the service. Contact with ACTION-Housing showed, however, that they were overloaded and would welcome sharing the load. As a result of communications from ACTION-Housing, FHA Washington headquarters was persuaded to overrule local officials and approve Pittsburgh's Operation Equality for Sec. 237.

In addition to St. Louis and Pittsburgh, Urban Leagues in **Seattle** and **Philadelphia** are active in Sec. 237 counseling, and **New York** will be soon. Nationally, Urban League affiliates are now responsible for fully one-sixth of all Sec. 237 certifications, and the number is growing.

Sec. 235 in Philadelphia: With two housing counselors, the Philadelphia Urban League Housing Information Center has chosen this program—which makes home ownership possible for poor families through government subsidy of their mortgage payments — as a major activity. Begun shortly after passage of the 1968 Housing Act the program has involved an aggressive program of public information through posters and brochures, civic club speeches, radio and television spots, direct contact with brokers, bankers, and mortgage lenders. As a result it has drawn as high as 300 inquiries per week. One result of the demand thus stimulated, plus the League's intensive broker-contact effort: Several Philadelphia brokers now feature willingness to sell under Sec. 235 in their newspaper ads. "Last year no such ads ever appeared in the papers and for the most part brokers had to be prodded into using the program," says Mrs. Shirley Dennis, the Philadelphia League's housing director.

Despite a record of some 500 families placed in homes through the program, there are serious problems yet to be overcome:

- Although fully half of those who call or come in to ask about the program qualify on the basis of income, only half of them can actually apply. The others (mainly welfare cases) do not have the $200 minimum down payment required. (A problem which Essex County New Jersey has licked—see below.) Of the applicants about one in five falls by the wayside because of broker or seller resistance or lender rejection (such cases are now the target of Philadelphia's 237 program). Broker resistance is often on principle ("I made it without help so why can't they . . .") as well as on ignorance of the program or reluctance to work for a relatively small fee. Sellers often refuse because they must, under the law, pay half of closing costs — and think they are losing money even though the FHA appraisal that sets the sale price allows for this. "We are now asking HUD to separate settlement costs and the sale price," says Mrs. Dennis.

In New Jersey, Sec. 235 applicants who are on welfare may receive $250 toward down payment and closing fees from the welfare department under a $30,000 grant from the New Jersey Housing Finance Agency. The Urban League of Essex County, now seeking to help nonwelfare families as well, has set up a loan program for them which they hope will help between ten and twenty families acquire homes this year.

Foundation. . . .

(Continued from p. 1)

Black community by using minority contractors and seeking to relate housing and employment resources.

National staff and officers hope that recruitment of an executive and election of permanent trustees can be completed, along with the initial funding, in the next few months. Developments will be reported in these columns as they occur.

Among the consultants' findings that led to the Foundation's creation were:

- Few affiliates have staff capacity to direct a housing production program at this time;
- But several have staff able to work jointly with a professional development team;
- In addition to serving local needs directly, housing development programs may offer affiliates a measure of independence from local funding sources.
- Local capacity falls into four major categories:

1) active, on-going housing development program with well trained staff and little need of Foundation support;

2) geared up for large-scale production, are already establishing or have a housing development corporation, but need substantial support and a tie-in with a private developer;

3) well enough organized and active, but probably able to handle only a smaller number of units — say, about 50 houses or apartments;

4) a few years from capacity for working with a development program, best able to benefit from staff training help and development of a local strategy and structure.

- For most affiliates, a "joint venture" arrangement with a commercial developer (and perhaps with the Foundation as a third co-venturer) seems the best arrangement for the first efforts so as to combine League commitment with expert know-how.

A Growing Program and a Growing Commitment

The National Urban League Housing Development Foundation (see story, P. 1) is only one harbinger of a new, vital emphasis in the League's national program. Others include the appointment of a new Housing Director and staff in the National Office, and the first housing professional in a Regional Office, participation in housing specialist training for local programs, and even the initiation of this publication.

All add up to a quickening tempo in a program activity that has become really potent only within the past four years.

Prior to 1966, there were a few local affiliates with special budgets for housing activities; most confined their concern to fair housing or watchdog roles on local urban renewal and housing enforcement programs.

In that year, however, the National

(Continued on p. 5)

Operation Equality Research Reports Available for Six Cities

They are: Cleveland, Miami, Philadelphia, Pittsburgh, Rochester, Seattle.

Each contains a rich store of detail and analysis of local experience. Overall, however, a pattern emerges:

- In general, the most mobile clients are young, blue collar workers. Both husband and wife work. While the husband might take a suburban factory job, the wife tends to be tied to a center city job, with resulting babysitting requirements unless the husband's suburban job pays well enough to maintain an adequate living standard without the wife's contribution.
- Eighty-five per cent of clients want to live in stable, substantially mixed communities, say half black — not integrated in proportion to black population of the urban area. About 12 per cent of clients want housing in predominantly black communities. Only 3 per cent seek to be "pioneers" in all white communities.

The reports may be obtained by writing to Tom Gale, Director, Operation Equality, National Urban League, 55 East 52nd Street, New York, N.Y. 10022.

Growing Program. . . .

(Continued from p. 4)

Urban League received a $1.5 million grant from the Ford Foundation for Operation Equality, which funded programs — with professional staff — in twelve cities through 1970 (two received direct renewals from Ford last month; see story, p. 2).

The matching provisions of the Ford grant, which required an average input of $1 local for every $2 Ford (but actually varied from 1:1 to 1:6 depending on local conditions) encouraged local commitment of resources.

A further impetus was given by provisions of the Housing Act of 1968 which promised funds for nonprofit sponsors.

As these opportunities to become involved grew, so did pressure from the clientele — as a result of dwindling supplies of new housing, deterioration of existing stocks, and failure of production to meet the most pressing needs of the worst-housed segments of the population.

By contrast with pre-1969, about a third of local Leagues have housing programs, and among these, the Regional offices, and the National Office, there are about 70 professionals.

Most affiliates with housing programs have one or two-man professional staffs, but some have as many as a dozen. Their services include counseling clients on housing rights and opportunities; advising on housing finance and credit (the Urban League collectively is one of the nation's largest contractors under FHA Sec. 237 counseling, accounting fully for one-sixth of the cases); organizing tenants to campaign for rights and protest substandard conditions to landlords and city agencies; advocating low-income and minority housing needs to local authorities; providing guidance for fair housing volunteers; and pursuing various strategies to increase the supply of low rent housing in both the center city and the suburbs, in ways that are consonant with some long-range planning.

Housing in the Urban League, like housing in America generally, suffers from a dearth of hard statistical data, however, and the fact that a full two-thirds of local affiliates did not, for example, reply to the consultants' questionnaire last May hints that there may be as yet unknown activities among them, and certainly untapped potential for activity.

For now, it is possible to say that most local programs have developed at first in response to specific needs of the local clientele. As these programs grew, however, they began to develop capacity for taking initiative and choosing directions beyond immediate needs.

Some local programs now show deployment of resources and strategies of action that go to long-range goals. Case profiles of some of the best of these, in both large and small-city settings, will be offered in upcoming issues of this paper. Emphasis will be on ideas and methods that seem most borrowable.

News of local activities in any affiliates, whether part of a major program or not, will be welcome and noted to the best of our ability, within space limits.

Whitney Young, Jr. . . .

(Continued from p. 1)

employment, or any other element of community stability, the central factor— the key — is housing.

And this means more than the quality of housing — although that is very important. It is also where the housing is, because that affects school patterns and job access.

We are in a period where we hear the Federal government calling for greater housing effort, but cutting back 75 per cent on public contracts and tightening the money market for private building. We see the white noose of the suburbs strung around the central cities that are getting blacker and poorer all the time — all aided and abetted by FHA's insistence on homogeneous neighborhoods, and by the way the Federal government subsidizes 90 per cent of the cost of highways that let suburbanites commute more easily, but doesn't subsidize mass transit for city dwellers.

Now we are seeing businesses moving to the suburbs in larger numbers, and taking jobs with them.

All of these things mean we have to take strong positions on where new housing should be, what kind of government aid it should have, how it and all the other elements of community development in and out of the city should fit together. It means aggressive, coordinated action among workers in economic development, community planning, social services, and education as well as housing. And finally it means the Urban League taking the initiative in building and managing housing, not just monitoring what others do, or urging them on to greater effort.

So for all these purposes — school desegregation, economic integration, community stability, and rights and opportunities generally, we are placing greater emphasis on housing in our attention, in our effort, and in staffing.

We are particularly interested in raising the professional competence of our work in housing. We hope this newsletter will help in that direction. More important, the overall effort can be much more effective if there is a constant and free flow of information and ideas among the local, regional, and national components of the Urban League movement. Here is one medium for that purpose. We hope that you will find it useful and will contribute ideas and information for its columns.

It takes a sharp lens and a fast shutter to catch at rest the two men pictured above. As the National Urban League's central housing staff they tend to behave more like jet missiles than desk-bound bureaucrats.

At left is Glenn Claytor, Housing Director, and at center is Tom Gale, Director of Operation Equality. With them is Mrs. Betti S. Whaley, Program Director of the National Urban League, who is responsible for developing and evaluating programs which emanate from the national office, and seeing that program advice is supplied to affiliates. An urban leaguer for 12 years, she was instrumental in launching Operation Equality.

Among local Leagues, Messrs. Claytor and Gale are working to help develop strategies for advancing low income housing in their areas. This includes reviewing local resources, advising on use and availability of local and national programs, and national funding sources, and translating the experience of other Leagues to local terms. They are also advising on how to coordinate housing programs with others in the fields of economic development, welfare, tenants rights, family service, and so on. Nationally they aim at developing coalition strength with other groups in the civil rights field, developing and maintaining liaison with specific parts of the Federal government concerned with rights and housing — HUD's equal opportunity section, the Fair Housing Section of the Justice Department, the Research Department of the Civil Rights Commission, and Equal Opportunities section of the VA housing division, for example.

Glenn Claytor, who was appointed to his current post in November, comes to the National Urban League from Rochester, where he was the Urban League housing director. He is 33, a native of Washington, D.C. and attended the University of Rochester (B.S. '63) and the Brooklyn Law School ('LIB '67). He has been a member of the New York State Bar since 1969 and in addition to his Urban League duties maintains a small private law practice and housing consultancy.

Tom Gale, 37, a native of New Mexico, was raised in California, Oregon and Texas and attended Massachusetts Institute of Technology (B.S. '58). He has been a planner for the Tennessee State Planning Commission, Puget Sound Regional Transportation Commission, and after three years as an urban planning consultant in New York, during 1969 was Research Director of Operation equality before his current assignment as director.

Housing Committee Launches National Abandonment Study

New York City runs an annual net deficit of units lost from the housing inventory and unreplaced by new ones of approximately 21,000 homes and apartments. The reasons for this loss are not mainly fire, storm, bulldozer or other forms of natural or unnatural disaster. The main cause is landlords simply locking their doors and walking away from their buildings. Fully two-thirds of the 135,000 units lost each year (vs. 114,000 added) are lost by such abandonment. Sometimes a landlord does not bother to lock the door; he walks away while

Housing Committee's Acting Chairman, Henry G. Parks, Jr.

House Hears League on 1970 Housing Act

The National Housing Act should be written for the people whose needs it purports to meet, not for the builders, lenders, and other dominant interests in the housing industry, the National Urban League told the lawmakers.

Stressing the League's experience and concern as an agency primarily concerned with delivering benefits of the Act to its intended beneficiaries, Housing Director Glenn A. Claytor presented the League's views on the Administration's proposed 1970 Housing Act. He told the Housing Subcommittee of the House Banking and Currency Committee that four items were of prime interest to the League:

- Immediate and in-depth attention to the need for a national land use policy. This would allocate land in accordance with national growth patterns, prevent speculative land price inflation, and insure that entry of poor center-city residents to suburban areas where industry is beginning to move will be accompanied by adequate planning for community resources.

Mr. Claytor told the Committee that an Administration proposal to override local zoning ordinances which arbitrarily exclude federally-assisted housing might be a worse cure than the disease it is designed to stem. He predicted it would result only in token amounts of low-income housing for factory workers, without adequate planning for schools, and other necessary supporting facilities. He repeated last winter's plea before the full Committee for a national land agency (HOUSING NEWS, May '70).

- Greater flexibility in programs to encourage home ownership for low in-

(Continued on page 4)

OE Review Stresses Variety

Ghetto housing programs that begin limited but effective may have a much better chance of long-run success and growth than ones that try to offer a comprehensive array of services but deliver none of them well. The reason: credibility is vital in building and keeping clientele, and new services can always be added.

That seemed the main lesson offered by Operation Equality directors at an all-day round table held by National Office staff to review experience thus far. Another message: the enormous diversity of possible responses to ghetto housing needs adopted by different programs.

Discussion revealed a clear split in the way individual programs responded to reality as they found it. Begun under the original Ford Foundation grant to aid ghetto residents in finding decent, integrated housing in the suburbs, all quickly discovered their assignment could not be that neat — or limited. The incoming client group was

(Continued on page 6)

Rochester Scatters Sites, Cuts Red Tape

Two trial programs underway in the upstate New York city offer promise of expanding the housing supply for low income families without many of the agonies of official processing. They place a large part of the initiative and direction of the programs in the hands of the sponsoring agency, the Urban League of Rochester, and may yield substantial savings in time and money.

One program involves the selection and acquisition of scattered vacant lots on which prefabricated modular homes are then erected, to be sold upon completion to the Rochester (Public) Housing Authority. The lots are selected by the League, and so are prefab contractors and the families to occupy the homes. Agent for the transactions involved is the Metropolitan Rochester Foundation.

The first home to be erected under the program has just been completed — a three bedroom ranch which is expected to sell to the RHA at about $19,000 if HUD approves. This compares with a per-unit top cost limit of $21,000 under Federal public housing construction regulations for a high-cost area such as Rochester.

The home is located in what David Snipe, housing director for the Rochester UL calls "non-traditional" — which means non-ghetto — and moderate-income. "We are," he points out, "talking integration too, after all." A second lot has been acquired next door, and the League plans to begin another home there soon. Snipe says the homes may also be made available for purchase by low-income families under FHA Sec. 235, since the cost limits are beneath the maximum for that program too. Just how useful the program will be in speeding and spreading public housing depends on HUD at this stage, says Snipe. "We won't know whether the costs are actually economic or not until we know what HUD will approve as a price for public housing purchase."

Rochester's second program involves private, conventionally financed home rehabilitation for rental. Local limited partners put up equity and front money, while the Rochester UL acts as general partner, managing the property, selecting tenants, collecting rents, and so on.

The first job of this kind has just been completed as well, says Snipe, and "so far it looks good." The limited partners, two Rochester businessmen, each put up $1,500 for downpayment and closing costs on an $11,000 dwelling. After renovation (with interim financing from Central Trust Co., a Rochester bank), a permanent mortgage of $8,348 was obtained from a local bank at market interest rates — currently 7½ per cent. The tenant is a welfare mother with eight children, whose rent of $155 a month is paid by the welfare agency. It should, says Snipe, yield enough to cover the carrying charges, taxes, repairs, and leave some profit at the end of a year's time. The Rochester UL is now looking for additional homes to treat similarly. One source of prospects: banks which have repossessed dwellings in mixed neighborhoods have approached the UL to take them over. Snipe says that under this program too, the idea of using FHA Sec. 235 to enable some families to buy their homes is contemplated.

Tulsa UL Hosts Sec 237 Parley

A pattern that might be useful in other states was tried out by the Tulsa and Oklahoma City Urban Leagues recently. The session brought Mrs. Carrie Bash, St. Louis UL housing director, to Tulsa as consultant for a discussion of the concept and applications of the program, and a form-by-form run-through of the FHA paperwork which it requires. Participants included staff of the Tulsa and Oklahoma City leagues, the Oklahoma City FHA insuring office, and Tulsa urban renewal, community design, building and real estate interests. Bruce Gruber, Assistant NUL Southern Regional Director (Housing) took part as well.

Specialist Course Comes to New York

The National Urban League has joined the Foundation for Cooperative Housing and the National Urban Coalition in co-sponsoring the Housing Specialist Program, the nation's most successful school for housing professionals (HOUSING NEWS, May, 1970). In its first two years, HSP has trained more than 100 interns from 25 states in a six-month course which combines seven weeks of class work with a four-month on-job training.

The shift from Washington, D.C. to New York for the Summer 1970 session, HSP's fourth, reflects new interest in emphasizing community and social aspects of housing. It also signals the League's decision to continue supporting HSP rather than initiate its own training program.

The change in location was arranged with the assistance of NUL's housing consultants, Trans-Urban East Inc. and the curriculum was overhauled by NUL staff and the consultants in collaboration with HSP staff.

While major emphasis still remains on mastering technicalities of government housing aid programs, with at least half of the 200 seminar hours devoted to them, time devoted to social issues in housing has been doubled to 25 hours. The balance goes to learning about the economic, technological, and other aspects of housing planning, design, construction, sales, and management. Even here, however, there will be a stronger slant toward the social. For example, discussions of architecture and planning will include professionals in these fields who make a specialty of working — often as volunteers — with grass-roots organizations rather than official agencies or commercial developers.

An SRO class of 40 interns sponsored by government and voluntary agencies, developers, or themselves, (tuition: $700) is enrolled. Among the group will be nine more sponsored by the National Urban League and their local-affiliate employers, bringing the total of League personnel served by the program to 30.

Active Committee Sparks Housing Work

The direction and force of the Urban League's new thrust in housing is largely the result of broad knowledge and concern in housing and community affairs brought by thirty men and women from across the nation to their service as members of the Housing Committee of the National Board of Directors. As an advisory subcommittee of the Board, they have been instrumental in gaining for housing its present high priority within the overall program framework. As the program's monitors they have concerned themselves with matters ranging from broad policy considerations to the institution of this publication, and in so doing have endowed the program with many of its most important components. Among the most recent: participation in a national study of housing abandonment in center cities (see story P. 1).

Such activity is of relatively recent vintage. Always a subcommittee of the national Board, the Housing Committee was for many years essentially a paper committee, acting for the most part to ratify such initiatives in housing as the program staff might take. Then, three years ago, largely through the efforts of then Board Member Henry G. Parks Jr., the committee's chairman, its role became more active. Last November it was enlarged to include a substantial number of non-Board members with special qualifications to assist in shaping and conducting an aggressive housing program. Among those added are people experienced in designing, building, financing, selling, and managing housing for the inner city, and others skilled in the social and political processes required to advance production of such housing. The membership also reflects a League policy of including professional field staff representation from all Urban League geographic regions.

Since its reconstitution in membership and function the Committee has, among other matters:

- Developed the concept of the NUL Development Foundation (HOUSING NEWS, May 1970), secured Board approval to establish it as a separate corporation, reviewed and guided development of the Foundation's prospectus, established the goal of 1,800 units for its first year of operation and investigated ways of financing it. The committee also set the criteria for Foundation products: good housing for all, not just cheap housing for the poor; choice and mobility for low-income families; housing that will be saleable in any community.
- Approved National Urban League participation in the Foundation for Cooperative Housing-Urban Coalition training program for Housing Specialists, which will be conducted in New York City for the first time during the Summer, 1970 session (see story, P. 2) under League sponsorship.
- Authorized and guided staff in negotiating National Urban League participation in HUD's Operation Breakthrough; co-sponsor of Breakthrough proposals with three of the 22 winning competitors, the League anticipates active participation with a number of the others.
- Authorized National Urban League support for OEO-funded Housing Development Corp. of Washington, D.C. at a time when it faced possible funding cut-off. The threat was removed.
- Provides ongoing benefit of its collective knowledge, judgment, interest and support in the formulation of policy positions on National Urban League activities in housing and urban development.

Mr. Parks, president of H. G. Parks, Inc. of Baltimore, rotated from the Board according to its bylaws which limit membership to two successive three year terms, is currently leading the committee as Acting Chairman.

Philadelphia Moves to Stem Abandonment

Even before the returns are in on abandonment as a national problem (See story, P. 1) Philadelphia officials and community leaders feel they know enough to consider it a grave threat to the local housing stock. And one of the most promising strategies to meet the problem has been developed by the Urban League of Philadelphia, as a part of its overall housing program.

Paradoxically, the strategy is based on a two-year old state law that is designed to put slumlords on the spot, by permitting tenants in buildings that violate local health/safety ordinances to withhold their rents until the violations are removed. The rents go into an escrow account maintained by a neutral third party, and if the landlord fails to meet his obligations within six months the rents go to the tenant.

"The thing is," says Mrs. Shirley Dennis, the Philadelphia league's housing director, "that when you take a closer look it's often not an unfeeling landlord, but just a poor one, old and ailing in addition, simply unable to do the job that's needed. Often when a building is declared unfit as far as the landlord is concerned that's the end of the matter. He gives up entirely." So the League tries to help both landlords and tenants.

One sign the approach is working: When the League started its escrow program only some 30 per cent of cases were closed through landlord compliance. Now about 50 per cent are. And the League is at work on a scheme to improve the ratio further: by persuading the city to provide funds to landlords who lack capital to make repairs. "The City is desperate for some solution to the problem of vacated buildings," says Mrs. Dennis.

Policy guidance for the escrow program is provided by a subcommittee of the Philadelphia Urban League's housing committee. It includes representatives of both real estate and community interests — people who, as Mrs. Dennis notes, "you might expect to find on opposite sides of the table, but whom we've been able to pull together in a common concern for decent housing."

The American Arbitration Association, which operates a community dispute-settling center for low-income neighborhoods in Philadelphia, is providing free arbitration services for landlords and tenants who agree to settle their differences over maintenance out of court. Community Legal Services of Philadelphia provides free counsel for tenants who must go to court. And a local law firm is providing counsel to the League itself.

Escrow funds are deposited in one or the other of two Federally-insured Savings & Loan associations — one Black-operated — and draw 4½ per cent interest, which goes to help pay the costs of administering the program. The balance of the cost is funded under a community housing information service supported by the Philadelphia Urban Coalition. The funding extends to August 1, and the League is now preparing a request for a continuation, and some increase in staff.

First step in the program is a counseling session which informs the client of his rights under the rent escrow law. If he decides to invoke it, he starts paying his rent to the League, which notifies the landlord of the fact. If and when the landlord earns a certificate of compliance from the city's department of Licenses and Inspection, the League notifies the tenant, and also advises him of a right to appeal, and offers counseling on this. As the end of the six-month escrow period nears, if nothing has happened, the League reminds the client of his options — to begin another escrow period, or to move. Those who elect to move receive assistance and counseling in finding a new home. Often they are encouraged to buy if they can qualify under FHA Sec. 237 for mortgage subsidy (HOUSING NEWS, May '70).

House . . .

(Continued from page 1)

come families, so that existing housing could be used in larger amounts. Mr. Claytor told the Committee that a ceiling of 15 per cent on mortgage assistance funds that can be used to aid low income families seeking to buy existing homes was too low. He called it a step backward from the present 30 per cent ceiling. Most low-income families must shop for homes among existing housing because new construction is too expensive, he explained. Furthermore, to discourage owner-occupancy of existing homes would tend to perpetuate stratification and encourage absentee ownership and exploitation.

- Continuation and full funding of programs of family credit counseling. Under these the League and other voluntary counseling agencies have been remarkably successful in assisting low-income families with shaky credit ratings to become home owners. Mr. Claytor cited a practically nonexistent default rate (½ of 1 per cent) among counseled families. He urged that credit counseling be made an integral part of all low-income housing programs, rental and purchase. He emphasized the importance of funding the program however. The League, with seven out of 42 FHA-approved counseling contracts, and other agencies, are hard pressed to provide the expert professional services required. They have been subsidizing the program voluntarily because of its importance, but cannot indefinitely.
- Shifting the basis for determining family eligibility for housing subsidies, and the amount of the subsidies. These are now based on an arbitrary proportion of "family income." The basis should be a formula which includes a careful analysis of each individual family's finances. "At the very least," he said, "the present concept that between 20 and 25 per cent of family income should be spent for housing should be revised downward. Few better-off families devote such a large percentage of income to housing." He noted that a middle income family very likely gets a subsidy of as much as $67.50 a month in income tax credits on interest and real estate tax payments on a $30,000 home — a larger subsidy than most federal housing programs provide for poor families.

Mr. Claytor stressed throughout his testimony that this year, for the first time, the League's statement was drawn from the concerns and insights of a national network of professional housing staff people, not just concerned welfare workers and laymen. The professional component, he noted, is a symptom of a new commitment and emphasis on housing in the League's work.

Nebraska UL Housing Director Nate Goodwin surveys newly-renovated home, chats with the new owners under Sec. 235.

Omaha Program Earns $250m HUD Reservation

A home renovation program using FHA Sec. 235 financing has enabled the Urban League of Nebraska to place 30 poor Omaha families into their own homes in the past year. A presentation of the program, which operates through the Nebraska League's subsidiary non-profit Housing Foundation, highlighted the National Urban League Board's Kansas City meeting in May, and the national Housing Committee's a week later in New York. Key elements, presented by Nebraska UL Board Chairman Charles Washington and Housing Director Nate Goodwin are use of black contractors, working only in salvageable neighborhoods, and recruiting families with stable incomes.

Of the first 30 families, 27 have been on welfare, and all are black. But this, says Goodwin, is not by design. The program is available to all poor families. Typical financing structure for a family of seven in a two-story, three bedroom frame home priced at $13,800 involves a 35-year mortgage, with monthly payments of $66 — $38 principal and interest, $22 taxes, and $6 for insurance. This means an effective interest rate of only 1 per cent for the client, the mother of six whose entire income is derived from Aid to Dependent Children. The comparable FHA unassisted mortgage would call for 8½ per cent interest, with consequent carrying charges of $136 a month — $37 more for principal and interest, and $5 more for FHA insurance, waived under Sec. 235.

Under Sec. 235 interest ranges from 1 to 3 per cent depending in income.

Houses are acquired by the Housing Foundation under the program at an average price of $5,000 with typical rehabilitation cost of $6,000. Local banks provide interim financing with permanent financing from the Federal National Mortgage Assn. through Iowa Securities Co.

Home owners get extensive counseling, both in the use and care of their new home and its appliances — furnace thermostats, and so on — and in family finances. Though the Foundation does not insist, it asks the new owners to check with it before making major new purchases for the home. Careful advice, plus detailed family budgets worked with the help of Foundation family workers, improve chances for long-term success of a move. Sometimes the savings are dramatic. The lady in the case example

(Continued on page 6)

Abandonment . . .

(Continued from page 1)

his building is still occupied, and leaves the tenants to discover their plight through the inroads of vandals, and decay of the services and structure.

New York's problem is dramatic and ominous. But it is not unique. It increasingly appears that abandonment is a national problem. So the National Urban League's Housing Committee, in pursuing its newly revitalized mission (see story, P. 3) at its May meeting authorized League participation in a national study of the problem. The study will be conducted in collaboration with the Center for Community Change. It will last four months and will seek to find out just how widespread abandonment is, how much of a threat it is, and to learn its causes and possible cures.

The study will consist of two phases. In the first, existing data on abandonments — volume, location, and so on — will be obtained in a baker's dozen of Eastern and Midwestern cities where reports indicate they are a significant and growing problem.

On the basis of these data, between four and six cities will be given in-depth analytical treatment, in an effort to discern the processes through with abandonments occur and their likely causes. The main technique will be to interview knowledgable individuals with a stake in the community: public officials, real estate brokers, bankers, and community leaders.

Findings are expected to shed light on the relationship between abandonment and such factors as neighborhood ethnic change and municipal housing and taxation policies, and to spot similarities or their lack among the cities.

First-round cities include Cleveland, St. Louis, Rochester, Pittsburgh, and Syracuse, where Urban League staff will make initial surveys. In Boston, Chicago, New Orleans, Erie, Pa., Denver, Baltimore, and Washington, D. C., consultants will be hired for the purpose.

By mid-June a preliminary report summarizing the status of existing data in these cities will be prepared. Sometime in September, the final report is scheduled to be complete. It will be

published in a Fall issue of The Architectural Forum.

Total cost of the study is estimated between $15,000 and $20,000, of which the National Urban League is providing $6,500. The balance is being provided by the Stern Family Foundation and the New York Foundation.

OE Review . . .
(Continued from page 1)

not only mostly low income, but often closely tied to the center city by job, social services (day care, for example), and family. Moreover, the supply of housing in target suburbs which was within the means of moderate-income families was rapidly shrinking.

One group of programs responded by becoming more selective in client intake and trying to work within the existing real estate market: encouraging cooperation between black and white brokers, developing strong legal departments to fight discrimination, helping mostly young couples with small or no children to become home owners for the first time — generally in close-in suburbs and in transition neighborhoods. This group also found themselves drawn into watchdogging municipal services in such areas, interceding with lenders, and so on.

The second group sought to serve the clients as they presented themselves, and became users of all existing government aids to improve and expand available housing for poor people. They rapidly became involved in direct action for housing production — rehabilitation and new construction — without particular regard to location. The income range of their clientele was substantially broader, as a result, and supporting social services correspondingly more important.

The split does not appear permanent. As time passes each type of program begins to look more like the other. The initial approach becomes established, new activities are begun, and services become more comprehensive. Such "cellular" growth — specific activities delivering specific benefits to specific clienteles — seems more workable than the effort to be all-embracing. "Comprehensive programming is a developmental goal, not a problem of program design," says National OE Director Tom Gale.

Following the OE meeting, specialists spent a day of candid talk about where the League is headed as a housing movement and where its housing workers are headed as individuals. Their most important recommendation: that the National Office develop housing program standards for local affiliates to aim to meet. Another: that national and local offices should encourage cross-fertilization of ideas by letting professionals take time off to act as consultants to other offices as need and the opportunity may arise. A number have already done so (eg, the Tulsa meeting noted on P. 2).

Also stressed in the talks: the interdependence of efforts. Local programs tend to wither or waver unless plugged into a national structure, and at the same time there can be no national thrust without local teamwork.

Omaha . . .
(Continued from page 5)

found that her heating bills went from $40 a month in her former drafty and substandard home to $15-20 a month in a better insulated dwelling.

The program has been successful enough so that HUD has reserved $250,000 in Fanny May funds for the Omaha area. It is not without snags, however. Iowa Securities is the only local mortgage banking outfit that will handle the program, and although it collects the authorized ½ per cent FHA processing and servicing fee, the Housing Foundation must pay for the client credit check and do virtually all the other tasks for which the fee is paid.

Notes from the Field

Gary, Indiana—Gary League's milestone Oak Knoll Terrace development HOUSING NEWS, May '70) last month welcomed its first tenants. Hailed by Edwin H. Gott, chairman of U.S. Steel, the League's partner in the venture, as a "major step in Gary's urban revitalization," the 550 unit garden apartment and townhouse complex offers apartments from $111 to $172 a month under FHA Sec. 221d(3), will be owned and operated by the Gary League. Construction is of prefabricated modular steel components, by a U.S. Steel subsidiary.

Cleveland, Ohio—Operation Equality and Cleveland's largest builder-owner of apartments have agreed upon a precedent-setting policy to enforce fair housing practices in apartment rentals. Builder Carl Milstein and OE Director Joseph Battle worked out the arrangement which calls for an equal opportunity workshop for all Milstein rental employees and either disciplinary action or dismissal for those who fail to adhere to a strict fair-housing policy. The agreement covers some 47 apartment buildings in 12 suburban communities, involving some 3,200 apartments.

Columbus, Ohio—The Columbus League last month placed before the local development commission a rezoning proposal to clear the way for the city's first League-sponsored new housing development, 56 one and two-bedroom apartments.

Colorado Springs, Colo.—The Urban League of the Pikes Peak region has received a renewal and enlargement (Continued on page 6)

Name NUL Foundation Chief Executive

William A. Ross, currently in the administration of HUD's Office of Equal Opportunity, and a professional expert, with nearly 20 years' experience, in education, housing, and manpower, is the new director of the League's housing development agency.

He will take office July 27th, and will attend the National Conference before then. First order of business, says Mr. Ross, will be "to organize the functions of the foundation and get some housing started."

Although FHA Sec. 236 commitments are popular with nonprofit sponsors and there is a fairly long waiting list (some projects have taken as long as 18 months to process, and one took eight years), Mr. Ross hopes the Foundation may see some housing in the ground in six months. "We will have to move quickly if we are to reach our goal of 1,800 units in two years.

Site of the first development has not been selected, he says. "That's part of the organizing job."

A soft-spoken man who does not waste words, Mr. Ross has been interested in housing since his undergraduate years at Delaware State College, where he majored in housing construction. From 1953 to 1966 he served in Baltimore county and city schools as industrial arts teacher for nearly a decade, then as guidance counselor. In 1966-67 he was Coordinator of the Neighborhood Youth Corps' In-School Program in Baltimore.

In 1961 meanwhile, Mr. Ross organized Summer Contracts Company, a vacation-time enterprise engaged in residential building and improvements. Out of this experience and his (Continued on page 6)

William A. Ross

The Urban League Housing Council, the membership organization of Urban League Housing professionals, will have its annual meeting in the Park Sheraton Hotel, Sunday, July 19, 2:30 p.m.

Mr. James Cummings of Lippman Associates will be available at the New York Hilton Hotel during the National Conference to discuss joint housing development ventures. The National Urban League housing staff has designated Lippman Associates as a cooperating agency with full-service capabilities for support of Urban League housing programs.

Quiet suburban street is in Oak Knoll Terrace, south of Seattle, where black families are able to move under Sec. 235 home ownership program promoted by Seattle OE. Homes sell for $13,950 to $21,950 including range, refrig, washer, dryer, and carpeting. Only problem: poor public transportation.

Remodeling under OE's rehab program is designed to give house a 30-40 year additional useful life. Interior treatment includes radical repartitioning, new heating and other systems, if needed, plus refinishing of existing ceilings and walls, full carpeting, in many cases.

Seattle OE Coordinator David Guren and Asst. Coordinator Carl McCray discuss next move in war on housing disadvantage in Guren's basement office at 708 Empire Way. Charts show funding sources and contributions for all program services.

Mr. A. J. Smith, who is Best Builders, Inc., has been in OE rehab program since it began, is one of its most active rehab contractors. It has, he notes, been steadier work than offered by the new homes market.

Housing Specialist Mrs. Judy Ball discusses income qualification problems with new client, who has come in because a friend was helped by Operation Equality. Although client's income appears too low to satisfy FHA home ownership requirements, Mrs. Ball questions gently to learn whether such items as babysitting payments or food stamps may not raise the gross. Counselors are focal point of client service program, receiving them from field reps and matching them to programs and counselors as appropriate.

Photos by Robert Seaver

Seattle OE: "Creative Flexibility" In Action

A vistor's first-time impression of the goings-on at 708 Empire Way in Seattle's Central District is likely to be one of barely controlled chaos. In a former three-bedroom home that has been turned into a warren of offices from basement to attic, the Seattle Urban League's Operation Equality staff conduct their business practically at each others' elbows, with no apparent pattern, and a good deal of background noise.

The impression is, however, completely superficial. Beneath the apparent informality of the setup is a closely-structured, highly integrated array of diverse activities aimed at helping the poor and minority families of the Seattle area meet their housing needs.

The program is widely regarded as the most comprehensive and successful of the Operation Equality pilot efforts. It has placed over 600 families in new or rehabilitated homes in the last three years. It serves over 1500 families with continuing counsel on home maintenance, family finances, and legal problems related to home maintenance, family finances, and legal problems related to home ownership. Last year it had more than 17,000 client contacts for these purposes.

In addition to these benefit-delivery functions, the program works steadily at pushing outward the frontiers of housing choice for poor and minority families. It seeks to develop new patterns and techniques for housing production and distribution. It was the first in the nation to make processing for FHA Sec. 221 h (now 235) subsidized home rehabilitation manageable and, therefore, workable. The method is now providing the model for a HUD-sponsored national experiment in expediting rehab projects. The program has also been instrumental in Seattle's successful proposal to become an Operation Breakthrough city, and is organizing its own nonprofit housing development corporation. It works closely with local government and a variety of agencies as well as the real estate industry on a wide range of key problems. Its function has proven so viable and vital that in its three years it has grown from an initial budget of $69,000 and a staff of six to one of $450,000 and a staff of thirty-five for fiscal 1970-71.

The program began, like the other OE experiments, in 1967 as a Ford Foundation-funded open housing effort. "But it soon became evident," says Coordinator David Guren, "that the program design was invalid. The people and the houses just didn't match."

Seattle was in the midst of an aircraft industry boom which created an acute demand for homes for low and middle income families. The housing industry just was not able to meet it nor were the volunteers who sought out listings for OE's effort. So, while OE in Seattle has consistently worked to strengthen open housing and anti-discrimination laws, and regularly investigates housing discrimination cases, it rapidly switched from the role of matchmaker and listing service to that of housing producer. Before it was a year old, the first package of five 221 houses was on the market at about $13,500 apiece. Fifty more were in the process of acquisition. Terms were $200 down and less than $100 a month for 25 years thanks to the FNMA subsidy which kept interest at three per cent. All of the houses were in integrated neighborhoods. These were the first houses rehabilitated in the U.S. under this program.

OE's strategy was not only to produce houses, however. It was to provide a concrete example that would induce other potential nonprofit sponsors to take part. This involved nothing less than turning FHA's normal operating procedures around, so as to reduce the frustrations and red tape that had kept sponsors away until then.

Beneath all the paperwork, OE found, were four critical factors: the purchase price of the house, the contractor's price for rehabilitating it, the sponsor's overhead (insurance, architect's and lawyers' fees, and so on), and the FHA sale price appraisal. If the first three add up to less than the fourth, all is well; the job is feasible. If they total more, it is not.

"The problem was that FHA, which has traditionally considered itself an insurance office, insisted on reviewing each deal after all the preparations," says Guren.

This routine might be workable with merchant builders, but it takes only a few frustrated efforts to turn off a voluntary sponsor. So OE decided to ask FHA to put its appraisal "up front" along with the other figures, and to get FHA to share its data bank on how much overhead allowances should be. Through hard work and a good relationship with the local insuring office, both were accomplished. An FHA appraiser now visits each house along with OE's production specialist and the contractor. His appraisal comes in at the same time as the rehab price, and FHA sets flat percentage rates for overhead which lets the whole job be figured in one operation. The result: "We've turned all our fair housing groups — churches, clubs, and so on — into housing production units," says Guren. All told, 12 sponsors are now in the picture along with OE, which continues to sponsor some houses.

Another result: HUD was so impressed at Seattle's success in developing volume with this processing change that it has designated pilot efforts in fifteen cities to rehabilitate 1,000 to 1,500 units — in multiple dwellings — in each of two years. One of the cities: Seattle. One of the first sponsors: Operation Equality. The job, involving 193 apartments in seven buildings, will be financed under FHA Sec. 221-d-3 at market interest, and be used for families who are receiving federal low-income rent supplements.

But getting a house for a family is only, OE quickly perceived, the first and not always the most important step. This is particularly true when home ownership is involved for a family that has never had the responsibility before. An integral part of the program is intensive counseling, both before and after occupancy. The core is financial and maintenance, but it can cover such diverse matters as interior decorating, landscaping, and family relations.

"You try to stay out of social work and stick to the financial side, but it's hard. You have to get involved," says Mrs. Dorothy Eichelberger, one of OE's three financial counselors. Financial counseling includes help in setting up a family budget, advice on buying wisely — shopping bargains, buying

in quantity, avoiding name brands in favor of quality — help in getting food stamps if qualified, and referral for advice on managing family debt. A major trap for new homeowners, Mrs. Eichelberger says, is the impulse to junk all the old household furnishings and buy a new, generally overpriced outfit on excessive financing terms. Such a plunge can destroy the financial picture that qualified the family for a home in the first place and, in many cases, contribute to a mortgage default. An interior designer herself, Mrs. Eichelberger has made a special cause of showing families how they can make do with their older furnishings and still have an attractive home. Through her efforts, members of the local chapter of the American Institute of Interior Decorators have been recruited to conduct workshops for OE clients and counsel at a one-to-one basis too. They have now undertaken to design and decorate several model homes for demonstration purposes — on budgets set by each family's own resources. Materials and furnishings to augment the family's current possessions may be obtained as contributions from vendors or individuals.

Another specialist who has added a new dimension to the program through personal initiative is Maurice "Buzzy" Benson, head maintenance counselor. "My bag is keeping people in houses," he says. In addition to workshops and individual counseling for new homeowners, he has recruited a group of volunteers from the Seattle community with a variety of home repair and building skills. They take turns manning a truck, dubbed the "Love Buggy," that is equipped with a full array of power and hand tools for most home repair jobs. Three days a week the buggy visits individual clients for training sessions. The other two it responds to distress calls. The volunteers have done jobs that range from making a set of window screens to building an addition to a home. Like the decorators, they work with contributed materials. OE has developed a receipt form that enables donors of both old and new items to show them as tax-deductible contributions. These are used by both groups of volunteers.

Pre-occupancy maintenance counseling, like financial counseling, tends to stress the "stitch in time" theme. Counselors are fond of illustrating this by telling of a lady with a plugged downspout which caused a gutter to overflow. The water splashed against a window with a loose frame and the water ran in and ruined a hardwood floor.

Such mishaps are more likely to occur among families where the head of the household is a woman. "I tell these ladies who are heads of households if they don't know how to hammer and fix they should catch themselves some cat who can," says Benson. "Then too, we try and encourage clients we've helped to help others. Not long ago the man we made screens for put a new roof on for another client. We got the shingles donated."

Group counseling seminars are held evenings and Saturdays about once a month. They tend to combine financial and maintenance matters. But attendance by those already in their homes is sparse, even though clients can also learn about decorating, gardening, sewing and home economics.

Because the kind and location of housing available at any given time varies client recruitment must be closely tailored to the available supply. This is the job of OE's field representatives whose function is important for another reason — OE finds it's easier to get white clients than black or other minority. The client mix currently is 50% white, 45% black, and 5% others, says OE's reports specialist, Mrs. Frances Riley. One reason, says Field Representative Roosevelt James, is that black clients in particular tend to mistrust government promises. They fear that their subsidies may be withdrawn, leaving them with an insupportable debt. OE has found that, for minority clients in particular, circulars, newspaper ads and other written materials are of limited use; word-of-mouth is the best medium for recruitment. James can call upon a crew of paid canvassers who carry door-to-door word of available programs for an OEO-funded community action program, or a network of contacts among major employers in the area.

Field reps also keep the public informed about OE activities, and spend a substantial amount of time speaking before and keeping in touch with community organizations and agencies.

Clients generated by field reps or who come in on their own first see an OE housing specialist, qualified to analyze their housing problem and recommend a course of action. The specialist takes a statement of family composition and income, assesses housing need, and attempts to match the client to an available program. The basic operation here is to qualify on the basis of income — both as to maximums and minimums, for FHA will reject a client who must pay too large a proportion of his income, as well as one whose income exceeds eligibility limits.

The problem is almost always on the downside, says Housing Specialist Mrs. Judy Ball. If a client cannot be qualified for a home purchase program, the specialist recommends rental possibilities (at the moment only public housing) or suggests ways income might be augmented or interpreted to increase the gross. For example, clients may not know they can count food stamps, or baby-sitting payments from ADC, as part of their income. If there appears to be a credit problem, the client is referred to a financial counselor.

Clients matched to an OE program are routinely referred to both credit and maintenance counselors who make contact as soon as possible after the closing of the deal. Financial counselors also take immediate charge of Sec. 237 clients, who for the most part are referred by realtors or other agencies after an FHA or mortgagor turndown. They tend to be making a good income, so are not usually in need or OE's other services.

The intake, analysis, delivery and followup sequence of OE's service array is backstopped at a number of points by Legal Counsel Sidney Strong and a crew of law student aides. Strong joined OE with the idea of finding and attacking legal obstacles to adequate housing for poor afmilies. Two pressure points he has discerned are credit practices and procedures for assessing the soundness of housing before a sale is made. In each, his legal reasoning is intricate and fascinating, but boils down to the hope of developing a body of precedent that will enable exploited clients to seek damages for their treatment. "Then law firms will be just as ready

(Continued on page 5)

Seattle . . .

(Continued from page 4)

to handle these cases as they are negligence cases today," he says. The point is another example of how OE tries to develop approaches that others will be encouraged to pick up and carry on.

Like other staff members, Strong has found ways of multiplying himself through use of outside resources. He has law students from the University of Washington working for him under both Federal Work-Study provisions of the Higher Education Act, and under a program sponsored by the National Civil Rights Legal Research Council.

Combinations and permutations of the OE structure with other complementary activities and agencies are basic to the program's "second strategy" — which is not just to find ways to make the present systems of housing delivery work better, but to change them more profoundly. In effect, the strategy is to create new systems. OE's involvement in Model Cities, Operation Breakthrough, the Central Puget Sound Housing Development, all express this thrust. For, as Coordinator Guren puts it, "If we were only a delivery program it would be death and disaster because the present system is so inadequate we could not hope to meet the need."

"There are plenty of others to deliver the benefits if we can push for the changes that will make them available. I would much rather have thousands buy their own homes through realtors than have hundreds buy them from us. Then why do we reinvent the realtors' profession? Or any other role in the housing field? The answer is simple: so we can change it."

Guren cites as an example the very low default rate among clients screened, placed, and counseled by OE under the Sec. 235 program, compared with a very high one among those families who were sold homes under Sec. 235 by realtors. A substantial portion of OE's remedial counseling and legal work arises from efforts to gain redress for families who, despite FHA's inspection and the public purpose of the section were sold homes that were in poor condition.

"We are in housing construction development not because we want to build, but because we must be practitioners so we know the ground rules and the viewpoints of the participants in the process. Then when we assume an advocate role in behalf of change, we know what we are talking about," says Guren. In this role, he notes, OE "hits and runs," staying in a problem area only long enough to create the conditions for others to operate — as in the 221 h rehab program. In so doing, he says, any League or other agency should ask: Why are you building housing? Where is it? Who is it for? What kind of housing is it? and What are the social consequences?

In seeking answers for these questions through an operating program, OE has developed an unusually complex funding structure. In addition to the original Ford grant (renewed this year for a second three-year period) and local matching contributions, OE will draw funds this year from Model Cities, for client screening and selection, OEO for counseling services (a demonstration-research grant to prove that poor families can be successful home owners), and a contract with The Boeing Company under Operation Breakthrough for design and marketing advice as well as client services.

Among problems currently besetting the delivery complex are the inflated costs of housing production which are pricing poor people — welfare mothers in particular — out of the available programs, exhaustion of Sec. 235 existing-house commitments, a dearth of authorizations for assisted multi-family new construction, because an economic slump in the aircraft industry, Seattle's main one, has eliminated the statistical housing shortage. But Guren sees these as transitory. "This is a planning agency which is an advocate for poor people and black people in housing. As soon as there is new construction money available we'll be in there, and in other areas as they arise. Creative flexibility is the key concept, whether it is in operations or strategy. We want no stereotype thinking. If one approach doesn't work, we try another, and another.

"It sometimes gets very hard to operate and think at the same time," Guren admits. "It's schizoid — half of you is the operator, working within the system, and the other half is the reformer, maybe even breaking down the structure you're operating in. Yet it is the operating half that feeds the information to be an effective reformer. A knife-edge business, but worth it."

As Housing News went to press, HUD named the Boeing Company as one of its Operation Breakthrough prime site developers, responsible for the Seattle site. The announcement activates an agreement between the aircraft firm and Seattle Operation Equality in which OE will provide tenant selection and training, public information, minority contractor liaison, and market aggregation services. In its statement on the designation, Boeing said it hoped the project would mark the start of its own major entry into the field of housing development nationwide. Systems producers allied with the Seattle site are Keene Corp., working in concrete, Levitt Technology Corp. and Boise-Cascade Corp., both in wood.

NUL Parleys on Breakthrough Subcontracts

Announcement of winning designs in HUD's Operation Breakthrough competition for new technical systems for mass-production housing has intensified negotiations on contracts under which the National Urban League will take major responsibility for representing minority interest in prototype design and production, and for minority participation in production and marketing of prototypes on demonstration sites. One contract is already signed with a corporation representing a consortium composed of Module Communities Inc., American-Standard Inc., The Celanese Corp., and IBS Industrialized Building Systems, Inc. A second is nearing completion with Stirling-Homex, Inc. and discussions are under way with several more of the 22 winning producers.

For the consortium corporation, known as CAMCI, the League will prepare plans for implementing programs of equal opportunity in manufacturing, using local minority contractors and subcontractors, and enlisting community participation in planning and building prototype developments. In later phases the League expects to counsel and assist producers in carrying out the plans, first on prototype

sites and later in mass manufacturing and sales operations. The Breakthrough program, which aims to produce some 3,000 units of industrialized housing on sites in ten cities, is HUD's current major effort to remove roadblocks to decent housing for all segments of the population. The League has taken part in its development from earliest stages, and both the national office and several locals have helped systems producers and site developers prepare their proposals for the competition.

Notes . . .

(Continued from page 1)

of its 1969 New Thrust grant to operate a housing program in the local ghetto. Among its activities have been sparking the organization of a Colorado Springs Public Housing Authority, which now has 900 units of mixed elderly and low-income family apartments authorized; helping to form the Core Area Housing Committee, a grass roots organization of target-area residents. The first president was James D'Entremont, director of housing for the local League, and the present president is James Larue, assistant director for housing, and currently a member of the Housing Specialist Program in training in New York City. The League has also established a tenants' union in cooperation with the Colorado Springs Community Action Program, and since April has counseled 71 applicants for Sec. 235 housing.

Englewood, New Jersey—The Urban League of Bergen County has acquired 5.5 acres in this city on which to build 100 units of town houses to be financed under Sec. 235. The league has also worked out an agreement with the Englewood Housing Authority to sponsor 135 units of Turnkey housing.

Hawthorne, New York—The Urban League of Westchester County has been instrumental in winning an unusual fair housing case in which it secured damages to the plaintiff in this town from both the broker and the seller. The case was brought in Federal District Court by the NAACP Legal Defense and Education Fund under the 1866 civil rights act which says in effect no person shall be given different treatment from that accorded white persons.

Oklahoma City, Okla.—The local League has organized a Community Design and Planning Center in cooperation with Oklahoma State University School of Architecture and the Oklahoma University School of Architecture and Planning. Its two main projects are design and planning of Turnkey III, public home ownership housing, and a longrange planning program for the Northeast Oklahoma City Residential Association. The League is also conducting a three-unit demonstration for the Community Participation Committee for Turnkey III, an organization of 27 community groups, more than half of them grass-roots.

Pontiac, Michigan — The Pontiac Area Urban League has organized and received state approval of the articles of incorporation of an Urban League Non-Profit Housing Corporation of Pontiac, and is currently in negotiations with the Building and Zoning Committee of the Oakland County Board of supervisors to obtain options on two parcels of county-owned land, for development purposes. Gloria Lewis is director of housing and community services of the Pontiac Area UL.

Four Phase I Breakthrough Reports In

Four of the five final reports for Phase I of Operation Breakthrough, which NULDF contracted with housing systems producers to prepare are completed, announces NULDF Executive Vice President Bill Ross.

The four producers are Pantek Corp. of Boston, which will produce homes on sites in Indianapolis and Sacramento Cal.; CAMCI Inc., of Yonkers, N.Y., which will work on sites in Jersey City and Memphis; Rouse-Wates Inc. of Columbia, Md. which will work in St. Louis; and Levitt Technology Corp. of Lake Success, N.Y., which will work in Kalamazoo, Mich. and Seattle.

HUD Employes Rip Racism, Get Reforms

A campaign against racism in promotion policies and supervisors' attitudes in the Department's comptroller's division has resulted in upgrading 347 minority workers after a review of their files. Perhaps more importantly, the campaign is moving into the rest of the Department and beyond, to such agencies as the Library of Congress, NASA, Depts. of Agriculture, Interior, HEW, Post Office, General Services Administration, and Bureau of Census.

Demand DOJ Probe Bias In Cleveland HA

The action could have far-reaching effects because the charge, by the Cleveland Urban League, is that the entire conduct of the public housing program from 1937 on constitutes an illegal pattern of discrimination. It thus places under fire a whole array of dodges perennially used by local and citywide politicos to keep public housing from the right side of the tracks.

Specifically, the League charges that the Cleveland Metropolitan Housing Authority Board and the Cleveland City Council are responsible for:

- Site selection policies which placed 12 of 15 projects in operation by 1968 in depressed, decaying areas, nine of them in the black ghetto.
- Development policies which resulted in higher densities and greater burdens on these neighborhoods when the projects were completed.
- Relocation policies which placed the burden of relocation on the (mostly black) owners of property to be redeveloped, and tenant selection policies which at the same time disqualified applicants convicted of misdemeanors or worse without taking into account the higher incidence of crime in the ghetto and the practice of mass, indiscriminate arrests by police.
- Acceptance by CMHA of veto power by individual councilmen over sites in "more wholesome" areas, and obstructionism by the City Council to CMHA's efforts to find sites outside of impacted areas. This latter included an ordinance which restricted use of leased-housing provisions to areas which were designated for renewal, code enforcement, or other treatment—in other words, already blighted or headed that way.
- Withholding zoning variances or, in one case, utility development approvals, to block the construction of otherwise legal developments in areas where there was local opposition.

Ernest Cooper

Wrote Ernest Cooper, Cleveland UL Executive Director, in transmitting the League's seven-page complaint:

"From the very beginning of our public housing program to the present day, discrimination based on race has been the key element of Cleveland's program.

"Recent and obvious collusion

NAHRO Maps Development Aid Changes

The influential trade association of men and women who direct housing, urban renewal, code enforcement, and other development activities in the nation's cities has come out for a sweeping revision of Federal aid programs for such activities.

Among other things, the reform would deal another blow to forces that now tend to keep low income families in the center city by using zoning, codes, and other localistic controls to prevent construction of housing for them in the suburbs. It would do this by providing incentive grants to local housing and community development agencies that conduct programs overlapping local municipal or corporate boundaries. Such agencies could, in theory, build low rent housing in the suburbs to relocate families whose substandard center-city homes need to be razed. It would thus tend to loosen the "white noose of the suburbs."

The proposal would also make the machinery for providing federal aid to local housing, renewal, and community development programs much more flexible than it is now.

Housing assistance, for example, is now tied to a complicated set of subsidy formulas to help narrowly defined income groups. Urban renewal and other community development programs are generally conditioned on a rigid "plan" of specific activities to be undertaken within a specific area within a city or other jurisdiction.

Neither would be true of the programs proposed by NAHRO, which would substitute a single housing assistance payment, making up the difference between the cost of housing and the client's ability to pay, for all present forms of subsidy. Payments would be to a variety of sponsoring entities, including housing authorities and nonprofit private developers. Similarly development aid would require only a comprehensive strategy for meeting needs, with a set of priorities for which aid could be provided on a year-by-year basis without prescribing the precise nature of the expenditures.

The Nahro proposal would eliminate the tax exemptions or abatements with which localities are expected to help subsidize most current below-market housing, a feature that should find favor with local legislators who argue such housing erodes the tax base for up to a half century. Finally, Nahro would have the Federal government act as developer of last resort in cases where need could be shown but no local agency was prepared to meet it.

NAHRO's proposals, which contain many concepts urged by the National Urban League in recent years, would have been dismissed as Cloud Nine tripping not too long ago. But with HUD reorganized, in better control of its urban renewal, housing assistance, and planning programs, and eager to make improvements in them, plus the Administration's new interest in revenue sharing and greater local control of fund allocations, setting a policy trend, there is a greater chance of favorable reception and perhaps even the beginnings of adoption.

Technical Assistance Boom

Pontiac and Grand Rapids, Michigan Urban Leagues became the fifth and sixth to contract for NULDF expert assistance as they get into the production of nonprofit housing.

Other cities already signed up are St. Louis, New York (at two locations: Staten Island and Central Harlem), Boston, and Youngstown, O.

The agreements provide for advice and assistance on practically every aspect of putting together a development package, including the organization of a nonprofit corporation to own and operate the housing. Market analysis; site selection, appraisal, and option; negotiations with government agencies; professional team selection; contract negotiation, mortgaging, and management and operation are all items that NULDF may help on.

NULDF's fees are derived from a fixed percentage of the development cost specified in the regulations covering nonprofit housing mortgage assistance from FHA. The technical assistance service is not to be confused with NULDF's project seeding function, in which front money for professional services and preliminary project development may be provided, nor with the Foundation's work wtih Operation Breakthrough participants on the equal opportunity aspects of their contracts with HUD. (Both are noted elsewhere in this issue of HOUSING NEWS.)

In the case of Pontiac, negotiations for a 17.9 acre tract in town are under way. Grand Rapids is working on plans for a 68-acre tract. In both instances, NULDF has organized presentations to the two Leagues by developers and housing systems producers from among whom the clients may choose the firms that will do the actual building.

HUD Employees . . .

(Continued from Page 1)

The grievances are not new. As early as last April, HUD officials admitted a pattern of racism existed in the Comptroller's office. But progress in eliminating it was so slow that in October minority workers demanded (and got) a mass meeting with HUD Secy. Romney. They presented him with a 14-point bill of particulars, and held demonstrations outside HUD headquarters in support of it.

Among the demands were upgrading all qualified black employees who had been in grade a year or more, less emphasis in promotion reviews on experience in private fields (eg, real estate, banking, appraisals) that are not freely open to blacks, more emphasis on experience within the agency, detailed career development programs and training plans for all divisions, and penalties for racist offenses by supervisors.

The confrontation was spearheaded by the HUD Employes' Task Force Against Racism whose chairman, Ronald A. Wallace, handed the demands to Romney. Within two weeks they had a memorandum from HUD's Asst. Secy. for Administration Lester Condon, and Asst. Secy. for Equal Opportunity Samuel J. Simmons, responding point by point. Most responses were favorable, at least in principle, al-

though HUD refused to promote nonwhites to supervisory positions in proportions consistent with the racial composition of the agency and the District of Columbia. Nor would it agree to transfer out of the Comptroller's division all supervisors at work there in April, to "start with a clean slate."

The upgrading review, which was conducted by representatives of the Personnel Dept., Asst. Secys. for Equal Opportunity and Administration, and the Steering Committee of the Task Force, began in November and continues to date. The clear implication being that the upgrading will not stop with no. 347.

It had better not, as far as the Task Force is concerned, for members say some of those upgraded were overdue for promotion anyhow, and others were just given raises in grade. The Task Force also says it has seen no plans for training yet, and intends to keep on meeting with HUD top brass and making demands until more results are shown.

In the meantime, says Washington Urban League community organizer Leonard Ball, the movement has widening implications for the HUD Task Force is a part of Government Workers United Against Racial Discrimination (GUARD) which the Washington UL helped form and is now transferring the tactics used at HUD, to other agencies. HEW has already had confrontation similar to HUD's and organizing is under way at others.

DOJ Probe . . .

(Continued from Page 1)

among members of City Council, The Cuyahoga County Democratic Party, and the Cuyahoga County Commissioners provides ample assurance that the pattern and practice is designed to continue."

He asked Justice Dept. action under the 1968 Civil Rights Act.

For Cleveland, whose public housing program has long been among the most troubled in the nation, a suit could, if brought and successful, open new housing opportunities. But such a victory would mean, too, hope for other cities where the "public-housing-is-fine-as-long as-it-isn't-in-my-neighborhood" syndrome has stymied most efforts to build public housing in decent surroundings.

Bruce Gruber

Meet Bruce Gruber

NUL's Southern Regional Office is the hangout of a 29-year old architecture graduate who switched from the design side to the policy side of housing production because, after working for an architect who did a lot of low-income housing, "I just had to see how come something that was built so cheap cost so much."

Bruce Gruber went from the architect's office to the first Housing Specialist Program, and from there to Interfaith Inc., a non-profit housing development company sponsored by a consortium of 19 Atlanta churches. After nearly a year there, he joined SRO late in 1969, as Assistant Director/Housing.

A graduate of Georgia Tech ('68), where he was a member of the Architecture Honor Society, Bruce has also worked as a landscape architect, in plastics production, and did feasibility, site and construction analysis for FCH Services Inc. as his on-job training as a housing specialist.

He is a native of White Plains, New York and attended grammar school in Southbury and Windsor Locks, Conn. and high school in West Palm Beach, Fla. From high school graduation in 1960 through 1965 he spent his summers as a professional baseball pitcher, playing with farm teams of the Phillies, Cardinals, White Sox, and an independent team in Guadalajara, Mexico. Bruce has also taken part in a USA-USSR student exchange program while at Georgia Tech. Recently he has acted as a consultant to community action agencies for OEO in his spare time.

Contingent Setup Helps Kinloch Plan

A promising new approach to getting more immediate delivery of planning and development assistance to small cities and towns with all or mostly black populations is represented by an agreement between the Missouri city and the National Urban League Development Foundation.

Under the agreement, NULDF will be responsible for developing a comprehensive plan to cover housing, commercial development, water and sewerage, recreation and community facilities, urban renewal, and land use.

Until now, Kinloch, a community of 5,629 population, 4 miles from the city of St. Louis, has lacked the staff resources to do the job. Yet it, like many similar communities in major metropolitan areas around the country, is beset by urgent problems of urbanization at least as much as its suburban neighbors.

The consulting arrangement will address these problems for Kinloch and has a couple of other features which are rare if not unique.

In the first place, the Foundation's fees will be on a contingent basis. Kinloch need commit no local funds as front money for the planning operation. NULDF will be paid entirely from funds it obtains on Kinloch's behalf from country, state, federal, and private sources.

The second feature is that the consultancy will be carried out through an established nearby local League—in this case, the St. Louis Urban League. The St. Louis UL will open a Kinloch office, under the direction of St. Louis OE director Mrs. Carrie Bash. The office will not only administer the planning program on NULDF's behalf, but will provide health, housing, and other community services which are standard parts of the St. Louis league's overall program.

NULDF will offer its broad resources for overall guidance, and recruiting specialized talent and services that may be needed for particular phases

Kinloch . . .
(Continued from Page 3)
of the program, but day-to-day work will be carried on by a professionally qualified staff familiar with and working in the local situation from several directions. The arrangement thus multiplies the benefits to Kinloch, and demonstrates the unique advantages of the local-national relationship in Urban League—NULDF operations.

Kinloch Mayor Robert Metcalf says he is pleased at the prospect of acquiring services that the city cannot provide from its own staff. And NULDF Executive Vice President Bill Ross says the concept may represent a breakthrough in many black communities' search for ways to acquire substantial aid for planning and development without having to strain their budgets making a large investment to get the ball rolling. The development of such a delivery system is, he notes, a major objective of NULDF. So the experiment will be watched closely for transferable ideas.

Breakthrough . . .
(Continued from Page 1)
The reports are in fulfilment of equal opportunity requirements of Phase I, which is the design and planning phase of the Breakthrough program, which HUD hopes will shove industrialized housing systems over the threshold to become a major source of supply for the nation's housing needs. Such systems promise to reduce housing costs by taking advantage of mass production economy and new building technology. But they have never been able to command a large enough market to achieve a viable volume of production and sales, despite the potential indicated by the relative success of prefabricated homes and factory built mobile homes.

Under Breakthrough, HUD has induced 22 systems producers and site developers in ten cities to make the necessary investment to launch a variety of industrialized systems. Phase II will involve actual construction of prototype developments in the ten selected cities, and Phase III is expected to be the mass production and marketing phase.

The equal opportunity requirements of the contracts, generally referred to as Task 16, are designed to assure maximum access to all benefits of the program for minority groups.

Thus Phase I reports just completed all include plans for employment and training of minority group members in the systems manufacturing work force, for affording opportunities for minority entrepreneurship in the subcontracting phases of the work, for assuring equal opportunity in the housing to be produced, and for community participation in planning and developing the "total housing environment" in each development. The report must specify how these plans will be implemented in Phases II and III, and describe a plan for applying the Phase II experience in each in Phase III.

All four of the reports state that the producers submitting them intend to contract further with NULDF, and through it obtain the services of the National Urban League and local affiliates, in implementing and evaluating the plans which the reports set forth.

The fifth systems producer for whom NULDF is preparing a report is Stirling-Homex Corp. of Avon, N.Y. which will work on sites in Kalamazoo and Memphis. Its completion is expected shortly.

Open Housing Seen Key To Viable Cities

Unless housing occupancy is completely free and unrestricted, and unless the institutions which sustain viable occupancy are willing to continue investing goods and services in all segments of the metropolitan fabric, the central cities will turn into reservations for the poor, black and unwanted, Glenn A. Claytor, NUL Housing Director, told a gathering at the recent Fair Housing Seminar sponsored by the Jacksonville Urban League.

Stressing the League's experience and concern in this area he called on groups involved in fair housing to abandon one dimensional approaches toward problem-solving, and to develop alternate strategies, including getting into the development and rehabilitation of housing and thereby controlling such key factors as location and the economic spinoffs which can be channelled into black communities.

He said that the lesson learned from the League's Operation Equality Program, a project designed to improve minority housing opportunities, was that the enactment of a fair housing law is not a panacea for the problem of restricted occupancy and does little for the elimination of racism in housing.

In the beginning Operation Equality utilized rather traditional case by case methods to improve minority housing opportunities. These methods were soon found to be neither economical nor efficient.

The League then embarked on several alternative strategies, one of which was

William B. Widnall (R-N.J.) ranking minority member of House Subcommittee on Housing and Glenn A. Claytor, Housing Director, NUL. Claytor introduced Widnall to a plenary session of the conference and presented him with Distinguished Service Award of the Center. Claytor was re-elected Secretary of the Board of Directors of the Center, at its annual meeting of members.

HUD Says Buyer Must Serve Poor

The Atlanta Urban League has received a letter from Department of Housing and Urban Development Undersecretary, Richard Van Dusen, which guarantees that when the government-owned Ogelthorpe Apartments are sold, 333 units will be turned into subsidized housing for the poor.

The apartments, many of which are four and five bedroom units, will be spread throughout the 120 acre complex so as to ensure a healthy social and economic mixture.

The guarantee followed threats by the League to sue HUD and the Federal Housing Authority if at least one-third of the 1,000 units in the complex had not been set aside for those in desperate need of housing.

Earlier FHA had announced its intention to sell the complex, which reverted to government ownership in 1968, to the highest bidder for conversion into luxury apartments.

The League argued that while FHA could sell the apartments to whomever it chose, it also had a legal obligation to provide housing for those who need it most by requiring the purchaser to set aside at least one-third of the units for low-income families.

Fred Thompson, the League's housing director, described the position as having nationwide implications since it could set a pattern for the provision of low-cost housing in the 42,000 units across the country that FHA now has a "strangle hold on."

Tenants Save Boston Apartments

A group of tenants in Boston, organized to save two large apartment buildings from destruction, are nearing their goal through a combination of determination and ingenuity in transferring work performed into the equity needed to finance the rehabilitation of the buildings. This "sweat equity" represents the required 10 percent needed to finance the project through the Massachusetts Housing and Finance Agency under the Section 236 program.

Involved in the project, in addition to the Cooperative Assistance Association which did the necessary organization work, are the Columbus Avenue Tenants Association, The New Urban League of Greater Boston and an organization associated with the Massachusetts Institute of Technology that did the architectural design work. The story of the project began when the Boston Redevelopment Authority decided that two large old apartment buildings were worn out and should be torn down to be replaced by a school.

But as so often happens, the tenants of the buildings did not want to leave their homes. They got together and went to the BRA asking for a chance to take over the buildings and rehabilitate them themselves. The tenants organized with the help of PEURC (People's Elected Urban Renewal Committee) and the Columbus Avenue Tenants Association Inc., (CATA) was formed. After two years of negotiations the BRA relented, found a new site for the school and gave options on the buildings to the tenants association.

New Castle Court (shown above), 599 Columbus Avenue, one of two apartment buildings saved from destruction by tenant group in Boston.

Two years of hard work have passed —but now the Columbus Avenue tenants, who truly charted a new course, are just about at their goal. Renovation will be starting shortly. "Of course if we had known then what we know now, it would not have taken so long," says Talbot Hazard, the Housing Director of the New Urban League of Greater Boston, who looked after the whole deal.

How was this accomplished? Those responsible had outlined nine important steps:

1. Make a physical survey and preliminary drawings.

2. Outline financing plan.

3. Organize development team for which you need: a developer, architect, lawyer, and contractor. (Archibald-Shepherd Builders, Inc.)

4. Meet with financing agency, in this case the Massachusetts Housing and Finance Agency, to discuss your "development package," which must include: Development and financing plan (developer, lawyer, logistic and staging); design plan (architect); relocation plan (for tenants in the building); management plan; tenant selection plan; neighborhood analysis (land use, transportation, schools, etc.) and market study.

5. MHFA approval and mortgage commitment made.

6. Working drawings started.

7. Trust set up for syndication by CATA (Columbus Avenue Tenants Association), Urban League of Greater Boston and National Urban League Housing Foundation. Since this is a Limited Divident Project (as opposed to Non-Profit), investors can be sought to buy a share of the project for what is called "tax shelter." That is, investors in high tax brackets find it attractive to invest in housing in return for the depreciation that is permitted on top of the "limited dividend." The income from the syndication will be used by tenant owners as a cushion for unexpected expenses, future

80 Unit Project Planned in Phoenix

The Urban League Development Co., Inc., an outgrowth of a housing counseling service program of the Phoenix Urban League, has signed a contract with the National Urban League Development Foundation for the latter to serve as the consultant on an 80 unit housing project with a price tag of $1,092,227.

The development company was established by the Phoenix Urban League. It has a five-man board including Gabor Lorant, architect; George Welsh, Jr., attorney; Jerry Landis, aerial surveyor; Rosendo Guitierrex, engineer; and Junius Bowman, Urban League Executive Director.

Funds for the project are being sought through the Department of Housing and Urban Development. Planned are eight one-bedroom units, 60 two-bedroom units, and 12 three-bedroom units.

As originally conceived when it began in 1969, the housing program of the League provided only counseling services. Within the past year the UL Development Company had placed eight families into rehabilitated homes under the 235 (J) Home Ownership Program; built and sold 21 new homes and ten rehabilitated repossessed FHA homes, and qualified 80 Phoenix families for subsidies and helped them purchase new or remodeled homes.

The League is the first local minority organization to develop a non-profit building program to coincide with the federal housing subsidy act.

"We have been working cautiously with little fanfare over the past year establishing our program on a sound basis," Gabor Lorant, one of the board members of the development company said. "Our comprehensive counseling service, before and after our families move in, is the key to making the program work. Construction of a house does not in itself constitute a home. We are creating a whole new life-style for people struggling out of the poverty cycle. It is important to help these new homeowners properly maintain and retain their homes."

A detailed system of counseling has been worked out by the development company, beginning before the family moved into a home and continuing through to the organization of an Urban League Homeowner's Association in which families who have purchased a home and as well as qualified applicants awaiting homes, are encouraged to help each other wherever possible on a skill-sharing basis. The Association also buys paint and maintenance supplies and equipment for cooperative use.

The development company has also conducted the Paint and Beautify Phoenix Project that succeeded in painting 80 homes in the inner city occupied by the elderly, the physically disabled and families with limited incomes who could not allocate money for the maintenance of their homes. Paint was donated by business firms, students and private citizens. Labor came in the form of volunteers from the police department, fire department and students.

The director of the company is Elario "Larry" E. Chavez, who was recently named to that position as well as appointed Housing Director of the Phoenix Urban League.

Clay Named

Donald E. Clay, a native of St. Louis, has been appointed assistant director of housing for NUL's Midwestern Regional Office. A former city planner for the City of St. Louis Beautification Commission, Clay has also served as an associate member of James G. Randal Architects and as a planning consultant for Harold Garner Associates.

He obtained his bachelors degree from Southern Illinois University and studied for three years at the Washington University of Architecture. He expects to receive his masters degree in Urban and Regional Planning in June 1972.

Mr. Clay is a member of the American Institute of Planners, the American Society of Planning Officials and the National Association of Housing and Redevelopment Officials.

NULDF News

Breakthrough At Louisville Expo

How to obtain greater minority involvement in the modular building industry was detailed in an exhibit by the National Urban League Development Foundation at the Second Annual Industrialized Builders Exposition in Louisville, October 31 to November 4.

Space for the exhibit was donated to NULDF as the result of a confrontation with the exposition's management at last year's event by the Louisville Urban League and the National Urban League Housing Division.

Management was presented with a survey showing that less than one percent of participants at the show were minority people.

In another action, the NULDF and the Dayton Urban League have signed a contract to jointly plan and produce 75 to 85 Section 235 single family homeownership units.

Sara E. Curry of the Southern Regional Office was the director of a recent seminar on Minority Business Opportunities sponsored by the Atlanta Regional Office of the Office of Economic Opportunity. The seminar, the third of nine for which the National Urban League has been funded by OEO to coordinate, was held in Louisville. Participating as resource persons were NULDF staffers Howard Mayfield and Claude Willis.

Johnson Elected Vice-President

Richard C. Johnson, specialist for the Chicago Urban League's Housing Department, has been elected vice president of the National Board of Directors for the National Association of Housing Cooperatives, Inc.

NAHC is a organization which represents state associations or individual housing co-ops financed under section 221 (d) 3, 213 and 236 of the Housing Act. It also acts as a technical development body.

OPEN HOUSING

(continued from page 1)

involvement in the production and rehabilitation of low and moderate-income housing to utilize sections 221(d)3, 236 and 235.

Another step involved a systems change strategy that placed emphasis on the lending institutions which took the "cream of the potential homeownership pool" and disregarded the needs of black families whose income and credit histories did not measure up to traditional criteria.

The provision for homeownership counseling under section 237 was used to address this problem. After careful counseling in debt management and budgeting, those families previously rejected for homeownership were qualified under federally sponsored subsidy programs.

The League's experience suggests that if racism in housing is to be eliminated, the following goals must be sought:

- Racial and economic mixture of all new developments.
- Tenant and neighborhood control over the management of properties to the maximum extent consistent with viable management.
- The maintenance of all housing market functions, including mortgage financing, resale value and governmental and institutional community services as a result of racial change in housing occupancy.
- Citizen participation with technical representation in urban development planning processes and urban development decisions.

League experience further suggests that in order to increase the economic empowerment and net worth of black and other minority group people, the League and other organizations involved in fair housing must work for:

- The development of parallel institutions to ensure minority participation in all activities of the housing and urban development industry.
- The integration of minority controlled elements of the housing and urban development industry with white dominated institutions and processes developing opportunities for the industry.
- Equivalent homeownership ratios for minorities and lower income families with white and affluent families.
- Equivalent equity development and security for minority and lower income real estate investments with investments by white and affluent families and individuals.
- The inclusion of minority economic development plans in urban development planning.

TENANTS SAVE

(continued from page 2)

repairs, etc., since the goal is to keep the rents as low as possible, and to run their own programs.

8. Rents: Tenants will make use of FHA rent supplement programs—tenants pay 25% of income, the rest is subsidized. (Up to 40% of tenants may receive rent supplement payment according to MHFA regulations.) The leased housing program of the Boston Housing Authority, if available, can be used (no money at present).

9. Management: Fees for management are based on a percentage of rent. Experience has shown that in many low rent projects like these, expenses exceed income. Syndication money is an essential cushion here. Tenant management training programs will be used to enable tenant owners to manage the apartments eventually. A professional management corporation will supervise management.

League Explores Further Action After Rejection

The Urban League of Greater New Brunswick (N.J.) is exploring the possibility of taking additional action after the city's Council refused to overturn a decision by the Housing and Redevelopment Authority to award the sponsorship of a massive urban renewal project to a private builder.

Ten months after the League submitted the first plan to sponsor the urban renewal project, the Housing Authority finally reached a decision in August—to award the project to the private builder.

The official reason given for the selection was the alleged greater experience of the private builder, but the League has charged that this is a "smokescreen," and that in fact, the experience of the contractors it proposed to use on the project far exceeds that of the firm awarded the job.

Delay and frustration dogged the involvement of the League from the moment the League initially presented its proposal in October, 1970. The date on which the Authority would name the sponsor was first changed from December, to January to March and finally to August. The League has taken the position that "this tactic was indicative of stalling procedures to allow other groups outside the community to prepare more elaborate proposals for the project area using the League's proposal as a model."

The renewal project had actually lain dormant for some ten years until the League, with its commitment to develop and design low-income housing in New Brunswick, resurrected it. An initial step was to make a survey to determine community sentiment, in conjunction with several other groups including the Community Involvement Corporation (COINCO).

A detailed and innovative project was designed that would be sponsored by the League but owned by COINCO. At the time of the presentation of the plan, no other group had come forth with a proposal and a spokesman for the League said: "We have the sponsor, we have the consultant and the architect, we have the financing. We are prepared to move if you give us the green light."

A survey of 2,500 city residents showed the League's proposal had the support of a majority of the residents of the target area, but delay after delay was encountered providing other groups with the opportunity to submit their own proposals.

The League, while wishing to avoid measures that would further delay the project, had asked the city council to overrule the decision made by the Authority. The League charged that the Authority's choice of the outside firm is discriminatory and clearly violates guidelines spelled out by the Department of Housing and Urban Development.

League officials cited a HUD memorandum suggesting that "a group with deep roots in the community will probably be stronger as a sponsor."

The League is also concerned with HUD regulations requiring employment and apprenticeship of minority group persons on federally-financed projects. It pointed out that the company awarded the urban renewal contract has no minority representation on its board and employs only one black, a female, as a research director.

In addition, the private firm's plan makes no provision for the relocation of families displaced by the project.

League officials also noted that the private firm's sponsorship of another project is currently under investigation by HUD as a result of a complaint filed by the National Association for the Advancement of Colored People.

As a result of initiatives by the League the city council finally agreed to a public hearing in late September. The meeting was billed as an "information session" to explain to the community why an outside contractor was selected.

Over 300 concerned citizens crammed into the city council chamber, the largest group of people to attend a council session in the city's history, to participate in a heated exchange. The community voiced a variety of concerns to which the council members gave only vague responses and contended that the Housing Authority was the only local agency with the final say in the matter.

Nevertheless, League officials indicated that they were prepared to join the NAACP and federal authorities to assure that this urban renewal project and others are "investigated and properly sponsored."

HOUSE, Inc., Making Progress

The House Organization for Urban Slum Elimination (HOUSE, Inc.), a nonprofit corporation sponsored by the Urban League of Flint to develop and rehabilitate low-cost housing, represents a major step toward easing that city's housing crisis.

HOUSE, Inc., whose Board is composed of community representatives and members of the League's Board, is headed by Leon Whitfield who is also director of the League's Community Development Department.

Last year with a $82,500 grant from Model Cities, the corporation purchased nine houses for $48,000. The rehabilitation, which was conducted by local minority contractors, cost $50,000.

A loan to supplement the Model Cities funds will be repaid by receipts from the sale of the houses. Minority real estate brokers were also involved.

The houses which after rehabilitation ranged in price from $10,000 to $16,000 were purchased by families under Section 235 of the Federal Housing Act which provides federal subsidy payments and mortgage insurance to ease the financial burden for home buyers.

Melvyn S. Brannon, executive director of the Urban League of Flint, said that although there has been criticism in some areas of housing constructed under 235, HOUSE, Inc. is an example of the good that 235 can do.

He said that rehabilitated homes are cheaper than new homes under 235 enabling many more people to own homes.

Archie D. LeFlore, housing project director for Model Cities, commended the cooperation between the two agencies and said that rehabilitated houses "meaningfully upgrade the life in the Model Cities neighborhood and represent a sound investment of community money."

Project officials said they plan to rehabilitate 40 houses and hope eventually to include new homes in the program. Other long-ranged plans include developing a model for future housing projects, and offering employment opportunities to minority businessmen.

Federal Programs Called Inadequate

The National Urban League has charged that present federal housing programs are "indirect, costly, and often fail to reach the man farthest down the economic ladder" and that private enterprise "has failed to house Americans adequately."

"More than half of all American families cannot afford the houses now being built forcing 14% of white families and 20% of nonwhite families to live in substandard housing."

In testimony before the House Subcommittee on Housing, Glenn A. Claytor, NUL Housing Director, said that the present response to housing needs is inadequate and that all future federal housing legislation must be directed toward providing "safe and sanitary housing" for the additional 70-100 million Americans expected by the end of the century.

"Although Congress established a conservative goal of an additional 26 million units for the decade ending in 1978, we have never met the annualized target of 2.6 million. After setting a goal of six million low and moderate income units needed for the same period, we have not yet produced the annual goal of 600,000 low and moderate income units," he said.

"The sad truth is that on an annual basis, we actually lose more low and moderate income units than we produce. Last year we produced less than 500,000 low and moderate income units, but recent studies indicate that many more than that were lost to abandonment and urban renewal."

Claytor approved of an Administration proposal that would facilitate additional housing production and rehabilitation by consolidating federal housing and urban development programs. He pointed out, however, that consolidation tended to benefit the operators of the programs, financial institutions, consultants and real estate brokers, rather than the consumers of housing programs.

"Housing aid programs provide little benefit unless local planning agencies rationally allocate resources for new construction, rehabilitation and preservation," he said.

Claytor also called for an amendment to the Revised National Housing Act that would continue to restrict contract authority for interest subsidy for mortgages on existing units to a maximum of 30%.

Citing the existing housing stock as the "primary housing resource for minority families," he charged that any legislation which restricts the ability of more existing units to qualify for mortgage insurance under this program will "exacerbate the current sellers market facing most minority families today."

He said that on the basis of an abandonment study conducted earlier this year by the League and the Center for Community Change which identified a deliberate and definite relationship between economic and social elements that tended to induce housing abandonment, there must be a "vigorous public intervention in the central city mortgage and improvement loan market." He said this is necessary to insure that adequate funds are available at interest rates that encourage property maintenance, needed rehabilitation and new construction.

Council Reelects Regional Officials

The Housing Council, composed of housing personnel from Urban League affiliates around the country, met several times during the National Urban League Conference in Detroit.

Regional representatives were reelected to their positions as follows: **Council President**—Mrs. Shirley Dennis, Philadelphia Urban League; **Eastern Region**—John E. Gaynus, Project Director, New York Urban League; **Mid-Eastern Region**—Leon Whitfield, Housing Specialist, Urban League of Flint, Michigan; **Western Region**—J. Harris LaRue, Field Representative, Urban League of Pikes Peak; **Mid-Western Region**—Mrs. Carrie E. Bash, Director, Operation Equality, Urban League of St. Louis, Inc.; **Southern Region**—Fred J. Thompson, Director of Housing, The Atlanta Urban League, Inc.; **Advisory Committee**—Henry Garcia, Housing Aide, Michigan State Housing Development Authority.

A by-laws committee was established at this meeting and Charles Gray, Director of Housing for the New Brunswick Urban League, consented to serve as chairman. This committee will be responsible for developing guidelines for the Housing Council and to, hopefully, structure a dues system which will help to defray expenses of the Council. It was also decided to attempt to hold two regional housing meetings annually.

In addition, the Council developed a history for activities which will be distributed to every housing staff member providing background information on the activities of the Council since its initial meeting which took place at the National Urban League Conference in Portland, Oregon, August 1967.

Task Force Set On New Towns

A Task Force on New Towns Strategies composed of members of the NUL Housing Committee and the National Urban League Development Foundation Board of Directors was created during a recent NUL Housing Committee Meeting. The Task Force will develop recommendations for strategies to involve the Urban League in new towns development.

Franziska P. Hosken of Boston, a journalist and teacher in architecture and urban development, was appointed chairman.

Other members include Carrie Bash, Program Director, UL of St. Louis; Donald E. Clay, Assistant Director of Housing, Midwestern Regional Office; Glenn Claytor, NUL Director of Housing; Hortense Gabel, consultant of New York City; Bruce Gruber, Assistant Director of Housing, Southern Regional Office; Richard Mapp, Assistant Director of Housing, Washington Bureau; Elton Morris, Assistant Director of Housing, Mid-eastern Regional Office; William A. Ross, Executive Vice President, NULDF; and Fred J. Thompson, Director of Housing, Atlanta UL.

NATIONAL URBAN LEAGUE

ST. LOUIS URBAN LEAGUE

A REPORT ON HOMEOWNERSHIP COUNSELING

a service of

ST. LOUIS OPERATION EQUALITY

Prepared by:

Carrie S. Bash, Director, St. Louis Operation Equality
Richard J. Devine, Assistant Housing Director/Research, National Urban League
Thomas C. Gale, Assistant Housing Director, National Urban League
Kathy Houston, Counseling Supervisor, St. Louis Operation Equality

INTRODUCTION

St. Louis Operation Equality

In May of 1968, the St. Louis Urban League became one of 12 Urban League affiliates participating in the Operation Equality program of the National Urban League. Funds from the St. Louis United Fund and other local contributors were matched by the Ford Foundation to provide financial support for the St. Louis Operation Equality program for a period of two and one-half years.

The program was designed to reduce inequalities in housing, by providing increased opportunities for lower income and minority households through the following services offered in a center located in the principle black ghetto of St. Louis.

1. Counseling and information services with respect to housing rights and opportunities.
2. Coordination of a network of volunteers to identify housing opportunities and assist client families to obtain housing.
3. An anti-discrimination campaign against the St. Louis area real estate industry.
4. Measures to increase the supply of housing for lower-income families.

Homeownership Counseling

The U. S. Housing and Urban Development Act of 1968 provided, as one of the freshest of its innovative measures, that FHA home mortgage insurance programs be extended to cover families until then regarded as credit risks because of past debt problems. Coverage was extended through creation of a program of debt management and related counseling, in Section 237 of the Act. Similar recognition of homeownership counseling was accorded in the new low and moderate income mortgage interest subsidy program created in Section 235 of the Act.

St. Louis Operation Equality
Homeownership Counseling Program

In St. Louis, as in the United States as a whole, inequalities between black and white residents in homeownership rates indicate that a program aimed at increasing homeownership opportunities could be a very important tool for reducing housing inequalities. The 1970 U.S. Census indicates that 39% of black households in the St. Louis Standard Metropolitan Statistical Area are homeowners, and 69% of white St. Louis SMSA households are homeowners. For the nation as a whole, the U.S. Census indicates a black homeownership rate of 41% and a white homeownership rate of 65%.

Despite the fact that no funds were forthcoming from the Congress that created the Section 237 program, St. Louis Operation Equality adapted the tool to its program. In the fall of 1969, a formal agreement was signed between St. Louis Operation Equality and the U. S. Dept. of Housing and Urban Development which designated St. Louis Operation Equality as a Section 237 and Section 235 Counseling agency. Five other Urban Leagues and some thirty other private agencies had entered into similar agreements with HUD at that time. In the following year, the number of agreements in the country nearly doubled, but still no funds have been appropriated for their operations.

Section 237 counseling in St. Louis and in other cities has proven its value in releasing homeownership demand pent up in minority groups by discriminatory operations of housing markets. St. Louis Operation Equality has found its application to be a necessary step in reducing housing inequalities. Counseling has become a focus of the St. Louis Operation Equality program which is being continued by local support after termination of Ford Foundation funding in October, 1970.

Report on St. Louis Operation Equality Homeownership Counseling Program

This report is issued as a documentation of the achievements of homeownership counseling under Section 237 in St. Louis. Our presentation is intended to be brief and to the point because there is little to argue about the results. Homeownership counseling is a tool which significantly unlocks previous barriers to black homeownership. It is necessary in the fight against housing inequality.

This report, to our knowledge, is the first publicly released documentation of the results of homeownership counseling under Section 237. We feel that it is the responsibility of such a report on this activity to state the case for Federal funding to make Section 237 counseling available in all parts of the country to all qualified families and to indicate the directions for further development of housing counseling. Section 237 should only be a beginning in providing for the delivery of housing programs to intended beneficiaries.

Organization of the Study

Data for this report comes from the records of St. Louis Operation Equality and from telephone interviews with 100 of the program's clients.

Data collection was designed and supervised by the staff of National Urban League Operation Equality. National Urban League OE also analyzed the data and wrote the report. Data were collected and tabulated and clients were interviewed by St. Louis OE staff.

Clients of St. Louis Operation Equality have been divided into three categories for purposes of analysis. Clients referred by FHA under the Section 237 agreement, clients receiving counseling and qualified for Section 235 subsidy, and clients aided in Section 235 processing without counseling. These categories enable identification by comparison, of the results of counseling.

OPERATIONS OF THE PROGRAM

I. Volume of Clients

A. Processed - As of November 21, 1970, St. Louis Operation Equality had received and processed 410 Section 237 packages.

B. Certified - As of November 21, 1970, Operation Equality had certified 258 Section 237 packages.

C. Number with continued counseling - 218 of the 218 families scheduled for continued counseling since October, 1969 there are approximately eighty active counseling clients per month. Most families are dismissed from counseling after 4 to 6 months.

II. Length of time spent on - initial interviewing and continued counseling per month.

Percent of Staff time		
31%	1.	Initial Interviewing (new clients) - approximately average of 1 1/2 hours of initial interviewing and pre-interview work per client (most clients are seen more than once which results in 48 hours per month spent in counseling new clients.
25%	2.	Continued Counseling - approximately 80 families are receiving continued counseling. An average of 30 minutes is spent on counseling these families which results in 40 hours per month. Total 88 hours per month.

III. Lenth of time spent in related counseling areas.

19%	A.	Communication with anxious mortgage companies and realtors results in an average of 1 hour per day or 30 hours per month.
3%	B.	Looking at property for 237 clients averages 5 hours per month.
5%	C.	Answering correspondence from other agencies averages about 2 hours per week or 8 hours per month.
3%	D.	Finding suitable homes (placements)for 237 clients who have been rejected due to poor property condition averages approximately 5 hours per month.

10% E. Working with 237 clients who are deliquent in their payments; working with 237 clients who have signed legal contracts which are not in the best interest of the clients; working with 237 clients to clear up bad credit; working with clients who are unhappy with condition of property - 15 hours per month.

4% F. Filling out 237 counseling reports for administration and for HUD averages approximately - 6 hours per month.

	Total	69 hours
Add total for Section II		88 hours
ACTUAL TOTAL		157 hours per month

These figures do not include phone calls from clients made daily or other demands which differ from month to month.

IV. Range of services -

A. Credit Counseling

1. Clearing up erroneous items on credit report.

2. Budgeting

3. Making arrangements with creditors for accounts to be paid.

DATA TABLES

A. DEMOGRAPHIC -

TOTAL FAMILY GROSS INCOME

	Client	Categories	
	237/235	235	237
11,000+			23%

\+ Data Insufficient

TRENDS IN THE DATA

A summary analysis of the data produced by the St. Louis 237 program reveals that a relatively selective clientele is being serviced in contrast to the 235 and 237/235 clients, the 237 program services persons and families that:

1. Have significantly higher incomes
2. Have two or more wage earners in the family
3. Have longer job tenure in semi or low-skilled jobs
4. Have male heads of household
5. Have smaller families with older children

It is also significant to note that the average difference between old and new shelter payments for this group ($51.00 per month) was higher than any other. These families are not, typically, newly formed. They appear to represent a segment of the population which has been ignored by the private, real estate market.

Their financial capacity for homeownership is unquestioned. The 237 client, on the other hand, are the least satisfied with their new homes. Although no family expressed an intention to move from their new housing, 15 and 18 percent (respectively) claims that their new accomodation was no improvement (physically or spatially) over what they had left. In this respect, the significant aspect of their move is that they became homeowners.

It is clear that St. Louis OE consistently out-performed brokers in all areas but two. Clients consistently claimed that OE was not as good in showing them good homes in better neighborhoods, as it was in providing the traditional counseling package. However, only 3% of staff was given to searching for housing and an additional 3% to looking at property for clients. Most clients had already been in contact with brokers before visiting Operation Equality

Finally, all clients ranked anti-discrimination as the least valuable service rendered. They were, however, close to unanimous in claiming that help in securing the FHA loan, i.e., getting them through the "process" was the most important service they received.

SUMMATION

The significance of the St. Louis Operation Equality Section 237 counseling program is that it has meant the difference between owning and not owning a home to more than 200 St. Louis families. The measure of that fact is the quantum increase it means for increasing housing choices for black families in St. Louis.

The program has not, for all clients, produced ultimate satisfaction in living environments. Current operations of St. Louis OE do not test the program's potential for meeting clients full desires because limited funds and the structure of the 237 agreement do not permit significant real estate advocacy functions. Both staff and clients express frustrations over this state of affairs.

The extent to which insufficient real estate advocacy weakens government homeownership programs is only hinted in the data collected for this study. That a test of an extended advocacy role for St. Louis OE is highly desirable is a clear finding of this report.

One result of not funding the Section 237 program is that counseling agencies, such as St. Louis Operation Equality, have expended their resources in filling the need to implement Section 237 and have not had opportunities to explore the wider and deeper potential for housing counseling and real estate advocacy.

URBAN PLANNING PROJECT

REPORT SRC ANNUAL MEETING
NOVEMBER 2, 1967

PLANNERS

During this year, since our report at last year's annual meeting, we have continued to probe the possibilities of influencing the professional planners. By and large, this has met with very little success. If one can generalize, the planners attitude is "don't bother me - that isn't where my fees come from." There are, however, a few notable individual exceptions to this. Also more articles on planning for all citizens are appearing in national publications. Unfortunately, in the states we cover, most of the reports by planners or their efforts in this direction have been buried in bureaucratic effort.

EDUCATION

Because we have felt the profession of planning does lack the ethic of planning for all citizens, we have experimented with trying to influence the teaching of planners at the university level. Up to the present time, this effort has fallen on deaf ears. It seems to us that in the highly competitive efforts for funding of higher education, the policy level is strongly influenced by an ultra conservative philosophy. We find much more sound

thinking at the student level and we only wish time would permit us to get back to some of this effort.

CITY GOVERNMENT

The Southern Regional Council has had some opportunity to pierce several city bureaucries. This is very slow work and takes not only time but money to prepare the reports on an adequate professional basis so that they will even be noticed. We are in the process of advising on a few of these. What the outcome of this will be we do not know. Although the odds are against us, we still have hopes and know that if we can ever succeed here results could be dynamic.

FEDERAL

As has previously been reported to you, we have attempted to work with the Federal Government through the Department of Housing and Urban Development, and have met with a wide variety of reactions. Our efforts centered in research on ~~six (6)~~ Eight (8) demonstration cities in reverse. On this, we are continuing, and we anticipate having out during February a report to the Administrator of Housing and Urban Development, our assessment, and recommendations. The problems of bureaucracy and the strangulation of

sincere efforts by small prejudiced individuals is too well known by all of you to review here.

However, much to our great surprise one of the major deterrants to a better use of present programs under the laws we have is lack of knowledge by citizens and also by employees of the Federal Government. We have generated a GUIDE TO PROGRAMS FOR BETTER HOMES AND NEIGHBORHOODS. A draft on this was distributed soliciting criticism throughout the whole country. The response was most gratifying. Because the returns were very constructive, the revision to this GUIDE has taken longer than we had wanted. At present, we hope to have this revision out in late March. We anticipate that this GUIDE, when completed, will be of help to sincere federal and local employees as well as useful for citizen action.

OPEN OCCUPANCY LEGISLATION

Through all of our work, which has covered almost two years, the point that we come back to over and over, and over again, is that OPEN OCCUPANCY LEGISLATION is an essential to GOOD PLANNING. This is a professional stand which can be positioned regardless of the political implications. Unless we have planning free from artificial barriers of race prejudice, the economic as well as all

other facets of an effective life of the metropolis suffers. Legislation at the FEDERAL, STATE, and CITY level all are necessary!

In my opinion, it doesn't really make any difference which one comes first. I am always grateful when I see effort and progress on this in any place because this will inevitably lead to better urban planning for all citizens where there is no disparity in urban services. Furthermore, as Dr. Wilber from Houston has mentioned, there are many ways you of the Southern Regional Council or local Councils on Human Relations can influence this at the local level. We hope that we can find time in the future to produce an analysis of city and state legislation on OPEN OCCUPANCY. I particularly call your attention to an article, (Fair Housing Restored in California), in the next NEW SOUTH, by Joseph B. Robinson, Attorney on the History and Impact of California's Proposition 14.

PUBLICATIONS

During the last year, the Urban Planning Project has gotten out six (6) publications.* On all of these we have obtained

* UPP Publication No. 3 - Mr. Mayor - Slum Ghettos in Your City
UPP Publication No. 4 - Neighborhoods - Where Human Rights Begin
UPP Publication No. 5 - A Guide to Programs for Better Homes and Neighborhoods
UPP Publication No. 6 - Atlanta Residential Patterns - A Map
UPP Publication No. 7 - Atlanta Housing Study
UPP Publication No. 8 - A Report to the Mayor

excellent professional assistance from the outside, but most helpful of all has been the editorial of Bob Anderson and Pat Watters, within the Southern Regional Council. Also, I do not know what we could have done without the Southern Regional Council's research help of Glenda Bartley, Doris Reed, Bernice Morrison and Susan Friedman.

JOINT VENTURES

Some of our most rewarding experiences in th Southern Regional Council's Urban Planning Project work have been our joint ventures with other Southern Regional Council projects. I list only a few:

Ft. Lauderdale, Florida - joint work with Vernon Jordan, Marvin Wall and Thad Olive, of the Voter Education Project. VEP did such a good job of organizing the minority that the ultra conservative forces in town really had to make a strong effort to prevent the minority from taking over. Although this was politically a failure at this time, I know much was learned, and I anticipate seeing success there later.

Kentucky Federal Prison - John Boone, Bill Farmar, of the Project on Crime and Corrections, and the Urban Planning Project, have been consulting on trying to influence state

and federal planning of prisons to be based on a sound operations policy which would be an influence for more functional planning in minimal planning criteria.

PRESIDENT'S COMMISSION ON CIVIL DISORDERS

8

Two staff members of the President's Commission Civil Disorders, came to Atlanta to evaluate the causes, past and present, of our riots. The Southern Regional Council total staff, chaired by John Boone, had a three hour session with these people. I was proud to be a part in this discussion. This may not get the wide national publicity as did Hungry Children; however, I assure you that the two federal staffers were "shook up" and their report will definitely reflect the Southern Regional Council's staff thinking.

All in all, the Southern Regional Council has a great staff, and whatever Urban Planning Project does will be a cross fertilization of the brains of our whole staff.

FUTURE - NEGRO PLANNERS

In case you have not heard, Negroes want to handle their problems themselves.

I believe in a bi-racial approach and hope if the Urban Planning Project is continued, it will be by a Negro and white Co-Director. If that cannot be financed, then by a

Negro Director. Also, we believe the Urban Planning Project should promote town and country planning and not just urban.

URBAN PLANNING PROJECT
October 25, 1968

The past year has seen the enactment of the first Federal Civil Rights Housing Law. Regardless of the outcome of the election, there will undoubtedly be non-compliance, as has been the case with all of the other civil rights laws. Attitudes have hardened, resistance techniques have been perfected, the mood of the country has moved ever to the right. Since the Federal Government is seen as a monster handing down decrees from afar, it becomes increasingly important to work to change attitudes on the grass roots level.

Local fair housing groups are springing up all over the country. These can be used as a vehicle of change. The SRC Urban Planning Project will continue to work with these groups to soften community attitudes and to bring about the enactment of local housing laws. Some of these groups have obtained foundation funds to aid Negroes in financing integrated housing. This aspect needs to be broadened.

Transportation has commonly been designed to prevent easy access between white and Negro neighborhoods. Buffer zones prevent streets from going through, and bus routes are circuitous. This creates great hardship in time and money for Negroes going to and from work. The Urban Planning

Project will continue to work with local planning boards to relieve this situation.

Lastly, I see a great need for an in-depth study of one sample city. This should show how the placement of freeways and urban renewal has been determined -- the displacement of Negroes in relation to whites, the percentage of Negro ownership of condemned land in relation to the percentage in rejected alternatives. Case histories of the machinations of real estate boards and of the FHA should be included. SRC reports get wide publicity and are effective instruments for change. Suchaa report would provide a solid base from which to work in effecting change in the area of housing.

The 1968 open occupance legislation opens up opportunities for bolder solutions for total city planning --- land use, intra-city transportation, inter-neighborhood communication, proximity of jobs to housing --- which can contribute to a healthier economic base and thus appeal to the business interests within the city.

If we are to have an open society, urban planning is a necessity. The SRC Project cannot make an impact through its own efforts alone. Resources and staff are inadequate. It will, however, continue to work in this area, and especially to seek to influence others to take up this fight. It will seek to develop financing for research papers that

call attention to the need for action, and thus enlist allies in this cause.

URBAN PLANNING

DEFINITION: Urban planning constitutes any prearranged land use and development for the benefit of all citizens. This includes, but is not limited to, facilities for communication, shelter, health, education and welfare, whether private or public.

The face of our cities is being changed in many ways. Highway construction and urban renewal projects are two of the attempts being made to deal with some of the problems of our exploding metropolitan areas. The whole concept of the city is undergoing re-evaluation.

More than ever, people are becoming conscious of the needs of the disadvantaged. The blight of the slums on the landscape and its dehumanizing effect on the inhabitants call for a concerted effort on the part of our nation to rehabilitate these people so that they will become useful citizens. The Executive branch of our Government through directives and speeches by the President and the Legislative branch in the Civil Rights Laws have increasingly made clear their position. Many civic associations and neighborhood groups have manifested their concern. However individual planners may differ in their ethical outlook, the profession as a whole is beginning to recognize the social problems and to commit itself to a solution.

Please make Alphabetical list

THE URBAN PLANNING PROJECT

During 1968, this project has continued essentially as a one-man operation, directed by Moreland Griffith Smith, FAIA.

The past year has seen the enactment of the first Federal Civil Rights Housing Law. Regardless of the direction taken by the new Federal Administration, there will undoubtedly be non-compliance, as has been the case with all of the other civil rights laws. Attitudes have hardened, resistance techniques have been perfected, the mood of the country has moved ever to the right. Since the Federal Government is seen as a monster handing down decrees from afar, it becomes increasingly important to work to change attitudes on the grass roots level.

Local fair housing groups are springing up all over the country. These can be used as a vehicle of change. The SRC Urban Planning Project will continue to work with these groups to soften community attitudes and bo bring about the enactment of local housing laws. Some of these groups have obtained foundation funds to aid Negroes in financing integrated housing. This aspect needs to be broadened.

In the past, throughout the south, there has been considerable dispersion of Negro residential areas. However, the Southern pattern has changed rapidly in recent years to parallel more

closely urban solutions in the North. Interstate Highways and rapid transit as well as railroads are presently commonly designed to prevent easy access between white and Negro neighborhoods. Further, buffer zones prevent streets from going through and bus routes are circution. This creates a gread hardship in time and money for Negroes going to and from work. The Urban Planning Project would of course continue to work with local planning groups to stress the desirability of more free and equal circulation.

The idea has been raised that there is a great need for an in-depth study of one sample city. This would doubtlessly show how the placement of freeways and urban renewal has been determined---the displacement of Negroes in relation to whites, the percentage of Negro ownership of condemned land in relation to the percentage in rejected alternatives. Case histories of the machinations of real estate boards and of the FHA should be included. SRC reports get wide publicity and are effective instruments for change. Such a report would provide a solid base from which to work in effecting change in the area of housing.

The 1968 open occupance legislation opens up opportunities for bolder solutions for total city planning---land use, intra-city transportation, inter-neighborhood communication, proximity of jobs to housing---which can contribute to a healthier economic base and thus appeal to the business interests within the city.

If we are to have an open society, Urban Planning is a necessity. The SRC Project cannot make an impact through its own efforts alone. Resources and staff are inadequate. It will, however, continue to work in this area, and especially to seek to influence others to take up this fight. It will seek to develop financing for research papers that will call attention to the need for action, and thus enlist others in this cause.

It is proposed to continue the Urban Planning Project, trying to encourage the private sector into Urban Planning areas of interest in order to broaden the city elements to reach all economic strata. It is felt that this can be done by encouraging the awareness of the American Institute of Planners, the Chamber of Commerce, as well as the Neighborhood Organizations, in addition to organizations which SRC has advised and worked with such as:

1. Southwest Atlantans for Progress
2. The Housing Committee, Houston Council on Human Relations
3. New Orleans Consortium
4. The Arkansas Council on Human Relations
5. The Georgia Council on Human Relations
6. The North Carolina Council on Human Relations
7. The South Carolina Council on Human Relations

8. The Tennessee Council on Human Relations

9. The Virginia Council on Human Relations

10. The American Friends Service Committee

11. Ansley Park Fair Housing

12. The Mayor's Committee on Housing Resources

13. The Mayor's Code Committee

14. HUD, Nationally and Regionally

The Urban Planning Project will also continue to circulate the seven (7) publications.

1. Neighborhood Stabilazation

2. A Home of our Own

3. Mr. Mayor - Slum Ghettos in your City, Can we solve our Housing Dilemma?

4. Neighborhood - Where Human Rights Begin

5. A Guide to Programs for Better Homes and Neighborhoods

6. Atlanta Residential Patterns

7. A Report to the Mayor

Dear_____:

Attached hereto are extracts from the Southern Regional Council's Annual Reports giving the Urban Planning Projects Program since its inception. This is as a background for our meeting on January 31, 1969. It is hoped that we may evolve from our discussion your thoughts on how this project may have the most impact in this area.

If you will let me know what time your plane arrives on the evening of January 30th, I would like to meet the plane.

Sincerely yours,

Moreland Griffith Smith
FAIA
Director, U ban Planning Project

MGS/mv

THE URBAN PLANNING PROJECT

The Urban Planning Project has as its purposes to assess urban planning in therregion, to encourage involvement of all the community in progressive programs, to encourage local governments to make all services available on an equal basis, and to evaluate the policies of and cooperate with the several federal agencies. The project is directed by Moreland Griffith Smith, FAIA, and assisted by Susan Bresler.

Publications during the year were: Neighborhood Stabilization (a guide to a changing neighborhood); A Home of Our Own (a guide for the new home buyer); Mr. Mayor, Can We Solve Our Housing Dilemma? (a guide for civic leadership); and, yet-to-be-published, studies of housing in Atlanta and of neighborhood housing and community improvement volunteer efforts.

The Project staff has been heavily involved in professional consultations with the leadership, official and unofficial, of a number of communities and with several of the local and state Councils on Human Rèàations. They have been requested and are giving professional analyses to the overall urban planning efforts of six southern cities. There have been a number of consultations with persons in the rggional and national office of the Department of Housing and Urban Developments, as well as a meeting with Secretary Weaver. The staff and the Executive Director have worked with the staff of Doxiadis and Associates and have conferred with Dr. Doxiadis. From the conferences may come a proposal for an

experimental metropolitan regional study.

In the hopes of encouraging a more realistic curriculum for students of architecture and urban planning, there have been several meetings with university faculties, particularly those of the Universities of Pennsylvania and North Carolina. We hope to continue and expand this work.

The Urban Planning Project epitomizes the SRC dilemma and opportunity: how, with very limited staff and resources, to develop programs that make a difference. We are encouraged with the first years's experimentation.

THE URBAN PLANNING PROJECT

As with several other projects, the Urban Planning Project has been essentially a one-man operation, directed by Moreland Griffith Smith since its inception in late 1965.

While as a planner Mr. Smith has done some significant consulting work for the leadership of several southern cities, the main emphasis has been an attempt to have a broader influence on urban planning than can be afforded with a city-by-city consultative approach.

Special effort has been made to reach appropriate officials in the Department of Housing and Urban Development on both the national and regional levels. Some attention, too, has been given to national professional groups. In several instances, the project has worked in cooperation with other programs and individuals within SRC. This has been true especially with the Projects in voter education and community organization. Also, Mr. Smith, as an architect, joined with Mr. Boone in a very significant consultation with officials in Kentucky concerning the building of a new state prison there.

During the year there has been continued consultative work on codes as they affect low cost housing, an ambitious report prepared for the Mayor of Atlanta on future urban planning for the area with emphasis on abolishing ghettos, and in several instances consultants and materials have been provided to con-

cerned groups in "transitional" neighborhoods.

Currently, the project is exploring the idea of providing, through SRC and other agencies, considerable assistance to the cities in the region involved in the Model Cities Program, with emphasis on providing assistance to those people in the communities most affected by this program. Initial exploration is being done in Charlotte. Public and private groups in a number of cities have expressed interest and, at this point, the exploration is being done with the assistance of the regional and national offices of HUD.

THE URBAN PLANNING PROJECT

This project will attempt, with both short term and long term programs and goals, to slow the trend toward establishing ghettos and to develop positive programs to reverse that trend. Major emphasis will be on offering technical assistance to urban planners and other public officials. (This is already being done in one city in Florida) We shall attempt also to offer assistance to the appropriate departments of the federal government and to study, analyze, and interpret the role of these departments. Special attention will be given to the regional and state offices of these departments. Consultative services will be available to local groups who wish to develop an interest in this area and to those who wish to stabilize a changing neighborhood or those who want to begin the process of neighborhood integration. Programs concerned with neighborhood improvement will also be assisted. An incidental but important part of this project will be to work with schools of architecture and urban planning in curriculum development to see that planners now being trained will have a better understanding of the necessary technical and social aspects of adequate urban planning. To direct this project we have been fortunate to secure Mr. Moreland Griffith Smith, FAIA. An architect formerly of Montgomery, Alabama. Mr. Smith has been at work since November and the progress to date is most encouraging.

SITE CRITERIA FOR SECTION 202

(Low Moderate Income Housing)

1. Depends to an extent on who the sponsor is.

2. Must be near (within walking distance by a 76 year old person) of all shopping needs especially a competitive grocery.

3. Must be on public utility lines electric, sewers, water.

4. Must be on or near public transportation

5. No obnoxious neighbors, for example, all night drive-ins, etc.

6. We (and the tenants) prefer downtown or close-in sites. One near a regional shopping center sometimes suffices. This is where the elderly who are seeking independent living choose on their own.

7. No workable program necessary

8. We like for the site to be close to the church that is sponsoring it.

January 5, 1966

Dr. Frances R. Cousens
22065 West 8 Mile Rd. - Apt. 328
Detroit, Michigan 48219

Dear Dr. Cousens:

Fred Routh tells me of a study you did on voluntary associations of the poor, your PhD dissertation.

The Urban Planning Project is about to begin assisting neighborhood groups with housing and community improvement programs. Your insights would be especially valuable in this work. Would it be possible for me to have a copy of your study?

Sincerely,

Moreland Griffith Smith FAIA
Director, Urban Planning
Project

Aspen, Colorado trip

May 25, 1966

Aspen Intrastate Airline
Aspen, Colorado

Gentlemen:

I would like to make a reservation on your Aspen Intrastate Flight 101, leaving Denver at 3:45 pm, arriving Aspen 4:30 pm for Wednesday, July 27, 1966. I will be arriving in Denver on Braniff Flight 66 from Dallas, Texas, that same afternoon.

My return reservation should be on Aspen Intrastate Flight 204, leaving Aspen at 2:25 pm, arriving Denver at 3:10 pm on Sunday, July 31, 1966. Your flight will connect with Braniff Flight 67 which departs Denver at 3:45 pm and arrives in Dallas at 5:19 pm.

I would prefer tourist if possible; if your airline is single class then please confirm me for that seat.

Hoping to hear from you soon, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

May 31, 1966

National Housing Center
National Association of Home Builders
1625 L Street, NW
Washington, D. C.

Gentlemen:

I would like information on buying a home with particular emphasis on the selection of the house (what to look for to determine structural condition), finance (including the hidden costs of buying and an explanation of what "closing costs," etc. are) and maintenance. I understand you have a pamphlet "How to Buy a Home" which might be of interest to me. If you have this material in simple lay terms I would prefer it.

Sincerely yours,

(Miss) Jerry Dell Gimarc
Administrative Secretary
Urban Planning Project

U. S. Government Printing Office
Washington, D. C. 20402

Gentlemen:

I would like information on buying a home with particular emphasis on the selection of the house (what to look for to determine structural condition), finance (including the hidden costs in buying and an explanation of what "closing costs," etc. are) and maintenance.

Sincerely yours,

(Mrs.) Jerry Dell Gimarc
Administrative Secretary
Urban Planning Project

Federal Housing Administration
Department of Housing and Urban Development
Washington, D. C. 20411

Gentlemen:

I would like information on buying a home with particular emphasis on the selection of the house (what to look for to determine structural condition), finance (including the hidden costs of buying and an explanation of what "closing costs," etc. are) and maintenance. Also I would like information about FHA loans, what the requirements are, who may apply and what conditions are attached. What are the regulations about buying an FHA (or VA) repossessed house, where one may obtain a listsof such houses and who is available to talk with those interested in buying these houses. If you have any of this information written in simple form and lay terms entirely I would prefer this.

Sincerely yours,

(Miss) Jerry Dell Gimarc
Administrative Secretary
Urban Planning Project

Mr. George E. Pettengill, HAIA
Librarian
American Institute of Architects
1735 New York Avenue, N. W.
Washington, D. C. 20006

Dear Mr. Pettengill:

Mr. Moreland Griffith Smith, FAIA, suggested I contact you regarding information on buying a home. In particular I am interested in suggestions on the selection of the house (what to look for to determine structural condition), the ins and outs of finance (including the hidden costs of buying and an explanation of what "closing costs," etc. are) and estimates of the maintenance requirements for various kinds of houses. We would appreciate any material which you might send us or suggest to us, particularly that which might be stated in simple lay terms.

Sincerely yours,

(Mrs.) Jerry Dell Gimarc
Administrative Secretary

Mr. Alvin C. Eurich
President
Aspen Institute for Humanistic Studies
P. O. Box 219
Aspen Colorado 81611

Dear Mr. Eurich:

Thank you very much for dispatching the letter to Dr. Doxiadis and for holding the other for his arrival. I appreciate your help most sincerely.

I am sorry to hear that Aspen Meadows is completely booked for the last week in July. I accept gratefully your offer to arrange other accommodations. I would like a minimum single room for the nights July 27 - 30. I will arrive by air Wednesday evening July 27th and depart the afternoon of Sunday July 31st.

I am looking forward to my trip to Aspen and to learning more about the programs of the Aspen Institute.

With all best wishes, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director

Aspen Intrastate Airline
Aspen, Colorado

Gentlemen:

On May 25th I wrote you requesting reservations on your airline for the following times:

July 27	Flight 101	Denver to Aspen
July 31	Flight 204	Aspen to Denver

I have not heard from you and I need to have these reservations confirmed in order to complete my other travel arrangements.

Hoping to hear from you shortly, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director

Congressional Record

PROCEEDINGS AND DEBATES OF THE 89th CONGRESS, SECOND SESSION

Vol. 112 WASHINGTON, TUESDAY, JUNE 21, 1966 No. 101

RACIAL DISCRIMINATION AGAINST NEGRO AND OTHER MINORITY GROUP SERVCEMEN AND THEIR DEPENDENTS IN OFF-BASE HOUSING—STATEMENT BY SENATOR HART AND REPORT BY DEPARTMENT OF DEFENSE

Mr. HART. Mr. President, on June 10, 1966, it was my privilege to appear before the Subcommittee on Constitutional Rights of the Committee on the Judiciary in support of S. 3296, the proposed Civil Rights Act of 1966. At that time I submitted for the hearing record a report by the Department of Defense entitled "Racial Discrimination Against Negro and Other Minority Group Servicemen and Their Dependents in Off-Base Housing."

I ask unanimous consent that my statement and the Department of Defense report be printed at this point in the RECORD.

There being no objection, the statement and report were ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR PHILIP A. HART BEFORE THE SUBCOMMITTEE ON CONSTITUTIONAL RIGHTS OF THE SENATE JUDICIARY, JUNE 10, 1966

Mr. Chairman and members of the Subcommittee, as the primary sponsor of S. 3296 and a co-sponsor of S. 2923, I appreciate this opportunity to appear before the Subcommittee in support of these bills.

Although encouraging progress in civil rights has resulted from the enactment of recent civil rights acts and the Voting Rights Act of 1965, much remains to be done before the democratic ideals upon which our country was founded become a reality for all of our people.

The President recognized this fact in his recent message on Civil Rights when he stated that "no civil rights act, however historic, will be final. We would look in vain for one definitive solution to an injustice as old as the nation itself."

The importance of S. 3296 lies in the possibility it offers of further alleviating discrimination in three vital areas—the administration of justice, education and housing. Who is to say which is more important? All three areas are but parts of this whole complex problem. While we may analyze and study one area separately, we must never forget that every advancement reveals the interrelationship of all aspects of civil rights. It is impossible to deal with the employment problems of Negroes without also taking into consideration discrimination in education, training, housing, and personal security.

Titles I, II, and V are designed to modify our system of administering justice so as to tighten the protection of physical security of all Americans and assure them of equal justice under the law.

In some regions the record of continuing violence against the advancement of equal rights is frightening.

The primary purpose of such terror and violence becomes crystal clear when we see its effects extending far beyond the victims and encompassing the entire community. No Negro American failed to understand the intended message carried in the photographs from Mississippi in yesterday's newspapers.

Every assault, every murder, every bombing which goes unpunished, has encouraged and reinforced efforts to stop the advancement of equal rights through violence and intimidation. Such assaults on the free exercise of constitutional rights constitute a compelling reason for immediate enactment of proposals such as Title V which is designed to insure that all who work for and advocate equality are protected from interference and violence.

Titles I and II are concerned with assuring equal opportunity to participate in jury service by strengthening the constitutional guarantee that accused persons will be judged by impartial juries. It is generally agreed that a jury drawn from people of different backgrounds, races and religions, a jury from which their peers have not been arbitrarily excluded, would be most likely to adhere to this constitutional mandate. Opponents of this provision argue that we should be very careful about tampering with the jury system, one of our basic institutions. I suggest that the jury system as originally conceived has already been tampered with by the widespread practice of omitting members of certain groups from juries. Because of the variations among our people, it is highly unlikely that a jury system which systematically excludes members of a certain race or group could provide the type of impartiality contemplated in the Constitution.

The weaknesses of the administration of justice are dramatically portrayed in the failure of juries to convict killers of dedicated civil rights workers. Without the possibility of conviction in this area, there is encouragement for such crimes to multiply. A strong jury system is essential to deter future violence of this type.

The Attorney General has stated that at the time of the Meredith shooting on Tuesday at least 15 lawmen were within yards of him. Yet the fact that the presence of these officers did not prevent the shooting is an indication that Congress should tighten the laws relating to administration of justice to the point where no man can mistake that justice will be prompt, effective and unwavering.

It was in this spirit that S. 2923 was introduced by Senator DOUGLAS and the cosponsors. In this proposal we have attempted to provide the statutory provisions we believe required to completely handle the breakdown of machinery for the fair administration of justice. This goes beyond the Administration's bill. But I believe the events of the past few days underline the reasons why it is important that this Subcommittee and the Congress review proposals such as the following:

1. The removal of certain types of prosecutions from state courts to the federal courts.

2. Provisions for civil indemnification of those killed or injured because they participated in lawful civil rights activities.

3. The removal of defendants from jurisdictions where a breakdown of effective justice has occurred.

4. More direct and automatic methods of reaching the problem of jury exclusion.

Both bills contain provision for broadening the power of the Attorney General to permit him to institute suits for the desegregation of schools and public facilities. The continued slowness of the school desegregation effort speaks more clearly than ever why there should be little disagreement over this long delayed provision.

Finally, S. 3296 contains a provision against discrimination in the sale, rental and financing of housing.

Most of the opposition to this proposal is based on the argument that it represents an unconstitutional interference with property rights. This argument was also made with respect to the public accommodations provision of the Civil Rights Act of 1964. However, expreience has shown that this provision was the effective and the constitutional way to accomplish the national goal of equal access to public accommodations.

In the metropolitan areas of our country are many independent local jurisdictions. In many such metropolitan complexes there are two or three state jurisdictions. I can think of no greater problem than attempting to coordinate the adoption of local fair housing ordinances or state statutes to cover residential and rental housing in these independent jurisdictions.

The opportunity for manipulating real estate markets in a situation where one local jurisdiction has an effective fair housing ordinance and others do not are obvious.

Clearly, uniform national action is required. Many of the metropolitan problems—freeway location, downtown renewal, outdated educational facilities—are compounded by the open practice of closing new rental and homeownership opportunities to Negro families.

It would seem to me the very economics of expanding the potentials for homebuilding and apartment construction to fill the obvious market available for better homes and apartments for these families would mean that the real estate and home construction industry would welcome a uniform and effective national policy.

Certainly we will never rebuild the American city to its fullest economic and human potential until we have met squarely this problem of housing discrimination.

I know, Mr. Chairman, you and other members have expressed grave doubts concerning the constitutional powers available to the Congress to enact such a statute. I hope that the excellent legal memorandum prepared by the American Law Section of the Library of Congress would be a part of this hearing record. I have reviewed Mr. Doyle's discussion of the powers available under the Commerce Clause and the 14th Amendment and believe that he has fairly established that Congress does have adequate constitutional basis for enacting this statute under the Commerce Clause, and possibly under the 14th Amendment.

We had much this same argument two years ago in discussing Title II of the Civil Rights Act of 1964, the public accommodations title. The Court upheld our actions under the Commerce Clause. I believe this would occur if we enact Title IV of the proposed bill.

Some weeks ago I asked the Department of Defense to prepare a report for this hearing on the problems faced by Negro enlisted personnel and officers of the Armed Services in finding adequate housing for their families in off-base housing.

I would submit this entire report for the record. I believe it speaks eloquently of the problem we attempt to meet in Title IV.

Attorney General Katzenbach referred to a few instances mentioned in this study, and I would like to read an excerpt from it:

"Adequate, decent off-base housing for Negro personnel in the Armed Forces is the most stubborn and pervasive form of segregation and discrimination affecting Negroes in the Army, Navy (including the Marine Corps) and the Air Force. The problem is nation wide. It is encountered in the North, as well as the South. It is along the Atlantic, as well as the Pacific Coast, and it is also found in the Middle West."

The report states further:

"Commanders at 102 Defense installations (43%) reported that their men encountered many forms of severe discrimination in seeking either to buy or rent. They were refused rental houses and apartments because of their color. They were required to live at places distant from their duty stations, in inferior dwellings in deteriorated neighborhoods and often charged inordinately high rentals and often when attempting to purchase the price would be doubled. It was reported that 39 trailer parks situated near the 235 installations refused to accept Negro soldiers, sailors and airmen."

Mr. Chairman, I close my statement with the observation that we live in the midst of many anomalies which are difficult for our citizens, let alone the people of the world, to understand.

But perhaps the most difficult one, and the one that must clearly be resolved in the year 1966, is our nation's willingness to call a man to serve in Vietnam without regard to the color of his skin while being unwilling to see that when he approaches a rental agency or a real estate office near his base he is treated as any man wearing the uniform of his nation should be treated.

REPORT: "RACIAL DISCRIMINATION AGAINST NEGRO AND OTHER MINORITY GROUP SERVICEMEN AND THEIR DEPENDENTS IN OFF-BASE HOUSING," JUNE 2, 1966

The Department of Defense and the Military Departments place high priority on the housing available to Armed Forces personnel and their dependents. This applies to the quarters provided on-base by the Services and to the housing required off-base in the communities adjacent and near defense installations. The kind and quality of housing afforded our personnel is an important factor affecting morale and military effectiveness.

The adequacy of off-base housing for military personnel is measured by specific criteria:

1. Proximity of housing to the duty station.

2. Cost of housing. When the rental costs, including utilities (except telephone) exceeds the maximum allowable housing cost, the unit is considered inadequate. Under certain conditions costs of transportion to and from the duty station are considered part of the total housing cost.

3. Physical condition and environment. The unit must be a complete dwelling unit with private entrance, with bath and kitchen for sole use of the occupants, and so arranged that both kitchen and bedrooms can be entered without passing through bedrooms. The unit must be well constructed and in good state of repair with heating and kitchen equipment provided, and it must be located in a residential area which meets acceptable standards for health and sanitation and which is not subject to offensive fumes, industrial noises, and other objectionable features. The unit must be adequate in size for military families.

The problem of adequate housing for military personnel takes on added significance when other facets of his situation are recognized. First, the soldier, sailor or airman is not in a community by personal choice, but because of the necessary requirements for the nation's security and defense. Second, the frequency of change of duty station places an additional serious hardship on the serviceman and his family in terms of adjustments, dislocations and uprooting. Assuming normal crcumstances a civilian employee and his family come to a community, locate a home, puts their children, if any, in school, establish a relationship with the institutions and their services, adjusts to the social and physical environments and sinks roots in the community. Stability and relative permanence is achieved. The situation for military service personnel is quite different. The Army states that their personnel move on the average every 2½ years, while the Navy moves its personnel every 3 to 3½ years. This means that there is a high frequency of mobility causing the soldier, sailor and airman and their families to pull up tent and roots, move to a new community and start all over again the process of searching for and locating housing, establishing new relationships, having the children adjust to new schools and school situations. In fact, they must start all over again.

The very nature of the process incident to adequate housing with frequency of change is a difficult matter of accommodation and adjustment. Add to this segregation and discrimination based on race and color and the difficulty becomes compounded and aggravated. Adequate, decent off-base housing for Negro personnel in the Armed Forces is the most stubborn and pervasive form of segregation and discrimination affecting Negroes in the Army, Navy (including the Marine Corps) and the Air Force. The problem is nation-wide. It is encountered in the North, as well as in the South. It is along the Atlantic, as well as the Pacific Coast, and it is also found in the Middle West.

Since 1963 the Department and the Military Services have given increasing attention to eliminating every vestige of segregation and discrimination in the Armed Forces, both on-base and off-base in the communities near defense installations. In 1963 the United States Commission on Civil Rights published a Staff Report—Family Housing and the Negro Serviceman.[1] The report reflected the findings of the Commission's staff on the patterns of discrimination and segregation in housing to which the Negro soldier, sailor and airman had been subjected.

In June 1963 the President's Committee on Equal Opportunity in the Armed Forces, in its Initial Report,[2] called attention to the difficulties and problems experienced by Negro servicemen in their quest for housing in communities near their duty stations. On the basis of the many complaints directly called to their attention, base commanders were seeking guidance in dealing with these difficult problems from the Chiefs of the Military Departments.

By March of 1963 the Department of Defense was sufficiently cognizant of the dimensions of the problem to take the first of its corrective actions. On March 8, 1963, DoD issued a Memorandum on Nondiscrimination in Family Housing[3] that, among other things, required that the leases for all family housing include a nondiscrimination clause consistent with the provisions of the President's Executive Order No. 11063 of November 20, 1962. The Memorandum also directed the housing offices at defense installations not to maintain any listings of housing units that were not available to all personnel without regard to race, color, creed or national origin.

A further step was taken on July 26, 1963, when the Secretary of Defense issued a Directive on Equality of Opportunity in the Armed Forces[4] clearly reaffirming and articulating the Department's commitment to equal treatment for all of its military and civilian personnel. The Directive said:

"It is the policy of the Department of Defense to conduct all of its activities in a manner which is free from racial discrimination, and which provides equal opportunity for all uniformed members and all civilian employees irrespective of their color.

"Discriminatory practices directed against Armed Forces members, all of whom lack a civilian's freedom of choice in where to live, to work, to travel and to spend his off-duty hours, are harmful to military effectiveness. Therefore, all members of the Department of Defense should oppose such practices on every occasion, while fostering equal opportunity for servicemen and their families, on and off base."

The Directive also provided the Military Commander with renewed and reinforced authority to deal with discriminatory conditions, including segregation and discrimination in housing, affecting his men off-base. It said:

"Every military commander has the responsibility to oppose discriminatory practices affecting his men and their dependents and to foster equal opportunity for them, not only in areas under his immediate control, but also in nearby communities where they may live or gather in off-duty hours. In discharging that responsibility a commander

[2] The President's Committee on Equal Opportunity in the Armed Forces Initial Report, "Equality of Treatment and Opportunity for Negro Military Personnel Stationed Within the United States," dated June 1963.

[3] Memorandum dated March 8, 1963, "Nondiscrimination in Family Housing."

[4] Department of Defense Directive 5120.36, "Equal Opportunity in the Armed Forces," dated July 26, 1963.

shall not, except with the prior approval of the Secretary of his Military Department, use the off-limits sanction in discrimination cases arising within the United States."

Military Commanders provided with this new Directive of July 1963 began to give leadership through negotiation, conciliation and conference in getting the real estate industry in the adjacent communities to remove racial barriers in the housing field. In some few instances the commanders were successful in overcoming the resistance to accord equality of opportunity in housing to Negro servicemen. During 1964, the Office of the Deputy Assistant Secretary of Defense for Civil Rights conducted informal negotiations and conferences with the Intergroup Relations Office in the Federal Housing Administration with a view toward obtaining their cooperation in respect to alleviating discrimination against Negro servicemen in communities near defense installations. It was informally understood that they would lend their good offices in affected communities and would provide information upon request of the commanders as to the properties covered by FHA insured mortgage loans. On February 8, 1965[5] a formal understanding was arrived at in which the FHA agreed to maintain current listings with base commanders showing the housing units in their area covered under the provisions of the FHA and which were subject to Executive Order 11063. It was agreed to provide base commanders with a list showing properties which had been obtained through FHA mortgage insurances and were either being repossessed or placed in the default status because of default in the terms of the mortgage.

The Department of the Army on July 2, 1964 issued their Army Regulation "Equal Opportunity and Treatment of Military Personnel",[6] and the Air Force issued its revised Air Force Regulation on the same title on August 19, 1964.[7] The Navy in February 1965 issued its Sec Nav Instruction entitled "Equal Opportunity and Treatment of Military Personnel."[8] In each of the aforementioned documents, guidance was provided the commanders in reference to their responsibility in using their good offices and leadership resources to achieve equal and adequate housing for Negro and other minority group personnel in off-base housing.

Another action taken by the Department was in June and July 1964 when it undertook to obtain from state and local Commissions on Civil and Human Rights their cooperation in eliminating racial discrimination and making available their good offices in assisting local base commanders in carrying out their responsibility.[9] Twenty-four such state commissions agreed to participate in this effort. In spite of these actions the problem still persists.

In a recent survey required by the Department of Defense of 235 installations of the Army, Navy and Air Force it was found that Negro servicemen encountered discrimination in meeting their needs for off-base private housing. Commanders at 102 Defense installations (43%) reported that their men encountered many forms of severe discrimination in seeking either to buy or rent. They were refused rental houses and apartments because of their color. They were required to live at places distant from their duty stations, in inferior dwellings in deteriorated neighborhoods and often charged inordinately high rentals and often when attempting to purchase the price would be doubled. It was reported that 39 trailer parks situated near the 235 installations refused to accept Negro soldiers, sailors and airmen.

Even though our Base Commanders have exercised more affirmative leadership, mobilized community support, utilized existing state and local agencies in the field of civil and human rights the fact still remains that our Negro and other minority servicemen and their families still encounter racial discrimination in off-base housing. While there has been some substantial progress made in the reduction of this form of segregation and discrimination, it still remains the most pervasive and stubborn, morale impairing social evil confronting the Negro servicemen off-base.

Set forth below are brief descriptions of cases cited to the Department of Defense by the Military Departments as illustrative of the problems and difficulties encountered by Negro and other minority group servicemen in their attempts to obtain off-base housing:

ABSTRACTS OF CASE HISTORIES, OFF-BASE HOUSING DISCRIMINATION ENCOUNTERED BY MEMBERS OF THE ARMED FORCES

Case No. 1

The Commander of a Defense installation in the northeastern part of the United States says:

"An analysis of the housing conditions affecting Negro personnel reveals that white and Negro personnel of comparable economic status do not in fact enjoy equal opportunity for adequate off-base housing in this state, particularly in the vicinity of this installation. White personnel can rent or purchase a home any place they desire provided, of course, they can afford to pay the cost. There is little difficulty for white personnel to secure mortgage loans. Generally they need only a perfunctory credit check. Conversely, in order for Negro personnel to get a mortgage loan, credit checks are thorough, cumbersome, and delayed over a protracted period of time. As a result, Negro personnel find themselves forced to accept properties in predominantly Negro or mixed areas. Also, as a general rule, desirable housing for sale is about twice the cost for Negro personnel as for white personnel for the same piece of property. It can be readily seen that the high cost of desirable property places Negro personnel in a position of financial hardship considering the initial cost and the maintenance outlay."

Case No. 2

A Commander at an installation near the Nation's Capital states:

"An allegation was made by a Staff Sergeant that he was refused housing when he attempted to rent living quarters from a private apartment project that advertised in the base newspaper. He was told by the apartment management that they did not rent to Negroes. The matter was investigated and finding the facts to be substantially as alleged the base newspaper discontinued acceptance of advertising from this and any other private housing projects that might be identified with such a policy in the future."

Case No. 3

A commander at a Defense installation in a Southern state says:

"It is anticipated that off-base housing will not improve in the immediate future as concerns Negro personnel assigned to this station. This, in all probability, will be that last area to remain segregated, in the local area. The local community is essentially a resort community of a high level with careful and studious efforts to allow only the 'acceptable' modes of construction and occupancy in the primary areas of the city. In view of the fact that this is an area not fully covered by the proscriptions of the 1964 Civil Rights Act, the officials of the base are left to few devices except the power of persuasion. In the past, this effort, however skillfully applied, has not changed in a very serious condition."

Case No. 4

From a Defense installation in the northern region of the Middle West it is stated:

"In December 1965, a Negro Lieutenant complained that he was refused housing by ten landlords in the largest civilian community near this base because of his race. The Equal Opportunity Officer referred him to the Fair Housing Committee, with instructions to return if he did not get satisfaction. He did not return and elected not to file an official complaint."

Case No. 5

It is reported from an installation in the central northwestern portion of the United States that "During 1965, one of our Negro servicemen answered a newspaper add looking for living quarters for his family. The agent would not rent him the house when it was discovered that he was a Negro."

Case No. 6

In the north central United States, the Commander of a Defense installation states:

"A Negro Sergeant attempted to purchase a house through a real estate broker. When the broker realized the prospective purchaser was a Negro, he advised him that the owner of the home would not sell to a Negro. This complaint was referred to the Federal Housing Administrator at the nearest regional office who indicated that he would investigate this matter. Shortly thereafter, the Negro indicated he desired to withdraw the complaint as he had found another house to purchase."

Case No. 7

A Commander of a Defense installation in the central midwest of the United States says:

"Three cases of discrimination in off-base housing occurred in the Spring of 1955 in which military personnel assigned to this installation were involved. Two cases involved off-base housing and the third involved off-base trailer courts."

Case No. 8

The Commanding Officer of an important training center in the southwest reports:

"A female Negro nurse assigned to our hospital registered a complaint against one of the apartments in August 1965, alleging refusal by the manager to rent her an apartment because of her race.

"Another female Negro nurse rented an apartment in the largest city adjacent to this installation on February 3, 1966, making an advance payment of rent. On February 4, 1966 the apartment manager informed her that because of complaints from other tenant he was returning the advance rent and asking her to move. She was served with a three-day notice to vacate."

Case No. 9

The Commander of an important Defense installation guarding the security of the Nation's Capitol states:

"Off-base housing in the form of separate houses and/or apartments can be obtained within reasonable commuting distance. However, there are both apartments and separate houses where Negro personnel can

---

[5] Memorandum dated February 8, 1965, "Family Housing Units Covered by Executive Order 11063 (Equal Opportunity in Housing)."

[6] Department of the Army Regulation 600-21 dated 2 July 1964, "Equal Opportunity and Treatment of Military Personnel."

[7] Department of the Air Force Regulation 35-78 dated August 19, 1964, "Equal Opportunity and Treatment of Military Personnel."

[8] Department of the Navy SecNav Instruction 5350.6 dated January 1965, "Equal Opportunity and Treatment of Military Personnel."

[9] Memorandum dated July 30, 1964, "State Commission on Civil Rights."

neither buy or rent. During the past year, three off-base housing complaints have been investigated with no solution provided nor available since the property constructed did not involve the use of Federal Government funds."

Case No. 10

From a Defense installation in the central midwest of the United States comes the report:

"On 27 October 1964, a serviceman enroute overseas complained that he had attempted to obtain parking space for his mobile home throughout the greater portion of this large metropolitan area without success. Trailer parks in local areas were also contacted and most professed to be "filled up." The serviceman departed for overseas on 12 November 1964. A desirable convenient site was obtained at ———, ———, however, the serviceman's dependents residing in the metropolitan community failed to accept same since they were now going overseas to join the serviceman.

"On 22 November 1965, a female officer attempted to rent in the ——— Apartments, in the community near the installation by telephone. She was advised that vacancies existed, however, upon arrival she could not obtain a commitment until further checking by the resident agent. Later she was advised all apartments were taken, that the last family was expected to move in within three weeks. The officer subsequently located an apartment in the nearby area.

"On 9 May 1966, a serviceman complained that he was unable to obtain suitable quarters for his family in the nearby community, though he did find and is occupying housing he describes as not suitable. This case is still being processed."

Case No. 11

From an important Defense installation along the Atlantic Coast in the northeastern United States it is reported:

"On 25 April 1966, a Staff Sergeant complained that he was unable to find a suitable trailer camp in which to place his trailer. At that time, the sergeant was given the names of six trailer courts in the areas near the Defense installation which were listed in base family services as trailer courts which did not discriminate against renters on the basis of race, creed, color or national origin. Shortly thereafter, he chose one of the six trailer courts in which to relocate his trailer and says he is very satisfied at this time.

"On 2 May 1966, a female officer complained that she was unable to rent an apartment in ——— Apartments, Inc. located in the adjacent community because of her race. She was advised that she had no redress under the existing laws. The law expressly excludes the sale or rental of houses, apartments and other dwellings as a place of public accommodation. The Federal Housing Administration office in the community has advised us that the subject apartments have not been financed by federal loans, nor have any loans to the apartments been guaranteed or insured by the federal government. The officer was advised that she had no redress under neither the Civil Rights Act of 1964, nor the President's Executive Order for Equal Opportunity in Housing."

Case No. 12

From a Defense installation in the southern portion of the United States, the Commander reports that:

"On April 7, 1965, a formal complaint was received from a serviceman stationed at the base against the owners of a newly built apartments in one of the cities adjacent to the installation. Inquiry revealed that these apartments were not subject to the Civil Rights Act of 1964, however, the officer received assistance in preparation of a formal request for suit over his own signature.

"On September 20, 1965, a 26 year old serviceman with four and one-half years service complained about off-base housing accommodations available to Negro military personnel and their dependents."

Case No. 13

The Commander from a large Defense installation in the southwestern United States reports:

"A Negro Lt. Col. on 7 December 1965, indicated that he had signed a contract with a large construction firm for the construction of a home. The president of the firm, refused to fulfill the contract after it was determined that the Negro Colonel desired to have the house constructed in a district that did not contain other Negro homes. The president of the company directly stated to the Commander that the construction would not be accomplished because of the Colonel's race.

"The Post Staff Judge Advocate provided assistance to the Negro Colonel in transmitting the circumstances to the FHA. In addition, the Commanding General wrote the Chamber of Commerce requesting an inquiry and corrective action. The Colonel departed for Vietnam without favorable resolution of the problem."

Case No. 14

From the same Defense installation, the Commander writes:

"A Sgt. First Class on 13 April 1966 contracted with the agent for a realty company for purchase of a home in a suburban community near the Defense installation. The Sgt. presented $250 as a contract binder on 17 April and offered additional funds to the builders. Subsequently, changes were made in the contract without the Sgt's agreement involving payment for certain miscellaneous services and materials. These additional requirements made it impossible for the Sgt. to comply with the new purchase price. This appeared to be a deliberate attempt by the owners to void the contract. A letter was initiated by the Sgt. to FHA providing details of the transaction and requesting assistance. The Commanding General has contacted the local Chamber of Commerce for assistance."

Case No. 15

From an important training center and military department school, the Commanding Officer reports:

"A Staff Sgt. on 12 April 1966 contacted a realty company in the community almost at the gate of the installation to rent a house. He was advised that the house could not be made available because of his race. He subsequently contacted another representative of the firm and was again denied consideration because of his race. The Commanding General of the installation advised the Mayor, the Secretary of the Board of Realtors, and the Biracial Civic Committee of the refusal to rent to the Negro Staff Sgt. and requested corrective action."

Case No. 16

An important Defense installation near the Nation's Capital reports:

"A Negro Lt. Col. during January 19, 1966 attempted to secure rental housing in two communities neighboring the installation and was denied because of his race. As a result of this denial the Negro officer found it necessary to purchase a home in another community further away from his duty station and incurring increased financial burdens because of the racial discrimination he had encountered.

"The Commanding Officer contacted the realtors and management personnel involved in the rental and sale of housing in the communities and communicated with various civic organizations in efforts to secure housing without discrimination for Negro applicants. Notwithstanding these efforts, except in the case of FHA-sponsored units, rental housing on a nondiscrimination basis is generally not available in the area near the defense installation."

From the same Defense installation the Commander reports that:

"A Negro Lt. Col. was scheduled to depart for Vietnam and desired to relocate his family from on-post quarters prior to his departure for overseas. He attempted to purchase a home in several communities near the base. His purchase application, however, was denied because of his race. The Colonel contracted in November for the construction of a home in another community and immediately left for Vietnam. The Commanding Officer of the base has authorized the continued occupancy of on-post quarters for the Colonel's family until completion of their home."

Case No. 17

A high-level official of one of the Military Departments in reporting on their findings of discrimination in housing in the farwest state said:

"One of the Military Departments made an extensive survey in order to determine family housing needs for the FY 1967. From data obtained in the survey, the department stated that 89 service members stated that their dependents did not accompany them to their present duty station because of racial discrimination in off-base housing. These persons were presently located in 13 states in every section of the country. An officer of one of the Military Departments says that the area in which discrimination is felt most severely is in off-base housing. Continuing, the officer said that although there has been a great deal of progress recently made in this area, the attitudes and practices of some realtors, landlords and home owners associations still reflect discriminatory policies."

Case No. 18

The Commander of one of the Defense installations in the West Coast stated that:

"Whereas families of minority groups are found in virtually all areas of the base city and the surrounding communities, it is a fact that Negroes are concentrated and located in one particular area. Trailer parks, with two exceptions, are not available to Negroes in the community and adequate housing is not available except in a particular area in a city near the base."

Case No. 19

From a Defense installation in a farwestern state the Commander reports:

"One man stated that, in the Summer of 1963, he arrived from overseas and attempted to contract for several rentals. On one occasion he was denied a rental because of his racial origin. Another man reported that, in May 1965, on two or three occasions he was told frankly that the landlords would not rent to him because he was a Negro.

"In another community, the Commander reported a complaint in which a Negro alleged discrimination in a trailer park because of his race. Another factor contributing to the refusal was the size of the serviceman's trailer which was too large for accommodation in the trailer park. The commander pointed out that some Negroes have to be separated from their families who can only find housing accommodations in a larger metropolitan community, thus causing additional expenses for increased commuting time, commuting expenses and family separation."

Case No. 20

The Commander of a Defense installation in the south says:

"Negro personnel do not have equal opportunity as to the location of adequate housing off-base, but in one of the com-

munities near the installation they do have equal opportunity in the quality of the dwellings.

"In another nearby community the Commander reports that all off-base housing for personnel in that area is substandard, inadequate and is separated from the white areas. Recently, however, new units of low cost for off-base housing has been built; 26 are designated for occupancy by whites and the remaining 14 are set aside for non-whites. As to trailer parks the commander says: Trailer parks in the area, with one exception profess to be nonsegregated. About one-half of them would probably accept colored tenants and the others, except one, grudgingly. One will positively accept only white tenants. The only specific complaint by an individual concerning housing involved a newly married officer of Mexican extraction and swarthy complexion, who was refused dwelling accommodations in white neighborhoods. He was transferred by headquarters as a solution to the problem. It is not believed that he would have been offered suitable housing in this area although the president of the local real estate board was brought in on the case. He was offered government housing which was refused."

Case No. 21

From another southern state the Commander of a Defense installation says:

"There is limited integration in housing. Segregation is practiced on an individual basis. The community is divided into the white community and the Negro community. Sales and rentals are handled on a racial basis and the majority of houses available to Negroes are below average. Negro visitors in housing occupied by whites are resented by landlords. Tenants may be evicted if they have Negro guests."

Case No. 22

From far away outpost of the United States, a Commander relates that "a large number of his military personnel, approximately 80 in number, reported experiencing difficulties in securing adequate rental housing. The command stated that the evidence was sufficient to conclude that discriminatory practices against Negroes by individual realtors and landlords is prevalent."

Case No. 23

The Commander of a Defense installation of a midwestern state says:

"The only apparent condition adversely affecting equal opportunity for military personnel and their dependents is off-base housing which tends to be segregated. Our off-base located Negroes live in areas that are predominantly all Negro. These areas are not created by governmental restrictions in any way, but are rather imposed by local property-home owners and real estate men whose personal prejudices and interests foster segregation. All other services and facilities are completely integrated. However, those facilities in predominantly all-white or all-Negro residential areas tend to be segregated. This segregation, it appears, is due to choice of the clientele and/or the owner, or operator, but not by local or state governmental directives.

"The letter from twelve officers assigned to various base activities addressed to the Secretary of Defense, dated 8 October 1965, also discusses the housing problem in the area near the base."

Case No. 24

The Commander of a Defense installation of a northern state says:

"Two complaints were received alleging that de facto discrimination exists, despite the command's requirements that the landlord or owner certify that they will not object to a person on the basis of color, creed or national origin when listed with the base housing office. The landlords involved were de-listed."

Case No. 25

The Commander of a Defense installation of an eastern state says that:

"Generally, segregation exists, either admitted or de facto, in the entire off-base housing community (20-mile radius). Housing available to Negroes is almost entirely limited to that located in time-honored Negro housing neighborhoods. Most personnel live in title 8 housing, now Public Quarters, adjacent to the base. Other apartments and homes are available. Usually there are few homes available for purchase by Negroes, and these are frequently in substandard areas. About half of all off-base apartment owners will rent to Negroes. There is no local "fair housing law" and there is general, passive resistance to any change in historically established general segregation by color.

"A Negro Sgt. was refused an apartment for rent in 1965 in this area and another Negro Sgt. was refused realty service."

Case No. 26

The Commander of an installation in a southern state says:

"Negro personnel are restricted to housing in the colored sections of the city. In most cases this is substandard. However, Negro personnel living off-base do so by their own choice in that Capehart housing is available with an average four to six weeks waiting period. In addition, there are no integrated trailer parks in this area."

Case No. 27

From another southern state, the Commander of a Defense installation says:

"In one area, 83% of the Negroes who have dependents presently live in public quarters. Only 55 live off-base. Housing is in segregated areas.

"Trailer parks and the 'for sale' and 'for rent' housing in one of the counties in this area remain largely segregated. The housing problem for Negro personnel at one of the camps in this area is mitigated to a degree by the availability of government housing. Approximately 10% of the government-owned trailers, now disposed of, were rented to Negro families in 1965. 88% of the Negroes who have dependents presently live in public quarters. There is a deficient military-civilian community housing market. An annual survey completed in 31 May 1963 confirmed a gross deficit of 4,224 adequate family housing units in the military and civilian communities."

Case No. 28

From another southern state the Commander says:

"New apartments are being constructed. It is reported that these are segregated, being located in either all-white or all-Negro neighborhoods.

"Local housing pattern has predominantly Nergo and white areas. Most housing available is on a segregated basis. The elimination of government trailers caused a problem since there was no other suitable available housing aboard the base. There are no trailer parks which lease to Negroes."

Case No. 29

A First Lt. of the Marine Corps tells in a letter to his Commanding Officer some of the details of discrimination encountered in the effort to get off-base housing:

"Since my arrival in this area on 6 January 1966, or there about, I have been trying to rent a house for myself and my wife, without success. As I stated to you when I made my request for a waiver of children requirement to Capehart, I had tried almost a dozen places. Over the phone, they all had places 'to show and rent.' However, upon seeing me in person, . . . 'have just rented or . . . nothing left.' As example:

"(a) A First Lt. who rented his place from a realty company, called the realtor and told him he had a friend, me, looking for a place to rent. The realtor's wife took the call as her husband was in the hospital for a few days. She stated they had two (2) places coming up for rent within the week, and I could have my pick; one at $105.00 per month and the other at $110.00 per month. She told the First Lt. to bring me by and she would talk to me about the apartments. When I met her in person . . . 'Don't know when they will be vacant.'

"(b) The manager and his wife, reside in one of the apartments. I went there with a First Lt. and ENS who wanted an apartment. There were two available, they took one. A week later, I called the manager and his wife answered the phone. I identified myself, she stated she remembered me. I asked what they had available in two bedroom apartments. She stated there were two (2) unfurnished and I could have my choice; (this was on Monday, 31 January 1966). I told her I would be down Wednesday to give a $50.00 deposit on one of the apartments. She said fine, she would hold one for me. The next day, I heard from the First Lt. telling me not to send a deposit as the manager stated . . . . 'We have nothing available.' I called the manager the following morning and asked him the reason for the sudden change. He simply stated . . . . 'Fella, we don't have anything nor do I know when anything will be available.' 'Fella' Nice address.

"(c) I was riding with a First Lt. and we made a wrong turn. I saw a sign 'House for Rent.' I called the mentioned number, and spoke to the realtor. He stated the house was for rent. I made an appointment to see the house that afternoon. The First Lt. drove me to the house. We got out of the car and approached the realtor. There was a smile on his face as he looked at the First Lt. When I spoke and introduced myself, the smile left. He showed us the house and told me he would 'call me tomorrow.' The call never came. I called his office for the next four (4) days. His secretary answered each time, and when I introduced myself . . . 'He is not in, I'll have him call you.' The call never came.

"(d) I made an appointment with a man of a realty company as a last effort to get housing (buy). Upon meeting me in person, he asked . . . . 'Are you a Syrian?" If you are, O.K., if not, we cannot rent to non-white skin people! He stated also . . . . 'The real estate men are not allowed to rent or sell to non-white skin people in this block of homes.' FHA Financing even.

"(e) And so it went with several other realty companies and a private house for sales, 'Nothing available'."

Case No. 30

Twelve commissioned officers of one of the Military Departments forwarded a memorandum to the Secretary of Defense via the chain of command and the Civilian Secretary of their Department in reference to racial discrimination and recommendations concerning the subject. Their comments on discrimination in housing are relevant. They said:

"We would all readily agree that this (housing) has been our greatest problem area. All of us are married, most have children, and we were all subjected to overt racial discrimination as we sought to find decent public housing for our families. In some cases, civilian advertisers who indicated to housing authorities that they would rent or sell without regards to race refused to accommodate us. We often saw white non-rated men move into facilities which were 'unavailable' to us. In many cases we were separated from our families for long periods as we watched persons reporting to the area after us acquire accommodations and rejoin

their families. Often persons have recommended 'nice colored' locations usually served by 'nice colored' schools which offer our children substandard education. Fortunately and unfortunately most of us have been given priority on the base housing list due to our 'handicap.' Whereas we realize that this was necessary, in fact we usually requested it; we take no pride in being given 'special consideration.' We simply want to be able to find decent housing just as easily (or with as much difficulty) as anyone else. When a door is slammed in our faces because we are Black, we feel that the full stature and determination of (the Military Department) should back us up. . . . It appears that something more than a half promise from a local official is needed. Often it is said that our situation is understandable and everyone sympathizes with us but very little can be done. . . . We suggest that the full economic and diplomatic weight of the government be brought to bear in areas where this problem is proven to be prevalent. (That would include most of the country). This has been suggested and in fact ordered in the past but the situation remains basically unchanged. We feel that if certain accommodations are not open to all military personnel, no military personnel should be allowed to acquire those accommodations. With regards to housing we are desperately in need of assistance and support.

Aspen Airways
Mr. C. L. Miller
Executive Vice President
Aspen, Colorado

Dear Mr. Miller:

Thank you for your letter of June 28th confirming my reservations on your flight 101 July 27th and Flight 200 July 31.

If possible I would like to charge my air fare. The Southern Regional Council has an American Express Credit Card (040 143 248 9) and an Air Travel Card, North America, issued by Eastern Airlines (EA 171175 n EA256470). Would it be possible to charge the fare to either of these accounts?

I will pick up my ticket upon my arrival in Denver.

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

Mr. Alvin C. Eurich
President
Aspen Institute for Humanistic Studies
Aspen, Colorado

Dear Mr. Eurich:

Today I received a reply from Dr. Doxiadis to the letter you forwarded to him for me. In my letter I requested a meeting with him to discuss the problems of planning for an open economy in the South. Dr. Doxiadis replied he would be happy to meet with me but that his schedule while in Aspen was being arranged by the Aspen Committee. He suggested that I contact the Committee to request an appropriate meeting time.

I would appreciate your help in forwarding my request to those planning Dr. Doxiadis' program while in Aspen. I will arrive the evening of Wednesday, July 27, and depart Sunday afternoon, July 31. While in Aspen I will be staying at Aspen Meadows.

Hoping to hear from you soon and with all best wishes, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

ASPEN INSTITUTE FOR HUMANISTIC STUDIES

Founded by Walter P. Paepcke 1949

May 27, 1966

Mr. Moreland Griffith Smith
Director, Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, Northwest
Atlanta, Georgia 30303

Dear Mr. Smith:

The envelope marked "Please Forward" has been sent to Dr. Doxiadis in Athens, Greece. I am holding the other for his arrival in Aspen.

Thank you much for your check for $100 to the Aspen Institute for Humanistic Studies. You are now a contributor member for 1966. Enclosed is a folder which describes the privileges of contributor members.

We at the Institute are most grateful to our contributor members who provide basic support which maintains the strength of the Institute.

Unfortunately, our rooms at the Aspen Meadows are completely booked for the period of July, when Dr. Doxiadis will be here. The date of the Convocation is Friday, July 29. However, we will be pleased to arrange other accommodations for you if you desire. Just let us know when you expect to arrive and depart and the kind of accommodations you need. We look forward to seeing you in Aspen.

Meanwhile, warmest regards.

Sincerely,

Alvin C. Eurich

Aspen Institute for Humanistic Studies

The Contributor-Member Program

The Contributor-Member Program

The Contributor-Member program is a means of broadening the impact of the Aspen Institute.

Numerous conference centers exist throughout the United States. The unique aspects of Aspen sessions are the level of participants and the small size of the seminars. The premise is that when conferences become conventions there is little chance participants themselves will be affected by a consideration of new ideas and a reconsideration of their own.

The Institute does not directly reach the "public" and will probably never desire to do so. This is one reason for the Contributor-Member program. It is a way of drawing persons into a spirit of inquiry through personal contact and experience. The materials selected for the program are important. Each Contributor-Member can share in the Aspen Idea and pursue independently what participants are pursuing in Aspen.

The second and related reason lies in the type of support which the program provides. Because of its commitment to man's self-understanding, the Institute must build upon individuals, and must be seen as worthwhile by them as well as by corporate donation policies. For this reason, support is forthrightly solicited from those persons and organizations who will grant it thoughtfully.

These two reasons merge into one when and if Contributor-Members find specific meaning in the program and take personal advantage of the physical and human resources which stand behind it.

Privileges and Conditions for Membership

The Contributor-Member program allows persons who believe in the goals of the Aspen Institute to share in the spirit and substance of its varied activities. Contributor-Members are continuously informed of all activities. They are sent materials of particular interest which are used by conference participants in Aspen sessions.

Seven yearly mailings bring to members:

1. All publications of the Institute, such as the Annual Report, specific conference brochures, news releases, shedule of events, and activities.
2. Specific materials from the "Man in 1980" conference series. These include reading kits, bibliographies, selected conference summaries and working papers.
3. Transcripts of important lectures and discussions (distributed exclusively to members).
4. Four books selected for their relevance to humanistic values and their contribution toward increasing man's self-understanding. Special introductions provide guidelines for thought.
5. Significant articles and publications appearing in books and magazines which deal with the humanities.

Members have the following additional privileges:

1. They may audit free of charge and when space is available a two-week Executive Program session each year. (All others, including alumni of Institute programs, will be charged $5 per session.)
2. They are given preferential treatment, when possible, at the Aspen Meadows lodgings.
3. They may request additional materials, such as daily summaries of discussions, for an activity of particular interest to them.

Conditions for membership are:

1. That all memberships be for individuals, not for companies or foundations.
2. That initial and continuing membership include a tax-exempt donation of $100 per year.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

PEACHTREE-SEVENTH BUILDING, ATLANTA, GEORGIA 30323

Room 645

Office of the Regional Administrator
REGION III

June 30, 1966

Transcribe

Mr. Paul Anthony, Director
Southern Regional Council
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Paul:

Enclosed is a copy of a letter and program outline of Urban America which I hope will persuade you and Moreland Smith to attend the Princeton Conference. The sessions on Section 221-d-3 housing, in relation to the proposed housing plans of the Southern Regional Council, should be most informative and helpful in providing more such units in the south. Therefore, I am asking you, without knowing your budget situation, to have Moreland Smith attend the conference on July 12 and 13.

As you know, Moreland, Harry Adley and I are in the process of drawing up a housing proposal for SRC, and the information of the Princeton Conference should make it possible for SRC to move faster and with authority in developing better sites in Region III of HUD. Moreland has had a conference with key members of our staff relative to the SRC working in six selected cities and we welcome the cooperation of your private agency. His involvement with and concern for our programs will promote the possibility of a better southland.

It is doubtful that I will attend the Princeton Conference because the Central Office of HUD has not requested that I attend. It may be that our Central Office will conduct its own orientation program for staff members, excluding FHA staff members who have already been informed about the Rent Supplement Program by Central office personnel. If there is a change, I will let you know.

Cordially yours,

Bob

CONSUMER BULLETIN

FHA MORTGAGE INSURANCE

For Rental And Cooperative Housing For Families Of Low And Moderate Income

FHA No. 221
Revised June 1966

FOREWORD

There are a number of families whose incomes are too high for public housing, but not high enough to compete for adequate housing in the private market. Some of these families have been forced into the market because of urban renewal or other governmental action.

To help these families obtain housing at prices they can afford, the Federal Housing Administration insures mortgages on special terms under the provisions of Section 221(d)(3) of the National Housing Act.

To keep the rents within the means of the people for whom the housing is intended, the Act authorizes a mortgage interest rate below the current market rate on FHA-insured mortgages.

Priorities for occupancy are given to families displaced by governmental action. Other families whose incomes are within the limits established by FHA also can qualify for occupancy, as can single elderly or handicapped persons. The terms of the program are summarized in this consumer bulletin.

ELIGIBLE MORTGAGES

Proposed new construction, and existing properties requiring rehabilitation, with five or more units may be eligible for mortgage insurance.

Mortgages on acceptable existing projects not requiring rehabilitation, with five or more units, may be refinanced if the mortgages are presently insured by FHA.

WORKABLE PROGRAM REQUIREMENT

Projects must be located in a community having a "Workable Program" which has been approved by the Administrator of the Housing and Home Finance Agency and certified by him to the FHA Commissioner.

A workable program is an official community plan for dealing effectively with slums and blighted areas. It is an assurance that neighborhoods will be preserved, improved, or rehabilitated, and that the community has a plan of action which will insure sound development of the area.

A workable program certification must be in effect at the time a commitment is issued. If such certification was in effect when FHA accepted an application with fee, but has since expired, it remains effective for purposes of issuing a commitment.

INTEREST RATE

A mortgage insured under Section 221(d)(3) may carry a market interest rate (at the present time not more than 5½ percent) or a below-market rate. This consumer bulletin outlines primarily the below-market interest rate provisions of the section.

Under these provisions, the interest rate during construction may be as high as the established FHA maximum

interest rate at the time of construction. Upon final endorsement of the loan, the interest rate will be lowered to 3 percent. FHA waives the mortgage insurance premium of ½ percent for projects with this low interest rate.

To provide financing at the below-market interest rate for Section 221(d)(3) projects, the Federal National Mortgage Association is authorized to purchase the mortgages under the FNMA Special Assistance Program.

ELIGIBLE MORTGAGORS

Projects may be developed by public agencies (except local housing authorities that obtain their funds exclusively for public housing from the Federal Government) or by cooperatives (including investor-sponsored), private nonprofit corporations or associations, or limited distribution corporations, or other mortgagors approved by the FHA Commissioner.

Nonprofit and Builder-seller Mortgagor

A nonprofit mortgagor is a corporation or association organized for purposes other than the making of profit for itself or persons identified with it and found by FHA to be in no manner controlled by or under the direction of persons or firms seeking to derive profit from it.

A builder-seller mortgagor is a special type of limited distribution mortgagor organized to build or rehabilitate a project and sell it, immediately upon completion, to a private nonprofit organization at the certified cost of the project.

Public Mortgagor

A public mortgagor is a Federal instrumentality, a State or its political subdivision, or an instrumentality of a State or of its political subdivision, which certifies that it is not receiving financial assistance exclusively for public housing from the Federal Government and which is acceptable to the FHA.

Limited Distribution Mortgagor

A limited distribution mortgagor is a corporation restricted as to distributions of income by the laws of the State of its incorporation (or by FHA) - or a trust, partnership, association, individual, or other entity restricted by law or by the FHA as to distributions of income - formed exclusively for the purpose of providing housing and regulated as to rents, charges, rate of return, and operating methods in a manner satisfactory to the FHA.

Cooperative and Investor-sponsor Mortgagor

A cooperative mortgagor is a nonprofit cooperative ownership housing corporation approved by FHA. Permanent occupancy is restricted to the members, and eligibility and transfers of membership are subject to FHA controls.

An investor-sponsor mortgagor is a special type of limited distribution mortgagor organized to build or rehabilitate a project and transfer it to a cooperative. If the project is not sold to a cooperative within two years after completion, the investor sponsor will operate it as a limited distribution corporation, for the purposes authorized.

MORTGAGE LIMITATIONS

For public agencies, cooperatives (including investor sponsored), and non-profit sponsors, mortgages on new construction may not exceed the replacement cost of the project; on rehabilitation projects, the estimated cost of rehabilitation plus the value of the project before rehabilitation; or if refinancing is involved, the estimated cost of rehabilitation plus the amount required to refinance the outstanding indebtedness. For limited distribution mortgagors, mortgages may not exceed 90 percent of these amounts.

The mortgage on any project is further limited by such factors as family income limits established by the FHA, and debt service considerations.

The maximum mortgage term is 40 years or three quarters of the FHA estimate of the remaining economic life of the property, whichever is less.

The maximum mortgage amount is $12,500,000. The mortgage on any project is limited by construction costs and median income figures established by FHA for the area. Information regarding these limitations for a particular area may be obtained from the local FHA insuring office.

WORKING CAPITAL

Public and Private Limited Distribution Projects: If advances are to be insured during construction, two percent of the original principal amount of the mortgage will be required as working capital. This fund must be deposited with the mortgagee by the mortgagor and must come from sources other than mortgage proceeds.

Cost certification is required.

Prevailing wage requirements must be met.

Private Nonprofit Projects: An allowance of two percent to make the project operational, in lieu of working capital, may be included in the mortgage.

FHA CONTROLS

With respect to rent, carrying charges, and occupancy requirements, FHA controls will be maintained until the insured mortgage is paid in full. To prevent early refinancing and release of FHA controls, full or partial prepayment of the insured mortgage without approval of the FHA Commissioner is prohibited, except that limited distribution mortgagors may pay in full after 20 years from the date of final endorsement without such approval.

All housing financed under the program must operate in accordance with regulations as to rentals, charges, methods of operation, and occupancy requirements set forth by the FHA.

Occupancy is limited to families and to elderly or handicapped individuals of low and moderate income, with preference being given to displacees.

Projects may be sold only with the prior approval of FHA and subject to prescribed conditions.

EQUAL OPPORTUNITY IN HOUSING

FHA regulations under the President's Executive Order 11063 of November 20, 1962 require that housing provided with FHA assistance be made available without discrimination because of race, color, creed, or national origin.

The regulations prohibit any person, firm, or group receiving the benefits of FHA mortgage insurance or doing business with FHA from practicing such discrimination in lending or in the sale, rental, or other disposition of the property. Violations may result in discontinuation of FHA assistance.

One- or two-family dwellings which have been occupied by the owner are exempt from the regulations; but if the purchaser of such a home wishes to finance it with an FHA-insured mortgage the lender may not refuse to make the loan because of the buyer's race, color, creed, or national origin.

THE FHA IN BRIEF

Since its establishment in 1934, the Federal Housing Administration has written mortgage and loan insurance aggregating $107 billion, covering 8 million homes, more than a million living units in multifamily projects, and nearly 28 million property improvement loans. FHA has helped more than 37 million families improve their housing standards and conditions.

Congress provided the FHA mortgage and loan insurance system to encourage improvement in housing standards, to promote sound financing practices in the housing field, and to act as a stabilizing force in the mortgage market. The FHA is self-supporting through income derived from fees, insurance premiums, and investments, and its insurance reserves are well over a billion dollars.

The Agency does not build houses or lend money. It [illegible] only as an insurer of privately made loans from ap[illegible]ed lenders.

In addition to its original programs of insurance for home improvement loans, home mortgages, and multifamily rental housing mortgages, FHA now insures mortgages through its 76 field offices on land development; housing for families of low and moderate income; housing in urban renewal areas; housing for the elderly or handicapped; nursing homes; cooperative housing; condominiums; experimental housing; housing at military installations; and long-term loans for major home improvements.

In over 31 years of operation, FHA has significantly influenced the location, volume, and kind of housing built in the United States. The agency has helped to make the low-downpayment, long-term, fully amortized mortgage the standard in mortgage lending.

The soundness of the FHA concept has been demon[illegible]ated over the years, and millions of mortgage and prop[illegible]y improvement loans insured by FHA have been made by banks, building and loan associations, mortgage companies, and other FHA-approved lending institutions. By protecting these lenders against loss, FHA insurance enables them to advance credit on more liberal terms than might otherwise be available to families with moderate means.

The FHA-insured mortgage also is marketable on a national scale. This fact helps to keep localities supplied with mortgage money by enabling lenders to sell mortgages in return for new supplies of cash.

In 1947, the Federal Housing Administration was made a constituent agency of the Housing and Home Finance Agency. In 1965, it was made a part of the Department of Housing and Urban Development.

The cover photograph is a view of the interior court of the St. Francis Square Community Apartments, Western Addition, in San Francisco, California. The project received an Award of Merit in the multifamily housing category in FHA's 1963 Awards for Residential Design.

MEMORANDUM

TO: THE LADIES

FROM: MORELAND GRIFFITH SMITH, FAIA (DREAM DEPARTMENT)

DATE: JULY 19, 1966

SUBJECT: SRC FACILITIES

As I reviewed SRC facilities at Paul's request to find space for on coming staff, one thing seemed overwhelming and that is the "lousy" condition of the Ladies Room and the snack facilities.

Shortly we anticipate getting in a carpenter to help get some space made more useable. If after the essentials have been bitten into and in case I can get the "Old Man" to approve a snack bar project and/or a Ladies Room refurbishing, what would you ladies feel should be included in this, giving order of importance?

Thanks,

National Association of Purchasing Agents, Inc.

Louisville, Ky MS
Courier-Journal

UL Appoints Urban Studies Center Director

A former special assistant to the governor of Massachusetts has been appointed director of the new Urban Studies Center at the University of Louisville.

Dr. Joseph Maloney, 40, will take over the position Aug. 15. For the past two years he has been a Ford Foundation consultant to the government of Nigeria.

The Center, authorized by the UL board of trustees at the beginning of the year, will have three primary functions: conducting research into the nature of cities and urban life, providing service to the community and developing instructional programs to train civil administrators.

Maloney received a doctor's degree in political science in 1955 from Fordham University in New York and taught there until 1960, when he was appointed special assistant to John Volpe, then governor of Massachusetts.

While in the governor's office he made an extensive study of public transportation in the Boston metropolitan area and did several regional planning studies.

In Nigeria he helped set up an institution for training high-level civil servants in public administration at the University of Ife in Ibadan.

July 19, 1966

Dr. Joseph Maloney
Director
Urban Studies Center
University of Louisville
Louisville, Kentucky

Dear Dr. Maloney:

It was with pleasure that I read in the Louisville Courier-Journal of your appointment as director of the new Urban Studies Center at the University of Louisville. Welcome to the South and to the challenges and opportunities of your new position.

The Southern Regional Council initiated an Urban Planning Project the first of this year for the purposes of exploring ways and means of aiding city governments in planning for an open economy and of working with the disadvantaged to gain consideration for their needs in the planning process. We are working slowly in these directions through a broad program of consultation, analysis and publication.

We are very interested in your plans for the Urban Studies Center and its emphasis. Any information you have at this time would be greatly appreciated, and I hope you will remember us as your Center develops.

Should you be in Atlanta in the next year, please let me know. I would like to meet you and discuss with you the problems confronting the urbanizing South.

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MEMORANDUM

TO: ED DAUGHERTY

FROM: MGS

DATE: July 26, 1966

Sorry you and Marjorie did not get to chat re the landscape execution

Here are the items she was to cover:

1. Front lawn is full of rocks and clay lumps.

2. Time to mow lawn? Grass is getting high.

3. Replace dead ivy in front. Water! Ivy just planted looks mighty wilted.

4. Do you think any pruning should be done over front walk where bushes are low and hide house?

5. Any pruning over back walk where bushes obstruct walking and rear balcony?

6. Day lilies to be planted

7. Shouldn't lawn be fertilized? I think it is called for in contract and Mr. Monroe said it should be done once a month.

8. Is Monroe to do something about hedge vine?

9. Drain pipe in back.

10. Back yard light.

11. Finish lamp post and sprig around it.

12. Fix broken concrete around garbage can.

13. Hump at north gate.

I will call you when I get back in town.

Best wishes,

Moreland

P.S. I want to discuss possible monetary credits on delays and neglect as well as allowances for items living. Would like to get with you for discussion prior to our seeing Monroe.

M.

Mr. Moreland G. Smith, FAIA
Director
Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Smith:

Thank you for your recent letter in which you request further information on our low-cost housing project for American Indian families. The project to which you refer was sponsored by the Office of Economic Opportunity in Washington. Consequently, we are not priviledged to provide detailed information regarding the development of low-cost housing in this project. In addition to evaluating the need for housing, consideration was given to determining (1) the type of financing scheme possible, (2) a method for reducing unemployment on the reservation, (3) a method for improving income on the reservation and (4) the type of program necessary to maximize community action in providing opportunities for self improvement.

Since you have an interest in low-cost housing, we would be most interested in discussing any particular problem you might have in this field. Our Construction Economics Group at Battelle has been involved with housing research for some time and is quite familiar with the major efforts in this country and the Caribbean area to develop self-help low-cost housing. If we can be of assistance to you, we would appreciate the opportunity to meet with you at your convenience.

Very truly yours,

MEMORANDUM

TO: PAUL ANTHONY

FROM: MORELAND GRIFFITH SMITH, FAIA

DATE: AUGUST 1, 1966

SUBJECT: COMMUNITY AND NEIGHBORHOOD ORGANIZATIONS

It is proposed that community organizations in Washington, D. C., Baltimore, Maryland and Philadelphia (West Mt. Airy), Pennsylvania be analyzed for background experience and potential for neighborhood efforts at creating stable interracial communities.

Although there have been a great many examples of group action to cope with the problems of social change within our settlements it is my opinion that the three communities mentioned contain the best and most varied experiences within this field.

One interesting element common to each of these organizations is the leadership:

Washington, D. C.: Mrs. Margery Ware
Executive Secretary
Neighbors, Inc.
6400 Georgia Avenue, N.W.
Washington, D. C. 20012

Philadelphia, Pa.: Mrs. Ruth Steele
Executive Secretary
West Mt. Airy Neighbors
7139 Cresheim Road
Philadelphia 19, Pennsylvania

Baltimore, Md.: Mr. Edward L. Holmgren
Executive Director
Baltimore Neighborhoods, Inc.
One Charles Center
Baltimore 1, Maryland

Because Mrs. Ware will be leaving Neighbors, Inc. shortly, I would suggest starting with Washington, D. C.

Although the successes and failures of these organizations have apparently not followed any consistent pattern, a primary purpose of this three-city analysis would be to determine the reasons for successes or failures.

It seems to me that the greater part of the information and insight about the community efforts in each city exists entirely in the memory of the director of the organization. A professional writer could take these personal experiences and informal observations

TO: PAUL ANTHONY DATE: AUGUST 1, 1966

combine them with all additional data and analyze the course and contributions of each community group. He would, in addition, be able to draw out the similarities between the groups and derive constructive generalizations regarding the creation of effective neighborhood stabilization programs. If these case studies are not documented the value of the experiences will be lost.

It is hoped that this analysis in depth would cover the following areas:

Historical background
Strategy of the organization
Leadership
Politics
Economics
Human relations (individual, group, race)
Pre-existing organizations
Subsequently created organizations

In each case it is important to point out (1) the degree of success and failure and the reasons for these results, (2) where each organization is now and where it is headed, and (3) what are pertinent recommendations for others who may want to attempt similar programs.

It is my opinion that the "community personality" has affected the results in each case. I hope that the three studies can be published separately along with a fourth booklet. This concluding study would cover the common attributes of the three experiences and suggest patterns of community organization which would be helpful to cities in the South.

To summarize, spontaneous and effective group action aimed at stabilizing our cities during the transition brought about by the present social revolution is an important part of urban development peculiar to our time. These experiences should be recorded to stimulate others more lethargic into action.

Therefore, I request approval of funding for the employment of an independent writer to implement the outlined four-element study.

Ed

August 4, 1966

Dear Mr. Jackson:

Your drawings covering the Reception Area - Switchboard have been received. I am enclosing two rough sketches for your consideration.

In both I strongly recommend the placing of the in-clerks counter directly in front of the main entry!

Second, I feel that the moving of the stair to the coffee shop would give a more dignified impression to the reception clerk's counter plus a better, safer, more attractive access to the coffee shop.

Third, I feel that a commodious lounge (14' x 30') plus solarium (10' x 15') would be most desirable added features to Dorothy Hall!

The main difference between my #1 and #2 sketches are the position of the position of the telephone room. In #1 it is behind the recetionist clerk area and in #2 it is across the lounge from the proposed lounge area.

If there is no technical (telephone company) reason why the in-switchboard has to be adjoining the telephone room then I personally prefer sketch #2.

Another possibility (see sketch #3) in case you can't sell the commodious lounge on the first floor would be to place the clerk in front of the entry, the telephone room in back of that and the manager's office where the receptionist is at present.

In any case the main point now is to complete the position of the centrex equipment. If you want to go into this further I suggest you telephone me.

Sincerely yours,

Moreland Griffith Smith, FAIA

Dear Mr. Smith:

Attached is a summary report on our rehabilitation work in New York City under the Experimental Housing Program.

I hope this fulfills your request of June 27 addressed to Mr. Lee.

Very truly yours,

Neil A. Connor

Dear Miss Whinihan:

I noted in the August AIA Journal an account of the booklet of advanced publicity and follow up press coverage of the occasion of Dr. Constantinos Doxiadis' visit to your Chapter. Could I obtain a copy of this booklet as sent to the Octagon?

Thanking you, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA

Washington, D. C.

Dear Mr. Granat:

It is my understanding that the O.E.O. has conducted a study on low-cost housing for American Indian families. I believe this study covered need, financing, "do-it-yourself" procedures, and community involvement.

Is it possible to obtain a copy of your detailed report? We would very much appreciate this courtesy.

Thanking you, I am,

Sincerely yours,

Moreland Griffith Smith

Dear Mr. Smith:

In answer to your request for literature on Battelle, I am enclosing some brochures that will describe Battelle's overall research capabilities. I am also enclosing a pamphlet which describes more specifically our research capabilities in Construction Economics.

The person to contact at the Office of Economic Opportunity in Washington, D.C. regarding the low-cost housing program for American Indians is Mr. Richard Granat.

Very truly yours,

John R. Hagely

Dear Mr. Fair:

It was good to meet you and have the opportunity of outlining with you and Dr. Doxiadis the possibilities of your organization working with the Southern Regional Council on a study for the eleven southern states in which SRC normally functions.

In accordance with our discussions I have talked this over with SRC's Director, Mr. Paul Anthony, and other members of our staff and this letter is written requesting that you schedule the proposed meeting with Dr. Doxiadis and members of SRC sometime between October 15 through October 31, but excluding October 20 or 27.

Looking forward to hearing from you setting a specific time and date, I am,

Sincerely yours,

Moreland Griffith Smith

Dear ~~Mr. Smith~~ Moreland:

To bring you up to date on several local developments is the purpose of this letter.

On August 17 the home owners group met to review a series of recommendations that the group's chairman had prepared and which had been approved by an executive committee. Father Jones was present and invited the chairman to meet with NAACP special committee on August 22 and he agreed. At the 8/22 meeting Father Jones and several others argued for the canal proposal but the chairman disagreed, noting that the home owners group would meet again 8/24 and he would continue to contend for the basic scheme.

The 8/22 meeting broke up in good spirits and there may be some recognition that NAACP will take a less rigid position. On 8/24 the home owners group met and to my surprise no one from the NAACP committee appeared. The report (copy attached) was approved.

I have contended that a dichotomy of views is not injurious. NAACP could press for urban renewal, federal aid, and the canal proposal while the home owners pressed for urban renewal, federal aid, and the basic scheme. There are other areas of agreement: development by local groups under FHA 221(d)(3), avoidance of a referendum, etc. And while I'm not convinced that unanimity on <u>all</u> points is essential, I think the areas of agreement should be stressed. You might want to make that point with Father Jones in a note.

Our timing is to finalize a plan - and we have done so - and the agency will pass on it at its August 30 meeting. It will go to the city commission September 6 and from there to the city planning and zoning

board to secure a review based on its conformity with the general plan of the city. Within 30 days the plan must come back to the city commission; a public hearing is then to occur. We expect the hearing could take place in early October. With a substantial turn-out it is possible that the city commission will decide to proceed without an election.

Best regards.

Sincerely,

James B. Hibben
Executive Director

JBH/gbh

Enclosures

OVERVIEW AND PROPOSALS

The Urban Renewal Home Owners Association was organized to assist the agency in the over-all re-development of the designated area with the cooperation of all interested groups and individuals.

This organization desires a development of the area that will attract home owners, regardless of race, color, or creed. The attractiveness of the area should be an asset to the total community.

We believe that, in the re-development of the designated area, if homes can be built commensurate with the out-lying areas the downtown area can benefit greatly. Homes especially designed for the elderly should have priority on a trial basis on unimproved property nearest to the proposed shopping center. This may include the downtown area. If proven impractical they could be offered to small families of low income who need easy access to public transportation.

We believe that homes in the area should be as luxurious and priced as homes in Lauderdale Lakes, Miramar, Sunrise Golf Village, $9,900 to $12,000.

It must be noted home prices in the Golden Heights area began at $12,500 in its initial stages and steadily increased to $15,500 as the area developed. The same homes in Melrose Park sold for $10,500 to $12,500.

Homes, 3 bedrooms 2 baths in Lake Aires and Esquire Homes, cost $15,500 and up. The outcome of Golden Heights came Golden Ridge where minimum prices were $17,500. These same homes built in other areas were priced much less.

A further look at the home market for Negroes is Westwood Park, Larkdale and Kennedy Estates. These areas grew rapidly due to the low down payment and monthly payments in keeping with incomes. With the population growth, even into integrated communities, we believe a large number of these people would have settled in near

downtown area for no other reason than being close to bus lines and churches. Transportation to out-lying areas are inadequate and necessitate further financial burden especially where both mother and father work.

The home owners in this area would like the re-development to be an asset to the total community and prices and quality of homes to be in line with homes in Golf Village, Tamarac Lakes, Melrose Park, Imperial Point, and other similar subdivisions.

We feel that with the opportunity for westward and northward expansion multi-family units should be minimized. More and more Negro families are seeking single family units and are purchasing in out-lying areas as they become financially secure with better paying job opportunities. This is evidenced by a large number of apartment vacancies. The mobile families are apparently less in number in this area.

We propose:

a. That home owners established in the area have ties that "bind" much greater than some others might realize. Some have reared families and are now at ages that to be relocated might not survive the ordeal. Therefore, every consideration possible should be given to upgrade the present home, where feasible, to conform to the improvements of the area. The sentiment of home owners should take precedence over others.

b. That home owners whose homes are too costly to rehabilitate permit rebuilding in the same location if they so desire.

c. That the depth of lots as now plated remain but conform to the Urban Renewal Agency plan as to width of 60 to 75 feet.

d. That the design of the area permit home to face on 7th Avenue, otherwise there might be homes to remain or rehabilitated that will not conform to the pre-described overall plan.

e. That the basic scheme is most practical due to the less possible marketability of homes on waterfront property.

f. That a committee appointed from Home Owners Association should work with the agency under the advice of technical advisors in determining the homes that will remain in the area taking into consideration hardship cases.

g. That a section of the area should be provided for the aged and retirees. Careful analysis should be considered as to the marketability of this area.

h. That federal funds be secured for the re-development.

i. That competitive bids are secured from reputable contractors in the re-development for quality and economy.

j. That the Home Owners Association work with all interested clubs, organizations and individuals in achieving goals set by this association.

k. That a survey of the community be made to help determine the marketability of the re-development. We hereby present a sample of the type of questionnaire to submit. We will work diligently with all organizations and interested individuals in gathering the necessary data.

l. That implementation of the proposed project proceed with deliberate speed.

A HOUSING MARKET SURVEY

The Urban Renewal Agency of Fort Lauderdale is preparing a plan for a part of the northwest section. The boundaries are: 9th Ave. on the west, FEC tracks on the east, 6th St. on the north, and Broward Blvd. on the south. The agency's work so far has consisted of a preliminary study indicating that the area might be rebuilt to provide about 300-400 new homes, 300 new units in apartment buildings; also about 300 existing units, mostly in apartment buildings, might be retained if they could be rehabilitated.

The Urban Renewal Home Owners Association is recommending that the area consist of single family residence with the exception of the existing modern apartment buildings and a limited number of duplexes. Your help is needed to support our recommendations. Please fill out the following questionnaire.

QUESTIONNAIRE

1. Name _____ Address _____

2. Wife's Name _____ Years living in Ft. Lauderdale _____

3. Homeowner _____ Yes _____ No No. in family _____

4. Type of work _____ Approximate yearly income _____

5. Would you like to own a home in the Urban Renewal Area if it had modern homes? _____ Yes _____ No

6. What type of housing unit do you prefer?
   a. single family house _____
   b. apartment _____
   c. town house _____
   d. duplex _____

7. If you prefer home ownership what are tye features you want in a house?
   a. how many bedrooms _____
   b. how many bathrooms _____
   c. garage _____
   d. carport _____
   e. width of lot 60 _____ 70 _____ 75 _____
   f. in a block house should there be a variety of design, or should most of them look alike?
      1. variety of design _____
      2. look alike _____

8. Besides the house what are some of the features you would like in a neighborhood?
   a. electric and phone lines should be
      1. underground _____
      2. up in the air _____
      3. don't care _____

   b. sidewalks are
      1. desirable _____
      2. undesirable _____
      3. don't care _____

   c. curbs are
      1. desirable _____
      2. undesirable _____
      3. don't care _____

   d. park and recreational facilities nearby are
      1. desirable _____
      2. undesirable _____
      3. don't care _____

e. a shopping center nearby is
   1. desirable _____
   2. undesirable _____
   3. don't care _____

9. In designing a residential community would you like to see
   a. all homes _____
   b. a mix of homes and apartments _____
   c. mostly homes _____
   d. a few apartments _____
   e. don't care _____

10. In designing a residential community would you like to see the streets arranged
   a. to encourage privacy and quiet _____
   b. discourage thru traffic _____
   c. thru traffic OK _____
   d. don't care _____

11. Please consider ahead a few years and estimate what you think you might be able to pay for a house on a mortgage each month?
   a. $80 or less per month _____
   b. $81 to $100 per month _____
   c. $101 to $120 per month _____
   d. $121 to $140 per month _____
   e. over $140 per month _____

12. Also, looking ahead a few years, please estimate the initial payment you might afford to make on a house.
   a. $500 or less _____
   b. over $500 but less than $1,000 _____
   c. over $1,000 but less than $2,000 _____
   d. over $2,000 but less than $3,000 _____
   e. over $3,000 but less than $4,000 _____
   f. over $4,000 _____

13. Do you favor federal financing? _____ Yes _____ No

BOUNDARY MAP	66-500
URBAN RENEWAL AGENCY	B-2
FORT LAUDERDALE, FLORIDA	

"Our communities are what we make them. We as a nation have before us the opportunity – and the responsibility – to remold our cities, to improve our patterns of community development, and to provide for the housing needs of all segments of our population."

– President John F. Kennedy
Housing Message, 1961

Relating the statement made by the late President on the local level within our city, the Urban Renewal Agency congratulates the Urban Renewal Homeowners Association and the N.A.A.C.P. Urban Renewal Committee for their determination to make their community a better place in which to live, work and worship.

Renewal Review

NO. 4 FORT LAUDERDALE, FLORIDA SEPTEMBER, 1966

PROGRESS REPORT OF THE URBAN RENEWAL HOME OWNERS ASSOCIATION

On July 13, 1966, a meeting was held at Mt. Herman A.M.E. Church. More than one hundred individuals attended this meeting, and with a show of hands, decided to form an organization known as the "Urban Renewal Home Owners Association." This association of home owners within the urban renewal area bounded by FEC Railway on the east, N.W. 9th Ave. on the west, N.W. 6th St. on the north and Broward Blvd. on the south, organized to assist the agency in the over-all re-development of the designated area.

The following persons were elected to office: Mr. H.W. Lewis, President; Mrs. O.P. Alexander, Secretary; Mrs. A.M. Hill, Assistant Secretary. A committee of six were selected to represent the home owners at the next City Commission Meeting. On July 19th, the committee attended the City Commission meeting and presented to the commissioners a petition of one-hundred signatures petitioning the city commission to withdraw the suggested referendum proposed for August 30, 1966 and use federal funds for re-development. It was pointed out to the commissioners by the City Attorney that a referendum at this phase of the program would not be in keeping with the laws stated in the Fort Lauderdale Urban Renewal Law. The commissioners canceled the August 30 referendum on the advice of the City Attorney. The following persons served on this committee: Mr. R. Bouyer, Mrs. J. Stephens, Mrs. M. Mims, Mrs. O.P. Alexander, Mr. C. Livingston and Mr. H. W. Lewis.

At the July 21 meeting, the home owners organized a rehabilitation committee. This committee will have the responsibility of reviewing all property (homes) to be acquired. They will determine

(continued on Page 2)

Horace Lewis Shows His Home to Urban Worker Nat Strong . . *agency says house illustrates goal of urban renewal.*

URBAN RENEWAL – NEXT STEPS: TIMETABLE

1) The Urban Renewal Agency must approve a definitive plan, and submit it to the City Commission. The Agency, at its July 18 meeting, adopted the concept of the basic scheme and approved a report. The report was submitted to the City Commission July 19. The Agency staff is completing a definitive plan that can be approved for submission this month.
2) The City Commission must refer the Urban Renewal plan to the City Planning and Zoning Board for review to determine if it conforms with the city's general plan.
3) The City Commission, after it receives the Planning and Zoning Board report, must schedule a public hearing, at which time all persons and groups wanting to speak on the plan, shall be heard.
4) After the hearing, the commission, if it approves the plan, shall determine how it is to be funded – with local funds to pay the full cost, or with federal funds to pay ¾ the cost. This question, the City Commission has determined, should be submitted to the voters for a referendum election. No election is required by law, but if such election were to be held, it would probably be at the time of the City Commission election, February of 1967.

COMMENT:

The **public hearing** can be a substitute for an election. If the City Commission decides that strong support exists, then it may agree to proceed in accordance with public opinion.

(Home Owners Association continued)
whether or not a home is basically sound and with rehabilitation the home met the minimum code and property rehabilitation standards required by the Urban Renewal plan. Local technicians will be asked to serve on the committee as advisors. The technicians would include a plumber, an electrician, two contractors and a building inspector. Any home owner wanting information as to the feasibility of their home being rehabilitated, should contact the representative in his section.
The committeemen by sections are:
Section A – Mrs. J. Stephens and Mr. R. Bouyer; **Section B** – Mr. Rahming; **Section C** – Mr. F. Garvin and Mr. C. Hankerson; and **Section D** – Mr. Edgecomb and Mr. C. Livingston.

The next meeting of the Urban Renewal Home Owners Association will be held on August 17 at Mt. Herman A.M.E. Church.

QUESTIONS AND ANSWERS

If you live in the area, whether you own your home or rent, you should visit your Urban Renewal Agency and find out how U.R. will affect you. Our office is conveniently located for you at 446 N.W. 7th Ave. The following questions have been the ones most frequently asked regarding Fort Lauderdale's U.R. program. The answers provided are factual, based upon the policies and regulations of the City, State and Federal Governments.

Q. Suppose I own a house in a project area, will it be taken away from me and given to someone else?
A. No. If you own a house in a project area, and it is too dilapidated to be repaired, the house will be purchased from you for a fair price based upon two appraisals. The Local Public Agency will then, by law, be required to help you find a decent, safe, sanitary place to live that is within your means to pay. If you rented the house, and were displaced, the Local Public Agency is still required to find you a place to live.

Q. What if I don't think the price offered for my house is enough?
A. You may have your property appraised by your own appraiser. Your appraisal will then be compared with the Local Public Agency appraisals. If some circumstances have been overlooked, the price offered for your house will be adjusted accordingly. If you are still not satisfied, you have benefit of due process through the Courts.

PERSONAL NOTE FROM THE PRESIDENT OF THE HOME OWNERS ASSOCIATION

"No one walks alone," one author said. This statement can be interpreted in the philosophy of the Home Owners Association. The ideas and opinions from a total society must be accepted and respected. The proposals and suggestions from this association, though selfish to a degree because of personal investments, should be made in a broad sense. There are groups and individuals who share common goals and aspirations that will be affected by the proposed project. The proposed project of re-development of one segment of this community can be an outstanding example for other areas of this community or other localities providing proper leadership and cooperation are exhibited, from every faction interested in improvements. The City Commission, the Urban Renewal Agency, the Home Owners Association or any other group does not have all the answers. Each group has a right to respect every other group and devise a plan of action that is common to all. No man has the right to determine what is best for another in a democratic society. No segment of the American way of life is independent of another. Therefore, to successfully complete the huge task before us, we must 'walk together.'

Horace W. Lewis

'I'll Begin My Improvements Even Before Urban Renewal' .. *store owner Floyd Garvin discusses plans with wife.*

URBAN RENEWAL TERMS

SMALL BUSINESS ADMINISTRATION: The SBA makes loans to disaster victims for the repair, acquisition or construction of homes. The SBA also provides financing and credit analysis in sales of commercial property under special purpose disposition programs of the Housing and Home Finance Agency.
RELOCATION PAYMENT is the cash amount paid by a local public agency to individuals, families, and business concerns for their reasonable, necessary moving expenses and any direct loss of property resulting from their displacement from property purchased by an LPA in an urban renewal area. The LPA is reimbursed for these expenditures through a relocation grant from the Federal Government.
FHA HOUSING FOR THE ELDERLY PROGRAM: Under legislation enacted in 1956, a program to improve housing opportunities for persons 60 or more years old. The program offers liberal financing terms for purchase of homes by the elderly, and mortgage insurance to assist non-profit organizations in providing rental accommodations designed to meet the needs of older persons.

Pictures used in this Publication are reprints from the July 26 issue of the Miami Herald's story on Urban Renewal.

Dear Mr. Smith:

1. At this point, we are trying to work out the details of Dr. Doxiadis' October trip to the U. S. At the present time, October 18 or 19 appear to be the best opportunities for our meeting.

2. From our discussions in Aspen, it was understood that the meeting would be in Washington. We shall plan accordingly unless this is not possible for you.

3. We also discussed in Aspen the interchanging of thoughts prior to the meeting on your concepts, scope, and depth with respect to the studies you wish to undertake. We still feel that this is important - it should serve to make our October meeting more productive.

4. We shall let you know as soon as possible the final date of our meeting, and shall be looking forward to receiving any information you can provide on your program.

Sincerely yours,

Washington, D. C. 20523

Dear Mr. Peer:

It was good to have the conference with you on Friday and you with Paul Anthony.

I believe the interchange of ideas should bring fruitful efforts in the future.

Enclosed herewith is an SRC six-months report to the Executive Council. This should give you more of a "feel: as to SRC's activities!

Your memorandum to come should be very valuable as SRC projects this thinking further. If I may I would suggest you send this direct to Paul with enough copies for the five Project Directors. This is particularly true as I will be gone from the office almost continuously from September 9 through October 15. I will be in Washington September 11, 12, and 13th for the Urban America Conference to be held I believe at the Sheraton-Park Hotel. I hope I may see you for a short time during those dates.

Sincerely yours,

Moreland Griffith Smith, FAIA

Enclosure

the Workable Program for Community Improvement

DEPARTMENT OF HOUSING
AND URBAN DEVELOPMENT

WASHINGTON, D. C. 20410
Reissued August 1966

THE WORKABLE PROGRAM FOR COMMUNITY IMPROVEMENT

Federal programs to give families the opportunity to live in decent homes in good neighborhoods can accomplish their purpose only in communities that make a real effort to help themselves.

On this sound principle, Congress provided that such Federal aids shall go only to communities that have a sound plan of action to eliminate and prevent slums and blight, and to foster local development. Such a plan should use private and public local resources.

This plan of action is called a "Workable Program for Community Improvement."

Congress has provided that these Federal aids shall go only to communities which are actively carrying out a locally-adopted Workable Program which has been certified by the Department of Housing and Urban Development.

The original Workable Program is certified for one year. To remain eligible for the Federal aids it must be recertified annually by the Department. This is based on a "Review of Progress" submitted each year by the community. The Review shows that it is taking effective action toward meeting its goals and objectives as established in the Workable Program. Recertification submissions are reviewed carefully to determine whether the community is making adequate progress toward its goals and objectives. Where reasonable, balanced progress is not being made, recertification is denied until corrective action is taken.

A Workable Program carries no direct Federal aid in itself. It is a prerequisite for the following Federal aids:

- Loans and grants for clearing, redeveloping, and rehabilitating slums and blighted areas,
- Grants for concentrated housing code enforcement projects and projects for the demolition of unsafe, dilapidated buildings.
- Section 220 Federal Housing Administration mortgage insurance for housing construction or improvement in urban renewal project areas,
- Section 221(d)(3) FHA mortgage insurance to provide rental housing for families of low and moderate income and those displaced by governmental action,
- Loans and grants to provide housing for families unable to afford standard private housing.

REQUIREMENTS OF A WORKABLE PROGRAM

The seven interrelated elements in a Workable Program represent accepted principles of good municipal management. They are:

1. CODES AND ORDINANCES.

If not already adopted, adequate codes and ordinances that provide sound standards for the construction and for the use of dwelling units must be put into effect within a year after the original Workable Program has been certified. The basic codes are building, plumbing, electrical, housing, and fire prevention.

2. COMPREHENSIVE COMMUNITY PLAN.

The community, working through its planning agency and assisted by technical experts, assesses its physical resources. Then it develops a plan and a program for providing the kind of environment needed for improvement, growth, and development.

3. NEIGHBORHOOD ANALYSES.

This is an extension of the planning process for each residential neighborhood, as well as for commercial and industrial areas. It is an examination of its problems, physical resources, environmental conditions, and decisions concerning the part each neighborhood should play in the total community program. It includes a schedule for doing what must be done so that it can play its proper role.

4. ADMINISTRATIVE ORGANIZATION.

Normally, a local government provides the services the people need or request. Under its Workable Program the community establishes goals which require the coordinated and positive use of virtually all of its administrative resources to reach those objectives. Accordingly, it checks its existing structure and makes the adjustments needed for effective action. At the same time, responsibility for program coordination is fixed. Provision is also made for adequate personnel planning, code enforcement and other necessary service and operating functions.

5. FINANCING.

The costs of the Workable Program need not be heavy. Care must be used in planning and budgeting for the most efficient use of current personnel and public improvement expenditures and any additional requirements for planning, code compliance and public improvements.

6. HOUSING FOR DISPLACED FAMILIES.

As the Workable Program advances, families will be displaced from their homes through slum elimination, code enforcement, public improvements or other governmental actions. The community has a clear responsibility and an opportunity to use its public and private resources so that displaced families are given a chance to secure good housing in a suitable living environment.

7. CITIZEN PARTICIPATION.

Citizen participation is the keynote of community's Workable Program. Citizens, through an officially designated citizens' advisory committee can contribute by informing themselves of goals and progress. They can assist in formulating programs and goals and serving as the medium for bringing private resources into the Program. A subcommittee or special committee on minority group housing is required in any community in which all housing resources public or private, are not available on a basis of full equality to minority group families.

PREPARATION OF THE WORKABLE PROGRAM

Additional informational materials, including individual Program Guides on each of the seven Program elements, are available from HUD Regional Offices.

An Urban Renewal Service is also available, upon request to the appropriate Regional

Office, to give technical assistance to a community in the preparation and development of its Workable Program.

A Workable Program for Community Improvement submission and the Reports of Progress are prepared under the direction of a local official designated by the executive head of the community, on forms that are available in the HUD Regional Offices shown below.

LOANS FOR SENIOR CITIZENS HOUSING

How nonprofit corporations can obtain Federal assistance in financing housing for elderly or handicapped persons of moderate income

September 1966 HUD IP-8

"A basic goal of an enlightened society must be to provide opportunities which enable older people to keep and strengthen their independence and dignity. For too many Americans, the later years still mean loneliness, idleness, lack of purpose and meaning. Today we have the tools to change this. We have the power to enrich the lives of older Americans and to benefit from their skills, their wisdom and their experience."

President LYNDON B. JOHNSON

The elderly in our Nation are a fast-growing group, largely because medical science is doing a better job of prolonging life. Yet longer life creates new and special needs. One of these is adequate housing for our older citizens at prices they can afford.

The Department of Housing and Urban Development administers four programs for housing for the elderly. These programs differ in terms of financing, sponsorship, and the income level of those who will live in the housing. They have, however, a single purpose: to help provide good housing adapted to the physical, financial, and psychological needs of elderly people.

One of these programs is the Senior Citizens Housing Loan Program. This program offers long-term, low-interest direct loans to private, nonprofit corporations to help provide suitable rental housing for the elderly or handicapped people of moderate income--those with incomes too high for public housing but too low for the private housing market.

The direct loan program supplements the program of mortgage insurance on loans made by private lenders for housing the elderly in a wider income range, and the program of annual contributions to local housing authorities for low-income housing for the elderly.*

*In addition, low-income senior citizens can be served under the direct loan program through an experimental program of rent supplements authorized in the Housing and Urban Development Act of 1965. Under the rent-supplement program, payments may be made to the housing owners on behalf of qualified low-income occupants, the payments generally to be equal to the difference between 25 percent of the occupants' income and the fair market rents of the units occupied.

WHAT KIND OF PROJECT IS ELIGIBLE?

Loans will be made only for housekeeping-type projects, with each living unit required to have kitchen facilities and a complete bathroom. Projects may also include central dining, recreational, and social facilities. Both new buildings and old ones capable of being rehabilitated may be used. Only those projects designed to house occupants mentally and physically able to take care of themselves will be considered as eligible.

Loans will not be made for nursing homes, special care facilities, or projects based on life care plans involving founders' fees and complete care as part of the project service to residents.

WHO IS ELIGIBLE FOR A LOAN?

Loans may be made to private, nonprofit corporations, consumer cooperatives, and certain public agencies and bodies, including corporations formed by churches, labor unions, fraternal and civic organizations, and professional associations providing housing for the elderly. Each applicant group must demonstrate that it has an assured life covering the term of the loan requested.

HOW MUCH OF THE PROJECT COST WILL THE LOAN COVER?

The loan may cover the total development cost, including cost of the land and necessary site improvements, cost of construction, fixed equipment, ranges, refrigerators, and laundry equipment, and architectural, legal, advisory, and other fees. Temporary financing during construction may be obtained from the Federal Government if needed.

WHAT ARE THE TERMS OF THE LOAN?

Loans are being made at 3 percent interest for periods of up to 50 years.

HOW OLD MUST A PERSON BE TO QUALIFY?

This program is for persons who are at least 62 years old or are handicapped. In the case of families, the husband or wife

must be at least 62 or handicapped. A younger person, not a member of the family, may live with an elderly or handicapped person or family if it is necessary to provide physical care or economic support.

ARE THERE INCOME LIMITS FOR OCCUPANCY ELIGIBILITY?

Yes. Occupancy is limited to those whose incomes at admission do not exceed limits established by the Secretary of Housing and Urban Development as applicable to the area where the project is located. Specific income limits are established for individual communities within national limits of $4,000 for single persons and $4,800 for two-person families.

WHAT RENTS SHOULD BE CHARGED?

Although rental income must be sufficient to repay loans and other expenses, the rents must be held within the range that older people of moderate income can pay. Every effort should be made to keep rents low without sacrificing good design, good construction, or needed facilities. Rent schedules must be approved by HUD.

WHO DESIGNS AND PLANS THE PROJECT?

The applicant and its architect design and prepare plans, specifications, and project cost estimates, which must be submitted to HUD for review and approval. Elaborate or extravagant design is prohibited, and construction costs must be kept as low as possible.

Construction contracts must be awarded on the basis of competitive bidding to the lowest responsible bidder, and prevailing wages, as determined by the Department of Labor, must be paid.

ARE ANY EQUAL OPPORTUNITY REQUIREMENTS INVOLVED?

Yes. Under the loan agreement between the applicant and the Federal Government, no person may be denied admission as a tenant because of race, creed, color, or national origin. Discrimination on these same bases is prohibited in the employment of project construction workmen.

WHAT ARE THE OTHER REQUIREMENTS?

1. Each applicant must demonstrate that there is a community need for the project and an effective demand for housing at the proposed rentals. These needs may be supported by analysis of census data, by evidence of interest on the part of elderly prospective tenants, or by studies of other housing in the locality, including rental ranges and rates of occupancy.

2. Officers, members of the board of trustees or directors, members of the corporation, and the authorized representative of the applicant must certify that they have no financial interest in any aspect of the project.

3. The applicant must have enough money to pay costs incident to preparing for management and operation of the project and the cost of movable equipment and furnishings, and must deposit 25 percent of the estimated first year's operating and maintenance expense. Part of the deposit may be waived if firm rental commitments have been obtained for certain percentages of the rental units, and with 75 percent or more firmly committed the deposit may be completely waived.

WHAT SHOULD THE APPLICANT DO FIRST?

Get in touch with the Regional Administrator in the appropriate HUD Regional Office. These offices and States under their jurisdictions are listed below. Detailed information, advice, and application forms are available at all of these offices, along with any assistance the applicant may need in filing for a loan.

2 September 1966

Mr. C. L. Fair
Director of Administration
Dixiadis Associates, Inc.
1058 Thomas Jefferson Street, N.W.
Washington, D. C. 20007

Re: C-USA-W 8835

Dear Mr. Fair:

Thank you very much for your letter of 29 August 1966. Mr. Paul Anthony and I are holding open the 18th and 19th October for our meeting in Washington and await your further advise. Either date is satisfactory to me; however, I have a slight preference for the 18th so that if you and I need to get our heads together on some further detailed projections we could possibly do that on the 19th.

Enclosed herewith is a copy of my tentative proposal to Mr. Anthony. My problem essentially was in compressing my thoughts into a readable memorandum when there was so much that needed to be said.

I would like to emphasize that what I would like to evaluate in the October discussion is what might be the budget and time required for a comprehensive study and then see what sort of a start we could make on our present limited funds looking forward to supplimentary potential funding. As you can see, I am convinced that a worthwhile impact can only be obtained by a worthwhile study.

If there are any questions I would be glad to have you call me collect (404) 522-8764.

Looking forward to hearing from you and hoping we may work together, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Smith:

Thank you very much for your letter of August 19. Please forgive the delay in replying as I just returned from a trip to Africa. Although I am extremely interested in the operations of our cooperative housing organization in the U.S., I am primarily concerned with our International Program and therefore I am not fully conversant with our domestic activities. I am, therefore, forwarding your inquiry to Mr. Roger Willcox, President of FCH Co., so that he may fully explain to you the scope, objectives and activities of our U.S. program.

We are placing you on our mailing list to receive our periodic publications as well as the special publications which we may issue.

Sincerely,

J. David McVoy

J. David McVoy
Director of International Programs

cc: Mr. Roger Willcox

Dear Mr McVoy:
Thank you very much for your letter of September 2, 1966. I shall look forward to hearing from Mr. Willcox and also receiving your publications. Actually I believe what you would be doing in the International Program

particularly in South America could be more applicable to the Rural South than the Domestic program. Thanking you again,

Ian,

Sydney

6 September 1966

Mrs. Benjamin M. Gimarc
1520 Senate Street
Apt. 10-A
Columbia, South Carolina 29201

Dear Mrs. Gimarc:

Just to keep you posted, your paper has been turned over to Bob Anderson and Marge Manderson to get ready for the printers. What was the purpose of the attached? Please write Bob returning the copy with your expalantio.

Please note Mrs. Paschall's letter of 24 August to Paul. Could we get you to criticise and improve this in light of your leaflet? Aren't there some succinct illustrations which would be helpful on page 6? A better explanation of methods used for exploition on page 10? Add "or selling" on page 11?

When I get back October 12th I will write you regarding book reviews and quotations.

Sorry we were so tied up with Anna Jane's problems we didn't get to see you and Benjamin again!

Sincerely,

Moreland Griffith Smith, FAIA
Director

6 September 1966

The Rev. Theophil D. Krehel
Assistant Director
Nonprofit Housing
Urban America, Inc.
2 West 46th Street
New York, New York 10036

Dear Fr. Krehel:

Thank you so much for your letter of September 2, 1966. It was good seeing you in Atlanta as well as Princeton. I also hope the Atlanta Housing Council will get underway. I will be out of town from the middle of this month to the middle of next month. When I get back I will check with Cecil Alexander and find outwwhat status and advise you.

Thank you also for the New York Times release on CCAP. I knew Mr. Blackwell had gone with them, but I did not know of the Stern Foundation grant.

As you probably know the Southern Regional Council, Inc. covers eleven southern states, therefore, if you have any activities within this whole area I would appreciate being kept posted.

Sincerely yours,

Moreland Griffith Smith, FAIA

(copy sent to E Paschall

TO: MORELAND GRIFFITH SMITH, FAIA

FROM: JERRY DELL GIMARC, XTRZ

SUBJECT: E. PASCHALL'S PAMPHLET

P. 3: The introduction seems very labored to me...This "battlegrounds of obscure countries with odd names" for instance. I mean, isn't it a little hard to tie that in with the question at the top of the page, "What would happen to my local school?" This should be changed to be more direct, less ambiguous. I've suggested: "For some of us, these changes still seem remote, something we read about in the morning paper or weekly news magazine."

Pp. 4-5: Besides the pleasantries which might make "my neighborhood" appeal to members of minority groups another point to emphasize, it seems to me, is that the confines of "their neighborhood" are artifically static. This in turn inflates the price of property in these boundaries. The minority family simply wants a reasonable return for their housing dollar, something they can't get in their artifically limited market. You will note I've proposed some other changes in the text. Do you agree that the surgeon - day laborer analogy is better than surgeon - car salesman? As it is written it seems to imply that the Negro surgeon might have little in common with a white car salesman - into whose neighborhood the surgeon may be moving.

Pp. 6-7: How about adding at caret: "These panic profiteers make their money by scaring homeowners with tales of falling property values, then offer to buy houses (under appraised value, of course). Having bought, for example, an $18,000 house for $12,000, the profiteer resells it for $21,000 to a Negro who is desperate for housing. In the space of a few months the profiteer has made a profit of $9,000 through his manipulation of some people's fears and others needs." It might be well if we could document a case. Aren't there some cases and prices with the Milwaukee (Wisconsin Industrial Commission) report?

On page 7 this brochure mentions the University of California Studies in Race and Housing. This is the Luigi Laurenti work (one volume of Studies) in which he took a number of cities and studied integrated neighborhoods along with control group all-white ones. Anyway, this was published in something like 1959! So while the pamphlet implies that the Studies are the latest work, the Laurenti is dated. I would check to see if NCDH has any references which are more recent. I know there is a man in Washington, D. C., who has done similar work recently for Washington. We have an off-print of some short blurb about it and also a clip (or xerox copy of a clip) from the Washington Post on this man's study. We wrote him requesting the full report, but I do not believe we got a reply. Can't remember his name, but it is in the alphabetical file somewhere. Sorry I can't be more specific. But this might be a good additional (an up-to-date) reference.

Pp. 8-9: This section on neighborhood deterioration should be more specific, something like: "A person's race does not determine how well he will take care of his property. This depends on his pride and sense of responsibility - attitudes which will extend to the entire neighborhood."

P. 10: I suggest that the buy low-sell high go in at pp. 6-7. I've changed that last sentende to read: "...it is not the wishes of the group itself, but the results of restrictive and exploitive practices in the sale and rental of real estate combined with discri mination in employment which tends to relegate minority group people to low income jobs. Thus, housing mobility and selectivity are severely limited for minority families."

P. 11: No, I don't think "or selling" should be added, because except in the few communities (and Atlanta is not one) where there are fair housing laws, the seller may discriminate. Perhaps you mean that restrictive covenants can't keep a person from selling to a member of a minority group, if the seller so desires? If that is what you mean then maybe the text should read: "...community of his choice nor can they prevent the owner's selling to a minority group buyer."

P. 15: Took out a phrase which seemed to weaken the statement too much to suit me...

P. 16: It might be well to point out (at caret) that one of the primary reasons many minority group families actually actively seek new housing is in order to have in another neighborhood the benefit of better schools with lower pupil-teacher ratio and to live in an area where other parents also care about education and their public schools.

The illustrations in this pamphlet, I might add, are horrid. It would be better without them. Also the physical construction of the thing is cumbersome. It is nice to see the title headings, but the second half pages are very difficult to read without pulling the whole pamphlet apart (as I seem to have done). I don't know whether it is worthwhile for SRC to reissue this. Perhaps they should buy copies of another group's pamphlet on this problem (Washington Neighbors Inc., Philadelphia Human Relations Commission, Philadelphia West Mt. Airy Neighbors ?). Other pamphlets I've seen by other groups have been better - at least, I remember them as being so now.

It was good to hear from you. I hope these comments are what you wanted. You and Mrs. Smith have a pleasant holiday!

Terry Bell

for Interracial Justice
8017 Palm Street
New Orleans, Louisiana 70125

Dear Mr. Sisson:

I talked to Mr. Smith over the phone a few days ago. He is interested in attending your conference in Houston on October 12th. But he wants to know more in detail about what you'd like him to do in the workshop.

I think the best thing to do, to save confusion, would be for you to call Mr. Smith at the Kedron Valley Inn, South Woodstock, Vermont.

I had an enjoyable chat with Jim McGuire on Tuesday.

Sincerely yours,

September 14, 1966

Miss Susan Bresler
Southern Regional Council
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Miss Bresler:

Enclosed is a copy of the letter to Mr. Smith relative to the Houston meeting.

As I discussed with you on the phone today, we would like for you or Mr. Smith to give a fifteen-minute statement of the opportunities to promote low cost housing by church groups, and also of the kinds of efforts being made to secure open occupancy of housing in the South.

There will be several resource people from Houston with you; we think that about 25 priests will attend this seminar session.

Jim McGuire, my associate, will be in your office a little after midmorning on the 20th and would like to sit with you for an hour to discuss SRC programs and plans. He will be attending the Interagency meeting which starts at noon. If you are unable to give him this appointment, will you kindly call me.

Sincerely yours,

Jack Sisson

August 19, 1966

Mr. Moreland Smith
Southern Regional Counsil
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Smith:

We have just finished the final planning of a clergy conference for 300 priests of the Diocese of Galveston-Houston, to be held at the Sheraton-Lincoln Hotel in Houston on October 12 and 13.

On Thursday, October 13, there will be a workshop on Neighborhood Stabilization, and I would like to invite you to be one of the resource people in this workshop which will last about two and a half hours, from ten o'clock in the morning. The opening address that morning should be extremely interesting; it will be made by Callan Graham, director of the Texas Catholic Conference, on the subject, The Practical Politics of Social Action.

We are not in a position to offer transportation or expenses, but hoped you might want to arrange your schedule for a Houston visit so as to be able to participate in this conference. You are probably familiar with the work of the VISTA volunteers being carried on under the direction of Miss Nancy Pollard out of the Houston Counsil on Human Relations office, and undoubtedly plan to get down that way some time. We could also use some printed material relative to the topic of neighborhood stabilization, such as the piece you did for SRC.

Perhaps we can talk about the whole program when I return to the office on August 30.

Sincerely yours,

John P. Sisson

Rev. Joseph A. Fiorenza
Sacred Heart Co-Cathedral
1111 Pierce Avenue
Houston, Texas 77002

Dear Father:

Moreland Smith of Southern Regional Council needs a reservation at the Sheraton-Lincoln for the evening of the 12th. He has agreed to be our primary resource person in the workshop on Neighborhood Stabilization on the 13th.

He suggested that it would be helpful to have someone from the government who would be familiar with 221(d)3 housing provisions. I would assume that Gladstein might know someone in the appropriate government office there in Houston; otherwise we can probably get someone from the Dallas HUD office to come down and be with us.

Sincerely yours in Christ,

Jack

September 29, 1966

Mr. Moreland Smith
c/o Kedron Valley Inn
South Woodstock, Vermont 05071

Dear Moreland:

We are very glad that you will be in the workshop entitled "Neighborhood Stabilization" to give a 15-minute summary of the various things that churchmen can do to promote housing betterment, enforcement of codes, help organize and finance new housing or rehabilitation of housing, and so on.

We will secure someone from a federal office who can answer questions on the details of 221(d)3 housing.

Dr. Wilbur of the Houston Council on Human Relations will be one of the local resource people in the meeting and the seminar, which will probably be chaired by my associate, Jim McGuire. After the presentation, the discussion will be informal. We hope to get as many as 25 to attend this workshop, including some from all over Texas as well as from Louisiana, Arkansas and Mississippi. Miss Nancy Pollard, who is in charge of the VISTA volunteers in Houston, will also be a resource person.

If you have materials which you would like to pass out to the participants, that would be good.

In talking about this originally with Paul Anthony I had made it clear that the diocese does not have enough money to cover travel and expenses, but would be glad to help make any arrangements locally which would help make your visit there more fruitful. Doubtless you will want to spend some time with members of SRC's affiliate, the Houston Council.

We will look forward to seeing you on the evening of the 12th, or for sure on the morning of the 13th at the Sheraton-Lincoln.

Sincerely yours,

Jack

Memphis, Tennessee

Dear Mr. Jones:

Mr. Robert Anderson told me of your interest in the constructive involvement of the church in planning and housing and your desire for further information. I am terribly sorry to have missed seeing you when you were in the office here and wish that I could have discussed this with you in person. I am a little at a loss to know what to write about or what to send you without some clarification. Would you mind writing me in detail your specific interests? I would be delighted to hear from you.

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:jb

11 October 1966

Mr. C. L. Fair
Director of Administration
Doxiadis Associates, Inc.
1058 Thomas Jefferson Street, N.W.
Washington, D. C. 20007

Dear Mr. Fair:

Needless to say I was tremendously dissappointed to learn upon my return to the office that our appointment with you and Dr. Doxiadis on the 18th and 19th had been called off! We shall look forward to having a new time set and trust that it will not be very far off.

Is there anything further I should get together before our meeting? With all of the best wishes, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:jb

11 October 1966

Mrs. Benjamin M. Gimarc
1520 Senate
Apartment 18A
Columbia, South Carolina 29201

Dear Mrs. Gimarc:

Thanks for your memo of 12 September 1966 which arrived while I was hibernating in Vermont. Just returned this morning and am leaving this evening for Houston. I will not have a chance to read your memo until I return from Houston.

You are heavily missed at SRC. Lunch today with Mrs. Bartley, Miss Browning, and Mrs. Morrison brought your name up many times. Wish you could have been here!

Will answer your neno more specifically, upon my return.

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:jb

Jerry Dell: We needed you in Georgia lately; those new election supervisors let us all vote only once, and it wasn't enough to turn the tide. Georgia politics and SRC continue to be a summer festival way into October.

It's almost 5 o'c. and I wouldn't dare work late, so I'll summarize the concensus: YOU ARE MISSED MUCHLY. Even the Downward and Backward Club has taken a plunge upward since you left. J. Browning.

October 15, 1966

Father Daniel A. McGinn
2312 Rice Boulevard
Houston, Texas

Dear Father McGinn:

It was good to meet you at the Houston Clergy Confeeence on "The Church and the Human Rights Struggle," and the Neighborhood Stabilization Workshop. I had wanted to discuss further with you individually Mr. Callan Graham's speech on politics. I don't believe <u>even</u> in laymen compromising their moral positions, <u>much less</u> the clergy. However, we both do exist with politicians and I do think Mr. Graham's knowledgeable analysis of the politician and his commitments to:

1. his constituents
2. himself

can be extremely helpful to us in dealing with him.

Further, I believe our Christian understanding and love rather than dictation to can assist him in operating more with a social or moral conscience. Our understanding of him will enable him to better understand us.

I am enclosing herewith a copy of the requested "Neighborhood Stabilization: A Program." If you desire further copies, please let us know.

With regard to 221(d)3 housing, I suggest you write direct to:

Department of Housing and Urban
Development
Region V
Federal Center
300 West Vickery Boulevard
Fort Worth, Texas 76104

They can furnish you with detailed information.

Also, write for the booklet, "Patterns for Action: The Church and Not-For-Profit Housing."

Local Development Services
Division
Urban America, Inc.
2 West 46th Street
New York, New York 10036

This should give some helpful suggestions.

Writing direct for these should save time on this. However, after you have this information in hand if there are further quggtions, please let me know.

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

Mr. John P. Sisson
National Catholic Conference for
Interracial Justice
8017 Palm Street
New Orleans, Louisiana 70125

Dear Jack:

It was good to see you in Houston, and I enjoyed taking a small part in your program. My only hope is that it was something along the line you wanted! I would be interested in your criticisms or suggestions so that I might be able to do better next time.

I shall look forward to receiving a copy of Msgr. Josiah Chatham's talk, "The Theology of Race Relations" as well as Mr. Callan Graham's talk on, "Practical Politics of Social Action." To me these were the highlights of a splendid program! You are to be congratulated on what you put together. Hoping to see you soon, I am

Sincerely,

Moreland Griffith Smith, Director
Urban Planning Project

MGS/mmj

October 17, 1966

The Honorable Richard T. Rives
902 Park Avenue
Montgomery, Alabama

My dear Judge Rives:

It was good to see you and Mrs. Rives at John's installation. If you are ever in Atlanta please stay with Marjorie and me -- we have "oodles" of room.

On our Vermont vacation last month we met a college chum of your daughter's, Betty Hammett of New York City.

The Southern Regional Council has started a new three-year project on Penal Reform and Criminal Rehabilitation headed by John O. Boone, for whom I have a high regard! John was associated with the Federal penal system. I believe he held the highest position ever attained by a Negro.

Enclosed herewith are his first releases. I feel you would be interested, and I would appreciate having your frank assessment, if you can spare the time!

Would you object to my proposing your name as a possible member of this Advisory Committee?

Looking forward to hearing from you, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

October 20, 1966

Mr. Moreland G. Smith, Director
Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Moreland:

I have your fine note of October 17. Jessie and I also enjoyed seeing you when John was installed as Judge. We shall certainly get in touch with you and your good wife whenever we are in Atlanta.

I read the material on the project on Penal Reform and Criminal Rehabilitation. It certainly is a timely topic and a most worthwhile undertaking. Of course, like all other similar projects, its success or failure will depend on the personnel of the committee. From your estimate of Mr. Boone, I have high hopes of its success.

As to your suggestion that you might propose my name as a possible member of the advisory committee, I would ask that you not do so; not because of any lack of interest, but because it would be in conflict with my duties as a Judge. As you probably know, though retired, I am continuing right on in active hearing of cases. One of the cases, a three-judge district court case, is set for hearing November 29, involving the desegregation vel non of the prisons and jails in Alabama. Incidentally, I notice that Mr. Boone's letter states that the Human Relations Council will receive copies of Ferguson v. Buchanan, which resulted in the desegregation of the Dade

County Jail. That case has not yet been called to our attention. I wonder if you would ask Mr. Boone either to let me have a copy of the opinion or to advise me where it is reported.

John is already busily engaged in his duties as Circuit Judge. He has sat on some 40 cases to date, and next week is scheduled to sit with Walter Gewin and myself in Montgomery to hear some 20 more. It will be unprecedented to have three Circuit Judges from Alabama sitting together.

With best wishes, I remain,

Sincerely yours,

Dick

October 28, 1966

Mr. Thomas J. Reddick, Jr.
1400 N. W. 6th Street
Fort Lauderdale, Florida

Dear Mr. Reddick:

It was good to see you again on last Wednesday. I would like to commend you on your effective presentation of the By-Racial Committee's resolution. I am glad you were able to contact enough people to have it presented!

The unity shown by the Negro community was excellent, and I hope that it portends the continued pulling together of the entire Negro citizenry in a total political impact at the ballot box. Only this can bring the Negro to the front of Democracy, and it can be far more reaching in the long range for you and every American Negro.

My best wishes for your continued success!

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

October 28, 1966

Father Theodore J. Jones
St. Christopher's Episcopal Church
318 N. W. 6th Avenue
Fort Lauderdale, Florida

Dear Father Jones:

It was good to be able to work with you on the Urban Renewal Project. I do hope that the Commission will approve the project! If they do, at that time I hope the Negro community can unify all of the organizations represented Wednesday into one petition; stating succinctly the reasons for preferring federal funding, i.e., using all available funds -- local and federal -- for a better job for a better community, etc., etc. If you would care to discuss the wording with me as a matter of strategy, I would be delighted to have you review the draft over the telephone.

Hoping to have good news, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj
cc: The Reverend Samuel W. George

October 28, 1966

Mr. Charles H. Fletcher
Burdine's Department Store
115 South Andrews Avenue
Fort Lauderdale, Florida

Dear Mr. Fletcher:

It was good to see you again in your office Thursday morning. If I may, I would like to commend you again on what you have done in leading the city forward with unity in assessing blight and vitalizing Urban Renewal as a tool for building for the future. I am sorry that your influence will no longer be felt as a board member on the Urban Renewal Agency. However, perhaps in the Economic Study and Planning Study by Victor Gruen you will be even more valuable in the economic affect on the trade area through good planning.

I appreciate your offer to keep me posted on Fort Lauderdale's progress, and I shall look forward to being placed on the mailing list for progress reports.

Hoping to see you again, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

Established 1845 SCIENTIFIC AMERICAN October 1966 Volume 215 Number 4

The Culture of Poverty

Does membership in a group that has been poor for generations constitute belonging to a separate culture? A study of Puerto Ricans in both Puerto Rico and New York indicates that it does

by Oscar Lewis

Poverty and the so-called war against it provide a principal theme for the domestic program of the present Administration. In the midst of a population that enjoys unexampled material well-being—with the average annual family income exceeding $7,000—it is officially acknowledged that some 18 million families, numbering more than 50 million individuals, live below the $3,000 "poverty line." Toward the improvement of the lot of these people some $1,600 million of Federal funds are directly allocated through the Office of Economic Opportunity, and many hundreds of millions of additional dollars flow indirectly through expanded Federal expenditures in the fields of health, education, welfare and urban affairs.

Along with the increase in activity on behalf of the poor indicated by these figures there has come a parallel expansion of publication in the social sciences on the subject of poverty. The new writings advance the same two opposed evaluations of the poor that are to be found in literature, in proverbs and in popular sayings throughout recorded history. Just as the poor have been pronounced blessed, virtuous, upright, serene, independent, honest, kind and happy, so contemporary students stress their great and neglected capacity for self-help, leadership and community organization. Conversely, as the poor have been characterized as shiftless, mean, sordid, violent, evil and criminal, so other students point to the irreversibly destructive effects of poverty on individual character and emphasize the corresponding need to keep guidance and control of poverty projects in the hands of duly constituted authorities. This clash of viewpoints reflects in part the infighting for political control of the program between Federal and local officials. The confusion results also from the tendency to focus study and attention on the personality of the individual victim of poverty rather than on the slum community and family and from the consequent failure to distinguish between poverty and what I have called the culture of poverty.

The phrase is a catchy one and is used and misused with some frequency in the current literature. In my writings it is the label for a specific conceptual model that describes in positive terms a subculture of Western society with its own structure and rationale, a way of life handed on from generation to generation along family lines. The culture of poverty is not just a matter of deprivation or disorganization, a term signifying the absence of something. It is a culture in the traditional anthropological sense in that it provides human beings with a design for living, with a ready-made set of solutions for human problems, and so serves a significant adaptive function. This style of life transcends national boundaries and regional and rural-urban differences within nations. Wherever it occurs, its practitioners exhibit remarkable similarity in the structure of their families, in interpersonal relations, in spending habits, in their value systems and in their orientation in time.

Not nearly enough is known about this important complex of human behavior. My own concept of it has evolved as my work has progressed and remains subject to amendment by my own further work and that of others. The scarcity of literature on the culture of poverty is a measure of the gap in communication that exists between the very poor and the middle-class personnel—social scientists, social workers, teachers, physicians, priests and others—who bear the major responsibility for carrying out the antipoverty programs. Much of the behavior accepted in the culture of poverty goes counter to cherished ideals of the larger society. In writing about "multiproblem" families social scientists thus often stress their instability, their lack of order, direction and organization. Yet, as I have observed them, their behavior seems clearly patterned and reasonably predictable. I am more often struck by the inexorable repetitiousness and the iron entrenchment of their lifeways.

The concept of the culture of poverty may help to correct misapprehensions that have ascribed some behavior patterns of ethnic, national or regional groups as distinctive characteristics. For

example, a high incidence of common-law marriage and of households headed by women has been thought to be distinctive of Negro family life in this country and has been attributed to the Negro's historical experience of slavery. In actuality it turns out that such households express essential traits of the culture of poverty and are found among diverse peoples in many parts of the world and among peoples that have had no history of slavery. Although it is now possible to assert such generalizations, there is still much to be learned about this difficult and affecting subject. The absence of intensive anthropological studies of poor families in a wide variety of national contexts—particularly the lack of such studies in socialist countries—remains a serious handicap to the formulation of dependable cross-cultural constants of the culture of poverty.

My studies of poverty and family life have centered largely in Mexico. On occasion some of my Mexican friends have suggested delicately that I turn to a study of poverty in my own country. As a first step in this direction I am currently engaged in a study of Puerto Rican families. Over the past three years my staff and I have been assembling data on 100 representative families in four slums of Greater San Juan and some 50 families of their relatives in New York City.

Our methods combine the traditional techniques of sociology, anthropology and psychology. This includes a battery of 19 questionnaires, the administration of which requires 12 hours per informant. They cover the residence and employment history of each adult; family relations; income and expenditure; complete inventory of household and personal possessions; friendship patterns, particularly the *compadrazgo*, or godparent, relationship that serves as a kind of informal social security for the children of these families and establishes special obligations among the adults; recreational patterns; health and medical history; politics; religion; world view and "cosmopolitanism." Open-end interviews and psychological tests (such as the thematic apperception test, the Rorschach test and the sentence-completion test) are administered to a sampling of this population.

All this work serves to establish the context for close-range study of a selected few families. Because the family is a small social system, it lends itself to

WATERFRONT SHACKS of a Puerto Rican slum provide a sharp contrast to the modern construction that characterizes the prosperous parts of San Juan's Santurce district (*rear*). The author has found that residents in clearly delineated slum neighborhoods such as this one often have a community sense similar to that characteristic of villagers in rural areas. Such *esprit de corps* is

the holistic approach of anthropology. Whole-family studies bridge the gap between the conceptual extremes of the culture at one pole and of the individual at the other, making possible observation of both culture and personality as they are interrelated in real life. In a large metropolis such as San Juan or New York the family is the natural unit of study.

Ideally our objective is the naturalistic observation of the life of "our" families, with a minimum of intervention. Such intensive study, however, necessarily involves the establishment of deep personal ties. My assistants include two Mexicans whose families I had studied; their "Mexican's-eye view" of the Puerto Rican slum has helped to point up the similarities and differences between the Mexican and Puerto Rican subcultures. We have spent many hours attending family parties, wakes and baptisms, responding to emergency calls, taking people to the hospital, getting them out of jail, filling out applications for them, hunting apartments with them, helping them to get jobs or to get on relief. With each member of these families we conduct tape-recorded interviews, taking down their life stories and their answers to questions on a wide variety of topics. For the ordering of our material we undertake to reconstruct, by close interrogation, the history of a week or more of consecutive days in the lives of each family, and we observe and record complete days as they unfold. The first volume to issue from this study is to be published next month under the title of *La Vida, a Puerto Rican Family in the Culture of Poverty—San Juan and New York* (Random House).

uncommon among participants in the culture of poverty; although gregarious, they seldom manage to become well organized.

There are many poor people in the world. Indeed, the poverty of the two-thirds of the world's population who live in the underdeveloped countries has been rightly called "the problem of problems." But not all of them by any means live in the culture of poverty. For this way of life to come into being and flourish it seems clear that certain preconditions must be met.

The setting is a cash economy, with wage labor and production for profit and with a persistently high rate of unemployment and underemployment, at low wages, for unskilled labor. The society fails to provide social, political and economic organization, on either a voluntary basis or by government imposition, for the low-income population. There is a bilateral kinship system centered on the nuclear progenitive family, as distinguished from the unilateral extended kinship system of lineage and clan. The dominant class asserts a set of values that prizes thrift and the accumulation of wealth and property, stresses the possibility of upward mobility and explains low economic status as the result of individual personal inadequacy and inferiority.

Where these conditions prevail the way of life that develops among some of the poor is the culture of poverty. That is why I have described it as a subculture of the Western social order. It is both an adaptation and a reaction of the poor to their marginal position in a class-stratified, highly individuated, capitalistic society. It represents an effort to cope with feelings of hopelessness and despair that arise from the realization by the members of the marginal communities in these societies of the improbability of their achieving success in terms of the prevailing values and goals. Many of the traits of the culture of poverty can be viewed as local, spontaneous attempts to meet needs not served in the case of the poor by the institutions and agencies of the larger society because the poor are not eligible for such service, cannot afford it or are ignorant and suspicious.

Once the culture of poverty has come into existence it tends to perpetuate itself. By the time slum children are six or seven they have usually absorbed the basic attitudes and values of their subculture. Thereafter they are psychologically unready to take full advantage of changing conditions or improving opportunities that may develop in their lifetime.

My studies have identified some 70 traits that characterize the culture of poverty. The principal ones may be described in four dimensions of the system: the relationship between the subculture and the larger society; the nature of the slum community; the nature of the family, and the attitudes, values and character structure of the individual.

The disengagement, the nonintegration, of the poor with respect to the major institutions of society is a crucial element in the culture of poverty. It reflects the combined effect of a variety of factors including poverty, to begin with, but also segregation and discrimination, fear, suspicion and apathy and the development of alternative institutions and procedures in the slum community. The people do not belong to labor unions or political parties and make little use of banks, hospitals, department stores or museums. Such involvement as there is in the institutions of the larger society—in the jails, the army and the public welfare system—does little to suppress the traits of the culture of poverty. A relief system that barely keeps people alive perpetuates rather than eliminates poverty and the pervading sense of hopelessness.

People in a culture of poverty produce little wealth and receive little in return. Chronic unemployment and underemployment, low wages, lack of property, lack of savings, absence of food reserves in the home and chronic shortage of cash imprison the family and the individual in a vicious circle. Thus for lack of cash the slum householder makes frequent purchases of

SAN JUAN SLUM AREA in the Santurce district sprawls along the edge of the tidal inlet (*top*) that connects the city's harbor with San José Lake. Rickety buildings have been erected on stilts beyond the high-water line and narrow alleyways crisscross the district. Compared to this area, many of New York's worst slum areas, such as the ones that appear below, are nearly middle-class.

EL BARRIO, the original nuclear Latin-American slum area of Manhattan, occupies the greater part of this aerial photograph. Lying roughly between Central Park and the East River north of 99th Street and south of 125th Street in Manhattan, this is the area that received the pioneer Puerto Rican immigrants to New York in the early years of this century. Photograph was made in 1961.

small quantities of food at higher prices. The slum economy turns inward; it shows a high incidence of pawning of personal goods, borrowing at usurious rates of interest, informal credit arrangements among neighbors, use of secondhand clothing and furniture.

There is awareness of middle-class values. People talk about them and even claim some of them as their own. On the whole, however, they do not live by them. They will declare that marriage by law, by the church or by both is the ideal form of marriage, but few will marry. For men who have no steady jobs, no property and no prospect of wealth to pass on to their children, who live in the present without expectations of the future, who want to avoid the expense and legal difficulties involved in marriage and divorce, a free union or consensual marriage makes good sense. The women, for their part, will turn down offers of marriage from men who are likely to be immature, punishing and generally unreliable. They feel that a consensual union gives them some of the freedom and flexibility men have. By not giving the fathers of their children legal status as husbands, the women have a stronger claim on the children. They also maintain exclusive rights to their own property.

Along with disengagement from the larger society, there is a hostility to the basic institutions of what are regarded as the dominant classes. There is hatred of the police, mistrust of government and of those in high positions and a cynicism that extends to the church. The culture of poverty thus holds a certain potential for protest and for entrainment in political movements aimed against the existing order.

With its poor housing and overcrowding, the community of the culture of poverty is high in gregariousness, but it has a minimum of organization beyond the nuclear and extended family. Occasionally slum dwellers come together in temporary informal groupings; neighborhood gangs that cut across slum settlements represent a considerable advance beyond the zero point of the continuum I have in mind. It is the low level of organization that gives the culture of poverty its marginal and anomalous quality in our highly organized society. Most primitive peoples have achieved a higher degree of sociocultural organization than contemporary urban slum dwellers. This is not to say that there may not be a sense of community and *esprit de corps* in a slum neighborhood. In fact, where slums are isolated from their surroundings by enclosing walls or other physical barriers, where rents are low and residence is stable and where the population constitutes a distinct ethnic, racial or language group, the sense of community may approach that of a village. In Mexico City and San Juan such territoriality is engendered by the scarcity of low-cost housing outside of established slum areas. In South Africa it is actively enforced by the *apartheid* that confines rural migrants to prescribed locations.

The family in the culture of poverty does not cherish childhood as a specially prolonged and protected stage in the life cycle. Initiation into sex comes early. With the instability of consensual marriage the family tends to be mother-centered and tied more closely to the mother's extended family. The female head of the house is given to authoritarian rule. In spite of much verbal emphasis on family solidarity, sibling rivalry for the limited supply of goods and maternal affection is intense. There is little privacy.

The individual who grows up in this culture has a strong feeling of fatalism, helplessness, dependence and inferiority. These traits, so often remarked in the current literature as characteristic of the American Negro, I found equally strong in slum dwellers of Mexico City and San Juan, who are not segregated or discriminated against as a distinct ethnic or racial group. Other traits include a high incidence of weak ego structure, orality and confusion of sexual identification, all reflecting maternal deprivation; a strong present-time orientation with relatively little disposition to defer gratification and plan for the future, and a high tolerance for psychological pathology of all kinds. There is widespread belief in male superiority and among the men a strong preoccupation with *machismo*, their masculinity.

Provincial and local in outlook, with little sense of history, these people know only their own neighborhood and their own way of life. Usually they do not have the knowledge, the vision or the ideology to see the similarities between their troubles and those of their counterparts elsewhere in the world. They are not class-conscious, although they are sensitive indeed to symbols of status.

The distinction between poverty and the culture of poverty is basic to the model described here. There are numerous examples of poor people whose way of life I would not characterize as belonging to this subculture. Many primitive and preliterate peoples that have been studied by anthropologists suffer dire poverty attributable to low technology or thin resources or both. Yet even the simplest of these peoples have a high degree of social organization and a relatively integrated, satisfying and self-sufficient culture.

In India the destitute lower-caste peoples—such as the Chamars, the leatherworkers, and the Bhangis, the sweepers—remain integrated in the larger society and have their own panchayat institutions of self-government. Their panchayats and their extended unilateral kinship systems, or clans, cut across village lines, giving them a strong sense of identity and continuity. In my studies of these peoples I found no culture of poverty to go with their poverty.

The Jews of eastern Europe were a poor urban people, often confined to ghettos. Yet they did not have many traits of the culture of poverty. They had a tradition of literacy that placed great value on learning; they formed many voluntary associations and adhered with devotion to the central community organization around the rabbi, and they had a religion that taught them they were the chosen people.

I would cite also a fourth, somewhat speculative example of poverty dissociated from the culture of poverty. On the basis of limited direct observation in one country—Cuba—and from indirect evidence, I am inclined to believe the culture of poverty does not exist in socialist countries. In 1947 I undertook a study of a slum in Havana. Recently I had an opportunity to revisit the same slum and some of the same families. The physical aspect of the place had changed little, except for a beautiful new nursery school. The people were as poor as before, but I was impressed to find much less of the feelings of despair and apathy, so symptomatic of the culture of poverty in the urban slums of the U.S. The slum was now highly organized, with block committees, educational committees, party committees. The people had found a new sense of power and importance in a doctrine that glorified the lower class as the hope of humanity, and they were armed. I was told by one Cuban official that the Castro government had practically eliminated delinquency by giving arms to the delinquents!

Evidently the Castro regime—revising Marx and Engels—did not write off the so-called *lumpenproletariat* as an inherently reactionary and antirevolutionary

PUERTO RICAN BOYS in a Manhattan upper East Side neighborhood use the fenced-off yard of a deserted school as an impromptu playground. The culture of poverty does not cherish childhood as a protected and especially prolonged part of the life cycle. Sexual maturity is early, the male is accepted as a superior and men are strongly preoccupied with *machismo*, or masculinity.

force but rather found in them a revolutionary potential and utilized it. Frantz Fanon, in his book *The Wretched of the Earth*, makes a similar evaluation of their role in the Algerian revolution: "It is within this mass of humanity, this people of the shantytowns, at the core of the *lumpenproletariat*, that the rebellion will find its urban spearhead. For the *lumpenproletariat*, that horde of starving men, uprooted from their tribe and from their clan, constitutes one of the most spontaneous and most radically revolutionary forces of a colonized people."

It is true that I have found little revolutionary spirit or radical ideology among low-income Puerto Ricans. Most of the families I studied were politically conservative, about half of them favoring the Statehood Republican Party, which provides opposition on the right to the Popular Democratic Party that dominates the politics of the commonwealth. It seems to me, therefore, that disposition for protest among people living in the culture of poverty will vary considerably according to the national context and historical circumstances. In contrast to Algeria, the independence movement in Puerto Rico has found little popular support. In Mexico, where the cause of independence carried long ago, there is no longer any such movement to stir the dwellers in the new and old slums of the capital city.

Yet it would seem that any movement—be it religious, pacifist or revolutionary—that organizes and gives hope to the poor and effectively promotes a sense of solidarity with larger groups must effectively destroy the psychological and social core of the culture of poverty. In this connection, I suspect that the civil rights movement among American Negroes has of itself done more to improve their self-image and self-respect than such economic gains as it has won although, without doubt, the two kinds of progress are mutually reinforcing. In the culture of poverty of the American Negro the additional disadvantage of racial discrimination has generated a potential for revolutionary protest and organization that is absent in the slums of San Juan and Mexico City and, for that matter, among the poor whites in the South.

If it is true, as I suspect, that the culture of poverty flourishes and is endemic to the free-enterprise, pre-welfare-state stage of capitalism, then it is also endemic in colonial societies. The most likely candidates for the culture of poverty would be the people who come from the lower strata of a rapidly changing society and who are already partially alienated from it. Accordingly the subculture is likely to be found where imperial conquest has smashed the native social and economic structure and held the natives, perhaps for generations, in servile status, or where feudalism is yielding to capitalism in the later evolution of a colonial economy. Landless rural workers who migrate to the cities, as in Latin America, can be expected to fall into this way of life more readily than migrants from stable peasant villages with a well-organized traditional culture, as in India. It remains to be seen, however, whether the culture of poverty has not already begun to develop in the slums of Bombay and Calcutta. Compared with Latin America also, the strong corporate nature of many African tribal societies may tend to inhibit or delay the formation of a full-blown culture of poverty in the new towns and cities of that continent. In South Africa the institutionalization of repression and discrimination under *apartheid* may also have begun to promote an immunizing sense of identity and group consciousness among the African Negroes.

One must therefore keep the dynamic aspects of human institutions forward in observing and assessing the evidence for the presence, the waxing or the waning of this subculture. Measured on the dimension of relationship to the larger society, some slum dwellers may have a warmer identification with their national tradition even though they suffer deeper poverty than members of a similar community in another country. In Mexico City a high percentage of our respondents, including those with little or no formal schooling, knew of Cuauhtémoc,

MOTHER AND DAUGHTER stand together by the door of a run-down apartment building on upper Park Avenue. Because common-law marriage offers the female participant in the culture of poverty more protection of her property rights and surer custody of her children than formal marriage does, the mother is usually the head of the household and family ties are to her kin and not the father's.

Hidalgo, Father Morelos, Juárez, Díaz, Zapata, Carranza and Cárdenas. In San Juan the names of Rámon Power, José de Diego, Baldorioty de Castro, Rámon Betances, Nemesio Canales, Lloréns Torres rang no bell; a few could tell about the late Albizu Campos. For the lower-income Puerto Rican, however, history begins with Muñoz Rivera and ends with his son Muñoz Marín.

The national context can make a big difference in the play of the crucial traits of fatalism and hopelessness. Given the advanced technology, the high level of literacy, the all-pervasive reach of the media of mass communications and the relatively high aspirations of all sectors of the population, even the poorest and most marginal communities of the U.S. must aspire to a larger future than the slum dwellers of Ecuador and Peru, where the actual possibilities are more limited and where an authoritarian social order persists in city and country. Among the 50 million U.S. citizens now more or less officially certified as poor, I would guess that about 20 percent live in a culture of poverty. The largest numbers in this group are made up of Negroes, Puerto Ricans, Mexicans, American Indians and Southern poor whites. In these figures there is some reassurance for those concerned, because it is much more difficult to undo the culture of poverty than to cure poverty itself.

Middle-class people—this would certainly include most social scientists—tend to concentrate on the negative aspects of the culture of poverty. They attach a minus sign to such traits as present-time orientation and readiness to indulge impulses. I do not intend to idealize or romanticize the culture of poverty—"it is easier to praise poverty than to live in it." Yet the positive aspects of these traits must not be overlooked. Living in the present may develop a capacity for spontaneity, for the enjoyment of the sensual, which is often blunted in the middle-class, future-oriented man. Indeed, I am often struck by the analogies that can be drawn between the mores of the very rich—of the "jet set" and "café society"—and the culture of the very poor. Yet it is, on the whole, a comparatively superficial culture. There is in it much pathos, suffering and emptiness. It does not provide much support or satisfaction; its pervading mistrust magnifies individual helplessness and isolation. Indeed, poverty of culture is one of the crucial traits of the culture of poverty.

The concept of the culture of poverty provides a generalization that may help to unify and explain a number of phenomena hitherto viewed as peculiar to certain racial, national or regional groups. Problems we think of as being distinctively our own or distinctively Negro (or as typifying any other ethnic group) prove to be endemic in countries where there are no segregated ethnic minority groups. If it follows that the elimination of physical poverty may not by itself eliminate the culture of poverty, then an understanding of the subculture may contribute to the design of measures specific to that purpose.

What is the future of the culture of poverty? In considering this question one must distinguish between those countries in which it represents a relatively small segment of the population and those in which it constitutes a large one. In the U.S. the major solution proposed by social workers dealing with the "hard core" poor has been slowly to raise their level of living and incorporate them in the middle class. Wherever possible psychiatric treatment is prescribed.

In underdeveloped countries where great masses of people live in the culture of poverty, such a social-work solution does not seem feasible. The local psychiatrists have all they can do to care for their own growing middle class. In those countries the people with a culture of poverty may seek a more revolutionary solution. By creating basic structural changes in society, by redistributing wealth, by organizing the poor and giving them a sense of belonging, of power and of leadership, revolutions frequently succeed in abolishing some of the basic characteristics of the culture of poverty even when they do not succeed in curing poverty itself.

November 1, 1966

Dear Mr. Fair:

I am enclosing the following studies from the Atlanta Regionl Metropolitan Planning Commission:

Regional Development Plan
Atlanta Silhouettes
Atlanta Region Comprehensive Plan: Open Land
Population and Housing
Atlanta Region Comprehensive Plan: Rapid Transit

There is a more recent rapid transit study. However, the Commission was short on copies. I hope these studies will be helpful to you in preparing your proposal.

I enjoyed meeting you and am sorry we didn't have a chance to discuss your organization. I know your time is very limited when Dr. Doxiadis is in town. Hopefully we will have the opportunity to talk more at length at a later date.

Sincerely yours,

(Miss) Susan Bresler
Urban Planner
Urban Planning Project

Mr. C. Lansing Fair, Director

5 Forsyth Street, N. W.
Atlanta 3, Georgia

Dear Mr. Smith:

We would like to thank you and the members of your organization for their participation in the past few months and particularly at the public hearing on October 25, 1966.

We have stated in the past that without your support and the support of the community that the realization of urban renewal in the northwest section would be difficult if not impossible. The public hearing confirmed this statement by the overwhelming support of your organization and the entire community in urging the approval of the plan.

We hope that we have developed a continuing and strong relationship with your organization and we welcome any suggestions or observations you may have. Again, we thank you for your support and participation.

Sincerely,

James B. Hibben

Mr. Moreland Smith
Housing Consultant
Southern Regional Council
5 Forsyth Street, N. W.
Atlanta, Georgia

Dear Mr. Smith:

One of Atlanta's greatest problems is a seriously inadequate supply of low and moderate income housing in the city.

If we are to successfully rid our city of substandard and blighted houses and provide all citizens with decent, safe shelter, we must use every available resource at our command.

This includes development by private industry of housing facilities which low income families can afford as well as continued support by the Board of Aldermen and Mayor of public housing. Recent federal legislation now provides additional resources for private entrepreneurs which makes possible new methods of participation by private enterprise.

In order to encourage maximum participation in solving this problem, I have invited private builders and developers and financiers, as well as federal housing officials to meet with us in the Aldermanic Chamber at City Hall at 2:00 p. m. on Tuesday, November 15, to help us find ways to speed the development of low and moderate income housing facilities.

I hope you will make your plans to attend and participate in this Housing Conference.

Sincerely yours,

Ivan Allen Jr.

Neighborhood Stabilization
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Smith:

The Lynchburg Chapter, Virginia Council on Human Relations is interested in a Neighborhood Stabilization program as a beginning to what, we hope, will eventually lead to a broader interest in establishing equal opportunity in housing. We would like to have a speaker in this area come to our Annual Dinner Meeting, Monday, January 30, 1967, 6:00 o'clock and give us the stimulus we need to get such a program off the ground and "do something." We would like to have you or if you cannot come someone you recommend.

Our treasury is small therefore we need to know in advance what honorarium is expected in order for us to determine how to meet the cost.

We will appreciate any assistance you give us. Thank you.

Very truly yours,

MS

November 22, 1966

Mr. Paul Anthony, Exec. Dir.
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta 3, Ga.

Dear Mr. Anthony:

Because the unresolved problem of segregation in housing has such serious effects on education, health, and economic and cultural opportunities, we asked Algernon D. Black, a noted authority in the field, to update his earlier Public Affairs Pamphlet on this subject. FAIR PLAY IN HOUSING -- Who's My Neighbor? (No. 396) is the result. Since it is so relevant to the work of your organization, we are pleased to send you the enclosed complimentary copy.

What do we fear when a Negro family moves into the neighborhood is the direct question the author poses in this pamphlet. He takes a searching look at typical fears -- concern about property values and upkeep, about the effect on children, about "inundation" -- and presents convincing reasons why integrated communities not only are more democratic but also can be more secure, more interesting, more enriching for everyone. Mr. Black suggests how home owners and other concerned citizens can encourage and maintain a democratic, integrated neighborhood.

We think you will agree that FAIR PLAY IN HOUSING effectively analyzes a critical social issue. We hope you will want to recommend its use by your affiliates for their discussion and community action programs. Low quantity rates make such use feasible; a schedule is enclosed.

Cordially,

Adele Braude

November 28, 1966

Mrs. Ralph H. Boulware
1209 - 14th Street
Lynchburg, Virginia

Dear Mrs. Boulware:

Your letter of November 9, 1966 is at hand. I am delighted to know that you are going into the area of equal opportunity in housing.

There are only two of us on this project, and we are doing everything we can to get out some pamphlets which we feel are much needed on this general subject. At the present, we are hopeful that these will be available the latter part of January. We also hope that these will be of assistance to individuals in groups similar to the Lynchburg Chapter.

Concerning a speaker, this is not the forte of either of us on the U.P.P., and I would like to suggest the possibility of:

(1) Mrs. Eunice Grier -- formerly with the Washington (D.C.) Center for Metropolitan Studies and now with the U. S. Commission on Civil Rights in Washington.

(2) Mr. George Schermer
210 "A" Street, N. E.
Washington, D. C.

Either of these people would be an effective speaker, well informed, and could do a better job than we. If you are not successful in getting one of them, please let me know.

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

Acting Director of Conference
Office of Projects and Field Support
VISTA
Office of Economic Opportunity
Executive Office of the President
Washington, D. C. 20506

Dear Miss Linford:

Your letter of November 30, 1966 addressed to me at my old address in Montgomery, Alabama has been forwarded to me here. Because of the manner the letter was addressed, I thought you possibly would have gotten my name from the U. S. Commission on Civil Rights.

I am no longer:

1. A resident of Alabama;
2. Chairman of the Alabama Advisory Committee to the Civil Rights Commission;
3. In private business.

If, with the knowledge of the above, you would still like to list my name as a consultant you are welcome to do so.

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

December 7, 1966

Mr. William H. Potts, Jr.
6126 Chinguapin Parkway
Baltimore 12, Maryland

Dear Bill:

Thanks ever so much for your assessment of the Baltimore Story. I am distressed to know of Holmgren's leaving Baltimore! I have been most impressed with his work.

Mrs. Bem Price, with Potomac Institute, Washington, D. C., who does freelance writing occasionally, did the job.

It is good to know you and Bill Metcalf are collaborating on a job. I shall be interested to know how the job works out in the final stages!

My best to Ann, and hoping to see you sometime, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

Dec. 7, 1966

Mr. Thomas K. Farmer, Pastor
Northminster Presbyterian Church
3911 Greenland Avenue, N.W.
Roanoke, Virginia 24012

Dear Mr. Farmer:

I am terribly sorry that your letter of November 15, 1966, has gone so long unanswered, and I wish we could be of more help.

We are enclosing some items I have used in research in housing as it affects Urban Planning and is affected by U.P.

I will be very much interested in knowing how your talks go! If you could send me copies, I would appreciate it.

Sincerely,

Moreland Griffith Smith,
Director
Urban Planning Project

THOMAS K. FARMER
PASTOR

November 15, 1966

Southern Regional Council
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Sirs:

NS
pl
11-17-66:s

As a part of a local television program which is sponsored by the Roanoke Ministers' Conference, I am going to attempt to deal with the subject of "open housing" during the third week of January, 1967. This program runs about twelve minutes each day for five consecutive days.

My problem is that I need to discover what materials are available on the subject, to gather the materials, and then to assimilate them into some presentable fashion. This means that I need not only to know what is available in the reading line, but also if there are any audio-visuals available which would be helpful in presenting the subject. I feel certain that your office has some material available on the subject and I would find it helpful if you would send to me anything you have.

It may also be that you would know of other organizations or individuals to whom I could write for information. These names and addresses would also aid me very much.

With gratitude for any help you can give and any suggestions you can make along this line, I am

Sincerely yours,

Thomas K. Farmer

Mr. Robert Smith
Housing
The North Carolina Fund
107 East Parrish Street
Durham, North Carolina

Dear Mr. Smith:

It was a pleasure to meet you and Miss Gubernick at Sekyll Island. I trust that we will be able to effect a good pattern of communication which, hopefully, will be mutually advantageous!

Enclosed you will find biographical data on myself and a brochure on my former firm, in which I was senior principal. You may be interested in assessing my "type of thinking" by referring to the following pages:

1) Residential, pp. 115-122, which covers approximately 5,000 housing units;

2) Master Planning, pp. 85-92;

3) Research, pp. 115-122;

4) Construction Isometric, p. 18, an illustration of an effective way to illustrate new type of construction to unfamiliar builders;

5) Awards, p. 125.

It occurred to me that this information might also be helpful in any "eye wash" you might conduct with regard to your advisory board.

Looking forward to hearing from you further, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

Dear Miss Gubernick:

It was most pleasant meeting you at Jekyll Island, and I hope we shall meet soon again.

I have forwarded Mr. Robert Smith some data on myself and work in the past. I trust that this will be of interest with regard to the prpposed advisory board.

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

Dear Bob:

Thanks so much for your letter of December 7, 1966 with comments. We do appreciate your reviewing Mrs. Price's booklet. Your comments will be very helpful.

When you get back from leave I will look forward to having a conference with you.

All best wishes for a Merry, Merry, Christmas and a Happy New Year, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

Advisory Commission on Intergovernmental
Relations
Washington, D. C. 20575

Gentlemen:

We have just seen an announcement which states that the Advisory Commission on Intergovernmental Relations has recently issued its "1967 State Legislative Program."

The Urban Planning Project, a program recently initiated by the Southern Regional Council, is interested in the legislative proposals contained in the report dealing specifically with:

1) Model Building Code and Statewide Construction Standards

2) Licensing of Building Inspectors

3) Technical Services for Local Governments

4) Regional Planning and Development Commissions

This kind of information could be, we feel, useful to our program.

Would you, therefore, send a copy of the report to us. We assume, since no cost was listed, that the report will be sent gratis. If not, please advise us as to cost before it is mailed. We also would appreciate being placed on your mailing list announcing other items relating to urban planning.

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

State Legislative Program Issued

The Advisory Commission on Intergovernmental Relations recently issued its "1967 State Legislative Program" designed to influence a more dynamic relationship between the states and their local governments. It advances 62 specific legislative proposals including those for:

- Model Building Code and Statewide Construction Standards
- Licensing of Building Inspectors
- Technical Services for Local Government
- Regional Planning and Development Commissions

AIA chapters will receive a copy of the program shortly. Others interested in state legislation may obtain a copy by writing to the Advisory Commission on Intergovernmental Relations, Washington D.C. 20575.

Please write a letter - 2 - for those over my name

thanks

for the limitation or of changed conditions.

Among other findings, the study maintains that:

- The cost of architectural services has risen faster than the cost of construction, due primarily to the complexity of today's buildings and component systems.

- The limitation, while considered fair in 1939 for relatively simple structures, is now completely unrealistic for laboratories, electronic facilities, remodeling and rehabilitation services and specialized structures, such as nuclear facilities.

Enclosure - 1.

MEMORANDUM December 9, 1966

To: Paul Anthony

From: Moreland Griffith Smith, FAIA

Re: Regional Study vs. Atlanta Study.

- : -

As I mentioned to you I have had three (3) conferences with Mr. Doxiadis and several additional ones with other members of his staff to see if we could set up a Southeastern Regional Study to be executed by Doxiadis Associates, Inc. in collaboration with the Southern Regional Council, Inc.

In essence, Mr. Doxiadis feels that a regional study would be not feasible economically as well as staff-wise. However, he is extremely interested in working with us on an Atlanta Trade Territory Study, which would encompass an area reaching halfway between Atlanta and Birmingham, Chattanooga, Greenville and Columbia.

A preliminary study to access the scope of the total study would cost $15,000.00. This would bring [redacted] this metropolitan study into focus with the national and regional potential.

- : -

December 12, 1966

Mr. Jack E. Wood, Jr.
Associate Executive Director
The National Committee Against Discrimination
in Housing
323 Lexington Avenue
New York, New York 10016

Dear Mr. Wood:

I saw a copy of your report on the NCADH Report on Atlanta, Denver, Providence and Rochester, but was unable to peruse that copy or to borrow it. I was disappointed that I have not received a copy as an individual member of NCADH or that SRC did not receive a copy as a participant in one of the city studies! Would it be possible for us to receive two (2) copies?

Will the proceedings of the West Coast Conference, "Urban Crisis and the Ghetto Systems," be available? This sounded like it would be a very constructive session and I regret that distance prevented my attending.

Looking forward to hearing from you, I am

Sincerely,

MGS/mmj

DRAFT

PREFACE:

The eleven Southern states encompassed in this study comprise one-fourth of the area of the United States. The solution ~~within~~ of the science of human settlement possible within this region should be of far greater ~~interest~~ significance, than any other area in the whole United States, ~~greater than any other area,~~ influencing the transition from a war world to a world dedicated to peace. It is with a strong conviction in the commitment of this region that we believe that here we will find the true meaning of equal opportunity. Although the thesis of equal opportunity for all citizens regardless of race, creed or color must be a fundamental basis for any true democracy we feel that one premise must be taken for granted: that in any projection of good planning the strong emphasis for the legal position of ~~open~~ OPEN OCCUPANCY is an essential ingredient ~~of this~~ if ~~effective~~ good planning is effective. This is outside of and as important as the moral ~~or~~ ethical or political overtones of this principle. Open occupancy is good economics, good business and therefore an essential ingredient to good planning. ~~Therefore~~ We assume in this study the eventual conclusion that open housing is the law of the land under the Fourteenth Amendment to the U. S. Constitution. "When we endeavor to make for ourselves an atmosphere in which to live and work...we are performing a genuine service not only to our time but especially to the future." (Frank Lloyd Wright).

POWER: BLACK AND WHITE - SOME REFLECTIONS

John Morris

It isn't that I can add substantially to the controversy swirling around the slogan of "Black Power", but, rather, that it's part of my responsibility to ESCRU members to let you know how I felt about it when I woke up this morning. Concepts and moods which have been emerging for several years have now come fully on the scene, and - for better or worse - this is what I now feel about them. My mind could change, but the listening and pondering of several months leads me more firmly to the following observations. I know from conversations and correspondence that ESCRU members differ on the subject, so I do not presume to enunciate a position for the Society. This is something we will invariably do at the Annual Meeting, whether formally or by tacit consensus.

Let me put it in a nutshell right off, but invite your careful reading of the balance of what I have to say before you form conclusions; with a hope, also, that you will hear this in the context of ESCRU's seven-year history and the positions I have taken on related matters heretofore. Briefly put, I view the catapulting to prominence of "Black Power" - as I discern it in the main - as tragic historically, practically untenable, morally and theologically unacceptable, but probably inevitable and, possibly necessary.

Before I try to explain this, let's look at one side of the ledger - White Reaction to the slogan. I believe that white revulsion is chiefly induced by the too-universal factor of fear and suspicion of Negroes on the part of whites. Feeling that our culture is riddled through with racism, latent and otherwise, I seem to hear many white people saying in response to "Black Power": "Now my dislike of black people is justified."; or the moderate white seems to be saying: "How dare you threaten us.....after all we've done?" At best, the white moderate seems remorseful that he might not be able to retain the initiative in social change. Whatever the nuance, a lot of racism and/or paternalism is evident in the reaction that has come from white Americans to Black Power.

Let's also look squarely at the record of White Power over the years. Those three hundred years of brutal, dehumanizing slavery & segregation - still not done away - cannot be ignored in coming to grips with Black Power and its implications. See the whites in Grenada only yesterday stomping on small black children. Reflect on the meaning of the Senate's inability to take up the 1966 Civil Rights Bill. Listen to the white invectives in Chicago and Cicero, and feel the rain of bricks and bottles. Look at the Federal Government's refusal to take action in the case of white violence done Jonathan Daniels and Richard Morrisroe in Hayneville. It's really a miracle that the more violent exponents of Black Power have kept their peace so long. With the syndrome we've experienced since 1954 of "too little, too late, and too lily-white", recent developments were probably inevitable.

It isn't sufficient to come charging out as the Bishop of North Carolina did recently when he said that "...there is no place in this Church for the thinking of the Klan or the philosophy of Black Power.", thereby making an equal juxtaposition of the two. The fact of the matter is that there are white Churchmen in his diocese who espouse the thinking of the Klan - white supremacy - whom he has not previously sought to excommunicate. It's as if a little white racism is alright, but we sure aren't going to tolerate any Negro anger. Also, the record simply does not reveal that Black Power exponents have resorted to the same violence induldged in by whites for years.

All of this and more must be a part of any assessment of Black Power. It should not be necessary to recount such here, but in the shifting sands of present-day viewpoints, one must acknowledge that he hasn't forgotten these things before he then levels criticism at what seems to some to be the latest mark of a militant spirit.

We must also recognize the positive aspects of Black Power (which is all that some exponents of the new mood mean by the slogan), affirming their legitimacy and place in American traditions. Of course, Negroes must pull together in common cause for the obtainment of full economic, political and social freedom. Where this means an all-black effort, as in Lowndes County, Alabama, (home of the Black Panther party), so be it. Elsewhere, why shouldn't the political and buying power of black people be turned toward whatever will throw off the shackles of the old order? For many, this is what Black Power means. I respect it. I reject, however, the notion that a new concept has been introduced into "the movement", as if such leaders as Martin Luther King, Jr., and others, had not long seen such a necessity. The efforts by some to downgrade older leaders, as in the encouragement given small children in Canton, Mississippi, during the Meredith March to chant "Martin Luther Coon", etc., must be labeled as the worst in attempts at organizational aggrandizement.

In short, there is an aspect of the Black Power development which is consonant with the goals and aspirations of the Civil Rights Movement. But, there is another side to the slogan and the one which is fast becoming the hallmark of the position. It is represented in such assertions from Black Power exponents as: "Can you have power without violence?", "We've been shooting and cutting the wrong people."; "I am not opposed to violence."; "The answer is armed revolt against whites."; "....our black brothers engaged in acts of rebellion...", referring to riots; "Black Men, whitey's plan for you is death in Vietnam..."; "If you keep mixing, you won't have any black blood left."; "From now on we're using Black Power - muscle! We're going to tear this city up!"; "Non-violence is dead."; "...I want a little chaos."; "these flags don't represent you", as SCLC-provided American flags were retrieved from persons on the Meredith March by a SNCC worker; "Violence and non-violence are irrelevant."; "Get that White Jesus out of here", referring to a white poverty program worker in a Negro ghetto; "...white blood will flow..."; Etc., Etc. These statements are becoming the symbols of Black Power. They reflect the mood which I believe will increasingly be predominant and explanatory of Black Power activity. They are not the work of newspapermen trying to discredit an organization or new leader. No amount of care in the preparation of fund-raising materials will obscure this mood, nor does the fact that the mood is and has been present in growing sectors of the Negro community validate it as a legitimate part of the outlook of organizations due much credit for earlier leadership in the Civil Rights Movement. To recognize the mood and its causes is one thing. To encourage it, however necessary, perchance, it may be in the realization of group identity and in the ventilation of understandable feelings is another thing.

It is a dreadfully dangerous thing to provide white America with what is being interpreted as justification for white racism, and I believe certain charismatic leaders are doing just this. We used to label the counterpart of this in the white community 'demagoguery'. Whatever the justification, the same process can operate on the other side of the great racial gulf, and little people will take these pronouncements as sanction for their acts of violence. If this were South Africa, violence would be a viable alternative - even for Christians, I believe - in bringing about change. Here such continuing polarization can only result in the white community laying plans for the erection of gas chambers. It was a well-known prophet of our Household who once predicted such an outcome. Tragically, such is not now as incredible over the course of years as it seemed. This same prophet also suggested that white America (and he meant the nation as a whole) should realize that their best friend since George Washington was Martin Luther King, Jr. Recent developments have proved the truth and depth of this assertion.

Who is to blame that utter cynicism and despair have found their public spokesmen? White America and White Churchmen who have rocked along, never coming to grips with the racial crisis! And, Negro Churchmen, also ,who have left the impression that all was well because they personally had it made. Some say the crisis is now insoluble. I don't know. I also felt when I woke up this morning that there was this day's work to be done and that, for ESCRU, it had something to do with the wholeness of God's Church and its witness in the world. - September 27, 1966

HUD AT A GLANCE

U.S. DEPARTMENT OF HOUSING
AND URBAN DEVELOPMENT

Robert C. Weaver, Secretary
Washington, D. C. 20410

MESSAGE FROM THE PRESIDENT

We are bringing into being today a very new and needed instrument to serve all the people of America.

"In less than a lifetime America has become a highly urbanized nation, and we must face the many meanings of this new America.

"With this legislation, we are going out to meet tomorrow and master its opportunities before its obstacles master us.

"Today we are taking the first step toward organizing our system for a more rational response to the pressing challenge of urban life.

"This is a wise and this is a just and this is a progressive measure for all America."

Lyndon B. Johnson

At the signing of legislation creating the Department of Housing and Urban Development, September 9, 1965.

WHAT IS HUD?

The Department of Housing and Urban Development (HUD) is the eleventh Cabinet-level Executive Department of our Federal Government. HUD represents urban America in the highest councils of Government. It provides the framework necessary for effective Federal assistance in two of our country's major domestic-problem areas—how to provide decent housing in a wholesome environment for every American family, and how to achieve the greatest possibilities in our cities, towns, and suburbs.

WHEN WAS HUD ESTABLISHED?

On September 9, 1965, President Johnson signed Public Law 89-174 authorizing the establishment of a Department of Housing and Urban Development. HUD came into actual being two months later

on November 9, 1965, absorbing all the activities of the former Housing and Home Finance Agency and bringing to a single focus the Federal programs relating to housing and the problems of urban areas.

WHY WAS HUD ESTABLISHED?

Over the past 30 years the Federal Government has adopted a wide variety of measures for housing the growing urban population and for improving the towns and cities of our Nation. HUD was created and organized to carry out the intent of the many measures now in effect and of new ones yet to be adopted. Its creation is a huge step forward in Federal response to urban needs.

HUD is the focal point for Government-wide coordination of aids to urban areas. It deals with all levels of government and private groups to develop solutions for the full range of urban problems.

HUD is committed to the interests of the urban American and of urban America. Establishment of HUD is a natural outgrowth of the vast expansion of our urban population.

About 139 million American people now live in cities and their suburbs—71 percent of the Nation's population, an increase from 64 percent in 1950 and 56 percent in 1940. And this 71 percent of the population, moreover, lives on 1 percent of the Nation's total land area.

Before the turn of the century, urban population is expected to reach 280 million—approximately 80 percent of all Americans. These urban residents will need as many more houses, schools, apartments, commercial buildings, parks, recreation areas, and public facilities as have been built since America was colonized 3½ centuries ago.

HOW IS HUD ORGANIZED?

The Department is organized along functional lines to meet modern urban needs, and its efforts are directed toward improving physical and social aspects of urban living. HUD is headed by the Secretary of Housing and Urban Development. He is assisted by the Under Secretary and five Assistant Secretaries.

The Secretary and the Under Secretary are in charge of overall policy and direction of the Department. Each Assistant Secretary has charge of a particular group of activities.

- *The Assistant Secretary for Mortgage Credit (who is also the Commissioner of the Federal Housing Administration) directs all HUD programs involving the private mortgage market, and is responsible for coordination of the*

activities of FHA and the Federal National Mortgage Association.

- *The Assistant Secretary for Renewal and Housing Assistance directs programs of public housing, urban renewal, college housing, housing for the elderly and the handicapped, central city open space and urban beautification, neighborhood facilities, and coordination of relocation, social, and welfare programs in project areas.*

- *The Assistant Secretary for Metropolitan Development directs programs relating to metropolitan or regional urban complexes — programs for transportation, sewage disposal, water supply, urban and metropolitan planning assistance, public works planning assistance, preservation of open spaces, and urban beautification outside central cities.*

- *The Assistant Secretary for Demonstrations and Intergovernmental Relations directs the Federal urban program coordination and intergovernmental relations functions of the Department. He also directs research, experimental, and demonstration programs, and administers programs that provide HUD funds to States, cities, and other public and private bodies to undertake programs of research and demonstration.*
- *The Assistant Secretary for Administration directs HUD's administrative management functions, including budget, personnel, accounting, auditing, management systems, and other administrative services.*

Seven Regional Offices, each with a specific geographic jurisdiction, administer HUD activities in the field and serve as

contact points between localities and individuals taking part in those activities. Locations of the Regional Offices are: Region I, New York City; Region II, Philadelphia, Pa.; Region III, Atlanta, Ga.; Region IV, Chicago, Ill.; Region V, Fort Worth, Tex.; Region VI, San Francisco, Calif; and Region VII, San Juan, Puerto Rico.

WHAT DOES HUD DO?

HUD carries on a wide range of activities concerned with the provision of housing to meet the varying needs of the American people and the planning and development necessary for sound urban communities.

Mortgage Credit Activities

The FHA system of mortgage insurance, established in 1934 under the National Housing Act, has helped to make low-

downpayment, long-term, fully amortized mortgage the standard in mortgage lending. It has enabled lenders to advance credit on more liberal terms than might otherwise be available to families of moderate means. Mortgages insured by FHA cover regular sales and rental housing, and special-purpose housing such as that for families of low and moderate income and for the elderly and the handicapped.

The FHA also insures loans for property improvement.

- *More than 37½ million families, nationwide, have improved their housing standards and conditions through the help of FHA insurance.*

- *The overall amount of insurance written by FHA by the end of June 1966 was $109 billion. This amount represented:*

- *Over 8 million home mortgages.*
- *Nearly 1.2 million housing units in more than 13,000 multifamily projects.*
- *Some 28 million property improvement loans.*

- *Insurance written in 1965 totaled $8.7 billion, covering:*

  - *554,000 home units (a record number).*
  - *Over 38,000 multifamily project units.*
  - *More than half a million property improvement loans.*

- *The average FHA buyer of a new home in 1965 had a family income of slightly less than $700 per month before taxes. He bought a house valued at a little over $17,000. The house had one story, an area of 1,228 square feet, and about 6 rooms including 3 bedrooms.*

The Federal National Mortgage Association

The Federal National Mortgage Association (FNMA) provides a national secondary market for FHA-insured and VA-guaranteed mortgages by buying, servicing, and selling such mortgages. It also provides funds, under its special assistance functions, for a number of special-purpose programs. The effect of FNMA's operations is to increase the amount of housing credit available to the economy.

- *At the end of June 1966, FNMA's mortgage portfolio amounted to more than $6.1 billion.*
- *In the first half of 1966 alone, its purchases came to more than $1.5 billion, including nearly $1.3 billion under its secondary market operations, and $118 million under its special assistance functions.*

Housing for Low-Income Families

There are 10½ million substandard houses in our Nation—4 million of them in urban areas. Some 6 million families with incomes below $4,000 are living in substandard housing.

Housing specifically for low-income families is provided through several different forms of HUD assistance.

Public Housing

For almost thirty years, Federally-aided public housing for low-income families has provided decent housing for millions of low-income people. By mid-1966:

- *More than 9 million people had lived in low-rent public housing.*
- *More than 2 million people were living in low-rent public housing.*
- *830,000 units had reached reservation or later stages of development.*

- *All 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands had approved low-rent public housing projects.*
- *2,539 communities, served by 1,883 local housing authorities, were participating.*
- *More than half the communities had populations of less than 5,000, and four-fifths of the aid served communities of less than 25,000 population.*
- *The median income for public-housing families at the end of March 1966 was $2,600.*
- *617,000 units were available at the end of June 1966. Of these, about 30 percent were occupied by the elderly.*

FHA "Below-Market" Private Housing

Below-market-interest-rate mortgages insured by FHA under Section 221(d)(3) of the National Housing Act are available

to nonprofit, cooperative, and limited dividend sponsors to develop rental and cooperative housing projects having 5 or more units. This housing is designed for families and for handicapped and elderly individuals with incomes too high to qualify for public housing yet too low to afford housing in the regular market.

- *From the summer of 1961, when the below-market-interest-rate provisions were initiated, through June 1966, over 47,000 units involving mortgages totaling $586 million had been insured.*
- *As of June 30, 1966, 34 States, the District of Columbia, Puerto Rico, and the Virgin Islands had "below-market" projects with insurance in force and mortgages assigned.*

Rent Supplement Housing

Special rent supplement provisions were

authorized in 1965 to help stimulate the construction of private housing within the means of low-income families. Under these provisions, the Federal Government pays the difference between the cost of providing standard housing and the rent the low-income tenant can pay with 25 percent of his total income.

- *As of June 30, 1966, fund reservations had been made for 8,852 units aggregating over $5.4 million.*
- *72 communities in 33 States were represented in rent supplement reservations.*

Demonstration Housing

One way of coping with the problem of providing satisfactory housing for the economically disadvantaged is for public or private nonprofit organizations to use HUD low-income housing demonstration grants to develop and test new or im-

proved means of providing housing for low-income families and individuals between 1961, when these grants were first authorized, and June 1966:

- *Grants totaling $7.3 million were made to finance 42 demonstrations in 29 localities spread through 19 States and the District of Columbia.*
- *Included among the projects are demonstrations aimed at lowering the cost of new construction, more effectively using the existing housing supply, and facilitating home ownership among low-income families.*

Housing for the Elderly and Handicapped

The special needs of the senior citizen and the handicapped individual are incorporated into housing provided under three forms of HUD assistance. These forms are public housing; FHA mortgage

insurance (Section 231 of National Housing Act) on specially designed private rental housing for people in the 62-and-up age bracket and for the handicapped in any age bracket; and direct Federal loans to finance nonprofit rental housing for senior citizens and handicapped persons. As of June 30, 1966:

- *The planned number of public housing units especially designed for senior citizens was over 140,000, and the number of completed units was nearly 44,000.*
- *FHA mortgage insurance on housing for the elderly had been written on 40,200 units aggregating $480 million.*
- *193 direct project loans had been approved, representing over 23,000 housing units; and 96 projects containing a total of 9,200 units had been completed and opened for oc-*

cupancy.

- *At the end of 1965, total commitments under the three programs covered 181,000 units—enough to house about a third of a million people—and 119,000 units were either finished or under construction.*

College Housing

When financing is not available from other sources on equally favorable terms, HUD makes direct loans at low interest rate (currently 3 percent) to colleges, universities, and teaching hospitals for the construction of housing and related facilities. Altogether, by the end of June 1966:

- *2,712 loans, covering 698,000 accommodations, had been approved for colleges and hospitals in 49 States.*
- *One-third of all students in insti-*

tution-owned college housing in the [illegible]tion were housed in facilities as[illegible]sted by these loans.

- *Most of the institutions using the assistance had enrollments of 2,000 to 5,000 students, and less than 10 percent of the participating colleges had student enrollments of 20,000 or more.*

To Meet Community Needs

The soundness of our society hinges on the health and progress of our cities and suburbs and the people who live in them, yet many communities lack the necessary local resources to meet the pressing needs of the present and the challenge of the future. The vast metropolitan areas made up of central cities and their suburbs overlap one another, and the population of the suburbs now exceeds that of the central cities of which they are a part. [illegible]elp communities do the job that needs

to be done, HUD makes grants and loans to localities for a number of different specific purposes.

Workable Program

In order to receive certain types of HUD assistance, a locality must have a Workable Program for Community Improvement. This is an official community plan of action for using local public and private resources to eliminate and prevent slums and blight and to guide the community's orderly growth and development.

- *As of mid-1966, 1,389 communities had active Workable Programs.*

Urban Renewal

Since 1949, through Federal assistance to local public agencies authorized to carry out urban renewal project activities, the Federal Government has attacked the

problems of slums and blight with increasing [illegible]e.

- *Grant reservations totaling over $5.2 billion had been made to 842 localities to assist in the financing of 1,994 projects, by June 30, 1966.*
- *Renewal areas approved through yearend 1965 represented about 42,000 acres of land, more than 31,000 of which had been acquired. Redevelopment had been completed on approximately 8,800 acres, and construction was underway on another 3,100 acres.*
- *84,000 new dwelling units had been completed on urban renewal sites by the close of 1965. Of these, about 8,600 were FHA Section 221(d)(3) units for low- and moderate-income families.*
- *The value of redevelopment underw[illegible] at the end of 1965 was over $[illegible] billion for residential, about*

$1.2 billion for commercial, $169 million for industrial, and [illegible] $1 billion for institutional construction—a total of more than $3.9 billion.

- *349 cities were carrying out 522 renewal projects involving conservation and rehabilitation activities, at yearend 1965.*

Community Renewal

Grants made by HUD are available to communities that need financial assistance to help them prepare community renewal programs covering the full range of urban renewal action required to meet local needs. At the end of June 1966:

- *156 localities were participating.*
- *Grant reservations totaled approximately $25 million.*
- *The size of cities involved [illegible]nged from localities with popula[illegible]s of*

over a million down to one community with a population of less than 2,500. (Based on 1965 yearend data.)

- *About 3 of every 8 community renewal grants were made to communities with populations of less than 50,000. (Based on 1965 yearend data.)*

Urban Planning Assistance

Urban planning assistance, in the form of Federal grants to supplement State and local funds, is given by HUD to communities that otherwise could not afford general planning staffs. By mid-1966:

- *2,523 grants, totaling nearly $113 million, had been made to communities in all 50 States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands.*
- *442 small areas had received in*

all nearly $42 million in Federal planning grants.

- *394 grants, for $18 million, had been made to assist planning in 988 localities in economic redevelopment areas.*
- *About $36 million had been made available in Federal grants to assist in the financing of 420 metropolitan and regional planning projects and 52 other type projects involving 253 areas.*
- *An additional $17.1 million had been granted to help defray the cost of 102 statewide and 7 interstate planning projects. 39 States, as well as Guam, Puerto Rico, and the Virgin Islands, had used or were using funds obtained through these grants for statewide or interstate planning purposes.*

Demonstration Cities

The Demonstration Cities and Pro-

politan Development Act of 1966 authorizes HUD to make grants and give technical assistance to help cities develop comprehensive plans for improving the conditions of life in whole neighborhoods. This new approach to attacking all the problems of urban deterioration in a specified area involves coordination of the entire range of Federal urban assistance—for rehabilitation of properties and for social, educational, and employment needs of residents—with State and local public and private resources.

By November 1, 1966, more than 200 cities in 43 States and the District of Columbia had indicated definite interest in participating in the program.

Neighborhood Facilities

To provide neighborhoods with much-needed services in centers in or near housing developments, HUD makes grants for

neighborhood facilities construction to communities of all sizes. Between August 1965, when these Federal grants were authorized, and June 1966:

- *11 grants totaling nearly $2.3 million were approved.*

Rehabilitation Aid

For people living in urban renewal or Federally-aided code enforcement areas, HUD makes direct low-interest home rehabilitation loans and, for low-income owners, home rehabilitation grants—to help bring properties up to standard or to carry out local urban renewal plans. As of June 30, 1966:

- *78 communities in 26 States and Puerto Rico had approved rehabilitation grants.*
- *203 loans totaling $847,000 had been approved.*

- *1,041 grants totaling $1,418,000 had been approved.*

Open Space and Urban Beautification

In recent years, concern for beautification and improvement of open space and other public land in the growth and development of metropolitan areas has reached national proportions. As a means of providing beauty and open space, HUD grants are available to help communities acquire and develop suitable parks and recreation areas and to help built-up areas carry out organized programs of urban beautification. Altogether, by mid-1966:

- *604 grants had been made in 38 States; 571 of these grants were for open-space land, and 33 were for urban beautification.*
- *Open-space grants totaled nearly [illegible] million, and urban beautification grants about $4.5 million.*

Urban Mass Transportation

HUD gives Federal assistance in the form of grants to help communities expand and improve their transportation systems and facilities, to experiment in demonstration of new mass transportation methods, and to plan transportation systems for the urban areas. It also makes loans for transit expansion. All told, by the end of June 1966:

- *HUD had approved 44 capital grants totaling nearly $157 million, 44 grants totaling $39 million for demonstration projects, and 2 capital loans aggregating a little over $6 million.*
- *22 States and Puerto Rico are represented in the 44 capital grants and 2 loans.*
- *Assistance had been made available to communities ranging in size from 17,000 to 8,000,000 population. (Based on yearend 1965 data.)*

Advances for Public Works Planning

Loans and advances are made by HUD to provide planning aid for individual local public works and for areawide and long-range projects that will help communities to deal with their total needs.

- *4,975 projects involving advances of more than $129 million had been aproved by mid-1966, representing every State except North Dakota.*
- *The Plan Reserve, at the end of 1965, included 2,157 planned projects with an estimated construction cost of over $3.5 billion.*

Public Facilities

Basic public facilities are fundamental to the growth and stability of our communities. To enable smaller communities to finance the construction of needed public facilities, HUD makes long-term public facility loans. In all, by June 30, 1966

- *1,029 loans, aggregating about $390 million, had been approved.*
- *Almost 90 percent of the loans were made to communities of less than 5,000 population.*
- *Although 90 percent of the loans made over the years were used to finance water and sewer facilities, this concentrated use has been diminishing. Only 73 percent of the loans and 58 percent of the dollar volume in 1965 were for this type of improvement. Loan activity in 1965 included such things as firehouses, airports, municipal buildings, parking lots, and street improvements.*

Water and Sewer Facilities

A lack of adequate water and sewer facilities has been a problem oppressing American communities as urban growth and expansion has taken place. Many communities have not been financially

able to afford these facilities. In 1965, HUD was authorized to make grants to help local communities construct or improve basic water and sewer facilities—water storage, treatment, and distribution plants—and basic public sewer and other waste disposal facilities. By the end of June 1966:

- *Reservations totaling about $90 million had been made for projects.*
- *19 actual grants totaling $13.5 million had been approved.*

SMALL-TOWN PARTICIPATION

Problems of urban growth are not limited to large places. Various forms of assistance provided by HUD are designed for and have been widely used by small communities as well as metropolitan areas. According to yearend 1965 tabulation:

[illegible] *percent of the communities that*

have public housing are under 25,000 in population; 68 percent are under 10,000; and 54 percent are under 5,000.

- *69 percent of the localities receiving urban planning assistance grants are under 10,000 in population.*
- *80 percent of public works planning advances have been made to communities with populations of under 50,000.*
- *About 90 percent of public facilities loans have been made to towns of under 5,000 population.*
- *50 percent of the active certified Workable Programs are in localities having populations under 10,000; 62 percent of communities that ever had a Workable Program are under 10,000 population.*
- *72 percent of the communities participating in urban renewal were under 50,000 population.*

INTERFAITH HOUSING CORPORATION

Chartered to provide specialized service and guidance to nonprofit sponsors of housing for low and moderate income families.

Executive Director, Mr. Malcolm E. Peabody, Jr.

Director of Local Planning, Mr. Roland S. Larsen

OFFICE: 120 Boylston Street, Room 608, Boston 16, Mass. TEL. #: 426-9808

Background

Since 1961, the United States Congress has increasingly been enabling nonprofit community based organizations to provide needed new housing for low and moderate income families. Prior to that time, our principal national emphasis had been on the Public Housing program to provide new housing for low income families, and on private enterprise to produce housing for families with moderate or higher incomes. Since 1954, however, due to public resistance not a single new unit of public housing for low income families has been built in Greater Boston, whereas, between 1950 and 1954, 17,308 such units were built. Federal and State allocations since 1954 have focussed on housing for the elderly.

Private enterprise has not filled the need either for housing for low or even moderate income families. The construction of new units has been mainly for sale or for rentals far above what the average family can afford, and the supply of acceptable older housing at moderate rents is steadily declining through deterioration and, in Boston, large scale demolition.

In 1961, with the passage of section 221 (d) (3) of the National Housing Act, Congress made it possible for limited dividend and nonprofit organizations to build new housing for sale or rental at prices substantially below existing private properties by making available long term (40 years) low interest loans (3 1/8 to 3 5/8) with high loan ratios (90% for limited dividend companies, and 100% for nonprofit corporations). Some 2,800 units have been built or are in construction in eastern Massachusetts at rentals as low as $85 per month for two bedrooms and all utilities. Based on the successful experience of the past four years, Congress, in the 1965 Housing Act, has extended the section 221 (d) (3) program at an even lower interest rate (3%), and has also added another program which provides greater assistance by offering rent subsidies to nonprofit and limited profit developers who rent units to low income families.

To build this new housing, the Federal government extends aids and privileges to nonprofit groups, including church-related groups. Such groups have been successful in gaining community acceptance of new developments. Also, the groups provide the continuing local interest and positive identification essential to successful management and maintenance of such developments. Most nonprofit groups, however, lack knowledge and experience in developing housing. There is an obvious need for experienced consultants to play a strong role through initial planning, construction and management phases.

Interfaith Housing Corporation was chartered in 1965 to perform this consultant role, beginning in the Greater Boston area, for any nonprofit groups that may need its services, particularly those groups seeking to construct new housing in less congested areas of Metropolitan Boston. At present, nearly 90% of all 221 (d) (3) housing recently built or now under construction is in congested areas. There is pressing need for such housing, however, in the cities and towns outside these areas

since many low and moderate income families and individuals who would normally live or continue to live in these areas cannot find housing they can afford.

The shortage has fallen hardest on certain groups within the population--specifically the elderly, large families, young married couples without college training and nonwhites. Many of these people are forced to move to other towns since there is little rental housing in their own towns and they have neither the capital or the income to acquire sales housing. Others now working in the area in blue collar or lower management positions and are forced by the lack of housing to commute longer distances to their jobs and are less able to afford this extra commuting cost.

Among this latter group the IHC is especially interested in the plight of the non-white family who is presently working or seeking work in the suburbs and who is now trapped by discrimination and by high suburban housing cost in an expanding, segregated community where their children are denied the integrated schooling experiences so essential to their future.

The Corporation proposes to stimulate construction of housing to meet the needs of these low and moderate income families and individuals described above by making available to local church-sponsored and other nonprofit groups advice and assistance with site selection, site acquisition, market analysis, architecture, financing, zoning, open occupancy planning and other problems that may be encountered in developing high quality housing for low and moderate income.

IHC activities will include:

1. Encouraging and stimulating members of churches and synagogues to join in sponsoring local development of housing to accomodate families of moderate and lower incomes.

2. Assisting local groups in planning, executing and managing such housing, including help in incorporating their local development organization and in choosing and acquiring properties and sites, and in obtaining community acceptance; help in selecting developers, architects, engineers, and contractors; help in tenant selection methods and in management and financing.

3. Introducing local groups to the various forms of governmental and other assistance available for housing developments and helping them to meet requirements for aids.

4. Working with local interfaith sponsors and other community support groups to assure access of all moderate income families to decent housing.

Sponsorship and Financing

The Interfaith Housing Corporation has been endorsed by prominent religious leaders in Massachusetts and Greater Boston, many of whom are serving as incorporators and members of the Corporation. The Corporation in 1966 is finances by a Low Income Housing Demonstration Grant from the U.S. Department of Housing and Urban Development and by other funds, including some from the Permanent Charity Fund and from various religious denominations.

Assets Needed by Local Groups to Start

No permanent equity is needed by a local group to undertake a housing development; the federally guaranteed mortgages will provide 100% financing. However, local funds will be needed for working capital purposes for analysis of local housing supply and of housing needs, site search and preliminary title examinations, preliminary architectural drawings, legal work and other fees. If these needs exceed the funds a local group can raise at first, Interfaith may be able to assist by loans from the funds at its disposal.

Other than the above, all that a group needs is time and a commitment to the task. Technical knowledge and ability can be made available through the Interfaith Housing Corporation.

Hearings before Committee on Law and Order
Pennsylvania House of Representatives

May 1959

SUPPORT FOR FAIR HOUSING LEGISLATION
Summary of Organizations and Testimony

93 spokesmen from 61 organizations, many of them statewide groups, appeared in Harrisburg on May 20, 21 and 22 to testify for passage of fair housing legislation. Subject of the hearings was House Bill 322, which would eliminate discrimination in the rental and sale of housing because or race, religion or national origin.

Important Organizations

Spokesmen for organizations representing hundreds of thousands of citizens from all parts of the state appeared to testify vigorously in favor of the bill. Jewish, Protestant and Catholic groups were represented. In addition, labor, civic, fraternal and Negro groups presented testimony in support of the bill.

Many Sections of the State

Appearing at the hearings were leaders from Pittsburgh, Erie, Reading, York, Harrisburg and Philadelphia, as well as a list of smaller towns like Donora and Shiremanstown and counties further removed from the large metropolitan centers.

Outstanding Civic Leaders

Appearing for the bill were leaders of educational, welfare and civic groups. Along with officers of organizations and citizens from every background, were housing experts and government officials. Governor David L. Lawrence issued a strong statement urging passage of H. B. 322.

Need Thoroughly Documented

Facts and figures from varied areas were introduced to show the damaging results of segregation, particularly

in the oldest housing, to both those congested and those isolated; to the general welfare of urban areas; to the financial stability of communities and the future of the democratic process. The harm done to the entire community by enforced overcrowding and exploitation was carefully detailed.

Strong Reasons Presented

Many arguments were listed during the hearings by those favoring the fair housing law:

a. Morality and religious ethics point clearly to the need for the community taking a clear stand as to the rights of all its citizens expressed in a law.

b. Overcrowding as a result of segregation is clearly related to higher deaths and illness from fire, accident and communicable disease.

c. Housing barriers increase racial friction, misunderstanding and violence.

d. Discrimination with resulting overcrowding makes possible exploitation by housing speculators at high cost to the rest of the community.

e. It is economically short-sighted to discriminate, because discrimination retards new home building, investment in new communities, and makes more difficult worker migration and the resettling of industry.

f. Discrimination hampers our defense efforts by restricting military personnel at various installations.

g. Discrimination critically injures the chance of our carrying out a genuine democratic foreign policy, in that all our efforts are suspect among the majority of the peoples of the world.

h. Segregation is damaging to the proper operation of our local political structures.

i. School segregation, overcrowding and other undesirable conditions result from housing segregation.

j. The real estate profession abuses its state license and its professional responsibilities if it discriminates.

Fair Housing Essential to General Welfare

Nor only are discrimination and segregation related to bad housing conditions, but vital public policies at every level are hampered in their operation. These include city and regional planning, urban renewal, improved schools, and in the private area, the rate of new home building and private investment. Local tensions become international disgraces in addition to the moral wrong of exploitation of any group of citizens.

A Law Is Needed

One speaker after another listed the facts and problems of unfair housing restrictions and stressed the need for a law to supplement growing educational work and changing opinion. A sound law carried out in a responsible manner, like the Pennsylvania F.E.P. law, would aid in gradual improvement of the situation.

Limited Opposition

The only persons opposing the bill were representatives of real estate organizations. Many of the objections were to a particular clause in the law. Many reasons listed, in addition to plain dislike for facing this responsibility, were far-removed questions and appeals to antagonism. It is significant to note that no home owner appeared in opposition to the bill.

Extensive Press Coverage

In addition to stories run by Pittsburgh, Harrisburg and Philadelphia papers, clippings have also been received from Erie, Lancaster and other smaller cities. The three days of hearings were covered by the United Press and Harrisburg Press. Several dozen clippings have already been received from widely separated parts of the state.

PROSPECTUS

NEIGHBORS, INCORPORATED

INTRODUCTION

The nation's capital is fast becoming a Negro ghetto.

The emerging pattern is familiar--a central city occupied almost entirely by Negroes, ringed by suburbs occupied almost entirely by whites. It is the pattern of division and despair, of panic and suspicion, and resulting in "a sense of permanent alienation." This pattern must be broken.

Fortunately, the potential exists in Washington - perhaps more than in most large cities - for open occupancy and better balanced racial distribution, in short, for a genuinely integrated community.

Achieving this anywhere would be important. Achieving it in Washington would be doubly important because of the inevitable symbolism attached to everything of consequence that happens here.

Washington until now has had no genuinely integrated neighborhoods large enough to be significant. Its "integration" has been the phantom integration of transition.

Now, however, Neighbors, Inc., a local community organization, has shown that it is possible to dampen panic and prevent upheaval. Operating in a large section in the northern part of the city east of Rock Creek Park, it has in five years evolved techniques that can change transition into integration.[1/]

1/ For a map of the Neighbors, Inc. area, see Appendix B, p.ii.

This undertaking, carefully meshed with related efforts now beginning in other parts of metropolitan Washington can create new patterns of race and residence in the Nation's capital.

Neighbors, Inc. is out of the experimental stage. It has the necessary skill and experience. It has won community support and recognition by highly placed officials. What it now must have, if it is not to become just an interesting failure, are the resources to put its skill to work on a scale broad enough to be meaningful.

PROBLEM AND SOLUTION

What are the essential facts in Washington?

The last Census showed that 54 percent of the District's population was Negro. If the present trend continues, the 80 percent mark may be reached sometime before 1975.[1/]

The solution is dispersion and broad scale integration. White families must be attracted back from the suburbs to urban Washington. It is equally important to encourage and assist Negro families to move out of their urban ghettos.

Most Negroes will not automatically take advantage of housing opportunities in predominantly white areas or even know about them. This is particularly true as long as whites flee from the expanding edges of the Negro ghetto and in doing so open up new housing opportunities for non-whites, though frequently at inflated prices.

1/ See Appendix C for notes on trends in race and residence in Metropolitan areas and for the projected growth of the District's Negro population, pp. iii-xi.

A program of neighborhood stabilization, such as the one we have undertaken, slows down the turnover of housing in areas of racial change, and contributes to integration both locally and throughout the metropolitan region. Stabilization reduces the number of homes available to Negroes in the transitional areas rimming the Negro ghetto. Stabilization, thus, contributes to the forces promoting diffusion of the Negro population - provided new opportunities are opened, and are made known to Negroes, in presently non-integrated areas.

Concurrently, a program of neighborhood stabilization will transform transitional integration into permanent integration. These integrated areas in turn must be made to spread gradually outward from their borders, ultimately to become the dominant residential pattern in the central city.

THE ORGANIZATION

Neighbors, Inc. (NI) has its roots in one man's decision to try to keep his neighborhood integrated.

Marvin Caplan became a resident of the Manor Park section of the District in 1957 at a time when Manor Park was in danger of turning rapidly from an all-white to an all-Negro area. Mr. Caplan wanted neither. He decided to see what could be done to suppress the ill will and irrational panic that had already turned large parts of the city into ghettos.

He enlisted a small group of fellow residents. Since the existing community association refused to take them in because some of them were Negroes, they formed their own organization.

It quickly became apparent that it would be impossible to stabilize a small city neighborhood within a metropolitan complex so three more neighboring sections were included.

The area covered is 250 city boocks. Some 35,000 to 40,000 of the District's 764,000 residents live there. More than half of the housing is owner-occupied. The median value of these houses ranges, by census tract, from $15,000 to "over $25,000." Median rents run from $84 to $105, with the bulk of the rental units in apartments rather than houses.

Neighbors, Inc. is a membership organization. It has grown since 1958 to an enrollment of about 1,000. The members elect annually the 18 member governing board. The full time staff consists of an executive director, a community organization specialist, an administrative assistant, and a secretary.

Financing for a current annual budget of $25,000 comes from three principal sources. First, the basic dues are $2 a year per member. Some members contribute more. Second, the organization runs special income-producing projects such as a book and art fair, concerts, and other benefits. Finally, NI has been able to secure vital foundation support. Initially, the Eugene and Agnes Meyer Foundation provided some seed money. More recently, the Taconic Foundation of New York

gave a three year grant of $15,000 a year. We are in the second year.

STRATEGY AND ACTION

The problems of race and residents are complex. They require a varied response.[1/]

Neighbors, Inc. works in three main areas. It tries to slow down the turnover of homes in its north Washington area (stabilization). It attracts white home buyers (recruitment). It works with government and civic leaders not only to relieve the pressures that impel racial change, but to encourage efforts to achieve genuine freedom of residence (dispersion).

Stabilization

Within the neighborhood, our first target is the attitude of white residents. Our own observations and the little research which has been done in this field suggest that a number of fears interact to induce white families to flee neighborhoods undergoing racial transition.

They are afraid that property values will drop precipitously. They are afraid that the quality of education will deteriorate and problems of social relations will increase as the proportion of Negroes in the neighborhood schools rises. They are afraid they will

1/ See Appendix C, p. iii.

lose social status because they live in a racially mixed neighborhood. They are afraid that once Negroes enter a neighborhood it inevitably and rapidly will become all-Negro.

The best antidote for fear is facts and Neighbors, Inc strives to supply them. We seek first to educate and mobilize our community.

Individuals are reached through special neighborhood meetings, block meetings, general membership meetings, forums and other specialized public meetings. A monthly newsletter is published, and also material to meet particular situations.[1]

Religious, business, civic and educational groups in the area are asked to let Neighbors' speakers tell them how their interests are related to neighborhood stabilization and how they can contribute.

At such times, we point out that, while the classic response to Negro migration into a new residential area has been white flight, this has by no means been the universal pattern. We stress the fact that property values in transitional neighborhoods do not have to fall, and that calmness contributes to their stability.

We publicize the facts about the area's schools to refute rumors. We seek to overcome some of the deficiencies of the schools stemming from inadequate funds granted them by Congress. We encourage volunteers to work with the schools. We have helped devise for the junior high school in our area a special program called "American Democracy in Action."[2] It has the double purpose of giving the school an out-

1/ See Exhibits in accompanying packet.
2/ See Appendix D, pp. xii - xvi.

standing program and of enhancing its reputation in order to overcome parents' thoughts of moving away.

Neighbors, Inc. has begun the task of giving residents a sense of belonging to an important and creative community--a living symbol of residential democracy. Gradually, parts of the area are being turned from a place to flee to a place to settle. A start has been made toward restoring the prestige of the area. NI has received favorable local and national notice, has been the recipient of a number of citations,[1/] has held outstanding public events and has become the home of a number of notable persons.

A second focus of our stabilization program has been on the real estate firms. We have sought to restrain the activities of unscrupulous real estate salesmen who, by inducing panic among white home owners, are often able to buy houses at below-market prices, and then sell to Negroes at above-market prices. We are trying to persuade District officials to bar unethical scare tactics. We have secured a ruling that "SOLD" signs are illegal. Meanwhile, we are educating residents to cope with high-pressure real estate tactics.

We helped spark a successful two-year campaign to get local newspapers to eliminate racial designations from classified real estate advertising.

We have tried to develop interest in the area on the part of well-established real estate firms many of whom have refused to handle pro-

1/ See Appendix G, p. xxiv.

perty here and abandoned the neighborhood to speculative dealers. We have demonstrated to them that white families will buy in mixed neighborhoods if the advantages of the area are fairly presented.

Our third emphasis within the neighborhood is maintaining community standards at high levels. We try to see to it that housing and zoning codes are enforced. We sponsor contests and educational programs designed to encourage housing and neighborhood maintenance and beautification.

Last, we have sought to develop cordial relationships across racial lines. We have promoted activities that bring people together on the basis of common interests. These include a garden club, Junior Neighbors, The Community Singers of Washington, a boys' athletic club, concerts by local artists, interfaith meetings of area clergymen, and a local businessmen's association.[1]

Recruitment

The Neighbors, Inc. community is one of the few desirable areas where Negroes seeking homes need not fear humiliating rebuff. Despite our efforts, many real estate concerns simply do not show white home seekers property in the area. They either assume white buyers are not interested or actively discourage them.

These circumstances combine to produce more Negro home seekers than white in the Neighbors' area at any given moment. Consequently,

1/ See Appendix F for a detailed description of our stabilization program in Shepherd Park, pp. xix - xxiii.

recruitment of white families is essential to maintain effective integration. The results of our free home-finding service -- staffed like most of our activities by volunteers -- have been encouraging.[1] Through our efforts, two white families settled here the first year, eight the second, 12 the third, and last year 35. Nearly all have young children. About a dozen Negro families have also found homes with NI help.

Dispersion

Integration in the NI community will remain unstable as long as housing opportunities for Negroes in other areas continue to be restricted. Unless these opportunities materialize the pressures on the Neighbors' area will continue to build up and may soon be irresistable.

We have, therefore, made freedom of residence throughout metropolitan Washington our parallel concern.

We have urged city officials to issue fair housing regulations. We were among those who urged President Kennedy to issue his Executive Order on Equal Opportunity in Housing. We have acquainted urban renewal and school authorities with the problem and have urged them to consider the consequences of their policies as they affect population dispersion and residential stability.

1/ See Appendix E, pp. xvii - xviii.

We have participated in numerous area-wide educational activities aimed at overcoming prejudices against open occupancy. We have urged high-ranking church officials to co-operate in stabilization efforts. We have assisted in conducting a good neighbor pledge campaign through which citizens have assured potential neighbors they would be welcome regardless of race or religion.

Neighbors, Inc. is a point of reference for housing matters in Washington. We have a small specialized library and are consulted by students. We have provided guidance for county groups seeking to accommodate new Negro families in their communities. Both Negro and white groups refer white and non-white prospects to NI for assistance in finding integrated housing.

We have discussed with Negro leaders the threat that the growing segregation of neighborhoods poses to equal opportunity in jobs, education, and housing.

We have assisted in bringing to their attention the mutual benefits for both white and colored deriving from residential dispersion and the importance of taking advantage of housing opportunities throughout the metropolitan area in order to avoid perpetuating "colored or changing neighborhoods."

Despite its limited resources, Neighbors, Inc. has sought to promote the concept of freedom of residence by assisting a great variety of groups, some long established and others just beginning. We have provided literature and consultation to local organizations and others

as far away as California and Washington State. In all some 35 groups have received our help.[1]

POTENTIAL

The potential for housing desegregation in the Washington area is relatively high.

Washington has a rapidly growing Negro middle class which can afford to move to both new and renewed areas of the city and suburbs. The high mobility of the population provides opportunities for desegregation in housing.[2]

It is generally ancicipated that the President's Executive Order, applying to the suburbs, and the expected District fair housing regulations will also help open more areas to Negroes.

Neighbors, Inc. is part of the potential. More than ever, if the patterns of the past are any guide, our accumulated skills in allaying panic will be needed as Negroes move into presently unintegrated areas throughout metropolitan Washington.

1/ These have included: The American Friends Service Committee, the Board of Home Missions of the Congregational-Christian Churches, the National Conference of Christians and Jews, community centers and settlement houses, a ministerial association, a Negro church striving for integration, members and committees of Congress, economists and researchers for the housing industry, a small municipality, Baltimore Neighborhoods, Inc., the Library of Congress, radio and television outlets, and the Voice of America.

2/ See Appendix C, p. v.

If our demonstration succeeds similar efforts in other parts of the region will be strengthened.

If we fail, old fears will be confirmed and the cause of residential integration would be set back. The old cycle would be perpetuated, with Negro penetration of white areas inducing panic and panic inducing renewed segregation.

We don't intend to fail, but we must have support if we are to succeed.

NEEDS

In our five years of experience, we believe we have developed a tenable theory of neighborhood stabilization and a set of tools with which the theory can be put into practice.

We are out of the experimental phase. What we now need are the resources to put the concepts and techniques to work on a broad enough scale to make a significant impact on our own community and the housing patterns of metropolitan Washington.

The Neighbors, Inc. Area

While the racial transition has been perceptibly slowed down as a result of our work, the forces we confront remain formidable. Unless our resources can be multiplied quickly, it is quite probable the area will become predominantly Negro within the next 12 to 24

months, and an opportunity to establish integration will have been lost.[1/]

Our most urgent requirement is for more full time professional staff. Most pressingly, we need more community organization specialists complemented by other technicians and clerical staff.

Our present single specialist has visited approximately 300 home-owners - some more than once in 15 months. Impressive though that is, it must be set against the total job to be done. There are about 6,700 owner-occupied houses in the NI area.

Our specialist's activity has been largely concentrated in one of the four principal sections of the area where unscrupulous real estate speculators have been most active. She is often pitted against some 20 or more real estate firms at one time. (About 50 firms do business in the NI area.) Meanwhile residents in other parts of our community have complained with some justification that while they have contributed money and effort to the organization, it has neglected them. If we are unable to respond we shall risk losing their support.

There is an urgent need to get residents active in their own neighborhoods. This is the most effective way of keeping up neighbor-

1/ Although the 1960 Census is outdated in the NI area, it is the only data available. The Negro population is moving generally from south to north. Following the general order of migration, the proportion of non-whites in each census tracts in the NI area was: tract 21 - 62%, tract 19 - 52%, tract 20 - 41%, tract 17 - 18%, tract 18 - 12% and tract 16 - 2%.

hood morale. Professional help is indispensable in galvanizing and channeling the efforts of volunteers.

Large blocs of white residents leave whenever an owner "converts" an apartment from white to Negro occupancy under the guise of integration. Little or nothing has been done about the 6100 rental units in the area, a substantial majority of which continue to have exclusively white tenants. We believe we have developed techniques to promote stability in rental property. Lack of staff, however, has prevented us from acting effectively.

Recruitment of new white families needs to be expanded and put on a much more systematic basis. An extremely important adjunct to this is widespread publicity to inform as many people as possible of the advantages of this neighborhood and to portray it in an attractive and prestigious manner. A comprehensive public relations program must be mounted to reach the large numbers of persons new to Washington.

We need to do much more to maintain and enhance the physical aspects of the area. This is essential particularly in the southern most section where the population density is increasing rapidly. Continuing effort is required to get services from various departments of the municipal government, such as better trash collection and improved street lighting.

Neighbors, Inc. because of limited resources has been able to do relatively little to help new Negro residents become a vital part of the community. NI, of course, welcomes all racial and religious groups.

But because Negro families are often unsure of their reception in integrated neighborhoods, more needs to be done to acquaint in-coming Negroes with the organization and to enlist their co-operation in activities of common interest.

A vital factor is the attitude of many white parents toward integrated neighborhood schools, particularly our junior and senior high schools. A program for the senior high school comparable to the junior high, "American Democracy in Action," program is needed. The schools in the area have many unmet needs because Congressional support of the whole school system is woefully inadequate. We must do more to recruit volunteers to meet some of these needs.

Creative attention also must be given to the development of appropriate social activities at our integrated junior and senior high schools, a problem made acute by the apprehension of many white persons.

Our program should include research. We need to know more accurately and more quickly about developing residential patterns in our area. A study of what actually is happening to property values is essential. We need to analyze the strengths and weaknessess of our own program. The area is a living laboratory for exploring the dynamics of changing neighborhoods. A unique opportunity exists here to make an invaluable contribution to national understanding of these forces and knowledge of how to respond to them .

The Broader Community

As we have noted, Neighbors, Inc. has influenced in a modest way the forces outside the area. The program envisaged in this prospectus would allow an expansion of our activities in the broader community.

Decisions about housing and transportation are now being made which will have major impact on many areas including our own. We need to be in a position to help mold these decisions intelligently.

Several important new developments have recently occurred in the metropolitan area. For example, the American Friends Service Committee and Suburban Maryland Fair Housing, Inc. are beginning programs to encourage greater housing opportunities for Negroes. As the local organization with the greatest experience with integrated housing, Neighbors, Inc. should be able to allocate staff time to consult and cooperate with them.

Endeavors by other groups, public and private, will bear heavily upon the success or failure of our own venture. More and more Washington neighborhoods will face problems similar to ours as a result of the Executive Housing Order and the anticipated fair housing regulations for District of Columbia. Our experience should be made readily available to assist these neighborhoods in assimilating Negro families. Lack of staff presently makes this aid virtually impossible on a continuing basis.

Specifically, an expanded staff would make feasible:

1. The preparation of a series of reports analyzing our experiences designed to serve as guides to other groups similarly concerned here and throughout the country. There is at present no comprehensive manual available.
2. The development of field services to assist in dampening real estate panic occasioned by Negroes moving into areas now occupied exclusively by white residents, to encourage existing neighborhood organizations to work for area stabilization, and to stimulate the formation of new groups if necessary.
3. The establishment of close working relationships with other groups promoting wider housing opportunities in the metropolitan area. Similarly NI could explore with the Housing and Home Finance Agency the possibilities of local and national programs to promote neighborhood stability.
4. In cooperation with other agencies, the organization of a survey of non-white housing demand in the metropolitan area as an aid to program planning by both public and private agencies.
5. The stimulation of coordinated effort by public and private agencies to secure a comprehensive plan for attacking the basic urban-suburban racial division on all possible fronts.

Proposed Budget and Staff

In summary, Neighbors, Inc. seeks to increase its staff to a point where these stated objectives can be accomplished. Our principal need is for four additional community organization specialists, bringing

our total number of community workers to five. We would then be able to assign one worker in each of our four geographic areas and the fifth to work with tenants of our many apartment buildings.

We also need three additional professionals with training and experience in 1) real estate, 2) sociology and social research, and 3) public relations. Supporting clerical services, additional office space and equipment, and more funds for program are also required.

All professional staff would carry related responsibilities for portions of the program directed toward the broader community in addition to their work within the NI area.

While it is customary to build up staff in several annual steps, ours is an emergency operation. We have been functioning at a minimum level for about five years. The need is urgent. Thus we seek a rapid expansion of staff over the next two years. To attract the skilled personnel needed, the program should be underwritten by a three-year grant, renewable for two more years upon evidence of satisfactory performance.

The proposed budget appears in Appendix A. The total budget for three years is $309,400. Of this, we anticipate that the Neighbors, Inc. membership will be able to raise $30,000. We already have in hand our Taconic Foundation grant which will provide $15,000 for 1963-64. We seek, therefore, foundation grants totaling $264,400 over the next three years.

PROPOSED THREE YEAR BUDGET

APPENDIX C

SUPPLEMENTARY NOTES ON RACE AND RESIDENCE IN METROPOLITAN AREAS

Statesmen have decried the effect of discrimination and segregation upon the foreign affairs of this country, but of more immediate concern is the effect here at home.

The magnitude and impact of the growing cleavage between cities and their suburbs are indicated by census data and the authoritative reports of students of urban problems.

Between 1940 and 1950 more than two million white persons deserted the central cities, while the movement into the cities was in the proportion of about 1.3 white persons for each two non-white.[1/]

In 1950 only 39% of the total non-white population of the country lived in central cities, but 10 years later 51% were urban dwellers. This change resulted in a 63% increase in the number of non-whites within the cities, from 6.3 million to 10.3 million. On the other hand, white persons in the suburbs increased from 19.9 million to 36.1 million, an increase of nearly 82%.[2/]

This "urban-suburban schism" has frightening import. It threatens the very framework of our urban society. An early analysis was made by

1/ Donald J. Bogue, Components of Population Change, 1940-50. Miami University, 1957, p. 34. Figures for 1950-60 are not available.
2/ "Our Non-white Population and Its Housing - A Summary of Census Statistics," Office of Program Policy, Office of the Administrator, Housing and Home Finance Agency, November, 1962.

Professor Morton Grodzins.[1] His catalog of the products of this population dichotomy includes the following:

> The spread of slums; increased resistance to the expansion of Negro residential areas; problems resulting from residues of lower income and prejudiced whites in the central city; increased Negro-white tensions; greater isolation of Negroes in northern urban centers than exists in the rural south; the segregation of community facilities in the north as pronounced as in the south; the decline of business and property values, as well as the tax base, in the cities; the growth of increasingly racialistic Negro political power in the cities, and the attempts of white legislatures to retaliate by gerrymandering Negro areas; the much needed cooperation of urban and suburban areas threatened by color conflict. 2/

In a more recent survey, Charles E. Silberman underscored the grave risk that Negroes will decide that the American middle-class is not for them. Impatience is turning to bitterness and a "sense of permanent alienation from American society" is developing.

Mr. Silberman continues:

> "Unless the Negro position improves very quickly, Negroes in whatever class may come to regard their separation from American Society as permanent, and so consider themselves permanently outside the constraints and allegiances of American society.
>
> "The Negro district of every large city would come to constitute an American Casbah, with its own values and its own controls -- and a deep hostility to the white community. In such a situation, communication between the races would become impossible. And life in the large city would become unbearable." 3/

Nesbitt is Director of Low-Income Housing Demonstration Program and Mrs. Yankauer is an Urban Sociologist for the Housing and Home Finance Agency.

3/ "The Negro in Our Cities." Fortune, March, 1962.

Washington, D.C., itself, is a paradox. The opportunities for achieving non-white dispersion are great yet the situation here is extremely critical.

Housing expert George Nesbitt wrote in 1956 that fortuitous dispersion of non-whites in the District was providing ample opportunity for "adopting a character of city design and housing developments which supplement and extend the non-white dispersion trend." In 1962, he confessed that the opportunity had been "little used". However, he believes that the opportunity for housing desegregation which was overlooked in the fifties "is still present in the sixties."

The factors he cites are:

1. A rapidly growing non-white middle class, able financially and educationally to move into new and renewed areas of the city and suburbs.

2. The price and other characteristics of the existing and expanding supply of metropolitan housing.

3. The high mobility of Washington's population which produces rapid housing turn-over.

4. A housing industry increasingly equipped to depart from segregation-supporting policy and practice.

5. A local government better equipped to support desegregated housing than its past performance would indicate.

6. A great potential for movement toward an open city through Presidential influenee and power.

7. In general, an increasingly favorable climate for desegregating housing in the Washington area.1/

Over against these favorable factors is the stark reality that

1/ Nesbitt and Yankauer. op. cit., pp. 80 - 92.

Washington is the first city with a non-white majority. The percentages for the six closest cities are: New Orleans 37%; Baltimore 35%; Cleveland, Detroit and St. Louis 29%; and Philadelphia 26%.

However, the population trend for the Washington metropolitan area as a whole showed a trend directly opposite to that within the District of Columbia. The proportion of non-whites in the entire area declined in every decade since 1900 but two. At the century mark Negroes comprised 32% of the regional population, but in 1960 they made up 24% of the total.

Scarcely anyone will deny that this unbalanced distribution was brought about through factors largely controlled by the white population. Against this background, other statistics from the 1960 Census foretell more, rather then less, bifurcation. During the preceding decade, the number of Negroes within the District of Columbia increased 44%, while whites declined nearly 34%.

The fertility ratio (i.e., children under 5 years per 1000 women 15-49 years of age) of white women in the city was very low (about 250) while that for non-whites was high (about 510). The latter figure is only slightly higher than the fertility ratio for suburban white females. The median age of white females in the District was 43 years against 27.6 years for non-whites.[1/]

All of this is reflected in the growing rate of increase of the Negro population within the District since 1920. From a low point of about 25% in that year, the proportion of the total reached nearly 30% in 1940. A slow, steady rise continued to 1950. From 35% in that year the proportion shot up in the next decade to almost 54%. This trend, and those for related

1/ Eunice Grier, Understanding Washington's Changing Population, Washington Center for Metropolitan Studies, 1961, p.30.

areas, are shown on the graph[1] below.

Changing Percentages of Negroes - District of Columbia, Suburbs, and Entire Metropolitan Area, 1900 to 1960.

If the trend line for the central city is projected, it reaches the 72% mark in 1970 and the 80% mark in 1973, i.e., four colored persons to each white person living in the District.[2]

To the natural or uncontrolled population pressures should be added the effects of urban renewal and highway programs. From the first displacements in urban renewal areas in December, 1953, down to July 1, 1962,

1/ Ibid, p. 11.
2/ A local statistician, Raymond Clapp, makes a similar estimate. He anticipates that by 1970 if the suburbs remain closed, Negroes will constitute 71.1%, or if open - 64%, of the District.

renewal projects have displaced about 25,850 persons. The best estimates available indicate that during the calendar years 1954 through 1962, other governmental programs (highways, schools, housing code enforcement, condemnation of insanitary buildings, etc.) have displaced 17,890 more. A five-year estimate, extending from July 1, 1962, to June 30, 1967, forecasts the displacement of 35,200 persons, of which about 11,500 will be from urban renewal and 23,700 from other governmental programs.[1/]

The vast majority of those already displaced and those still to be up-rooted are Negroes.[2/]

A political scientist who recently made a study of Washington declared, "Halting the outflow of the white population and stabilizing mixed neighborhoods may be the most critical problem of the city. Thoughtful Negroes as well as white persons are profoundly concerned over the transformation of Washington into a Negro community."[3/]

The Washington story is repeated, at various levels of intensity, in most of our northern metropolitan centers. Yet, as George and Eunice Grier point out, not a single metropolitan area has been willing to devote the effort and the resources necessary to deal effectively with the developing tragedy. It is amply clear, they conclude, that the consequences of failing to learn soon how to equalize and disperse pressures of Negro

---

1/ Office of Urban Renewal, D. C. Government. Displacement will be less if highway or other projects are delayed, or greater if such programs are accelerated.

2/ Washington Housing Association. Actual displacement figures by urban renewal projects are: Southwest-B: 5,105 persons, 97% Negro; SW-C: 18,316, 68% Negro; SW-C-1: 622, all Negro; NE-1: 1,800, all Negro.

3/ Martha Derthick. City Politics in Washington, D. C., Joint Center for Urban Studies, MIT and Harvard University, and Washington Center for Metropolitan Studies, 1962, p 125.

population growth "will mean that the phenomenon of rapid and complete racial change must continue."[1]

There is a wide difference of opinion on how to attack the problem. Some business leaders and real estate men take a laissez-faire attitude. They anticipate that Negroes will move to the suburbs and white families will flee again - this time back to the cities.

The Washington, D. C. Commissioners seem to view urban renewal as the answer to the city's population problem. They hope thus to restore the tax base and to attract upper-middle income white families back to the city.[2]

There are others who see urban renewal either as an inadequate solution or as a program which compounds the difficulties. The Griers declare that "bringing back a few thousand white people to the cities through urban renewal will not solve all the problems."[3]

The head of the local renewal agency told the U. S. Civil Rights Commission, "If we don't get this problem solved, I think we're going to have to call off the urban renewal program."[4]

Robert Weaver, the present Housing and Home Finance Agency Administrator, said several years ago, "Urban renewal has to date accelerated the exodus of middle-class families to the suburbs at the same time that it served to generate blight and slums in some communities. Such ironic perversion of urban renewal is closely associated with enforced residential

2/ Derthick, op. cit., p. 125.
3/ Griers, ibid., p.12.
4/ Hearings, U. S. Civil Rights Commission, April 12-13, 1962, Housing in Washington, p. 279.

segregation."[1]

Weaver's analysis is worth quoting:

> "In an effort to eradicate the worst of the downtown slums, areas selected for clearance and redevelopment have frequently housed a large proportion of minority families. These families have access to only a part of the total housing market. Principally they have found alternative shelter in existing, already over-crowded areas of non-white concentration. Their arrival has worsened an already bad situation. Enforced residential segregation generally restricts non-whites to housing ill-designed to meet their pocket-books or family needs. Doubling up, inadequate conversions and rapid deterioration follow. Prior to urban renewal, this development had been a major factor in the spread of blight and slums. Since this program got under way, the process has been greatly accelerated.
>
> "In the wake of new slums and blight created by relocation incident to urban renewal, more pressure has been placed upon middle-income white families to leave the city. The program has also provided an economic incentive for them to do so since the rather sudden necessity for non-whites to find alternative shelter creates a new and inflated market for old housing. Whites who own such properties are able to sell or rent them at a good price to Negroes; these white owners are then much better prospects for suburban housing."

Neighbors, Inc. concurs with Morton Grodzins' position that "anything less than a massive program may have admirable local effects for particular factions but does not attack the basic problem of bifurcation of races on urban-suburban lines."[2]

Only a broad program backed by the government and private groups in concerted action can succeed. What is needed, say Banfield and Grodzins, "is a whole range of measures to make central cities more

---

1/ Speech to National Conference on Discrimination in Housing, Phila. December 11, 1958, pp. 8. (An extended discussion of this subject by Mr. Weaver may be found in his article, "Class, Race and Urban Renewal." Land. Economics, August, 1960.

2/ Quoted by David B. Carlson, "The New Urbanites." Architectural Forum, June, 1960.

attractive to upper and middle class whites and to allow non-whites to live where they can afford to live and want to live."[1]

> "Such measures can be achieved only through a major effort of all levels of government and must include large-scale financing, public education, and nondiscrimination laws, and experimentation with new programs of urban renewal and relocation housing."

Just as the opportunity was missed during the decade of the fifties, it can be lost again, perhaps irrevocably, in the sixties unless top level leadership within and outside government takes the initiative.

There are many who foresee, as Nesbitt and Yankauer do, that "Washington will deteriorate dangerously, unless government, industry and citizenry move quickly to make housing in the Metropolitan area available to all who need it, without 'second-class' restrictions. The potential is there. But strong action must be taken to realize it."[2]

APPENDIX D

THE "AMERICAN DEMOCRACY IN ACTION" PROGRAM AT PAUL JUNIOR HIGH SCHOOL

A Special Junior High School Program

Neighbors, Inc. recognized during its first year of operation that many white parents had lost confidence in the junior high school serving the area because of the increase in the number of Negro students, even though only one-third of the student body was colored at that time. Parental apprehension about the school was a strong factor influencing white families to flee the neighborhood.

NI is trying to overcome this situation. One of its 1959 monthly membership meetings was devoted to Paul Junior High School. The meeting was widely "advertised" throughout the neighborhood. Almost every monthly newsletter has contained some favorable news about the school. A special meeting was held at the school for principals, teachers and PTA presidents with the cooperation of the school administration on the subject of "The School's Role in a Changing Neighborhood." The objectives were to provide some understanding of the problem, to explore how the neighborhood and the school situation interact, and to instill the idea that positive steps could be taken to achieve stability rather than accepting "the inevitable."

Our representatives held two conferences with the Superintendent of Schools. We urged that Paul and Coolidge High School which also serves the area should develop special programs for which they would become known throughout the city.

We suggested that the two schools together might become an outstanding center for music and art, or for language, or for sciences, or for

history, government and international affairs.

However, it was not until the fall of 1962, at the suggestion of parents led by active NI members, that a special program, "American Democracy in Action," was inaugurated at Paul Junior High School.

The program is designed to inculcate an early and deep interest in government and democratic processes.

Just as significant is the contribution this pilot project can make in achieving a stable, integrated community. Paul has been eminently successful in maintaining academic excellence during a period of pronounced racial transition.

It is hoped that the prestige of the participants and the practical idealism of the program are making Paul's image match its reality and that is is offsetting the apprehensions of white parents whose children attend a school whose student population is now well over 50% colored.

An executive committee composed of residents of the area was formed including Lee White, Assistant Special Counsel to President Kennedy; Kenneth Holum, Assistant Secretary of the Interior; and Carl Rowan, Deputy Assistant Secretary of State (now Ambassador to Finland.)

In addition, an appeal was made to national leaders to help with the program on the basis that the day-to-day life of the capital city is the nation's business. The Honorable Walter Tobriner, President, Board of Commissioners for the District, and Dr. Carl F. Hansen,

Superintendent of Schools, invited a number of distinguished governmental leaders to form an Advisory Council for the Paul program. In every case, these busy persons demonstrated strong interest in the project both as an educational venture and as an exciting experiment to aid in preventing integrated public schools from reverting to segregation once again.

Advisory Council members, each of whom agreed to participate in at least one program for Paul students, presently include: United States Attorney General Robert Kennedy; Secretary of the Interior, Stewart Udall; Administrator of the Housing and Home Finance Agency Robert Weaver; Associate Justices of the Supreme Court Arthur Goldberg, William Brennan, William Douglas, and Potter Stewart; Senators Clifford Case, Paul Douglas, Jacob Javits, Maurine Neuberger, and Hubert Humphrey; and Representatives Frank Burke, Abraham Multer, Katherine St. George, and Charles Mathias.

The program is for all students in every grade and on every level of achievement in the school. As far as possible activities are planned to disrupt classes as little as possible. Many field trips are scheduled for evenings or after school. Some trips are taken by a few students in each class who report back to their classmates. Attendance at special assemblies is rotated so that all may participate. So far assemblies have included talks by Secretary of the Interior Udall, Representative Mathias and Arthur Schlesinger, Jr.

Students have made many field trips. During the November, 1962, elections in Maryland, the students attented political coffee hours, met the candidates, attended rallies, interviewed the Governor of Maryland and local officials ranging from the sheriff to the Judge of the Orphan's Court. They visited the polls and collected campaign literature from

both major parties.

Students have attended sessions of the Supreme Court and of Congress. They have attended Congressional hearings, public hearings called by the District Commissioners on matters important to District residents, where they heard testimony from community leaders on both sides of the issues.

In every way possible the trips and lectures are designed to enrich the program of academic studies at the school. There are also many side benefits. Small groups of students have had the privilege of talking with distinguished visitors at teas following lectures. They have developed poise, the younger students learning from the more experienced upper-classmen. Reporters from the school paper have sometimes held press conferences with guest speakers. Perhaps most important has been the growth of school spirit as the students have gained the feeling that they too are an important part of the community.

Reactions from several of the speakers seem to confirm our expectations of the many benefits of this program. Below are quotations from only three:

"I was greatly impressed by my visit to the Paul Junior High School -- by the liveliness of the students, by the devotion of the teachers, by the concern of the parents and, most of all, by the sense of a vital educational community produced by students, teachers and parents working together in a common undertaking."

Hon. Arthur Schlesinger, Jr.
Special Assistant to the
President

"Democracy in action was what I found at that admirable school (Paul) ... continuation and expansion of such efforts toward true neighborhood democracy are desperately necessary if our metropolitan

capital is to be a city of which we can be proud."

Hon. Stewart Udall
Secretary of the Interior

"The maturity and interest of the students as judged from the character of their questions was impressive to me as I am sure it would be to any visitor. The fact that the question and answer period at the conclusion of my brief remarks was so animated and was conducted at a high level is positive evidence of the ground work which has been laid at Paul Junior High School over a period of time."

Hon. Charles McC. Mathias, Jr.
Member of Congress

APPENDIX E

THE HOUSING INFORMATION SERVICE

The Housing Information Service (H.I.S.) is a community-wide service of Neighbors, Inc. designed to promote an open housing market in the NI area. NI offers its service to prospective buyers and sellers. It accepts no remuneration.

The acute shortage of housing for Negroes in the Metropolitan region occasionally creates situations in which the ethnic diversity of presently "open" neighborhoods is endangered.

In the light of this, we sometimes suggest to white families that they may wish to consider moving into certain areas -- or to Negro families that they may wish to select housing inside or outside the Neighbors area -- where the most effective contribution to neighborhood stability and integration can be made.

At the same time, H.I.S. gives all prospects, whether Negro or white, information about all available housing which seems to meet their requirements. The Service will gladly assist prospective buyers if they want to live in the NI area or will be happy to refer them to another organization if they wish to live elsewhere. The prospects' preferences, and then the ability of buyer and seller to agree on a contract (usually with the services of a real estate dealer) determine whether or not a sale takes place.

When NI was organized, most real estate firms handling property

in the area were selling houses only to Negro families, actively stimulating white families to flee, and refusing to show houses to prospective white buyers who had not been deterred by real estate advertisements labelled "colored". This has necessitated an emphasis on "recruiting" white families.

In the four years it has been operated by volunteers (one at first, and now four,) H.I.S. has helped find houses for nearly 70 families, of whom 57 were white. In addition about a dozen Negro families have been assisted, a substantial proportion of all requests from this group.

In our effort to recruit white families, we have used a number of techniques. A few "spot" newspapers advertisements have had little success though with adequate funds this method might yield greater results. We have prepared an attractive brochure promoting the area and its facilities. (See "A Vital and Lovely Place to Live" in the Exhibits Packet.) This brochure has been distributed to many personnel offices and other places where persons new to Washington are likely to see it--the local newspaper offices, the District of Columbia and Federal government offices, labor unions, etc. Finally we have made a special effort to call the NI area to the attention of several hundred new Congressmen and appointees of the Kennedy administration. A sample copy of our letter follows.

METHODS USED IN STABILIZING A PORTION OF THE NEIGHBORS, INC. AREA

The 250-block area served by Neighbors, Inc. is really four distinct neighborhoods with different backgrounds and socio-economic levels, and to a degree, different attitudes and interests. They are Manor Park, Takoma, Brightwood, and Shepherd Park.

In October, 1961, a grant from a foundation made it possible for NI to employ one community organization specialist. As it was obviously impossible for one person to cover the entire NI area, the Board directed her to concentrate in the section where the real estate speculators were (and are) most active, namely, Shepherd Park.

Stabilization here is vitally important to the whole NI project. If the white families in Shepherd Park succumb to panic and flee, it is doubtful that stability can be achieved in the NI area.

Stability has both its greatest strategic value and probably its best chance here. According to the 1960 Census, the racial composition of Shepherd Park was 98% white and 2% non-white, while other census tracts ranged from 12% non-white to 52% or more. The Shepherd Park white population is significant factor in averaging out the proportion of non-whites in the entire NI area to about 25 to 30%.

But by the fall of 1961 Shepherd Park was showing the first signs of large-scale panic. This neighborhood contains the most expensive homes in the NI area and is located in the northern-most part of the District along the Maryland state line.

For the first time, NI was able to launch a concentrated counter-effort near the onset of panic, induced by tactics of the speculators.

The NI staff member worked intensively in a 40-block triangle where most of the houses for sale were located. The triangle, a portion of census tract 16 is bounded by three thoroughfares, Sixteenth Street and Alaska and Eastern Avenues, N.W. It houses not quite half the residents of census tract 16.

The program of fact finding, stabilizing, recruiting and developing a sense of community which were worked out in the Shepherd Park neighborhood illustrate the techniques which have been developed and would be applied in other neighborhoods by an augmented staff.

By a process of ringing innumerable doorbells, a system of "block hostesses" was set up. At a series of coffee-klatches, these hostesses talked through the problem of stabilization and developed an informal survey instrument. (See Items 1 and 2 attached.) It was not intended to be a scientific research tool, but rather a means of permitting the hostesses to ring their neighbors' doorbells without embarrassment and a device for acquiring necessary facts on neighborhood change to combat rumors and realtors.

Although the initial survey indicated that the non-white households in the triangle represented about 10% of the homes, the dissimination of the information collected was helpful because most white persons presumed that the increase had been far greater. (See Item 3 attached.)

There were also several by-products of the survey. It provided: 1) a list of potential workers for such forthcoming events as the Home and Garden Tour (see below); 2) advance notice to the Housing Information Service about property coming up for sale or rent; and 3) a channel for distributing information on the purposes of Neighbors, Inc.

It soon became apparent, as it had earlier in sections further south

in the NI area, that a focal point of unrest was the junior high school. The organizer spent considerable time interviewing the parents of children in that school. These parents were found to be less worried, however, than parents of sixth graders about to enter the junior high school. An attempt was made to bring together the parents of each group through a series of forums. (See "Schools Serving the Shepherd Park Area", and "Your Stake in Shepherd Park", Items 4 and 5, attached.)

Before the forum on schools took place, a questionnaire devised by the staff member and volunteers was circulated to the parents to secure information about the students and the parents' attitudes toward the neighborhood public schools. (See Items 6 and 7 attached.) Findings were sent to panel participants to help them plan their presentation. It was also during this period that the "American Democracy in Action" program was started at Paul Junior High. (See Appendix D)

Concurrent with the efforts of the NI staff member to keep white residents from fleeing, the Housing Information Service was busy helping "prospects" find houses in Shepherd Park and other NI neighborhoods.

Most of the white newcomers are active "intellectuals" who believe in the possibility of neighborhood integration and are willing to work for it. In many cases, they have moved here deliberately to involve their children in an integrated experience. Hopefully they will give NI a self-perpetuating base - the new families inducing their friends to move in, and they in turn attracting their friends in expanding circles.

Finally, our community organization specialist sought opportunities for old and new residents of both racial groups to get acquainted in living room meetings as well as at large forums and neighborhood activities.

In the District of Columbia, the Georgetown section annually holds the most illustrious of the traditional Washington home and garden tours. NI members wanted a similar yet different way to publicize their area.

Consequently a "Home and Garden Tour - With a Difference" was planned for May, 1962. (See Item 8, Program of Neighborhood Open House). About half the homes opened were owned by white families and half by Negroes. Some 400 persons from all over the metropolitan area turned out for the tour on a Sunday afternoon. Eighteen applied for help in finding housing and several eventually moved to the area.

One of the most significant results of all this activity is the bond of community which has developed among those participating. This serves as a major deterrent for many who otherwise would be tempted to move. Many new Negro families have also been welcomed in a natural way and immediately involved in some phase of the program.

The general efforts of NI and the concentrated work of the community organizer in the Shepherd Park area have showed results. On her first visit to this area in early October, 1961, she counted 44 "For Sale" signs. One year later, in October, 1962 only two signs were visible.

During that year (October, 1961 through October, 1962) housing turned over at the annual rate of 20%, which was not higher than for the District of Columbia taken as a whole or, to cite a second comparison, for the city of Chicago. Houses were sold equally to white and colored, that is one for one. This 50-50 ratio, oddly enough, was maintained almost by month by month and block by block.

These statistics are encouraging if one considers what the situation

probably would have been had the NI effort not been made. Nonetheless, if present rates of change continue, this triangle area will probably be 50% Negro in less than five years. Other parts of Shepherd Park would probably be strongly affected.

Another valuable result of the Shepherd Park work is the development of new leadership. Many persons have become active in various phases of NI's work - the Housing Information Service, the several standing committees of the organization, and the planning of special events such as NI's Neighborhood Open House last year and the Neighbors' Art and Book Festival, to be held this year.

Seldom, if ever, has there existed a better laboratory for experiment and documentation in the human relations of housing integration. The new members of Neighbors, Inc. in Shepherd Park, both white and Negro, are committed by word and deeds. If they lose the struggle here, the loss will be felt everywhere in metropolitan Washington.

CITATIONS AND COMMENDATIONS

Neighbors, Inc. has received three awards and two of its leaders have received four citations:

November, 1960 -- Metropolitan Washington Chapter, National Association of Social Workers:

"On the occasion of the 1960 Jane Addams Centennial Commemoration, the Metropolitan Washington Chapter, National Association of Social Workers, presents this commendation to Neighbors, Inc. for its laudable efforts as a grass roots organization of volunteers committed to helping relieve and eliminate racial pressures in a neighborhood of changing population. In only two years of operation it has completed an impressive list of accomplishments. It has brought about racial harmony in neighborhoods through cooperative education and action in the tradition of unity of all mankind exemplified by Jane Addams."

May, 1962 -- -- Capital Press Club, Award for Community Service.

June, 1962-- -- Upper Northwest Community Group Citation for Outstanding Community Service.

Marvin H. Caplan, founder and first president of Neighbors, Inc. has been the recipient of three citations for his work with the organization: B'nai Israel Men's Club, Washington Chapter of American Veterans Committee, and Omega Psi Phi Fraternity.

Margery T. Ware, Executive Director, received a citation for distinguished community service from the D.C. League of Women Voters in 1962.

Many favorable comments have been made about the work of Neighbors, Inc. by an impressive list of community leaders. A number of quotations are contained in an early promotional leaflet called "What They Say." (See Exhibit Packet)

Among the commendations received since publication of that leaflet are letters from:

President of Howard University
President Emeritus of Howard University
Associate Dean of Faculties, American University
Chairman, Public Utilities Commission
Chairman, D. C. Recreation Board
President, Catholic Interracial Council
Special Assistant to President Kennedy (Chester Bowles)
Superintendent of D.C. Schools
Chairman, Urban Renewal Council (and President, Acacia Mutual Life Insurance Company)
Executive Secretary, Washington Housing Association
Superintendent, Methodist East District

BOARD OF DIRECTORS AND OFFICERS - BRIEF BIOGRAPHICAL NOTES

President: Dr. Robert C. Good - Director, Office of Intelligence and Research for Africa, Department of State; formerly, Research Associate, Washington Center for Foreign Policy Research, Johns Hopkins University ; formerly, Executive Director, Carnegie Endowment Seminars in Diplomacy; and Coordinator of President Kennedy's Task Force on Africa; Ph. D., Yale University.

Rabbi A. Nathan Abramowitz - Spiritual Leader of Synagogue.

Mrs. Lewis K. Atkinson - Housewife, P.T.A. Vice President.

Rev. Harry L. Bennett - Clergyman; Chairman, Division of Human Relations and Economic Affairs, Baltimore Conference (Methodist).

Marvin H. Caplan - Journalist; President, National Capital Clearing House for Neighborhood Democracy; Founder and former President of NI.

Gilbert Diggs - Assistant principal, junior high school; active in Boy Scout work and Catholic organizations.

Samuel Grant - Government employee; P.T.A. president.

Dr. Lawrence Graves - Principal, junior high school; member, Commissioners' Youth Council.

Mrs. Eunice Grier - Staff Associate, Washington Center for Metropolitan Studies; Co-Author, Privately Developed Interracial Housing.

Dr. Clifford C. Ham - Professor of Church in Urban Development, Wesley Theological Seminary; formerly community organizer, Baltimore Urban Renewal and Housing Agency; Affiliate member, Commissioners' Urban Renewal Council.

Mrs. T. J. Hutchins - Substitute teacher, District of Columbia and Maryland public schools; Sunday School superintendent.

Rev. Donald D. M. Jones - Clergyman; Department Chairman, National Capital Area Council of Churches.

Father Patrick Kemp - Priest

Charles M. Rodgers - Captain, D. C. Department of Corrections; Executive Committee member, Federation of Civic Associations; Treasurer, Neighbors, Inc.

Mrs. Donald Slaiman - Costume designer; former vice-president, Detroit block organization in a "changing" neighborhood.

Warren K. Van Hook - Partner, pharmacy business; member, Business and Professional Men's Association; Vice-president, Neighbors, Inc.

Tighe Woods - Realtor; formerly Administrator of Federal Rent Control (Housing Expeditor under President Truman).

QUALIFICATIONS OF EXECUTIVE DIRECTOR

When Neighbors, Inc. opened an office, Margery T. Ware became the organization's first executive. She has had 12 years professional experience in community organization and intergroup relations work and five years as an executive, four of which have been with this organization.

Previous experience included:

One year in the mid-1940's as legislative representative for the National Council for a Permanent FEPC, organizing national support for fair employment legislation.

After a period of graduate study, Mrs. Ware joined the staff of the Washington Urban League as Assistant Executive Secretary and Community Organization Secretary. During the seven years she was there, she was responsible for program in the fields of education, recreation, health, housing and welfare. She was Acting Executive for one year.

In addition to B.A. and M.S. Degrees from Wellesley College, Mrs. Ware completed graduate course work and examinations at American University for a Masters Degree in Sociology.

She is a member of the following professional organizations:

National Association of Social Workers
Academy of Certified Social Workers
National Association of Intergroup Relations Officials
National Association of Housing and Intergroup Relations Officials (Potomac Chapter).

Mrs. Ware has given leadership and service in numerous community organizations. In 1962 the D. C. League of Women Voters gave her a citation for Distinguished Community Service. Among her past positions are:

President, D. C. Legislative Clearing House;
Chairman, Community Affairs Committee, National Association of Social Workers (Metropolitan Washington Chapter);
Executive Committee Member of the above organization;
Executive Committee Member, National Association of Housing and Redevelopment Officials (Potomac Chapter);
Member, Settlement House Development Committee, United Community Services;
Secretary and Board Member, National Association of Intergroup Relations Officials (Washington Chapter).

Presently she is:

Member, Board of Directors, National Capital Clearing House for Neighborhood Democracy;
Member, Board of Directors, Suburban Maryland Fair Housing, Inc.

The New York Times.

SUNDAY, FEBRUARY 7, 1960.

ENTRY OF NEGROES STUDIED IN CITIES

Report on 8 Areas Asserts Realty Values in All-White Sections Do Not Fall

NO PATTERN DETECTED

But Study Says Non-Whites Often Bring a Stability in Prices to Neighborhoods

By THOMAS W. ENNIS

The widespread belief that real estate values fall when non-whites enter a previously all-white neighborhood has been rejected in a study of neighborhoods in eight cities across the country.

The study's major finding is that the entry of non-whites into an all-white neighborhood was much more often associated with price improvement or stability than with price weakening.

No single or uniform pattern of nonwhite influence on property could be detected, the study says. Rather, what happens to prices when non-whites enter a neighborhood seems to depend on a variety of circumstances which may influence prices upward or downward, or leave them unaffected.

Factors Are Listed

The influencing factors, the study finds are the following:

¶The strength of the whites' desire to move out of a neighborhood when non-whites come in.

¶The strength of non-whites' desire to move in.

¶The willingness of white families to purchase property in a racially mixed neighborhood.

¶The choice of housing available to white families.

¶Housing available to non-whites.

¶Relative levels of home prices.

¶The state of business conditions.

¶The long-run trend of property values.

The study, called "Property Values and Race" has just been published by the University of California Press. It was written by Luigi Laurenti, who has taught economics at the University of California in Berkeley.

The study reports the findings of one phase of a broad investigation of housing problems involving minority racial and ethnic groups which is being conducted by the Commission on Race and Housing.

The commission, formed in 1955, is an independent citizens' group headed by Earl B. Schwulst, president and chairman of the Bowery Savings Bank of New York. The commission's work has been made possible by a grant from the Fund for the Republic. An earlier study on discrimination in housing, called "Where Shall We Live," attracted wide attention when it was published by the commission in 1958.

Eight Cities Studied

Much of the new report is based on Mr. Laurenti's own studies in San Francisco and Oakland, Calif., and Philadelphia. He also evaluates similar studies made independently of the commission in Chicago, Kansas City, Detroit and Portland, Ore.

In San Francisco the sale prices of 5,417 homes in twenty formerly all-white neighborhoods which underwent some degree of non-white entry were compiled.

The sale prices of 4,495 additional houses in nineteen closely comparable neighborhoods which remained all-white were also tabulated. Neighborhoods were selected to give as much diversity as possible in price class, degree of non-white occupancy and other factors.

The fluctuation of prices in neighborhoods entered by non-whites — the test areas — was compared with price changes in the matching all-white neighborhoods—the control areas in the study.

For each pair of neighborhoods two types of price comparisons were made. These were the relationship of test prices to control prices before and after nonwhite entry, and the relative change in test and control prices.

Study of the comparisons yielded the following conclusions:

¶ In 41 per cent of the comparisons, test prices stayed within 5 per cent of the control prices, indicating no significant difference in price behavior.

¶ In 44 per cent of the comparisons, test prices were relatively higher than control prices by margins of 5 to 26 per cent.

¶ In the remaining 15 per cent of the comparisons, test prices were lower than control prices by margins of 5 to 9 per cent.

Relationships Varied

From the date of the first non-white entry at the beginning of the study period in 1943, 59 per cent of the comparisons showed larger percentage increases for test prices than for control prices. The remaining 41 per cent showed larger increases for control prices.

Neither the price class of the test neighborhood nor its percentage of non-white occupancy showed any steady relationship to the observed price movement. All ranges of price and non-white occupancy displayed both superior and inferior test price behavior as compared with control prices.

Mr. Laurenti concludes that price changes which can be connected with the fact of non-white entry are not uniform, as often alleged, but diverse. Depending on circumstances, racial change in a neighborhood may be depressing or it may be stimulating to real estate prices and in varying degrees.

The study finds that the odds are about four to one that house prices in a neighborhood entered by non-whites will keep up with or exceed prices in a comparable all-white area, particularly in a period of rising property values.

An analysis of mortgage financing data in the San Francisco area revealed the following:

¶Almost as many non-white buyers purchased for cash, plus a first mortgage, as did whites (48 per cent as against 53 per cent).

¶Resort to second mortgages was about the same for non-whites and whites—two out of five nonwhite buyers, two out of six white buyers.

¶For non-whites, cash down payments were 17 to 25 per cent less than those made by white buyers.

¶First mortgages extended to non-whites were as large or larger than those granted to whites, and involved the same loan-price ratios.

¶Recorded interest rates were the same for non-whites as for whites.

The findings for San Francisco, Oakland and Philadelphia are generally consistent with the neighborhood studies in Chicago, Kansas City, Detroit and Portland.

Demand Is Important

The study notes that discussions of race and property values assume that the demand for housing in racially mixed neighborhoods must come entirely, or almost entirely, from non-whites—that few if any whites will consider buying property in such areas.

This doubtless has been true in the past, the study says, and it means that the effect of racial changes in a neighborhood on property values depends basically on how rapidly white families dispose of their houses when demand on the part of non-whites appears.

The major threat to prices seems to be a too sudden and large addition to the neighborhood supply of housing available to non-whites.

DESEGREGATION . . . A Community Design

PHILADELPHIA, 1960—By GEORGE SCHERMER

The following article is reprinted from the **ADA NEWS** *of July, 1960.*

Should Philadelphia attempt racial desegregation? Can it be done? Is it worth doing? How big a job is it? When will the time be right to begin?

Those Philadelphians who pride themselves as liberals may consider such questions impertinent. "Of course," they answer, "Integration is now the official policy of the land. The U. S. Supreme Court has declared racial segregation to be unconstitutional. All that is necessary is to implement the decision. The process is going on now. We will need a fair housing practices law. Once we get such a law it will just be a matter of time. As to whether it is worth doing, why raise the question? Integration is inevitable. It cannot be prevented."

In a superficial sense, these answers are correct. Some integration is inevitable. Exclusion on the basis of color, ethnic origin or religion is outlawed in employment, public education and public accommodations. It has been reduced to nominal proportions in higher education. While exclusion continues to be lawful in all private housing operations in Pennsylvania, there are hopeful indications that an effective fair housing practices law will be adopted in the next session of the State Legislature. Admittedly, a very large part of the Pennsylvania citizenry is apathetic on the issue, and considerable opposition prevails. However, the forces supporting such a law are vocal and appear to have the support from the large city political organizations. They have the tactical benefit of both the pivotal value of the Negro vote and weight of the moral and religious forces on their side. If the supporting forces will mobilize their forces now and generate every possible ounce of effort, a Fair Housing Practices Law in 1961 seems attainable.

THE EFFECT OF LAWS

It will be a fact, then, that so far as law and public policy are concerned discrimination and exclusion will be doomed. Within a few years hence the Negro family that has the necessary resources, courage, determination and emotional stamina will have the support of law in breaking away from segregation.

The question then will be: How much motivation will be required of the Negro family and how many Negro families will possess the financial resources and motivation indicated? These questions have been given little consideration by even the most ardent integrationists, either white or Negro.

Thus far the issues have been those of principle, morality and justice. Many a Negro spokesman has said, "We Negroes really aren't interested in associating with white people. We just don't want to be excluded. We want to know that we can enter a given place if we choose to." Many liberally oriented white spokesmen have said, "I think 'they' should have equal opportunity, they shouldn't be excluded, but they should not force themselves or be forced upon us."

Thus, there appears to be considerable distinction in men's minds between the absence of discrimination and exclusion on one hand and affirmative measures to implement integration on the other.

MIDDLE CLASS LIBERALS

Due notice should be taken of the growing group of middle class liberals who are uncomfortable about living in an exclusive community. They would like to have integration on their own terms. These people may or may not subscribe to racial quotas in principle, but the integration they seek is not attainable without them. "I want my child to have the experience of knowing Negro children as schoolmates and equals" they say, "but I do not want my child to be in the minority. I want to be sure that the standards of the school will remain high and that the social standards of the Negro families will be equal

to our own." Since these conditions cannot be guaranteed in the areas where racial transition occurs, and most such people are insufficiently committed to devote the time, effort and capital necessary to create an "intentional" community of their own, little comes of their avowedly liberal attitudes.

However, a few creditable demonstrations of the controlled, "intentional" communities are in evidence. Morris Milgram and George Otto have produced Concord Park and Greenbelt Knoll in the Philadelphia community. Modern Community Developers, founded by Milgram, is an investment corporation committed to underwriting similar developments in any part of the nation. George and Eunice Grier, in a publication entitled Privately Developed Interracial Housing, record a total of fifty integrated developments around the Nation, totalling some 8,000 dwellings. Some appear highly successful, others are shaky.

NEIGHBORHOOD ASSOCIATIONS

There has been considerable national attention given to the many efforts to stabilize the racially changing neighborhood. Teaneck, New Jersey; Hyde Park in Chicago; the Ashburton neighborhood in Baltimore; Russell Woods in Detroit are illustrations. In Philadelphia, Strawberry Mansion, Sedgewick Neighbors, West Mt. Airy Neighbors and Garden Court Association are just a few of groups that have tried, or are trying, to stem the tide of total change. The formula is fairly standard--a racially inclusive neighborhood association is formed; neighbors candidly and mutually avow an intention to maintain a balanced, integrated residential pattern; the white residents pledge themselves not to flee; various techniques are employed to combat exploitive real estate practices.

These efforts have often succeeded in reducing panic and flight. The whites move out more slowly. There is less dumping of property on the market at sacrifice prices. With less panic selling, the sellers and brokers are more selective of their Negro buyers. A more stable, better quality Negro neighborhood is assured.

However, the neighborhood associations have no control over sales as in the cooperative type community. Few, to date, have sustained an affirmative sales campaign to attract white buyers after a number of Negroes have moved in. Most such efforts have been carried on in neighborhoods which are contiguous to and under pressure from nearby segregated areas. It is doubtful that those changing neighborhoods which constitute the expanding "edge of the ghetto" can be permanently integrated if the larger house market remains restricted.

POWELTON VILLAGE

Powelton Village represents a movement of somewhat different character. There, it might be said, a new neighborhood is taking shape, displacing one that had gone rather far toward decay. This inclusive neighborhood exercises no legal control over sales. However, a corporation with rather impressive capitalization is engaged in buying, renovating, selling and managing properties. The neighborhood enjoys a favorable geographical location. The corporation and neighborhood leadership have conducted an impressive public relations and sales campaign. While strictly inclusive and non-quota oriented, it has succeeded in attracting an impressive number of white families into an area that had been predominantly Negro.

These various efforts to promote racially inclusive neighborhoods are entirely laudable and should be given every possible encouragement. At the least, they serve as a means of demonstrating techniques for integration. Some of them may be sustained as permanent islands of integration; cornerstones for the broader integrated society which may possibly lie around the corner of the future.

Creditable as they are, it would be folly to suggest that these mark the beginning of the end of segregation. The fact is that, residentially speaking, Philadelphia, like every other large metropolitan area in the country, is becoming more segregated every year. With residential segregation goes de facto segregation in the public schools, segregated playgrounds and racially self-conscious cultural, civic and political organizations.

Few, indeed, have tried to comprehend the situation in its full dimensions. Most people simply ignore the situation or seek to escape it. Others, too alert and responsible to ignore so pressing a concern, nonetheless,are content with token achievements, with serving on a committee, or devoting an occasional program of their organization to a discussion on civil rights.

POPULATION TRENDS

Here, in a few paragraphs, is an attempt to outline the Philadelphia situation in its full dimensions.

The population of the Philadelphia metropolitan area is growing steadily at a rate just a little

slower than the rate of growth for the nation as a whole. (The national rate has been estimated at 16% for the 1950-60 decade, while the Philadelphia metropolitan area rate appears to have been about 13%.) However, all the growth occurs outside Philadelphia city. The City's population has remained static in numbers since 1930. (It lost during the thirties, gained six percent during the forties, but preliminary 1960 census reports indicate that it is back to where it was thirty years ago.) The metropolitan population exclusive of the city has gained an estimated eighty percent since 1930.

Half of the metropolitan area population now lives outside the City. Ninety-two percent of this suburban population is white. All but an infinitesimal part of the suburban non-white increase has occurred in those tight islands of suburban segregation found in such communities as Chester, Camden, Darby Township, Yeadon, etc.

There has been a net out-migration of whites from Philadelphia to the suburbs for at least forty years.* This net out-migration was close to 110,000 during the "twenties" and about 90,000 each during the "thirties" and "forties". While the Philadelphia white population had remained static in numbers from 1930 until 1950, it appears certain that there has been a decline in actual numbers between 1950 and 1960

The Philadelphia white population is considerably older than the Negro population. This is because migrant populations tend to be young. Those were young Negroes who migrated to Philadelphia in the 1940's. They, in turn, have established families and are now of child-rearing age. It was also the younger white people of child-rearing age that sought the new housing in suburbia. A disproportionate share of the metropolitan area white children are growing up in the suburbs. As time goes on, the Philadelphia city white population will become more and more adult. At present about eighty percent of the Negro children of the area are growing up inside the City, while at least sixty percent of the white children are growing up in the suburbs. Unless drastic changes occur the ratio of white children within the City will continue to decline.

CITY SEGREGATION

However, these trends toward white and Negro concentration are not a simple urban, suburban phenomenon. Within the city itself, the pattern of segregation is being maintained with almost equal rigidity. As of 1956, 84% of all non-whites in Philadelphia lived south of Lehigh Avenue, north of Snyder, between the two rivers and in West Philadelphia between Baltimore and Lancaster Avenues. The entire area north of Lehigh Avenue and east of Broad Street contains less than two percent of the City's Negroes and has shown only infinitesimal gains in non-white population since 1950 while the white population in that area had gained by more than fifty thousand persons. During a twenty-year period, 1940 to 1960, the non-white population of Philadelphia increased by an estimated 265,000 (approximately 100%). During that same period, eleven wards of the City having only nominal non-white populations to begin with, have shown practically no non-white increase at all, while their white population increased by approximately 125,000.

This pattern of residential segregation is reflected in the City's schools. In 1956, 26% of the elementary schools were 80% or more Negro in attendance, while 51% were 80% or more white in attendance. The annual trend is toward an increase in the predominantly Negro schools.

NEGRO POPULATION GROWTH

In all this, it is important to keep in mind that the relative increase in the number of Negroes in the metropolitan area is by no means overwhelming. Negroes constituted about 9.5% of the total population in 1930 and are estimated to be no more than 15% in 1960. Dr. William Wheaton, at the Institute of Urban Studies, has worked out projections indicating that the ratio should level off to 20% by 1980. The present ratio of one Negro family to six white families, if evenly distributed throughout the area, would fall well short of what Dr. Morton Grodzins calls the "tipping point" of a neighborhood.

It is the fact that the Negro population is so heavily concentrated into a pattern of massive segregation and that the process of segregation continues that presents the problem. Pending more exact information from the 1960 census, it may be estimated that about 4600 additional Negro households are formed in the metropolitan area annually. Eighty percent of these are added to the City population, and all but a tiny number find their homes in those areas which mark the expanding "edge of the ghetto". Perhaps six times as many additional white households are formed annually and nearly all of them, in addition to the 4,000 or so displaced by Negro families, are established in the restricted

*A net out-migration is indicated if the population figure at the end of a period is less than the figure at the beginning plus births and minus deaths. A city population may show an actual increase in numbers and still reflect a net out-migration.

white areas of the city and suburbs.

If the metropolitan area were to somehow check the process of segregation--that is, even if the present patterns of concentration were to be preserved and only the additional Negro families located into a decentralized pattern, not less than 4600 Negro families annually would have to find homes in predominantly white neighborhoods. If the greater Philadelphia community were to plan for total desegregation within 40 years, it would be necessary to step the rate up to approximately 8,000 families per year and to somehow attract 3400 white families annually into the presently predominantly Negro neighborhoods. (These figures do not take into account the relocation required to provide for urban renewal, highway development and the like. The forty year goal has been suggested here because the City Planning Commission has suggested that its new comprehensive plan could be realized in that span of time.)

MOTIVATION FOR DESEGREGATION

Is there any possibility that the process can be geared up to such proportions? This question brings us back to the two questions raised above. How much motivation will be required of the Negro family and how many have what it takes?

The answer to the first will be found in the white community. Assuming that a fair housing practices law is put in force before 1962 and that the right to purchase or rent a home regardless of color or ancestry is guaranteed by law, how hard or how easy will the managers of the housing market and the residents of established white neighborhoods make the process? Experience to date with the Fair Employment Law indicates that while the law is an extremely useful device, few people are likely to assert their rights under the law in the face of opposition or discouragement. The law can prohibit a seller or agent from refusing to sell, but it is less likely that it will cause them to affirmatively merchandise their product in a manner they consider contrary to their best interests. At present, the operators of the housing industry are in the habit of merchandising their product to whites only except in those neighborhoods where white buyers are slow, in which case they merchandise with equal vigor to non-whites. It appears obvious that significant incentives to merchandising housing to whites and Negroes alike must be found or the industry will drag its feet in every way it can.

DO NEGROES WANT INTEGRATION?

The answer to the second question will be found within the Negro population. How much do Negroes want integration? Again, assume that so far as the law is concerned, the barriers are down; that for a number of years to come the Negro who seeks a home not specifically offered for Negro occupancy will receive a cool reception; and that realty agents are actively seeking his patronage in the "changing areas"--the edge of the expanding ghetto. How actively will the Negro buyer resist the latter and seek the former?

There is little experience upon which to base an answer. Morris Milgram learned that when he offered houses for sale in an integrated development, prospective Negro customers flocked in at such a rate he had to establish quota controls to prevent the development from becoming all Negro. Levittown is only a short distance away. Four additional Negro families have moved in there without a ripple of resistance after the demonstrations against William Meyers, Jr., in 1957. Several hundred houses forfeited to the Veterans Administration have been for sale there. Legally, the VA cannot refuse to sell those houses to a qualified buyer regardless of race. The houses are listed with private brokers who, no doubt, seek white customers and avoid Negro prospects. However, Negroes would have little difficulty buying those houses if they were financially competent and reasonably persistent about it. The evidence shows that few Negroes are that strongly motivated.

IMPACT OF MERCHANDISING

The preponderant evidence of the moment suggests that Negroes and whites alike are influenced more by merchandising techniques than by concerns for integration. It is a fair guess that the law alone will not greatly alter marketing habits. A fair housing practices law is essential to any program for integration, but by itself it is likely to produce no more than a token process. Unless there are affirmative programs to encourage Negro families to leave the protection of the ghetto, only the most strongly motivated will assume the role of the pioneer.

This brings us to another of the questions raised at the beginning of this article. Is integration really worth while? Admitting that overt exclusion is wrong and granting Negroes the right to get the homes of their choice if they want to go through the trouble, what is wrong with segregation if the majority of the population prefers it or suffers too much inertia to do anything about it? Is segregation,

per se, wrong or bad if it is not imposed?

EFFECTS OF SEGREGATION

Dr. Kenneth Clark, of City College, New York, indicates that segregation, not just exclusion, is psychologically damaging to the person. GAP, the Group for Advancement of Psychiatry, in The Psychiatric Aspects of Desegregation come to the same conclusion. In a pamphlet, From Color Blind to Color Conscious (American Jewish Congress) disparities in achievement drives between white and Negro children are laid to lower morale produced by segregation. Dr. Morton Grodzin in The Metropolitan Area as a Racial Problem lists a long series of urban ills as products of segregation. He holds that the massive pattern of present day urban segregation causes serious injury to the City, but believes that numerous small concentrations scattered throughout the metropolitan area would be both wholesome and more feasible than total integration.

Unquestionably, the preponderance of documented evidence indicates that segregation, per se, in addition to the overt act of exclusion, is an injury upon the person and upon society and detrimental to the public welfare.

If this is true, it becomes incumbent upon organized society, the political, governmental, educational, business, labor and religious institutions to launch a program of sufficient dimensions and power to do the complete job. Partial measures to encourage some token integration while the major part of the Negro population remains segregated will not be enough. Stupendous as the job may seem, the problems of coping with continued segregation are even greater.

No plan for long range, total desegregation in a large metropolitan area has even been devised anywhere in the Nation. The emphasis to date has been upon guaranteeing equal rights and opportunities under the law. This has been an essential first step. The New York City Board of Education has approved a plan for affirmative desegregation of the schools, which has received only nominal implementation. Dr. Morton Grodzin, in the monograph mentioned above, and Oscar Handlin, in The Newcomers, have attempted a broad treatment of the subject. Beyond these there is little in the literature or in action that can be classed as an attempt at a comprehensive look at the total problem.

TIME TABLE

A forty year time table has been suggested above only because it ties in with the City Planning Commission's time table for realization of the comprehensive plan. There is nothing magic about this number and the time table could be shortened or stretched out. It is highly doubtful that the forty year tempo could be realized in the first five years. If it were, a total of 40,000 Negro families would have been desegregated by 1965 and 17,000 white families would have been attracted into the central areas of the City. Realistically speaking, the beginning will be much slower and the tempo twenty years from now would have to be much greater.

Some of the terminology used above mav cause the reader to recoil. It may smack of manipulation; of moving people as pawns; of public management of private affairs. "Social engineering" has an ominous sound. This language has been necessary to convey the dimensions of the problem. The actual programming will have to be in accord with democratic principles, a free and open housing market, and freedom of choice. Law and the machinery of government will be required to guarantee equal opportunity; to supply fiscal incentives for open market operations by the housing industry and to underwrite the costs of research and education. However, law and government alone will never succeed. There will have to be a popular sentiment and organized civic movements reaching the proportions of a sustained crusade.

While the core of the problem and the measure of success lie in residential desegregation, the program must be broad and comprehensive, involving almost every aspect of community life. Many of the elements required will seem to have little direct relationship to the issue of racial segregation, yet failure in those elements will spell failure on the integration front.

A 16 POINT PROGRAM FOR PHILADELPHIA

Following is a partial list of the requirements for a long range, comprehensive process of desegregation in depth:

1. A public education system adequately financed and realistically oriented to meeting the educational needs of the entire population, including the needs of the culturally deprived, so that Negro children and young people will be as well prepared as, and capable of competing with, whites for jobs and professions. This includes affirmatively realistic guidance to enable the Negro youth to cope with subtle practices of discrimination.

2. City colleges or a system of publicly financed scholarships to enable all persons regardless of income status to obtain higher education in accordance with ability and merit.
3. A metropolitan economy geared to supplying job opportunity for the entire population. This means aggressive encouragement to industry and commerce.
4. Publicly sponsored training programs either under public education or within industry, or both, to develop within the Philadelphia area population the skills essential to the economy. Equal opportunity to gain the training must be guaranteed by law and in practice.
5. Full implementation of the fair employment laws plus greatly accelerated educational programs to promote genuine equality of economic opportunity and to develop the motivation and incentives for vigorous competition for jobs and higher skills on the basis of merit. Negroes must become economically enabled to compete for housing on the same basis as whites.
6. Leadership training programs for all citizens including Negroes, geared in with affirmative measures to include Negroes on executive and managing boards of business, civic, health and welfare and educational institutions.
7. A statewide fair housing practices law effectively administered in both the suburban areas and in the City.
8. Substantially increased appropriations to both the city and state commissions on human relations (or by whatever name the state commission will be known) for research and education. The present research and education program of the Philadelphia Commission on Human Relations contains most of the necessary elements in microcosm, but needs to be greatly expanded at both the local and regional level.
9. Conscious commitment and imaginative planning by urban renewal authorities so that the urban renewal program will be a major instrument for creating well balanced, cosmopolitan neighborhoods in the central city. Redeveloped areas must provide housing and neighborhood facilities of such quality as to be fully competitive with suburban living and so priced and financed that white and Negro alike will be attracted to live there.
10. Advancement of central city shopping, educational, cultural, recreational, amusement and sports facilities and programs to make the central city area a highly desirable place for living.
11. Amendments to Federal housing legislation providing for fiscal incentives to home builders and to the housing industry generally to affirmatively merchandise their housing developments on an open market basis.
12. Federal or state financial aids to neighborhood conservation and rehabilitation programs, including fiscal encouragement to cooperative non-profit neighborhood corporations operating on racially inclusive principles.
13. Civic organization support for the desegregation program per se and for all of the above. Such support should be both on a broad basis and in depth. Business, industrial and trade associations, labor, fraternal, veterans and women's organizations should set up committees to study the issues of racial segregation and integration and to recommend appropriate actions for their organizations.
14. Religious groups of all faiths should continue to examine their respective policies and practices and to challenge their members to do the same in their personal affairs and behavior.
15. Privately organized and financed intergroup agencies such as Fellowship Commission, Fellowship House and the National Conference of Christians and Jews need to be strengthened in terms of membership, fiscal support and effective program.
16. The Negro community, through its own institutions and press, must decide whether it is really interested in affirmative programs for desegregation or whether it aspires primarily to greater opportunity and better living conditions, letting the chips of segregation fall where they will. If the decision is in favor of affirmative desegregation, there must be a readiness to implement it in terms of increased emphasis upon training, constant probing for new opportunities, risk-taking and pioneering for jobs, business opportunities and for homes in areas well removed from the existing racial ghettos.

If the above sixteen point program seems overwhelming in its proportions, it should be recognized that at least ten of the sixteen are essential to a good community whether there is to be an affirmative

program for desegregation or not. The ones that represent the greatest problems in terms of law, new legislation and governmental expenditures are included in those ten. While a fair housing practices law will be a significant and important step, and the appropriations required for increased operations of local and state human relations agencies are essential, neither one presents a monumental hurdle or a large financial burden as compared with the proposals for adequate public education, higher education, urban renewal, center city redevelopment, industrial growth, manpower training and the like. The principal challenge on the integration front is that of making up the public mind, of keeping the issues under constant, intensive examination and discussion.

CONCLUSION

The timid should be reminded that the Negro population of Greater Philadelphia will grow just as fast with or without integration. If Philadelphia is prosperous the population will grow faster, including the Negro population. To reduce the rate of population growth Philadelphia must starve its industry, which it will not consciously do, although it may do so inadvertently. The growing Negro population will have to find its housing either through integration into the general house market or by displacing white people from areas contiguous to the growing ghetto. If Negroes continue to get their homes primarily by displacing whites as the ghetto is pushed out, both the whites displaced and the Negroes will be resentful of each other and will view each other as enemies. If an open market becomes the rule and the boundary lines between white and Negro neighborhoods fade away, the resentment and hostility must certainly decline.

There is one persistent fear that chills the hearts of most white people when they contemplate a racially integrated neighborhood. They agree that there are many Negro families whom they would welcome as neighbors. But they point to those Negro families who are impoverished and exhibit lower or different living standards and disorganized behavior. "We do not want that kind of neighbor, regardless of color," they say. They can be reassured that that kind cannot afford to purchase good quality homes and are unlikely to depart from the shelter of the racial ghetto. Only those Negro families who are economically, culturally and socially prepared will elect to live in an integrated neighborhood. How many such Negro families are there and will there be? A good many more than the machinery of the housing market is likely to serve on a desegregated basis in the immediate future. If the above program is implemented, the Negro population will make ready as fast as the community at large makes ready to accept them.

Is the public ready to have such a program imposed upon it? No, the public will never be ready to have it imposed. But, the public has no choice other than to face the issue and to make its own decisions, wise or otherwise. It is the responsibility of the human relations agencies and civic organizations to present the issues and to suggest the solutions.

THE GHETTO MAKERS . . *by Jack Rothman*

MEET A GROUP of ugly Americans you probably don't know—the "Ghetto Makers." They are found primarily in the real-estate and money-lending worlds and their stock in trade is racism for a profit. These are the men who control and manipulate the housing market in integrated areas of our cities. They specialize in panic salesmanship—the rumor, the racial argument, the prejudicial insinuation. They engage in a variety of pernicious financial practices, both legal and extra-legal, taking the Negro home-buyer for a ride in the process. Through their pressure-cooker tactics, whole neighborhoods are induced to change from white to colored—and segregated—in short order, and at great cost in human terms.

Racially changing neighborhoods have in recent years reached widespread and troubling proportions. Almost every city-dweller can call to mind some neighborhood that was transformed almost overnight from a solidly white to a solidly Negro district. Such rapid dislocation stirs up a torrent of intergroup tensions and a welter of social and welfare problems. And this is a problem that holds geography in disregard; it is as much prevalent and malevolent in the North as in the South.

One of the chief causes of rapid neighborhood change (and consequently of residential segregation) is the presence of prejudice in so many of our white citizens. No sooner does the first Negro family move into a white area than large numbers of whites move out. But this prejudice constitutes only the most obvious starting point in attempting to understand the dynamics of the change pattern. What is less known is that in addition to this "spontaneous" process, there are purposeful, efficiently organized "unspontaneous" influences at work — the Ghetto Makers, who consciously trigger off these personal predispositions and channel them into large-scale movements. These Ghetto Makers play at least as large a part in fostering segregation as do public attitudes, and their role needs to be laid bare and understood if we are ever to make headway in coping with the problem.

JACK ROTHMAN, social psychologist and social worker, teaches at the Graduate School of Social Work of the University of Pittsburgh.

Standing at their head are a core of unethical or prejudiced real-estate brokers. In the course of directing an experimental citizens' project aimed at stabilizing a racially changing neighborhood, I had a chance to observe a representative group of these brokers at first hand. The project, sponsored by the community planning division of the New York City Youth Board, was centered in the middle-class residential community of Springfield Gardens in the Borough of Queens.

The brokers I observed seemed to fall into two categories which may be described as the "block-busters" and the "lily-whiters." The block-busters are the more deliberately destructive. Once a Negro somehow manages to move into a white neighborhood, these brokers make their entrance and work over the area. Through house-to-house canvassing, relentless telephone solicitation, use of the mails and by various other means, they create an atmosphere of panic in the neighborhood and high-pressure the white residents into selling. They open up one block at a time, saturating block A with Negroes and then going on to block B. "Do you want your kids to play with colored kids?" goes their sales talk. "Do you want to be the last white family left on the block? Do you want to lose a fortune on your house?" Characteristically, they approach a home owner with a cash offer and the (often fallacious) news that Mrs. Jones down the street is selling to a Negro family. Emphasis is placed on the urgency of selling immediately, before the value of the house nose-dives. Occasionally "decoys," such as a Negro woman wheeling a baby carriage, are paraded up and down the street to set the proper psychological climate.

FOR the realty salesman, the wholesale turnover of an entire area is a happy and enormously profitable prospect. By panicking home owners, the broker can pocket an even greater return by entering the market he is manipulating, buying low and selling high. Negro brokers as well as white avail themselves of the block-busting technique; actually, the Negro brokers are even more insidious, since they are so heavily relied on by their Negro clients.

The block-busting real-estate men show homes in integrated districts such as Springfield Gardens only to prospective Negro buyers; I have known them deliberately to turn down prospective white buyers. For them the steady and total segregation of the neighborhood is a desirable goal.

MEANWHILE the other real-estate brokers, the lily-whiters, are operating in white areas adjacent to the changing community. Their clientele is usually entirely white. I saw them operating in Laurelton, adjacent to Springfield Gardens. If these Laurelton brokers had made an effort to show homes in contiguous integrated areas to their clients (as indeed had been their custom prior to integration), there would have been a greater possibility of counterbalancing the influence of the block-busters and maintaining a racially mixed community. However, we found that these lily-white brokers consistently failed to show homes in these areas to white clients, and turned down listings from Springfield Gardens which were offered to them. Just a few Negro families in an area marked it off-limits to these brokers for showing homes to white buyers. Their reasons for taking this position range from their own conscious or unconscious prejudices ("What decent person would want to live in that area anyway?")* to realistic economic considerations (it takes less time and effort to place the average white buyer in a white community than in an integrated one; and time is money).

Because of the extensive activity in the integrated areas of the block-busters and the abandonment of the areas by the lily-whiters, each time a house is placed on the market it is sold to a Negro family. This results usually in a gradual and unswerving rise in the percentage of Negro residents in a given community.

BANKS and lending institutions also play their unsavory part in this operation. They not only make it difficult for non-whites to obtain a mortgage when they attempt to buy in a white area; they also discriminate against whites who want to buy in a changing neighborhood. The banks take the view that a white individual who moves into a mixed area will soon find himself part of a small minority and will consequently move out within a short period of time, thus diminishing the duration of the loan. In one case, our committee had to contact a dozen banks before the enlightened Bowery Savings in downtown Manhattan agreed to make a loan to a financially solid white family.

Advertising in the Negro press is still another facet of Ghetto Making. Extensive and dramatic advertising directed at the Negro community is placed by brokers who specialize in changing communities. Brokers located in the major districts of Negro settlements like Harlem, and Bedford-Stuyvesant in Brooklyn, play up these areas with gigantic signs, flyleafs, etc. Since often such locations are the only sources of decent residential property for Negroes, this activity is entirely understandable. It tends, however, to make more difficult the process of orderly neighborhood change, and to foster segregation.

In advertisements in the Negro press (placed by both white and Negro brokers), one detects a pattern of unethical, even fraudulent, practices. Homes are advertised at unrealistically low prices to attract naive purchasers. Example of a typical ad:

> Magnificent home, $29.00 a month pays all. Detached 2-family, plus a rentable 3-room basement apartment. Really living rent free. Situated in a tremendous garden plot. Modern kitchen, Cadillac-size garage, automatic heat, three bedrooms and extras galore. $890.00 down.

When a Negro teacher acquaint-

*In one instance a white woman who was moving for reasons of health called one of these brokers specifically because she wanted to see racial balance kept in the community—even though she knew it would be more difficult to sell her home to a white person and that it might take a longer period of time. The broker turned her listing down cold. "Nobody but white trash would want to live in that neighborhood," was his caustic comment. This is in an "enlightened" Northern city.

ance of mine responded to such an ad, he was first told the property was located in an isolated swamp area near Idlewild International Airport and that he wouldn't really be interested in it. Later the broker admitted that the ad was a "come on." The objective is to entice the prospective buyer into the office by any suitable means at hand. Then an attempt is made to sell him a more expensive home.

The uninformed buyer is encouraged to overcrowd the house by using the attic and basement to take in roomers, boarders, foster children, etc., often in direct violation of existing housing ordinances. This tends to attract to a middle-class area large numbers of working-class families—which in turn causes a stampede of the remaining middle-class white families from the area. It also disheartens middle-class Negro families who, in the usual sequence of events, are the first to enter an all-white neighborhood, seeking a community of middle-class character. Most brokers who speak loftily of "neighborhood homogeneity" when it comes to keeping a neighborhood white, do not at all respect the concept of a homogeneous *middle-class* neighborhood when applied to Negroes. They willingly inject lower-class and "problematic" elements into an evolving middle-class Negro or interracial community, thus thwarting the efforts of colored teachers, doctors, lawyers and businessmen to enjoy the benefits of a reasonable standard of community living for themselves and their children.

As people who cannot afford payment for homes are deliberately enticed into brokers' offices, funding companies associated with the brokers make loans through devious and highly questionable financing methods. The result is that the purchasers are led into debt over their heads and find it necessary to overcrowd their homes for extra income. Again, a middle-class area tends to break down into a segregated slum.

On one occasion, members of the citizens' committee with which I was associated visited the publisher of one of the country's largest Negro dailies to call to his attention how some brokers were using the classified pages for their own ends—ends which we found wholly incompatible with the well-being of the Negro people. The approach we used was a friendly, interested, tactful one. Our delegation, an interracial group, was shocked at the cold, unsympathetic, even cynical reception we received from the publisher. A newspaper, we were told, is in the business of reporting news and bringing in an income. It is not a social-welfare institution. The use made of its want-ad columns is not the concern of the newspaper so long as the wording of ads does not violate existing laws. Any interference with the manner of advertising, the publisher informed us, would be an affront to the "free enterprise system." Ghetto Making for profit, it would appear, operates on both sides of the color line.

THE intricate financial machinations of the Ghetto Makers could make up a field of study in its own right. I will describe here only techniques I personally witnessed in the project area. Similar techniques, with appropriate local adaptations, have been put into effect in communities across the country and have been amply documented in the recent multivolume survey of the Commission on Race and Housing, sponsored by The Fund for the Republic (University of California Press, 1960).

In the Queens instance, funding companies affiliated with brokers required a large number of "points" to complete the purchase of a home. Each point is 1 per cent of the mortgage (for example, $150 on a $15,000 mortgage) and consists of a kind of service charge for making the loan. Since often the Negro purchaser, drawn into the broker's office through one of the beguiling hawking methods described above, does not have enough money for the down payment, he cannot obtain a loan directly from an ordinary bank, which might require only one or two points. He is therefore at the mercy of the funding companies, which in some cases have been known to demand up to 12 per cent of the mortgage (twelve points) merely for making the loan. This is independent of any interest rates on the loan. Later the funding company may pass the loan over to the bank. (Actually, the seller is supposed to be responsible for payment of the points, but this is circumvented by incorporating them into the purchase price. Through the point system, and by inflating the purchase price, brokers can charge exorbitant interest rates without technically violating usury laws.)

BUT this is not the end of the story. We now have a Negro buyer paying a high number of points, and unable to afford even a sufficient down payment. A contract of sale is made, permitting the purchaser to occupy the house; he must, however, pay a monthly bill until he has met the down payment. There is no actual transfer of title or deed until the down payment is completely paid off — ordinarily a matter of some five to seven years. Only then do the payments on the actual mortgage begin. During these first years, the monthly payment includes not only

the down-payment installment, but also interest on the down payment, interest on the old mortgage, carrying charges on the house such as taxes, insurance, water and sewage bills, etc. All this time *the purchaser has no security whatever.* Should he fail to meet a monthly payment, he may lose the house and every cent he has so far put into it.

The whole operational scheme of the Ghetto Makers makes sense only in the light of the undemocratic and socially debilitating ground rules under which our racial minorities live. While choked for space in depressed slum areas, Negroes are rigorously restricted in the housing market, with almost no new housing being constructed to meet their needs.* At the same time, their economic position is rising significantly and their attitudes are increasingly influenced by the middle-class values which pervade our society. It is no wonder that as a particular area of the city opens up for non-white occupancy, the Negro market will flow in that direction, all other channels being blocked. Thus, the slightly integrated community rather quickly becomes the changing community and, with a solid assist by the Ghetto Makers, eventually becomes the totally segregated Negro community.

THIS PATTERN can be reversed only when our cities achieve an open-occupancy status compatible with our democratic precepts. Under these circumstances, Negro families could disperse themselves widely into many neighborhoods in accordance with their economic resources.

Such an end can be achieved only by eliminating racial restrictions on home ownership and, simultaneously, striking hard at the Ghetto Makers, the shysters and manipulators of the housing market. No legislation currently on the books is geared toward specific control of the Ghetto Makers' practices I have described. There are Fair Housing Practices bills in some cities (notably New York and Pittsburgh) and states (notably Colorado, Connecticut, Massachusetts and more recently New York) which deal with discrimination in housing.

But none has a Fair Selling Practices clause which effectively regulates the block-busters until a state of open occupancy is achieved. (The block-busters do not discriminate per se against Negroes in the housing field. As a matter of fact, to a certain extent they may be said to open up new areas for Negroes to live in. But they do so by use of inflammatory selling practices and in such a way as to heighten racial tensions and create new racial ghettos.) Likewise, no existing law can deal adequately with some of the elaborate, racist financing and advertising techniques devised by the Ghetto Makers. An encouraging recent breakthrough has been the attempt by the license-issuing bureas of New York and Pennsylvania to regulate block-busting through administrative directives.

Some liberal and minority groups, caught up and frustrated in this complicated housing web, have thrown the full weight of their energies and emotions into the school-integration issue. Still, as former National Urban League Director, Lester Granger, stated, clamoring for school integration in these circumstances is like whistling in the dark. He reminds us, "If we spend our time battering school boards over the head, we overlook the real villains of the place—Jim Crow-minded property owners and real-estate brokers and developers."

The Ghetto Makers exert power in present-day America. They decide whom you may live next to and who may live next to you. For this service they extract a huge profit. The power of these men may be broken by legal means coupled with the weight of an enlightened public opinion.

HOW MONEY CAN MAKE OR BREAK OUR CITIES

Copyright 1961 by Jane Jacobs

Urban-renewal laws, both Federal and state, are based on certain widely accepted theories about what causes the decline of city neighborhoods and the formation of slums. Most of the reasoning followed among city planners for decades is demonstrably invalid. In New York, for instance Greenwich Village "ought" to be a slum and Morningside Heights "ought" to be a huge success. Just as striking as the nonsense that the urban-renewal law contains are the matters it leaves unmentioned, such as credit blacklisting. This practice is one of the chief reasons why slums form and also why so few slums, once formed, are able to improve themselves even when the people who live in them are both capable of improving their conditions and eager to do so.

Blacklisting shuts off the most important kind of housing money; the conventional credit extended by nongovernmental lenders, principally savings-commercial banks, and some pension funds. Although these institutions do not publicize the fact, they map cities into areas in which they will either invest or not invest. The decision is almost always unanimous. All large American cities--and many small cities too--have areas blacklisted for investment in this fashion. The practice is one of the most destructive forces at work in our cities; it leads almost inevitably to unnecessary stagnation or to unbridled slum exploitation.

Credit blacklisting is impersonal. It operates not against persons as such or even against buildings as such, but against neighborhoods. For example, a merchant in New York's blacklisted East Harlem, not able to get a $15,000 loan for expanding and modernizing his successful business there, had no difficulty in raising $30,000 to build a house in a Long Island suburb.

The motive of lenders in deciding to blacklist a district are not villainous. They are merely applying lessons they have learned from the city-planning theories of the 1930's, which aimed, among other things, at starving out dense city districts and nourishing suburbs. Blacklist maps came in at the same time as slum-clearance maps, and the two are ususlly identical both in conception and in results. Indeed, one of the objects of the planners: slum-clearance maps is to warn investors not to invest in certain areas. Sometimes the lenders anticipate the planners. In either case, it is decided that such and such a place is becoming a slum. Its future, insofar as it is considered at all, is projected in terms of the most widely accepted remedy for slums; eventual erasure after a period of further decline.

Credit-blacklist maps, like slum-clearance maps, are thus prophecies. And they are accurate for the simple reason that they are self-fulfilling prophecies. If no money is available to improve a neighborhood, if people there can improve their situation only by leaving, decline is all but inevitable.

SLUMS THAT FOUGHT BACK

Few areas, once blacklisted, manage to escape their doom. The only district, so far as I know, that met the problem head-on and forced reversal of the decree is the Back-of-the-Yards district in Chicago. This area used to be a notorious slum, the familiar hodgepodge of weather-beaten buildings that is generally recognized as an obvious candidate for the bulldozers. Residents applying for jobs outside the district used to give false addresses. But most of the men worked in the stockyards, and during the 1930's the district and its people became deeply involved in unionizing the packing plants. Extending the mood of militancy, a number of able men started an experiment in local organization. Called the Back-of-the-Yards Council, it came to operate much as a government does. Policies are set by a kind of legislature of two hundred elected representatives, which has a good deal more power than most formal citizens' organizations, both for carrying out public services of its own and for making its will known to the municipal government. The district's ability to get from City Hall the municipal services, facilities, regulations, and exceptions to regulations it needs is regarded with awe throughout Chicago.

In the interval between the formation of the council and the early 1950's, many of the people in the district graduated into skilled industrial, white-collar, or professional jobs. According to most city-planning theorists, the next move at this stage should have been a mass emigration to the suburbs. The abandoned district should thereupon have been filled by a new wave of slum dwellers.

But the Back-of-the-Yards people wanted to stay--as is often the case in such neighborhoods. The existing institutions, especially the churches, wanted them to stay. At the same time, thousands of residents also wanted to improve their homes beyond the small amount of remodeling or refurnishing already accomplished. They were no longer compelled to be slum dwellers and they did not wish to live as if they were.

The two desires--to stay and to improve--seemed incompatible. The Back-of-the-Yards had been blacklisted for mortgage credit. But in this case a local organization was both smart enough and powerful enough to find a way out of the trap. A survey by the council revealed that businesses, residents, and institutions in the district had deposits in some thirty of Chicago's savings-and-loan associations and savings banks. It was agreed that these depositors would be prepared to withdraw their deposits simultaneously if lending institutions continued to blacklist the district.

On July 2, 1953, representatives of the banks and the savings-and-loan associations were invited to a meeting. The mortgage problem of the district was presented and discussed amicably. Certain polite remarks were made about the numbers of depositors in the district and the size of their deposits. Before the meeting was over, several of the lenders promised to give favorable consideration to requests for loans. The same day, the council began negotiating for a site for forty-nine new dwellings. The most squalid row of slum apartments was equipped with indoor plumbing and modernized in other ways

by means of a $90,000 loan. Within three years, some five thousand houses had been rehabilitated by their owners. In 1959, construction of several small apartment houses was begun. The residents are pleased and proud of the progress their district has made with the banks' interest and co-operation, and the bankers, in their turn speak admiringly of the area as a location for sound investment. Nobody was thrown out of the district and "relocated." In short, the process of decay has been arrested and reversed.

The North End of Boston is an example of a blacklisted neighborhood that has managed to stave off disaster by another kind of resource. For thirty years, the largest conventional mortgage loans made in the North End have been for $3,000, and even those have been rare. The most affluent suburb could hardly have held up over such a period under such terms. The North End has managed as well as as it has only because many of its residents happen to be in the building trades. They have given or bartered their services so that much of the improvement or extensive repairs has cost only the price of the materials, which had to be financed out of savings. These methods, however, cannot be stretched to cover the financing of new construction. In the North End, cut off from mortgage credit, businessmen or landlords must have cash in hand to finance even improvements that will quickly justify themselves by bringing in more income.

Unless a neighborhood possesses both extraordinary vitality and a good deal of luck, the lack of conventional mortgage money makes further deterioration inevitable. There is no way of telling the full extent of destruction wrought by blacklisting, but it is enormous. The lower East Side of New York, an area of great potential--at least as great a potential as Greenwich Village--was thus doomed. The Society Hill district in Philadelphia, where vast sums of public urban-renewal money are now being spent, steadily lost residents and would-be residents for decades because of the impossibility of getting legitimate loans to buy or to improve property. Blacklisting doomed East Harlem in New York, which in 1937 seemed at least as likely as Boston's North End to be able to hold a deeply attached population, many of whom were moving economically into the middle class. Much of Brooklyn lies under the pall. Nearly all neighborhoods that possess any appreciable Negro pupulation, in all Northern cities, are automatically blacklisted for conventional mortgage credit.

MONEY FROM THE SHADOWS

Blacklisting does not necessarily mean that an area is cut off from all types of building investment. Stagnant or decaying areas that are losing the very residents who might help bring improvement often undergo a special form of investment upheavel.

There are three separate and distinct kinds of money used to finance city building these days. And as the money goes, so go our cities. When conventional mortgages are not available, a second kind of financing often appears out of a kind of financial underworld. The sources of this money are usually mysterious, its paths devious. Interest rates for this sort of capital start at about twenty per cent and range as high as the market will

bear, in some cases up to eighty per cent in combination with arrangers' fees. Those who provide this money are, in effect, the loan sharks of the real-estate world.

Immense opportunities are opened to this shadow-world money in areas where conventional mortgage credit has been halted. The exploitative money is used to buy up property for which there are no other purhcasers or purchase money, and presumably never will be. The buildings quickly become slums. First comes the withdrawal of all conventional money; then unscrupulous money lenders move in to underwrite complete ruin. This sequence is familiar in most of our large cities and seems to be taken for granted.

At the point of complete ruin, a third kind of money for city building investment is often provided by government, either out of tax receipts or through governmental borrowing power. Housing projects underwritten by Federal or state governments are financed by this third kind of money; so are the subsidies for land clearance that make possible privately financed redevelopment and urban-renewal projects. In addition, the Federal government will guarantee as much as ninety per cent of the residential mortgages given by conventional lenders, provided the investment conforms to the standards set by the Federal Housing and Home Finance Agency. The object is to buy up land and buildings and prepare the way either for public housing projects or for private renewal projects. In the latter case, the government money prepares the way for re-entry of conventional investment and partially subsidizes it.

In addition, however, this governmental money also prepares the way for further extensions of shadow-world investment. Blanket use of the powers of eminent domain often brings handsome profits to slum landlords because of the fact that the earning power of a building is one of the factors taken into account in setting a condemnation award. The most exploited buildings can be, and often are, the ones that bring the largest profits. Their owners then can use their gains to buy more property than they formerly had, in new localities that they promptly convert into new slums. In New York, some of these unscrupulous investors take not only their money but also their former tenants with them to a new location, thereby helping the city solve the "relocation" problem. Slum shifting has its own efficiencies.

All three kinds of money--conventional, shadow-world, and governmental--are typically involved in debacles of city decay and upheaval. The whole cycle, destructive as it is, is the logical outcome of what logical men can do when they let themselves be guided by the axioms of conventicnal city planning.

Theories as well as laws determine the ways in which money is invested. First comes the image of what we want, then the machinery is adapted to turn out that image. The kind of investment programs we have today are the direct result of city-planning theories which have idealized ruthless and oversimplified changes and which have written off as irrelevant most of the possibilities of gradual change and adaptation. Money is being spent to please the planners rather than the people who live in our cities. But if and when we decide that a lively, richly diversified city capable of continual growth and improvement is desirable, then surely we shall be able to adjust the financial machinery to get what we want.

It is all too easy to blame the decay of our cities on traffic, or immigrants, or the whimsies of the middle class. The decay of our cities goes deeper. It goes right down to our ignorance about how cities are built. The ways in which real-estate capital is used--or is withheld from use--are powerful instruments. Money can make a city, or destroy it.

Interracial Group Tries to Make Living Easier in Changing NW Neighborhood

By Stephen S. Rosenfeld
Staff Reporter

An interracial group of residents in Northwest Washington is trying to create a stable, integrated and vital neighborhood in an increasingly Negro section of the city.

This 3-year-old effort by Neighbors, Inc., whose area is bounded roughly by Ingraham st., Blair rd., the District line and Rock Creek Park, amounts to a far-reaching social experiment in the dynamics of metropolitan life.

The Flight to the Suburbs

If the effort pays off—Neighbors, Inc., claims only modest successes so far—it could help put spine back into the central city, give Negroes their first major chance to join the larger middle-class American community, keep the area attractive for whites and answer some nagging questions about good will and democracy.

Neighbors is not stuffy or doctrinaire, and its 600 member families—out of about 40,000 people, of which seven in 10 are white—would probably groan under such a daily weight of challenge.

Students of the problem point out that whites and Negroes generally do not know how to live with each other. The exodus of whites to suburbs has served to accentuate the racial separation.

From 1950 to 1960 the District Negro population rose from 281,000 to 412,000; the number of whites fell from 518,000 to 345,000. Individual census tracts swung between extremes. And this happened in a land-limited city while most new residential construction was in white-only apartments west of Rock Creek Park.

This massive transformation was well under way before Marvin H. Caplan, a big, breezy, candid journalist, bought a roomy house in Manor Park in 1957.

Manor Park was "changing." Caplan saw the Whittier P-TA lose three white board members in a term. Membership was dropping in white churches. The neighborhood was tense.

"I Have No Choice"

The Caplans did not cast themselves as hard-charging integrationists. But they liked their attractive new home and they wanted to make their new neighborhood click. As Caplan wrote in the Atlantic magazine in 1960:

"Do I believe in brotherhood? Do I believe we are all born free and equal? Do I believe in the sacredness of the individual? Suddenly I am pushed beyond easy platitudes into that difficult and stony place where we are forced to take a stand for our professed convictions or abandon them."

With others, Caplan got the white Manor Park Citizens Association to hold an "open" meeting for a talk on integrated neighborhoods. The meeting generated further discussions in the Caplans' living room. Meanwhile the Association juggled the question of admitting Negroes. It looked as though that issue would hang fire over the summer.

Rather than risk a becalming of community interest during the summer doldrums, Caplan called a meeting in the Brightwood Park Methodist Church one evening in June, 1958.

About 100 people, half Negro and half white, showed up. Neighbors Inc. was born. Community contributions were sought. (Assistance has also been provided by the Eugene and Agnes E. Meyer Foundation and the Taconic Foundation of New York.)

The comfortable-looking domain of Neighbors Inc. includes Manor Park, Shepherd Park, Brightwood, Brightwood Park and Takoma. The homes, largely single-family and owner-occupied, cluster in the $20,000 range, with most exceptions on the high side. Georgia ave. is the business street.

An office at 5802 Georgia ave. is headquarters for Neighbors' two paid staffers, executive director Margery T. Ware, formerly with the Washington Urban League, and Eleanor Garst, a community organizations specialist who worked with the Adams-Morgan Demstration Project. They marshal a small secretarial force and volunteers from the membership.

Pride and Enthusiasm

Many members are vigorous young professionals with children: State Department aides, scientists, professors, doctors, journalists. Less upbeat-sounding people belong, too. Their prime quality is neighborhood pride.

In fact, a conversationally unleashed Neighbor is something to behold, rhapsodizing on his area's big, fairly priced homes, its grown trees and green lawns, proximity to downtown jobs and culture, lower-than-suburban taxes, its "lovely and vital" character. He makes you feel like a louse for living anywhere else.

Neighbors' tools are facts and sense. With the one it hopes to induce the other, so that the pace and kind of change will not unbalance the health of the community and the peace of mind of its residents.

It puts out information about real estate values and practices, the cost of moving, neighborhood housekeeping and ways to stifle panic. It works through membership meetings, neighborhood receptions, community speakers, newsletters, block organizations, consultations with key people, negotiations with other groups and with real estate men.

It has sponsored clean-up campaigns, a public reception for resident diplomats, clinics for real estate salesmen, programs to help the schools. It helps responsible citizens move in, tries to retain others. The list is as long as Neighbors' imagination can make it.

Psychology and Money

Neighbors knows, however, that it is bucking powerful psychological and commercial currents of change: that is, the reasons people move out, and the real estate men who hustle them along.

Mrs. Ware says some whites

(cont.)

view the prospect of Negro neighbors with concern because of these fears:

• Decline in property values. Neighbors disputes this with an eight-city survey (not including Washington), by economist Luigi Laurenti, indicating that values generally rise in changing neighborhoods. Georgia ave. real estate men point to specific homes and blocks and largely agree, conceding that a panicked homeowner sells for less than true value. Parenthetically, a hardware dealers says he sells five times more grass seed to Negroes than he ever sold to whites for the same lawns.

• Deterioration of schools. Neighbors, while not denying the cultural disadvantages of many Negroes, cites the notable and persisting achievement records of such schools as Paul Junior High and Coolidge High.

Real Estate Problem

• "Inundation" by Negroes. Neighbors' whole program works against this fear, particularly its efforts to slow down change and to bring in white families. Many whites of good will, it says, simply don't want to be "the last white family on the block."

• Loss of status. Some whites feel they will be stigmatized as residents of a "colored neighborhood." Again, Neighbors tries to build pride and decency, noting the superior education, jobs and finances of many of its area's Negroes.

The high-pressure and often subtly racist practices of some fiercely competitive real estate men are another problem, perhaps the toughest that Neighbors faces. Hair-trigger sensitive to the implication that they profiteer on prejudice, the brokers can fairly state that they are filling a real need of house-hungry Negroes and that no such complaint to the District Real Estate Commission has ever been substantiated.

But the Commission is worried. It has in the works new regulations that would bring speculators, like brokers, under license and hence under some control. A broker acts for another for a fee; a speculator buys and sells for himself.

A walk through Shepherd Park, one current focus of real estate "action," is instructive here.

A retired white musician is enraged at harrassment by real estate men—up to 10 calls in a single Sunday. He's happy to have as neighbors anyone who'll keep the area the pleasand place which attracted him. He feels strongly that Negroes deserve the best homes they can afford. His children are grown and gone.

A Mood to Move

Another man cites two standard white fears: of being "engulfed" by Negroes and of the academic and social ills he thinks his daughter will meet next year at Paul Junior High. "Mind you," he's got nothing against Negroes. He's in a mood to move.

Across the street live a Negro Government employe and his school-teacher wife who, typically, "just wanted a nice place to live." They sought "a house they built for white people," a house of quality. Their worries about their three children were largely dissolved by a happy trick-or-treat reception.

They feel their "dream house" would have cost whites perhaps $2000 less. At another house a white neighbor overheard the agent jacking the price by that amount to a Negro prospect.

Another white home owner, an immigrant, fears he'll lose maybe $5000 on his $45,000 home if he sells. "They say" he'll lose. Some neighbors soon removed the "For Sale" signs that greeted the block's first Negro, but this man remains jittery. After all, "my life is in this house."

Failures of Contact

None of these people belong to Neighbors Inc., but all have heard of it; most area residents apparently have. Neighbors would like to reach them all. So far it has failed to make significant contacts with three key neighborhood groups: churches and synagogues, citizens associations and businessmen.

Most religious institutions, despite pace-setting stands by a few clergymen, have simply not busied themselves with the factors behind the flight of their congregations. Nor have they particularly welcomed Negroes.

Generally, citizens associations have held back through their policy of white-only membership and their traditional concern with such other matters as public works.

Businessmen now seem to be realizing that neighborhood health means good business. Caplan finally got a speaking invitation from the Brightwood Lions Club and a member said businessmen are "grateful" that Neighbors is at work.

Nobody knocks the group except a few brokers with burned fingers who claim that Neighbors is trying to keep Negroes out.

Neighbors itself is painfully aware of its own limitations. Only after three years, Mrs. Ware feels, does it have the roots and organization to become effective. Except for stiffer real estate regulations, "we're not yet at the point of knowing exactly how to ask the city to help," she says.

As Neighbors' main feats, Mrs. Ware cites a palpable lessening of tension and the nurturing of a feeling that this is a socially valuable neighborhood. The woman buying new carpeting who told the clerk she "went to a meeting of Neighbors and decided to stay" is pure gravy.

President Caplan feels that Neighbors has yet to handle effectively the problems of unstable low-income Negro families moving into the fringes of its essentially middle-class realm. "We're not a social-work agency," he observes.

He counts as a significant plus the 20 or more white families brought in directly by Neighbors. He thinks other community groups are "coming around—distrust is disappearing."

Caplan would like District and Federal officials to practice what they preach by moving into an integrated neighborhood. He wants all aspects of discrimination removed: "You touch everything."

Most importantly, he and Mrs. Ware believe that Negroes must have as wide a choice in the whole area's housing market as do whites, so that Negroes will not funnel out of one ghetto into another.

Racial Designations

After over a year of negotiation, Baltimore Neighborhoods, Inc. and the Greater Baltimore Committee were able to win the commitment of the Real Estate Board of Greater Baltimore to act in concert against the use of racial designations in the newspapers' classified real estate advertising columns.

The plan of the Real Estate Board to participate in efforts to eliminate designations was greeted with an enthusiastic reception by its membership, according to a report in that group's publication.

The Baltimore Real Estate and Building News reported that William H. C. Wilson, President of the Board, felt that "realtors might soon be urged to eliminate racial labels from their advertising."

Use of the designations "Colored" and "Negro" have been instrumental in forcing the conversion of many neighborhoods from all-white to all-Negro in the past. If permitted to continue, designations which have never, in the initial stages of change, truly reflected the racial make up of an area, will force community after community to become all Negro.

Designations help to create all Negro neighborhoods. They do not reflect the true racial character of a community.

May We Introduce Ourselves?

With this first newsletter, we want to introduce Baltimore Neighborhoods, Inc., an organization unique both in its program and its support. Baltimore Neighborhoods is the only foundation-supported agency in the nation seeking a comprhensive solution to an urban dilemma - preventing the city from becoming an all-Negro ghetto while at the same time promoting equal housing pportunities for all people, regardless of race.

All large American cities are faced with a steady decline of the stable, white urban population. Baltimore is the only metropolitan center in the nation organized to counter the white flight.

Organized in March, 1959, under the leadership of the Greater Baltimore Committee, Baltimore Neighborhoods, Inc. was charged with achieving these goals:

1. To conduct a continuing program to stress and promote the advantages of urban living.

2. To maintain the stability and quality of residential neighborhoods in the Baltimore Metropolitan Area.

3. To protect residential neighborhoods against the deliberate creation or exploitation of prejudice, fear, ignorance, or panic, whether by real estate brokers, dealers, speculators or others desiring to induce a rapid change in the character of population - by encouraging action against persons who use illegal tactics in the furtherance of such techniques, and by education and other appropriate means.

(continued on Page 2)

(continued from page 1)

4. To stem panic and wholesale flight from these neighborhoods; to process and help follow through with complaints relating to real estate practices and similar matters affecting neighborhoods.

5. To develop and implement means of financing older homes in the established residential neighborhoods of Baltimore City on a basis permitting these neighborhoods to compete from a financing viewpoint with newer developments.

6. To remove the barriers which block the operation of a free market in housing and thus to increase the availability of housing -- sale and rental -- to all people in the community; and to prevent the practice of "steering" Negroes to and whites from residential areas known as "changing neighborhoods."

7. To work with neighborhood associations builders, real estate brokers and agents, lending institutions, church and civic groups, labor organizations, the Negro community, appropriate state and municipal agencies, and the general public to co-ordinate efforts in behalf of the fulfillment of the objectives stated above.

Real Estate Board Report

The Real Estate Board of Greater Baltimore has been urged by its president to face up to the impact made on the housing market as a result of changes in the racial characteristics of neighborhoods.

William H. C. Wilson, the real estate official, said he knew of "no subject which requires more study and calm deliberation on the part of our Board and all of our citizenry."

In his "Six Month Report" to his Board Mr. Wilson noted that his organization, which "is very conscious of this problem," is attempting to "reach some conclusions which might do more to stabilize these changing areas..."

"Whether this is possible, only time will tell. If a satisfactory solution is not found, it won't be because of a lack of effort on our part," the president declared.

Fact Finding Committee on Race and Housing

Research into the Negro housing market demand and the outlook of white families moving into integrated neighborhoods are the two studies now underway in the Research Advisory Committee.

The Committee was formed in January to advise the staff on the direction and form of research that should be undertaken to best implement the BNI program.

The work on market demands is geared to develop data on the type and cost of housing Negres want and can afford. This study has a direct bearing on the need to create an open housing market in Baltimore and the surrounding counties.

Paralleling this project is the other study on the determining factors prompting the decision of white families to move into integrated neighborhoods. A survey is to be conducted to compile such information as the size of the families, income and education level, opinion of the neighborhood and the regard for the public schools.

Based on the conclusions reached from the survey, BNI can move to dramatize the choice made by hundred of whites to live in communities with Negro residents and to refute the contention of real estate brokers and some other businessmen that white families will not purchase or rent homes in an area undergoing racial change.

Once these two studies are completed, further projects will be undertaken by the Committee.

Sale-Rent Committee Program

Operating for more than a year under the chairmanship of Sidney Hollander, Jr., this Committee has adopted practical real estate selling techniques to encourage white families to purchase homes in integrated neighborhoods.

(continued on Page 3)

(continued from page two)

In grappling with this problem, the Committee has as its immediate and long-range goals the stabilization of neighborhoods on integrated basis. The Committee has had to meet this problem by preventing neighborhoods from gradually turning from all-white to all-Negro.

Representatives from the seven member associations of BNI agreed that new white buyers had to be brought into their neighborhoods to fill the vancies caused by regular turnover and to counter the tendency of real estate firms to show homes only to Negroes.

Operation of the program has been undertaken in this manner. The BNI office was named a clearing house for real estate listing information. And on a regular week-end basis during the Fall and Spring, two houses are advertised in the newspapers for sale or rent. Prospects contacting the BNI are put in touch with either the Lambros Realty Company covering Baltimore's west side or with the Pennington Realty Company covering the east side.

Both companies were selected for their willingness to participate in the program.

This liaison approach has met with some degree of success, and several homes have been sold and apartments rented in integrated neighborhoods to prospects attracted by the advertisements.

However, an over-riding factor in measuring the worth of the program is the sale of other homes to their own white clients by the two brokers. Although the motivation for moving into integrated neighborhoods may be diverse and varied, the end result is what is impressive. With the opportunity for both white and Negro families to move into these areas, the chances are strong that the neighborhood will maintain a desirable integrated balance. And the ramifications of this new trend are far reaching.

A Stroke of the Pen.....

During the 1960 Presidential campaign the then Senator Kennedy hit the Eisenhower Administration for its failure to move against discrimination in Federally-aided housing projects. All that was needed, Mr. Kennedy decried, "was the stroke of a pen" on an Executive Order barring bias by developers with FHA or VA backing.

Closing in on his second year in the Presidency, Mr. Kennedy's ink supply is stock-piling with gallons of the writing solution being sent to him by well-intentioned, but impatient partisans. (See Box) There are reports that Mr. Kennedy is waiting for the most politically opportune time to spring his Executive Order promised in the heat of the 1960 campaign.

The public certainly was not left with the impression that the Order would be wielded as a politically-inspired action, and it is not what we at BNI expect of the President in meeting this very serious problem. Moreover, the right political climate is now, and this compilation of figures for the Greater Baltimore area attest to the urgency: In the years 1950-1960 Baltimore City lost 113,000 white persons to the surrounding counties and gained slightly fewer than 100,000 nonwhites. At the same time, the nonwhite population in the counties of the metropolitan area decreased.

We urge you to write to the President -- and send along a bottle of ink--imploring him to issue the Order, encompassing not only Federally-aided programs, but also covering all Federally-insured lending institutions where mortgages are obtained.

Needed: Ink !

A novel twist in the efforts for issuance by Pres. Kennedy of his promised Order is the distribution by Monocle, a monthly magazine of political satire, of 6.000 blotters which ask "all Good Americans" to send a bottle of ink to the White House.

"President Kennedy has been in office for over a year now, and he still hasn't stroked that pen," says a message on the blotter. "Obviously the White House has run out of ink."

Suburban Integration

April Fool's Day in the surburban community of Sun Valley in Anne Arundel County was marked by no more than the usual occasional innocent pranks. And the shattering sound of a rock carreening through the front window of a modest bungalow later that night might have been dismissed as April Fool's exuberance had not the home just been occupied by the first Negroes in the all-white development.

For the Wallace family - Benjamin, his wife Irma and their three young children - the April Fool's Day destruction was only the beginning of a siege of terror and harrassment.

Had he been a man expecting the worst of his neighbors, Mr. Wallace might have given more than a passing thought to the discovery that his basement was flooded and the pump tampered with a few days before the original moving date of March 22nd.

It was, however, only viewed as an unfortunate circumstance that delayed the move of the family until March 29th.

Irked at what he considered the work of mischievous teen-agers, Mr. Wallace called the police and reported the incident.

The next evening, on April 2nd, the stillness that creeps on after the constant chatter of children is stilled by sleep was pierced by a twanging sound, a whoshing noise and two cracking thuds.

A steel tipped arrow was sent hurtling through the cardboard covering Mr. Wallace had placed over the broken window and narrowly missed hitting his sister, Mrs. Alice Johnson, who had just left the room, as it spent itself in a wall.

His complacency shattered, Mr. Wallace decided to nip off the harassment and the next evening, April 3rd, he armed himself with a shot gun and waited in his parked car for signs of intruders.

From his driveway vantage point, he saw two young men approach his home at 2 Phyllis Drive. Before he could move out from his car, they threw another rock and lobbed an oil-filled milk bottle on the front steps.

Scrambling from his car, Mr. Wallace fired a warning shot as the two youths, whom he was unable to identify, ran behind a house across the street.

Pondering the somewhat futile results of his individual resistance to the harassment, Mr. Wallace put in a call to the N.A.A.C.P., the first contact he had made with a private agency. Mr. Wallace asked Dr. Theodore Johnsonn, President of the Anne Arundel County NAACP chapter, how his family could obtain better police protection. In turn, Dr. Johnson sought the services of Mrs. Eleanor Crawford, an NAACP attorney.

The plight of the Wallace family came to the attention of Miss Ruth Fegley, Executive Director of Baltimore Fellowship, Inc., and Edward Holmgren, Executive Director of Baltimore Neighborhoods, Inc., through newspaper accounts of the harassing tactics. Both visited the Wallaces on April 4th to offer their assistance, and convinced Mr. Wallace at that time it would be unwise for him to continue using his gun, even for his own protection.

The next day, Miss Fegley and Mr. Holmgren reported the situation to Douglas Sands, Executive Secretary of the Maryland Commission on Interracial Problems and Relations, and it was agreed that their three agencies would work together on the case.

That night at 11.45 P.M., Miss Fegley was called by Mr. Wallace with the report that about fifteen minutes earlier, four beer bottles had been thrown through his front window. Mr. Wallace said the police had been notified, but they had not yet arrived.

(continued on Page 5)

Suburban Integration (continued)

Miss Fegley arrived at the Wallace home at 12.15 A.M., only to learn that the police had just left. However, when Miss Fegley left the Wallace home about 1 A.M. she met a detective stationed in a car outside. She learned from him that the incident occurred during "shaft change," but that the police were on continual afterdark surveillance.

On Friday, April 6th, a plan was initiated to bolster the faltering morale of the Wallace family. After consultations with the police, it was agreed that the Wallace family would be visited every evening by people expressing concern over the episodes.

This was continued for about a week, until the Wallaces felt there was no longer any need for the visitations. The agencies have maintained a telephone vigil and, occasionally, staff members have visited the home during the day or in the evening.

Mr. and Mrs. Wallace, who are civilian employees at nearby Fort Meade, purchased their Sun Valley home through the Denkins Realty Co. after the previous owners defaulted on a VA guaranteed loan.

The V.A. usually sells such homes as quickly as possible after foreclosure proceedings, and the Wallaces, with a good credit rating, had no trouble getting approval for their mortgage application.

A V.A. information bulletin, dated December 11, 1959, clearly enunciates its nondiscriminatory policy, adding that all parties concerned in a transaction abide by its anti-bias regulations.

Convenient to their work and located near Glen Burnie where they were born and reared, the Sun Valley home was purchased by the Wallace's because their family had outgrown the two bedroom apartment in Cherry Hill Gardens they had lived in for seven years.

Their move also was prompted by the need for yard space for the three children -- Nathaniel, age 9; Gerald, age 8 and Violet, age 6 -- and the privacy they could enjoy in a home of their own.

In the period since the incidents following the move-in of the Wallace family the community has began to accept its new neighbors. Baltimore Neighborhoods, Fellowship House and the Maryland Commission on Interracial Problems and Relations maintain a watchful eye on the situation.

Contacts with clergy and other community leaders have been established to assist the peaceful integration of the Wallace family and to help prevent fear and panic in the neighborhoods.

Annual Meeting

The second annual meeting of Baltimore Neighborhoods, Inc. will be held Thursday, June 14th at the Sheraton-Belvedere Hotel beginning at 6 P.M.

Featured on the program is a panel on "Neighborhood Stabilization: Illusion and Reality." The speakers will include: Councilman Peter Angelos, (D.,Third); G. James Fleming, Professor of political science at Morgan State College; Walter Sondheim, Chairman of the Baltimore Urban Renewal and Housing Agency, and William H. C. Wilson, President of the Real Estate Board of Greater Baltimore.

An election of Officers and of the Executive Committee also will take place.

Cocktails will be served at 6 P.M., with dinner following at 6:30 P.M. Reservations for the meeting are $5.00. If you haven't made your reservation, call SA 7-3194 today.

Urban Planning Project

SAMPLE LETTER OF INVITATION TO A NEIGHBORHOOD MEETING

Dear Neighbor:

At the suggestion of a number of your neighbors in the vicinity of the _____ block of _____ Street, a meeting has been arranged to discuss the situation that exists in our neighborhood.

What can be done to combat panic selling in the face of a changing population? What can be done to promote the maintenance and improvement of high neighborhood standards? These questions must be answered in a practical and common sense way for the benefit of all residents.

You are welcome to attend this meeting at _____ p.m. on _____ at _____. Inform your neighbors and invite them to attend also. We look forward to meeting with you.

WE'VE MOVED TO CHARLES CENTER

The new offices of BNI are located in the handsome new One Charles Center Building where we have almost twice the working space that we had before. Those of you who visited the one small room in which three BNI staff members previously worked will understand the gratitude we feel for this chance to expand. Our neighbor at the Charles Center is the Greater Baltimore Committee, whose conference room and other office facilities we are generously permitted to use. This arrangement is both an asset and a convenience to us. Come and visit us.

ON PLANNING FOR INTEGRATION

"We are dedicated to an open city. But this will be denied us if we rely solely upon legislation and lip service. Racial and ethnic considerations are an integral part of any sound planning approach in this City. A 'color blind' government policy carried out in a color-conscious housing market can only entrench and aggravate the segregation of racial and ethnic groups, with all its enervating and corrosive consequences."

New York City Planning Commission's report on the 1962-63 Urban Renewal Study Program.

THE STROKED PEN

Before President Kennedy's election, he stated that his predecessor could abolish discrimination in housing at anytime "with a stroke of the pen". These words were often reiterated by those urging the President to sign an Executive Order requiring non-discrimination in federally-aided housing.

The long awaited Order was signed on November 20, 1962. It provides for the prevention of discrimination in: (1) all housing financed, from November 21st forward, by government-insured (FHA) or guaranteed (VA) loans; (2) all property financed directly by the federal government (e.g. public housing, housing for the elderly, college dormitories); (3) all property owned or operated by the federal government (principally housing repossessed by FHA or VA and military or other installations); and (4) property obtained from a local government agency receiving aid from the federal government (urban renewal).

Although the limited coverage of the Order is somewhat disappointing, it reaffirms the principle of equal opportunity by federal refusal to tolerate discrimination in dispensing federal aid. Its chief limitations are that it does not apply to housing which predates the Order and that private building financed by banks and loan associations with federal charters is not covered. So long as this lack exists, open occupancy will remain, in effect, voluntary on the part of builders since they can obtain financing in the conventional mortgage market. In addition, the exemption of all housing built before November 20,

(cont. on page 2, Col. 1)

(continued from page 1)

1962 leaves unregulated the largest segment of today's housing market.

There has been and will continue to be pressure on the President to broaden the Order. Support for this has come from unexpected sources: the Mortgage Bankers' Association and the Association of Mutual Savings Banks. These groups have added their voices to the appeal for extending the Order because they concentrate on federally guaranteed mortgages and recognize that they will be the losers if builders turn to private financing to evade the Order. It has been predicted that bills may be introduced in Congress and, if legislation fails, that President Kennedy may then be asked to extend the coverage of the Order.

THE ORDER AND MARYLAND

Many members of the Maryland Homebuilders Association attended an annual meeting of their national organization last December to hear (among other things) a discussion of the significance of the President's Executive Order for the homebuilding industry. Baltimore Neighborhoods' director attended this session and was impressed with the interest shown by builders in learning how to operate within the Order. Further evidence that there is greater enlightment on the part of the homebuilders and other housing industry leaders is suggested by the recent cosponsorship by the National Homebuilders Association and the National Association of Intergroup Relations Officials of a conference on equal opportunity in housing.

The Maryland scene, however, is perhaps less encouraging. BNI has been in touch with representatives of the local homebuilders who seem to feel that open occupancy will have a "disastrous" effect on their business. Apparently, therefore, some builders plan to slow down their building schedules or switch from FHA to conventional financing to avoid compliance for the time being. Everyone, it seems, has adopted an attitude of "wait and see", and wonders where the first test of the Order will occur.

The Research Advisory Committee of BNI has drawn up a program to assist local builders to comply with the Order as painlessly as possible. The program includes: (1) urging them to take a unified stand in compliance since disunity will foster intra-industry competition; (2) recommending that the Homebuilders Association support the expansion of the Order's coverage so that virtually all home building operations will be covered and all builders will be on an equal footing (it is estimated that 95-98% of construction would be affected by maximum expansion of the Order); (3) bringing builders and the community to realize that neighborhood integration is ultimately inevitable and that the housing needs of middle-income Negroes constitute a growing and profitable market; (4) giving evidence to builders that while compliance to the Order need not be devastating, resistance carried to the point of litigation and adverse publicity would be damaging; and (5) providing them with case histories of successful integration in Baltimore and elsewhere and other current information regarding progress under the Order.

NEW STAFF ASSISTANT

We are pleased to welcome Mrs. Margaret Neustadt to the staff. She assumed her part-time duties in mid-September, undertaking the work formerly done by Sally Foley. Mrs. Neustadt's rich professional background in the field of housing, race relations and community organization made her the most outstanding candidate for the position. She most recently directed the Senior Citizens Program in the Mt. Vernon project area for the Baltimore YWCA.

Her duties include: (1) the coordination of activities of the sale-rent program i.e. contacts with potential purchasers and sellers, brokers, improvement associations, industries and organizations, etc.; (2) helping to organize meetings, recording committee minutes and preparing reports, following up on individual neighborhood problems that are brought to BNI's attention, editing the Newsletter, etc.

COMMUNITY COOPERATION IN NORTHWEST BALTIMORE

Sparked by the concern of Sinai Hospital for the stability of its surrounding community and by an unwarranted changeover in the racial occupancy of an apartment development on Greenspring Avenue, an initial meeting of representatives of neighborhood associations, religious institutions and civic and business groups occurred in mid-November to consider neighborhood problems of a large area in Northwest Baltimore. The area, bounded by the Western Maryland R.R. and the western city limits, the northern city limits, Falls Road on the east above Coldspring Lane and Greenspring Avenue below Coldspring to Park Circle, is largely residential and has many common community interests.

The first meeting, at which forty organizations were represented, was called by Father John C. Griffith of St. Ambrose Roman Catholic Church, Rev. Robert Briggs of Arlington Presbyterian Church and Rabbi Bernard Perelmuter of the Baltimore Hebrew Congregation. In order to present some of the aspects of neighborhood stabilization, two neighborhood associations told of their activities, and these accounts sparked lively discussion about the problems of zoning, commercialization in residential areas, the changing character of residents in certain neighborhoods and its effect on schools and other institutions. The concensus of the participants was that a permanent committee should be created to deal with these problems and to enlist additional community support. Since then a small nucleus of the participants has met to create a formal organization and to discuss strategy and action.

The project seems to be well under way. One new neighborhood association, the "Park Lane" group, in the southern portion of the above area, was formed as an outgrowth of the November meeting.

REAL ESTATE BOARD STATEMENT OF POLICY

One of the most hopeful events of 1962 was the issuance of the Baltimore Real Estate Board's policy statement in June. Recognizing the damage done to neighborhood stability by labeling properties by race in classified advertising, the Real Estate Board called upon its membership to refrain from this practice. It has also urged the local press to cooperate by adopting a policy prohibiting such advertising.

The policy statement goes on to request Realtors not to relinquish listings on properties when the racial character of the neighborhood begins to change. Instead they are urged to "extend every effort to obtain a buyer regardless of race, creed or national origin".

BNI's role in bringing the policy statement into being is not insignificant. It was as a result of talks between the officers of the Real Estate Board and BNI's Director that the action came about. Mr. William Wilson, past President of the Real Estate Board, acknowledged his recognition of BNI's role in a letter to BNI's President, William Boucher: "The experience and aid of your Ed Holmgren and your organization have been invaluable to me in developing a better understanding of this most difficult and sensitive metropolitan problem. While there are some fundamental differences in the thinking of Baltimore Neighborhoods, Inc. and our Real Estate Board on this vital subject, I do feel that we both have kept our eye on 'The Big Picture' and have moved in the right direction. The fact that there is a tremendous amount of work yet to be done is obvious..."

THE NEWSLETTER

With this issue of the Newsletter we are hoping to go on a regular schedule of monthly publication. We welcome our readers' comments and criticisms.

SALE-RENT COMMITTEE PLANS

The neighborhood members of the Sale-Rent Committee have been compiling representative lists of housing and apartments currently available for sale or rent in integrated communities. Copies of this list will be distributed to large companies, industries and institutions for use in aiding the latters' new employees to find housing in Baltimore. The firms must be sufficiently large to have established a housing service for their employees and must be willing to accept and distribute the lists. Personal visits to company spokesman by BNI staff are planned in order to introduce our over-all program and obtain the maximum receptiveness to this project.

The distribution of the lists will replace the Sunday newspaper advertising of homes in our neighborhoods, which was tried without conspicuous success. We are hoping for better results from this more direct method. Meanwhile, if any of our readers know of homes for sale or rent on an open occupancy basis, please let us know.

REPORT ON THE NEGRO HOUSING DEMAND

In the Fall of 1962 BNI's Research Advisory Committee undertook a study of the Negro housing market based on available statistics for the urbanized portion of the Baltimore metropolitan area. Its purpose was to estimate the size of the demand for additional housing on the part of Negroes during the next five years.

The results of this study revealed a need for approximately 5,000 units per year. The housing to fill this need will have to be supplied by new construction, changes from white to Negro occupancy, and the creation of additional units through conversion. This report is available on request for those interested in studying it in detail.

Vol. II No. 2 - May 1963

REMINDER - ANNUAL DINNER MEETING, MAY 27TH

Members and friends of Baltimore Neighborhoods, Inc. are reminded to send reservations in for the Annual Dinner Meeting on May 27th at 6:30 P.M. (dutch treat Cocktails at 6:00 P.M.) at the Sheraton-Belvedere Hotel. If you have misplaced your reservation slip, please use form below.

This is the one opportunity in the year for us to gather together to share our concern for overcoming discrimination in housing and stabilizing changing neighborhoods, for the staff to report on the activities and achievements of Baltimore Neighborhoods, Inc., and for us to enjoy each other's company. We are fortunate in having as our speaker, DAVID L. LAWRENCE, former Governor of Pennsylvania and now Special Assistant to President Kennedy and Chairman of the President's Committee on Equal Opportunity in Housing. His subject is "Housing and Race - Crisis of the Sixties". The REV. IRVING MURRAY, Minister of the First Unitarian Church and, for many years before he came to Baltimore, associated with Governor Lawrence in the campaign for civil rights in Pittsburgh, will introduce the guest speaker. MR. JAMES ROUSE, community developer and civic leader, and the Vice Chairman of the Greater Baltimore Committee, will preside.

A QUESTION OF FUNDS

Friends of BNI who agree that its work is of primary concern to our community will want to give it financial support at a time when our future depends on meeting at least minimum budgetary requirements. Moreover, the receipt of matching funds promised by a national foundation depends on our success in obtaining local contributions.

Every donor of course becomes a member of BNI. It would be reassuring to see a substantial growth in membership as an indication of your approval of our program and objectives. Membership renewals are, in some cases, overdue and will be equally welcome.

To make a contribution, please fill out form at bottom of Page Two.

DINNER RESERVATIONS

For reservations please return to: Baltimore Neighborhoods, Inc. Rm. 312, One Charles Center, Baltimore 1, Md., before May 23, 1963. (SA 7-3194).

Enclosed please find check in the amount of $_____ to reserve_____ places (tables of 10) for the Third Annual Dinner Meeting, for Monday, May 27th, 1963, Sheraton-Belvedere Hotel. Cost per person (including gratuity): $5.00.

STAFF MEMBERS ATTEND CONFERENCE

Two BNI Staff members attended a stimulating and fruitful conference of the National Committee Against Discrimination in Housing in Washington on April 25th and 26th. During the first day, the theme was the implementation of the Executive Order on Equal Housing Opportunity. It was encouraging to observe that at each special session, at which various aspects of the housing market were discussed - low income, FHA and VA, and urban renewal - federal government representatives received strong messages from urban communities throughout the country as to the urgency of desegregation and equal housing opportunity and also as to some of the shortcomings of the federal programs in these respects.

The second day's sessions, devoted to voluntary citizens' action, revealed a variety of programs and techniques being carried on in urban and suburban areas. Some programs are similar to that of BNI, but there are also a large number of suburban activities that started at the grass roots and continue to be almost entirely manned by volunteers. Progress reported in finding homes for Negroes, not only outside the ghettos but in exclusive residential areas, was encouraging.

EARLHAM STUDENTS' VISIT

A group of twenty students from Earlham College (Richmond, Ind.) who spent a ten week period in Washington studying urban problems, spent a day in Baltimore under the sponsorship of BNI. Following a tour of the renewal projects in the center city, the Earlham students 1) were given a report by a member of the BURHA staff on the relocation project in Madison Park, a cooperative community agency endeavor, 2) learned from the director of the Greater Baltimore Committee, the history and work of that agency and 3) discussed with Mr. Holmgren the objectives and accomplishments of BNI. We were later gratified to learn that the students considered Baltimore to be the high point of their Washington seminar.

CHANGES IN THE SUBURBS

In our last Newsletter we reported that our Research Advisory Committee has estimated a need of 5,000 additional housing units per year for the next five years for Negroes in the urbanized portion of the Baltimore area. The most important source to fill this need will be units now occupied by white families that may be expected to pass to Negro occupancy. But the question arises as to whether such transfers will occur in sufficient numbers.

The program of neighborhood stabilization in which Baltimore Neighborhoods has engaged for the last three and half years has had the effect of encouraging resident white families not to leave a "changing" neighborhood and other white families to purchase or rent therein. Although this activity helps to create stability and prevent new ghettos from being formed, it also limits the Negro market.

A necessary corrollary to neighborhood stabilization, therefore, is finding other non-ghetto areas where Negroes may live. An important future aspect of BNI's work will be to help presently all-white neighborhoods make adjustments to the arrival of Negro families.

That the movement of Negroes out of the center city and into previously all-white suburbs is happening and will continue to happen is evidenced by non-white movement into Glen Burnie, Milford Mill, Pikesville, Fern Park, Loch Raven Village, Mt. Washington, Odenton, Norwood Heights, Gwynn Oak, Pimlico, Northwood and Woodbourne. The non-discriminatory policy in FHA and VA foreclosure sales, the President's Executive Order prohibiting discrimination in housing under federally insured mortgages, and the rising standard of living of many Negro families are all factors influencing the probability of further suburban sales to Negroes.

A very positive aspect of these developments, even for white people who are apprehensive about integration, is that Negroes permitted a freer choice of neighborhoods need not concentrate in certain limited areas. Hence, whites need not fear that the arrival of one Negro family will be followed by an "invasion". Moreover, if white families in the city can observe that the suburbs are no longer a "place to hide" from integration it is probable that they will think twice before taking flight.

BNI's role in helping to find sensible answers to neighborhood change is known to our members and friends. Recent fruitful meetings have taken place with neighborhood associations in Chinquapin Park, Leith Walk, Liberty Road, Woodbourne, Park Lane and Blossom Hills, and we continue to keep in close touch with our nine member associations.

The Executive Director's continued contacts with a growing number of civic interest groups (including recently, the Central YWCA, the Maryland League of Women's Clubs, CCRE, the Maryland Commission on Interracial Problems and Relation, the Stony Run Friends Meeting, etc.) serves to increase the number of individuals and organizations committed to the aims of our program. Several Realtors and a few homebuilders have responded to the justice and logic of our case, and the Real Estate Board of Greater Baltimore has pronounced a new non-discriminatory ethic in negotiating sales and has urged the removal of race labels in real estate advertising.

Meanwhile, our sale-rent program, pursued with the cooperation of several brokers, includes both the listing of houses and assistance to home-seekers in integrated neighborhoods, including Baltimore County neighborhoods where opportunities are for the first time available.

NEWSLETTER

PICNIC

Watch for a flyer early in July, but mark the date on your calendar now!. The West Mt. Airy Neighbors will hold a picnic on Saturday, July 13, to celebrate our 5th birthday anniversary, and to pay tribute to George Schermer, one of our founders and former executive director of the Philadelphia Human Relations Commission. It is significant that the first meeting to discuss the organization of WMAN was held in Mr. Schermer's home in July, 1958.

The picnic will be held at Monastery Meadow in Fairmount Park from 5 to 8 PM. The Meadow can be reached by the second road to the right off Kitchens Lane. Continue over the small bridge and up the hill to the Park Guard stable.

We are all asked to bring our own prepared meals (there can be no cooking out), but free softs drinks will be supplied. There will be no rain date, so let's hope for lovely sunshine!

MEMBERSHIP PARTICIPATION PLANNING COMMITTEE

This new committee, using the above name temporarily, is an outgrowth of the good will and warm friendships created during our Foreign Students' Weekend. It is the simple hope of the committee that through social and community activities, all of our membership, old and new, may get to know each other. This idea can and will be extended to all age groups within WMAN.

Mrs. Martin S. Barol is chairman and the following are members of the committee:

from the general membership:

Mrs. Richard Bansen
Theodore Levine
Jerome Stone -- William Warner

from the board:

Jerome Bernstein
Lewis Tanner Moore
Nellie Roulhac

Matthew Bullock, Jr.
Marechal-Neil Young

consultants:

Robert Anderson (Membership Chairman)
Walter Omans (Youth Services Chairman
John McNelis (Community Relations Ch.
Henry Wells (President)
Ruth Steele (Executive Secretary)

A tentative schedule planned for 1963-64:

July	-	Anniversary Picnic
October	-	Annual House Tour
November	-	Barn Dance and Hootenany
January	-	Annual Membership Meeting
February	-	Covered Dish Supper & Community Sing
March	-	Hobby Show
April	-	International Weekend
May	-	open to suggestions

Mrs. Barol and the committee welcome any suggestions for other social events or activities appealing to you, and will be most happy to accept volunteers to serve on the committee. Please call Mrs. Barol at CH 8-4496 or Mrs. Mel Steele at the WMAN office, CH 2-1196.

MEMBERSHIP COMMITTEE

The Board is happy to announce that Dr. Robert Anderson will assume the chairmanship of this committee, replacing Mrs. Ludwig Schiff who is unable to continue in charge. Dr. Anderson was one of the founding members of WMAN and served as Treasurer for four years. He is now a member of the Advisory Board.

Dr. Anderson has prepared a block by block list of WMAN members, so that anyone interested in recruiting can know at a glance the present membership in any block in West Mt. Airy. Further, he is keeping the street lists up to date for membership recruitment purposes. The Membership Committee is being enlarged and an active block by block campaign will be instituted in the near future. Dr. Anderson reminds us to continue our practice of notifying Mrs. Steele, CH 2-1196, of new families moving into the neighborhood so that she can write welcoming letters to them.

Members anxious to work with Dr. Anderson may phone him at VI 8-6801 or call Mrs. Steele, CH 2-1196.

ZONING AND PLANNING COMMITTEE

Louis E. Levy, Esq., chairman, reports:
1) that at a Zoning Board hearing recently, a request for a variance at 7 W. Phil-Ellena St. for the storage of pretzels, was denied WMAN had opposed granting the variance. The advisability of supporting a use variance on this site as a one-man cabinet-making shop is being considered by the Zoning Committee.

2) that the problem of up-grading the zoning of the Germantown Steam Co. property will be given to the Committee for study. Mr. Levy said that he would appreciate suggestions from WMAN members

for the use of this property. He can be reached during the day at PE 5-5266 or call Mrs. Steele at the office, CH 2-1196.

CITY AND PUBLIC SERVICES COMMITTEE

Mr. Richard P. Bansen, chairman, reminds us of the next meeting planned by the Germantown Community Council on the renewal program for Germantown. It will be held on Thursday, June 27 at 3 PM in the headquarters of the Community Council in Vernon Park.

WMAN joined Allens Lane Art Center in sponsoring a previous meeting on this subject at the Art Center on June 17.

The Railroad Stations Committee, formed as a sub-committee, with Donald Scott as chairman, had a preliminary meeting recently. The group has been formed to study the problem of the neglected grounds at Allens Lane, Carpenter Lane and Upsal stations of the PRR. Mr. Scott tells us that the committee already has members who commute from Allens Lane and Upsal stations, but needs people who commute from Carpenter Lane. If you can serve, please call Mrs. Steele. The committee is presently contacting community organizations in Chestnut Hill for an exchange of ideas and to obtain information.

YOUTH SERVICES COMMITTEE

According to Dr. Walter Omans, chairman, calls for help from the Youth Employment Service have increased enormously this spring. Most of the calls to Mrs. Marion Darmstadter, VI 8-1352, have asked for gardening and yard work, while those for baby sitting are running a close second.

The Employment Service has a list of energetic, conscientious teen agers who can all the jobs you have been putting off yourself; cleaning nearly everything, grass cutting, painting, mother's helpers. You'll be glad to know that the Service continues throughout the summer, so be sure to call Mrs. Darmstadter, VI 8-1352.

Dr. Omans is asking for more volunteer teen-agers for the Service, since those on the list are using all of their available time on present calls. If you have youngsters between 14 and 18, or know of any who can use extra money, please have them call Mrs. Darmstadter.

PUBLIC RELATIONS COMMITTEE

Mrs. Bennett O,Stalvey, chairman. The West Mt. Airy Neighbors congratulates Mrs. Stalvey on her warm and enlightening article which appeared in the Sunday Bulletin Magazine, May 19. The title was "We Moved to an Integrated Neighborhood". We are glad to have Mrs. Stalvey as an active member, as well as a neighbor.

A local real estate agent has reported that four white families have contacted his firm because of the article and are currently looking at houses in our area. At least four more white families have expressed interest in future location in West Mt. Airy

REAL ESTATE PRACTICES COMMITTEE

Mr. Edward Lavin, chairman, informed us that seven or eight families in the 300 block of Wellesley Road have recently received cards of solicitation for their homes. In line with WMAN practice, Mrs. Steele has written to the families offering the use of our "Don't Call us - We'll Call You" form and has received requests for the form.

Mr. Lavin reports that another broker in the area has been added to the list of those who have signed the WMAN policy statement regarding real estate ethical practices.

VERNON FAIR

Mrs. Howell Heaney, chairman of the WMAN Booth Committee, expressed pleasure with the success of the booth. A great deal of interest from local residents and others was shown in the tapestry and other exhibits.

ANNOUNCEMENTS

1) Mrs. Maurice C. Clifford, one of our members, has brought to our attention an organization called The Experiment in International Living. This group, with headquarters in Putney, Vermont, sponsors an exchange program sending some 1500 persons abroad each year, and bringing a similar number to the United States. Visitors here live with families not as guests but as members of the family, from August 15 to September 15. Ages range from 19to 35 years. If any of you are interested in learning more about the program, or in being a host family, please call Mrs. Clifford (whose family plays host itself) at VI 8-1969.

2) A Department of Health Multi-Phasic Screening Clinic has been opened at the Germantown office, 131 E. Chelten Avenue. The clinic offers a great many tests to the public, free of charge. You may phone for an appointment by calling the clinic at VI 8-6500.

3) The National Conference of Christians and Jews will feature West Mt. Airy in their Summer Regional Workshop as a model integrated community. Their subject, "Rearing Children of Good Will" will be explored during a field trip on Wednesday, July 24, to our area, where 60 participants from various parts of the country will meet at the home of Mrs. Bennett O. Stalvey, Jr. to hear orientation comments by Mrs. Beatrice Chernok, principal of the C.W. Henry School, and the Rev. Leonard Smalls. The group then will break up into smaller units to form discussion groups at the homes of six WMAN members. A short visit to the Allens Lane Day Camp will be included.

BE SURE TO PUT OUR PICNIC, JULY 13, ON YOUR CALENDAR RIGHT NOW!

NEW ADDRESS: ONE CHARLES CENTER (ZONE 1)

Vol II No. 3 - August 1963

ACTION FOR TROUBLED PEOPLE

In his television address to the nation on June 10th, President Kennedy reported that in the previous two weeks over 75 cities had taken steps to desegregate public facilities. This came to pass, of course, as a result of the demonstrations and protests in many parts of the country which dramatized the unwillingness of Negro citizens to accept further postponement of their rights. The protests have at last frightened into action the white majority - some of whom have been pleased to maintain "white supremacy", and some being indifferent or lazy, but many of whom paid lip service to the concept of equality while permitting others to carry the ball.

Now it has become clear that others cannot carry the ball alone. Even the stunning changes that the year 1963 have wrought are by no means enough to meet today's reality, and every decent American must come to recognize this.

Many people who are troubled by the spectre of racial discrimination and profoundly wish to see the day when equal rights are available to all have not themselves done anything to bring about this end. It may be that they have not known what to do.

It is to these people that we would like to urge a program of activity, here and now, which will open to the Negroes of the Baltimore area new opportunities in housing. Lacking the increased budget needed to enlarge our staff, Baltimore Neighborhoods is sorely in need of a corps of volunteers to undertake responsibility for a special project to secure suburban housing for Negroes.

This is important work: our efforts to maintain stabilized integrated neighborhoods in the city cannot succeed in the long run without an increase in the Negro housing market throughout the metropolitan area. The city could become one enormous ghetto as white people move into the counties, an outcome of which would profoundly affect the economy of the city and impair our costly urban renewal program. Moreover, racial patterns in housing largely determine the extent of segregation in public schools and other institutions.

The main issue at stake, however, is the Negro's right to buy any home he can afford. Deprive him of this right, commit him to slums or ghettos and we take from him a part of his motivation to struggle up the economic and educational ladder and much of his sense of loyalty and responsibility to his community. If the white citizenry is to feel justified in sharing its world with the Negro only when he has become "acceptable", then, to be consistent, it must cease to block him from the decent integrated housing and other advantages that will help him to become acceptable and accepted.

(Continued from Page 1)

What kind of a program can volunteers undertake to open suburban neighborhoods to Negroes? We can learn much from observing the programs recently initiated in other cities which are operated by volunteers. In over fifty Boston suburbs as many committees are active in bringing white sellers and colored buyers together. They have federated into a greater Boston council, but each local group carries out its endeavor autonomously. A San Francisco organization has used both advertising and non-discriminatory multiple listings with considerable success. In Yonkers, where a fair housing law exists, volunteers now act as a vigilance committee to make sure of landlords' and sellers' compliance; however this same vigilance was previously applied to make brokers operate within the ethical code of the local real estate board and the licensing regulations of the real estate commission. (Baltimore City brokers are also regulated by Ordinance 502). In Montgomery County, Maryland, an active fair housing organization seeks and lists both houses and buyers and prepares neighborhoods to accept Negro residents. Three recent sales to Negro families in all-white communities have been negotiated with this organization's assistance.

The activities of Yonkers and San Francisco, suburban Washington and Boston suggest what might be done in the neighborhoods around Baltimore. Many people have asked us what they can do to help either to stabilize or to integrate their communities; if these and others would volunteer to staff a suburban program we could be well on our way.

IDLEWOOD CIVIC & HOME IMPROVEMENT ASSOCIATION JOINS BNI

On a rainy Sunday afternoon, July 14th, three hundred and fifty residents of Idlewood* attended a meeting of their neighborhood association to discuss the implications of the purchase of a home therein by a Negro family. The principal speaker was the Director of Baltimore Neighborhoods, and his message concerning the calm acceptance of this change was supported by the association's president and other representative community leaders. No negative comments were expressed to the meeting as a whole. The Idlewood Association has become a member of BNI.

*The boundaries of Idlewood are The Alameda on the West, Loch Raven Blvd. on the East, Northern Parkway on the South and the City limit on the North.

EXPANSION OF EXECUTIVE ORDER

"The restricted scope of the President's Executive Order [prohibiting discrimination in housing with federally insured mortgages is believed to have been] determined by political considerations, not legal ones. Now is the time for political considerations to dictate expansion of the order to include coverage of all banking institutions supervised by the Federal government as well as all existing housing aided in any way by the Federal government...

"Coverage of financial institutions is particularly important now, since mortgage money is so plentiful that there is increasing tendency on the part of the builders to 'go conventional' and not use FHA or VA...

"Letters [should be sent] to President John F. Kennedy <u>immediately</u>, urging him to expand the coverage of the Executive Order on Equal Opportunity in Housing, to cover all banking institutions supervised by the Federal Government, as well as all existing housing aided in any way by the Federal Government..."

Memorandum from the
National Committee Against Discrimination in Housing

RESEARCH ADVISORY COMMITTEE PROJECTS

Three projects of the Research Advisory Committee have recently been completed and have produced some interesting results.

A. The first was a survey of white families who have moved into racially mixed neighborhoods. Questionaires were sent to over one hundred such households and fifty-six completed forms were returned. Although we believe that the sample is not representative of all households in mixed neighborhoods, the results may be considered valid at face value, that is, as fifty-six case histories.

Twenty-two of the toal households were in Bolton Hill, not considered by many of the residents to be a truly integrated neighborhood. Three-fourths of the households heads were under 40 years old, four-fifths held professional or administrative jobs; over half made in excess of $10,000, only two of the males had not had some college education and over half had graduate degrees, nearly two-thirds were Protestant and most of the rest were Jewish.

In general, they moved into their present neighborhoods because they liked the atmosphere, the convenience, the specific house or the financial saving, i.e. for the same reasons that motivate others. Few mentioned integration as a reason for their choice; few sought integration and few were apprhensive about it.

B. The second project was the analysis of answers to a question which appeared in an omnibus market survey. The question was "What do you think most people in [neighborhoods where colored people are moving in for the first time] will do about this nowadays - will they [immediately] leave or will they wait and see?"

Those whose answers indicated the greatest readiness to move out quickly were the home-owning younger families with children, whose incomes were between $4,000 and $10,000. Almost half of the total number believed that "most people" would move out precipitiously. Of the remainder, many expressed tendencies in that direction but answered that they would "wait and see", which suggests that activities in crucial areas such as BNI initiates may determine whether they stay or go.

It was deemed important that the number who anticipated an immediate exodus as soon as Negroes arrived was less than half the respondents. Contrary to generally accepted opinion, not all white people are determined to reject residential integration under any circumstance.

C. The third Research Advisory Committee project has been an investigation by Dr. Homer Favor into the possibility of a market analysis survey of nonwhite housing demand in metropolitan Baltimore. Dr. Favor has evolved a design for gathering data on demand, supply, family characteristics, family attitudes regarding housing, and attitudes of builders and other suppliers of housing. The design has been approved by the Committee and a grant will be sought with which to launch the study. In addition to filling Baltimore's need for information, the project may provide guidance to other cities.

THE DIXON FAIR HOUSING ORDINANCE: AN ANALYSIS

Councilman Dixon introduced Ordinance No. 1 on May 27th. The ordinance has been referred to the Baltimore Urban Renewal and Housing Agency and the Equal Opportunity Commission for comment and recommendation. It has also been referred to the Council Committee on Judiciary. To date, no action on the ordinance has been taken by any of the foregoing bodies. It is our understanding that the Council will consider the bill after the summer recess in late September. BURHA is preparing a staff report which will be submitted to that Commission soon. The Equal Opportunity Commission is studying the ordinance and will take action at its August meeting.

ESSENTIAL PROVISIONS

Purpose of the Ordinance

To prevent and eliminate practices of discrimination in rental, sale, purchase, or financing of residential housing because of race, color, religion, ancestry or national origin.

Principal Acts Forbidden By the Ordinance

It shall be illegal because of race, color, religion, ancestry or natural origin:

1. To deny an equal opportunity to purchase, sell, lease, sub-lease, rent, assign or otherwise transfer or refuse to negotiate on any of these matters or to represent that such property is not available for inspection when it is so available.
2. To discriminate in the terms, conditions or privileges in the use or occupancy of a housing unit.
3. To discriminate in the furnishing of any facilities or services of a housing unit.
4. To deny financing, mortgage, loan guarantee or other funds for the purchase, construction, rehabilitation, repair or maintenance of any housing unit or housing accommodation.
5. To publish or circulate any notice, statement or advertisement, or to announce a policy, or to use any form of application, or to make any record or inquiry which specifies any limitation or discrimination.
6. To obstruct or prevent enforcement or compliance with this ordinance.

Against Whom a Complaint May be Filed

1. Any real estate broker, salesman or agent; (2) any owner of five or more dwelling units, whether or not contiguous; (3) any lending institutions; and (4) any person who participates, obstructs or prevents enforcement or compliance with the ordinance.

Who May File A Complaint

1. An aggrieved individual or 2) the Equal Opportunity Commission on its own motion.

To Whom the Ordinance Does not Apply

1. Religious institutions and organization and owners of less than five dwelling units.

STATE FAIR HOUSING BILL

Delegate Mitchell has presented a state fair housing bill which will be considered by the Legislative Council within the next few months. It is similar to the Dixon Ordinance, differing chiefly in its coverage of multiple dwellings. Owners of multiple dwellings containing three or more units, or ten or more contiguous single or two-family dwellings must comply.

THE REAL CHALLENGE OF NEW REAL ESTATE BOARD POLICIES

At the recent annual meeting of the National Association of Real Estate Boards in Chicago, two statements were made of interest and concern to Baltimore Neighborhoods, Inc. The first was a so-called property owner's declaration of rights, which proclaims the freedom of every property owner to dispose of or lease his property without "legal interference". The second is a policy statement of the rights of "Realtors" (members of local Real Estate Boards) to enter into broker-client relationships with persons of any race, creed or ethnic group and the obligation to determine the suitability of real estate transactions on grounds other than race. It includes a condemnation of block-busting and "panic selling".

The National Association of Real Estate Boards has been moving toward this second position for a number of years, and Baltimore's local board made a strong policy statement covering this point in June of 1962. The 74,000 individual members of the National Association, including the 1700 local members, are expected to adhere to the Board's policies, so this directive could be used advantageously by them to increase housing opportunities for Negroes in all parts of the Baltimore region.

Unfortunately, only a relatively small percentage of licensed real estate agents are associated with the Boards, and past observation indicates that blockbusting is carried on almost exclusively by non-members. An additional problem lies in the final power of decision that rests with the property owners which the NAREB is reluctant to have limited: if the owner wishes to discriminate in the sale or lease of his property his word is law. This concept is made clear in the "property owner's bill of rights".

We cannot depend, therefore, on the new ethical position of the NAREB or the local Board for a broad increase in the availability of housing for minorities, although unquestionably they are steps in the right direction. Brokers working for the rights of Negroes to live wherever they choose will be supported by such actions to some extent, but how can they overcome the prejudices and fears of property owners and the avarice of blockbusters?

A fair housing ordinance has been proposed for Baltimore (see page 4). It is similar in scope and intent to laws adopted in five other cities and thirteen states. This ordinance will undoubtedly generate much debate, pro and con, in the community. Can those who recognize the dangers of continued housing discrimination and segregation come up with a voluntary, self-enforced program within the industry and community as an alternative to fair housing legislation?

GIFT FROM THE ARCHDIOCESE

Baltimore Neighborhoods, Inc. was most gratified to receive in May a generous contribution to its work from the Catholic Archdiocese of Baltimore. In making the presentation, the Archbishop expressed his intense awareness of the urgency of our work.

A REQUEST

Do you have friends or business associates who would like to read of BNI activities? Send their names to us and we will put them on our mailing list. Also, if you anticipate change of address, please let us know.

SALE-RENT ACTIVITIES FOR 1963

A small but fairly steady number of requests for assistance in selling or leasing, buying or renting homes comes to Baltimore Neighborhoods. In each case, if we do not by chance have some direct help to offer, we refer the request to one of the real estate brokers who cooperate with us. Every effort is made to follow-up on each until a satisfactory solution is found.

Our records show the following picture of sale-rent activities during 1963:

Requests for Housing

	Total Requests	Housing found by or thru BNI	Housing found thru other resource	Home Not Yet Located	Decided Not To Move	Homeseekers from out-of town
Total	22	5	7	8	2	8
White	15	3	5	6	1	6
Non-white*	7	2	2	2	1	2

* Of seven "non-white", 5 were Negro, 2 East Indian.

Requests to find Buyer or Tenant from white property owners

Total Requests*	Buyer/tenant found with BNI help	Buyer/tenant found thru other resource	Still Available	Withdrawn from Open Occupancy Market
20	5	5**	9	1

* This total does not include listings received from Sale-Rent Committee representatives in BNI member neighborhoods.

**In one transaction, a white owner-occupant rented apartment to Negro tenants.

NEWSLETTER

House Tour:

A deep feeling of dedication, unswerving diligence, together with yeoman amounts of imagination and tact, combine to make the Third Annual House Tour of West Mt. Airy Neighbors a memborable one. The modernization of old homes is the theme of the Tour, to be held on Sunday, October 20 from 1 to 5 P.M.

One home, white stucco with both English and Frnch Provincial architecture, includes new features such as a swimming pool, modern paintings and Oriental sculpture, typified by a small plaster horse. The furnishings of the home include old dowry chests. You will see, too, a remodeled carriage house containing a huge fireplace, a weather vane used as a dining room light, and a kitchen built by Amish workmen.

Another, nearly 100 years old, a row house you have passed every day, was re-designed by a well-known Philadelphia architect, Horace Schoppe Here, the kitchen has been placed in the front of the house, so that the living room can overlook a lovely garden in the rear. These are only three of the unusual and yet typical homes in our green West Mt. Airy.

Tea will be served at the home of Mr. and Mrs. Harry S. Galfand, 502 W. Allens Lane from 3 until 5 P.M. The Hospitality Committee will welcome contributions of home baked bread for the tea. Please call Mrs. Graham Finney, Ch 7-3262, if you can help out in this way.

You will find enclosed the brochure of the House Tour listing all the homes open to the public, with a map of Mt. Airy showing the location of the houses. Be sure to take this with you on the Tour.

We have also enclosed two tickets. You may send a check or money order for these to the House Tour Treasurer, Mrs. James Boyd, 609 W. Cliveden St., Phila. 19, Pa. Please make checks payable to West Mt. Airy Neighbors. Tickets may be bought at any of the houses during the Tour.

Members of the House Tour Committee are: Mrs. H. J. Heaney and Mrs. Maurice Clifford, Co-Chairmen; Mrs. Melvin Bank, Mrs. Victor Crown and Mrs. William Suckle, House Selection; Mrs. Julian Saltz, Mailing; Mrs. James Boyd, Treasurer; Mrs. Harry Kownatsky, Secretary; Mrs. Graham Finney, Hospitality; and Mrs. Ashley Halsey, Publicity.

Remember: WMAN HOUSE TOUR
Sunday, October 20, 1963
1 to 5 P.M.

Membership Committee:

Organized and led by Dr. Robert Anderson, Chairman, the Membership Committee will undertake a massive educational campaign of West Mt. Airy on Sunday, October 6th. Members will visit every household in the area, explaining the services of our organization and encouraging non-members to use our resources. It is hoped that increased membership will follow from this new approach. Dr. Anderson can be reached for information at VI 4-6801.

Zoning and Planning Committee:

Louis E. Levy, Esq. reports that his committee has been unusually busy over the summer months. The committee has opposed two zoning actions with one refused and one granted by the Zoning Board; and supported three proposed changes, all of which were granted by the Board.

The committee appreciates the help of those residents who have been so alert to report zoning notices posted on buildings. Most of this summer's action was begun even before WMAN received official notice from the City Zoning Alerting Service. Mr. Levy makes the special request that each of us continue to report to Mrs. Steele, at CH 2-1196, as soon as we see Zoning notices posted on any property. This will enable the committee to begin action on proposed changes more quickly.

City and Public Services Committee:

Mr. Richard Bansen, Chairman, has made a study of the Housing Code enforcement under the jurisdiction of the City Department of Licenses and Inspection. He has asked all members of WMAN to make a special effort to be on the look-out for signs of serious deterioration of homes and to report these to Mrs. Steele at CH 2-1196. She will turn this information over to Mr. Bansen for consideration. Mr. Bansen made the point that multi-families in a one-family dwelling come under the jurisdiction of the Housing Code.

Railroad Stations Committee:

Mr. Donald Scott, Chairman, has been in contact with a representative of the Pennsylvania Railroad on the problem of the neglected grounds and lack of repair at the Allens Lane, Carpenter Lane and Upsal stations. The complete program is being worked out within the committee and the the Railroad, pointing to final action in the Spring.

Youth Services Committee:

Calls for teen-age help to the Youth Employment Service during the summer increased so satisfactorily, according to Dr. Walter Omans, Chairman, that the total working time was equal to that of 16 full time jobs. A number of our member- employers have been so pleased with the teenagers hired that they have continued to call on them for other types of work.

Just a phone call to Mrs. Marion Darmstadter, VI 8-1352, will bring you a baby sitter, basement cleaner, garden worker, painter, odd job man, car washer or what have you. Be dure to call the Employment Service when your Fall Housecleaning beings to get you down.

Community Relations Committee:

Mr. John McNelis, Chairman, tells us that many WMAN members have expressed a desire to contribute to the fund being raised by the Friends Service Association for Mr. and Mrs. Horace Baker, the first Negro family to move into Folcroft. He recommends that those of us who wish to donate, make checks payable to West Mt.Airy Neighbors-Baker Fund, and mail them to Mrs. Mel Steele, 7139 Cresheim Road, Philadelphia 19, Pa. She will forward them to the Assocaition handling the fund.

* * * * * *

KEEP ON THE LOOKOUT FOR ZONING NOTICES AND SIGNS OF HOUSING DETERIORATION AND CALL THE WMAN OFFICE, CH 2 - 1196 WITH YOUR INFORMATION. WE NEED YOUR HELP!

Public Relations and Publicity Committee:

Seventy members of the National Conference of Christians and Jews visited six homes of WMAN members on July 23 as part of their leadership training workshop, according to Mrs. Bennett O. Stalvey, Chairman. The members, who came from New England, New York, Pennsylvania and sections of the south, asked questions of West Mt. Airy residents, and discussed probelms relating to integration here and in their home areas. Mrs. Stalvey informed us that a reporter from Woman's Day, a national magazine, attended the workshop in preparation for an article which will appear in a December issue of the magazine.

Further publicity on the Conference's workshop here appeared in the Sunday edition of the New York Times, September 22. We are sure our members will be interested to know that the Community Relations Bureau of the American Jewish Congress has reprinted Mrs. Stalvey's article "We Moved to an Integrated Neighborhood" (Sunday Bulletin, May 19, 1963), and is distributing it around the country.

West Mt. Airy received additional publicity when some of our members appeared on a panel discussion over WIP Radio on Sunday evening, September 15. The program was titled "The Shame of Delamr Village". Those who participated from West Mt. Airy included Reverend Leonard L. Smalls, Mrs. Malcolm Berkowitz, Mrs. Bennett Stalvey, and Mr. John McNelis.

The Board of WMAN announces regratfully that Mrs. Stalvey will be unable to continue as Chairman of the Public Relations Committee because of other commitments. We welcome Mr. Joseph McLaughlin, long time member of the Board and one of the founders of our organization who will become the new chairman of this committee.

Schools Committee:

Ralph Bieber, chairman, announces that WMAN has joined the local Home and School Associations and several local civic organizations in sponsoring a Town Meeting on October 16 at 8:15 PM in the auditorium of the Henry School. The purpose of the meeting is to bring our local Councilmanic candidates together with a representative of the Board of Education,a spokesman for local citizenry and a moderator in a panel discussionof School Needs and Finances, in view of the new financing policy of the school system. A flyer with further information is enclosed and WMAN urges all those concerned with our public school system to attend this public meeting.

Real Estate Practices Committee:

Mr. Edward Lavin, Chairman, said that over the summer his committee was instrumental in the removal of a half dozen "SOLD" signs which had remained up over the seven day limit. Each sign was removed within 48 hours of notification to the realtor.

Activities Committee:

This committee, originally called the Membership Participation Planning Committee, chaired by Mrs. Martin S. Barol, held its first function on July 13. Over 200 WMAN members attended a picnic in Monastery Meadow to honor Mr. George Schermer and to celebrate our organization's fifth anniversary.

According to Mrs. Barol, our members can next meet and socialize sometime in November at a Barn Dance and Hootenany. The details on this will be available soon.

Editor: Jane Tarin

WEST MOUNT AIRY HOUSE TOUR

Sunday, October 20, 1963
1 to 5 P.M.

Enjoy "open house" at interesting homes in this exciting area between Germantown and Chestnut Hill ... a neighborhood of truly suburban living within minutes of downtown Philadelphia.

See what has inspired others to move to this charming and unique section ... see a remodeled barn ... how they have modernized old houses ... and how they have built modern homes in an old-world setting.

A 334 W. Allens Lane. Miss Grace Slocum. Originally a 3-room old weaver's cottage, considerably expanded for gracious modern living, with a lovely garden.

B 502 W. Allens Lane. Mr. and Mrs. Harry Galfand. A large rambling home designed in 1913 by Robert Rodes McGoodwin, set on three acres of wooded lawn and fruit orchards.

Dave + Joan

C 7321 Elbow Lane. Mr. and Mrs. David Wallace. In picturesque French Village, a large house of Norman architecture interestingly decorated with a combination of old and new.

D 707 Allens Lane. Mr. and Mrs. Jean ? Joseph. Large old barn excitingly redesigned and remodeled by the owners to express their unique interests and activities.

E 819 Carpenter Lane. Mr. and Mrs. Walter Kirschner. Turn-of-the century house completely transformed inside structurally by its owners and decorated with an unusual flair for color and contemporary design.

F ~~6798~~ 6709 Wissahockon Avenue. Mr. and Mrs. Oscar Bregman. Surprising combination of spacious contemporary architecture with traditional furnishings and lovely antiques.

G 1017 W. Hortter Street. Mr. and Mrs. Louis E. Levy. Small functional contemporary home charmingly designed for easy living for family with young children. Lou + Jane

H 119 W. Cliveden Street. Rev. and Mrs. Walter C. Wynn. Small carriage house and stable remodeled with African wood panelling and objets d'art; repeated from '61 tour by popular request.

* * * * * *

A complimentary tea and home-made breads will be served at the Galfand residence.

Please protect our lawns and floors by not wearing spike heels.

Tickets available at individual homes, or call VI8-1969 or CH8-3454. Price $1.00.

20 Families Move in

Suburbs Opening for Negroes

By Robert E. Baker
Staff Reporter

The door that has barred Negroes from the Washington suburbs has opened slightly in Montgomery County.

Some 20 Negro families have moved into formerly all-white suburbs of the County in that many months. Twelve of the families were helped by Surburban Maryland Fair Housing, Inc.

Some of the Negro move-ins caused a flurry of shock and resentment among neighbors; others went off without a ripple. But as far as the housing group knows, there has been no panic selling among white neighbors.

The results have encouraged the housing group, a volunteer organization formed in November, 1962, to assist in the orderly transition from all-white t oopen occupancy suburbs.

Fair Housing Inc. is one of a growing number of grass roots organizations now working on the problem throughout the Nation, spurred on by President Kennedy's executive housing order.

David L. Lawrence, chairman of the President's Committee of Equal Opportunity in Housing, inaugurated a new program of cooperating with such orga izations, by speaking to a pu'lic meetin sponsored by Fair Housing last night.

The drive for open occupancy in housing is considered one of the more emotional aspects of the civil rights movement. A Louis Harris poll published by The Washington Post on Thursday showed that 51 per cent of white Americans object to the prospect of a Negro family living next door.

In his speech, Lawrence called on the suburbs to lead the way to full citizenship rights for all Americans.

Part of Larger Issue

He said most suburban households have thought of the possibility and the inevitability of having a Negro as a neighbor. But the racial problem, he said, is only part of the ultimate issue and challenge posed by economic deprivation and dim hopes of millions of Americans.

"Too long has the citizen of suburbia pondered the issue and the challenge, discussed them bravely among friends, stared into the night while measuring them against the limits of his conscience," said Lawrence. "Too long has the call for action been muted in a downtown slum, never carrying over the city line.

"Now the time has come to move—to rally and be rallied. The suburban resident—confident, resourceful, independent, the hard core of American spirit—he is the one to help lead the way."

The Fair Housing group capitalizes on Montgomery County's pride of being among the Nation's top communities in education and income.

"Ideal Circumstances"

"If nondiscrimination in housing cannot be accomplished here in ideal circumstances, then where can it be accomplished?" asks the Rev. J. Wiley Prugh, pastor of St. Andrews United Presbyterian Church in Rockville, who is president of Fair Housing Inc.

The dozen Negro families who have moved individually into white communities with the help of Fair Housing Inc. involve eight house sales, three house rentals and one apartment rental. The Negro residents include professors, educators, a physician, a researcher, a dressmaker and Government employes. They have moved into various subdivisions that sprawl around Takoma Park, Silver Spring, Rockville and Bethesda.

Sale prices have ranged between $14,500 to $31,000.

One of Fair Housing's major tasks is to thwart rumors, panic and myths that are quick to spread among whites when a Negro moves into the neighborhood.

Case Cited

When a Negro computer analyst bought a $21,000 house in one Montgomery suburb and moved in, rumors went wild in the community. Whites said the NAACP had bought new furniture for the Negro family. They said the Negro had paid $3000 to $10,000 more than the FHA appraisal.

A policeman down the block planned to turn his house over to resentful whites for protest meetings.

Fair Housing Inc. went to work. Mr. Prugh prepared a fact sheet on the Negro family, showing that the house was bought at the FHA appraisal price. The leaflet was distributed among the white neighbors by the local government.

Top officials called in the policeman and expressed their displeasure at his role. No protest meetings were held at his house. The flurry subsided.

Opposite Situation

In another case, a neighborhood party was held for the prospective Negro family. When the family finally moved in, it was so besieged with gifts of food from white neighbors that the housewife didn't have to cook for several days.

When the owner of an 18-unit duplex apartment decided on an open occupancy policy, the resident manager went to the white tenants to implore them not to move, only to find out they had no intention of moving. Five tenants went to the trouble of sending notes of support and congratulations to the owner, and a Negro family moved into a $155-a-month apartment without trouble.

In one subdivision, two houses in the same neighborhood went up for sale at the same time. A Negro family moved into one. The real estate agency handling the other house told the owner he would have to take a $2000 loss on his home.

Got His Price

The owner said he couldn't afford to do that and insisted on the original sales price. He got his price from a white family that later sold the house to another white family for $2000 more than they paid for it.

In another area, a white woman still adamantly resents the Negro family which moved next to her some time ago. But the Negroes have turned their home into a horticultural showplace, and the white neighbor engaged a nursery to fix her yard up to keep pace.

Fair Housing Inc., has high praise for the growing number of real estate firms that are helping to stabilize newly desegregated communities by refusing to handle panic sales by whites and by refusing to sell too many homes to Negroes in one area.

More and more, said Mr. Prugh, community leaders and local officials are taking the responsibility to see that desegregated housing occurs without incident.

30 Committees

Fair Housing Inc. now has 30 community relations committees in suburban Montgomery communities. These committees carry out educational programs on the neighborhood level.

When a homeowner places his house for sale, a committee urges him to sell it on an open occupancy basis. If he agrees, his house is listed with Fair Housing Inc. Another list is kept of prospective Negro buyers, some furnished by Negro real estate agents.

The housing group gets the buyer and seller together. So far, it has witnessed no rush by Negroes to buy suburban homes. It has concentrated in Montgomery County but plans activity in Prince Georges soon.

The Fair Housing board of 24 persons consists of bankers, teachers, clergymen, businessmen and others. All are realists. They realize that a dozen Negro move-ins is a small break-through. They are encouraged by the white acceptance so far. They hope this is significant for the future.

American Friends Service Committee 160 North 15th Street, Philadelphia, Pennsylvania 19102

F.Y.I.

THIS IS WHAT ONE BOARD OF REALTORS IN NEW JERSEY HAS DONE - - TO REDUCE PANIC - SELLING . . .

BOARD OF REALTORS OF THE ORANGES AND MAPLEWOOD
INCLUDING
LIVINGSTON, MILLBURN, SHORT HILLS AND SPRINGFIELD

EXECUTIVE OFFICES: 2101 MILLBURN AVENUE, MAPLEWOOD, N. J.
TELEPHONE SOUTH ORANGE 3-5450

It has come to our attention that a member of a minority group has recently purchased a home in your neighborhood.

We would like to call your attention to the fact that experience has shown that unwarranted alarm and panic, and not the presence of a particular family, has been the cause of depreciated property values. We urge that the treatment accorded this new family be no different from that accorded any new family coming in to your neighborhood.

The purchase of a property by a member of a minority group invariably invites unscrupulous Real Estate Practitioners to attempt to profit by the use of "scare tactics" or "block busting".

Block busting is a term that has come into use in recent years -- yet its precise meaning has been difficult to understand. In order that you as a homeowner are aware of its true interpretation I would like to give you our interpretation of the New Jersey Real Estate Commission's definition.

> "A block buster is anyone who solicits the listing or sale of residential property, either in person or by advertisement, on the grounds of loss of value due to the presence, or prospective entry into the neighborhood, of persons of another race, religion or color"

The National Association of Real Estate Boards, of which the Board of Realtors of the Oranges and Maplewood is a member, abhors these tactics; tactics which substitute panic and fear, for reason. In our earnest desire to stamp out this vicious practice, which is a prime factor indepreciating values, I ask that if you have had any unusual activity or pressure to sell by a real estate broker or salesman, particularly in line with the above definition, that you write to me at once so that we may take such action as is necessary to stop this unscrupulous practice.

Sincerely,

Julian Brenner

Julian Brenner
President

IT CAN HAPPEN IN EVERY COMMUNITY IN THE STATE

. . . WHERE CIVIL RIGHTS ADVOCATES PERSIST IN FRANK AND OPEN DISCUSSION WITH LOCAL REAL ESTATE BOARDS

Newark Evening News

NEWARK, N.J., TUESDAY, OCTOBER 8, 1963 * 25

Realtors Launch Campaign Against 'Panic' Home Sales

The Board of Realtors of the Oranges and Maplewood has launched an attack against panic selling of houses when a minority group member moves into a neighborhood.

Julian Brenner, president of the board, announced yesterday the formation of a Neighborhood Relations Committee, headed by R. Herbert Connolly, to work with civic groups in "ironing out the problems that come up when a minority group family moves into a neighborhood."

One of the main purposes of the committee, Brenner said, will be an attempt to stop "block-busting" techniques, "the solicitation by unscrupulous realtors of property on the grounds of loss of value because of the entry into the neighborhood of a minority group family."

Brenner said the board " is interested in orderly integration proceeding" in the Oranges and Maplewood and in "preventing panic and alarm" from setting in and causing a drop in real estate values. He emphasized it was block busting—not the minority group family—that lowers values in an area.

To acquaint residents of the Oranges, Maplewood, Millburn, Livingston and Springfield with the techniques of block busters, Brenner said, two series of letters are being mailed by the board.

One, a general letter defining the blockbusing technique, has been mailed to 100 residents urging them to report to the board any attempts at blockbusting. The letters were sent to families in a four-block area surrounding Northview Terrace in Maplewood, in which about half the families are Negro.

The other has been mailed to residents in Stanley Road, South Orange, and in Gregory Avenue, West Orange—both areas where a Negro has recently bought a home. It urges the treatment "accorded this new family be no different from the treatment accorded any new family that moves into your neighborhood."

"It is unwarranted alarm and panic," the letter continues, "not the presence of a particular family that has been the cause of property values declining."

Brenner said the second letter would be mailed by the board every time a minority group family moved into an area. He added he had received 10 calls from persons receiving the letters. Nine of them, he said were favorable.

Newark Evening News 10/17/63

'Block-Busting' Stand Is Praised

The New Jersey Committee Against Discrimination in Housing yesterday commended the Board of Realtors of the Oranges and Maplewood for its recent action in sending letters to area residents — alerting them against possible "block-busting" tactics by unscrupulous realtors.

The committee hailed the Board of Realtors' move as a "great service not only to the real estate profession but to the community itself." The board's membership includes realtors in Livingston, Millburn, Short Hills and Springfield, besides the Oranges and Maplewood.

The N.J. Committee Against

THE PRESS RESPONDS

Maplewood-South Orange News Record 2/7/63

Realtors deserve praise

The Board of Realtors of the Oranges and Maplewood is to be commended for its attack last month on the practice of blockbusting and on neighborhood panic when minority families move in.

[illegible] letter to brokers and salesme

Newark Sunday News
October 20, 1963

Realtors and Rights

AN ENCOURAGING movement is taking hold in a number of suburban New Jersey communities. Its purpose—at once principled and practical—is to encourage the acceptance of persons as neighbors without prejudice based on color, creed or national origin.

The movement manifests itself in two ways. In some communities individual residents have publicly pledged not to let such considerations influence them either in the sale of their homes or in welcoming new neighbors.

In the Oranges, Maplewood and nearby communities, the Board of Realtors has initiated a campaign against the unconscionable practice of "block-busting."

As one remedy, the Board of Realtors in these communities encourages home owners to report any unusual pressures by salesmen or brokers intent on provoking a sale. It is a measure of sense, precaution and fair play that commends itself to adoption throughout the state and the nation.

A Real Service

West Orange Chronicle
10/24/63

The Board of Realtors of the Oranges and Maplewood has taken a concrete, practical step towards the elimination of one of the worst kinds of discrimination. In a letter sent to residents of neighborhoods where Negroes have bought homes for the first time, the Board has spoken out strongly against fear or panic on the part of homeowners. It has counseled residents against the terrors of "block-busting," that tricky gambit by which unscrupulous get-rich-quick artists bilk the frightened property owner.

"Blockbusting" is an old tactic. It uses the technique of terror on the unsuspecting to deprive him of not only the true value of his property but of his self-respect. When a Negro family moves into a neighborhood which has not had one before, these tricksters go from house to house spreading the gospel of hate in the guise of fear and what they purport to be dropping realty values. By spreading this blanket of fear, they snatch up properties at a fraction of their true value, then turn around and realize a fast buck in a resale.

Statistics have shown that racial mixing in a neighborhood does NOT reduce values. As a matter of fact, as any real estate man will tell you, Negroes usually pay more for the same house than a white family does. If a neighborhood holds fast and does not sell in panicky despair, they usually wake up to find they have new neighbors of dignity who add, rather than detract from the value of their homes.

Now the Realtors have placed out in the open a subject which has been discussed only sotto voce, up to now. In a strong letter, Julian Brenner, 1963 president of the Board of Realtors, has cautioned homeowners against being panicked. His advice will have so much more value, since he does represent those who buy and sell real estate as their profession.

Much discrimination, as any sociologist can tell you, has an economic base. In realty, the truth is never as bleak as the fantasy brought on by fear. By putting the prestige of its organization behind the dissemination of the truth, the Board of Realtors has done a service to the community.

Urban Planning Project

SUBURBAN FAIR HOUSING INC.

A licensed real estate firm dedicated to overcoming discrimination in housing.

November 1, 1963

Philadelphia, Pa.

ORIGIN

Suburban Fair Housing, Inc., a licensed real estate firm practicing non-discrimination, was organized in 1956 under the name of Friends Suburban Housing, Inc. Later the name was changed to indicate a broader base of support.

PURPOSE

Our purpose is to help to establish the principle of non-discrimination in housing. The present widespread practice of refusing to sell a house in the suburban area to a Negro family leads to grave injustice and forces Negroes to live in restricted sections of the city.

It is our conviction that Negroes and members of other minority groups should have the right to buy a house in the neighborhood of their choice. Since this is generally not possible in suburban Philadelphia, Suburban Fair Housing, Inc., was organized as an instrument to serve this purpose. We sell houses to qualified buyers regardless of race, religion or nationality.

Our purpose, we believe, is in harmony with the democratic principles of our country, and in accord with the basic teachings central to our major religious groups—Protestant, Catholic, Jewish.

ENDORSEMENTS

- American Civil Liberties Union—Greater Philadelphia Branch
- Committee on Race Relations and
- Social Order Committee of the Philadelphia Yearly Meeting of Friends
- Community Relations Committee of the American Friends Service Committee
- Office of Church and Society, United Presbyterian Church in the U.S.A.
- Urban League of Philadelphia

BASIC PRINCIPLES

Protestant

"We affirm that racial segregation both in the churches and in society is a violation of the gospel of love and human brotherhood. . . .

"Racial segregation is contradictory to the teaching of Jesus. . . .

"This General Assembly commits itself to achieve as soon as possible a non-segregated society."

—National Council of Churches, 1957

Catholic

We must act to remove obstacles that impede the rights and opportunities of our Negro brethren. We should do our part to see that voting, jobs, housing, education and public facilities are freely available to every American. We can do this in our own area of work, in our neighborhood, in our community.

—American Catholic Bishops' Joint Pastoral, Aug., 1963

Jewish

We . . . reiterate our uncompromising belief in the brotherhood of all men regardless of race and faith. . . . The area of housing discrimination still remains. . . . We . . . urge the members of our congregations to recognize the value of racially mixed neighborhoods, and to accept those of racial minorities who move into their neighborhoods on the same basis as other neighbors.

—Rabbinical Assembly's statement on open housing, May, 1963.

POLICY

Houses

Suburban Fair Housing, Inc., accepts only those listings which are available for sale without discrimination.

Buyers

Preference is given to buyers who need the opportunity most and are unable to buy a similar home through usual channels. We are also interested in finding white families who want to live in integrated suburban neighborhoods. We do not subsidize any families.

Neighborhoods

Housing opportunities are sought in suburban neighborhoods where there are one or two neighbors who would welcome a family from a minority group; or where there are, in the larger community, strategic individuals or a group sympathetic to integrated housing. We do not poll neighborhoods. The right of an individual to buy a house cannot depend on a vote of the neighbors.

Suburban Fair Housing is interested in listings in different communities throughout the suburbs, but it sells only a limited number of houses to minority group families in any one neighborhood. Otherwise, further segregation would result.

COMMUNITY RELATIONS

In order to encourage the acceptance of a minority group family in a neighborhood and to allay fears, we work in close cooperation with community relations agencies, fair housing councils and local church groups. We rely on their help for the educational work needed.

FINANCE

Suburban Fair Housing, Inc., is not in business to make money but to overcome discrimination in housing. Since the usual 6% fee for the sale of houses is insufficient at present to cover operating expenses, shares of voting stock at $10 per share, and non-voting at $50 are available to residents of Pennsylvania interested in helping to support the program. It is hoped that in time the business will become self-supporting.

A UNIQUE SERVICE

This non-discriminatory real estate firm provides an important service in the housing field not being offered at present by any other agency in the Philadelphia suburban area. It has sold houses to minority group families in more than 35 communities throughout Delaware, Montgomery, Chester, and Bucks Counties. It plans to continue in business until housing on an open basis becomes available through the usual real estate channels.

Dec. 1963 Newsletter

BALTIMORE NEIGHBORHOODS, INC.

One Charles Center, Baltimore 1, Maryland
SAratoga 7-3194
SAratoga 7-3942

NEW ADDRESS: ONE CHARLES CENTER (ZONE 1)

EDWARD L. HOLMGREN
Executive Director

THE MAYOR'S CIVIL RIGHTS ORDINANCE (#181)

In October, Mayor McKeldin proposed to the City Council a comprehensive civil rights bill. In addition to housing, it covers non-discrimination in the fields of employment, education, public accommodations, and health and welfare services. If passed intact, it would be the first broad, single civil rights law in any American city. Other cities with similar laws have achieved them piecemeal over several years.

The housing section is not all-inclusive; it is estimated that it covers some 45% of all dwelling units in the City. The largest exemptions are owner-occupied single family dwellings and houses containing three or fewer units of which one is owner-occupied. All absentee-owned housing units are covered, and all structures containing more than three units whether or not owner-occupied. Discrimination based on race or religion is illegal in the rent, sale or financing of such units.

BNI Support of the Housing Provisions. After considering the merits and deficiencies of the bill, BNI's Board of Directors voted to support it but to urge its extension to include all dwelling units and cover the entire metropolitan region. The latter is of particular concern to some BNI members who feel that anti-discrimination housing legislation via a City ordinance might defeat its own purpose by accelerating the flight of whites to the counties.

The Board therefore urged the City Council to pass the fair housing section of the ordinance and to petition the General Assembly to extend this coverage over the entire Baltimore region. Both Board and staff members of Baltimore Neighborhoods testified before the Council's Judiciary Committee on its behalf. The Executive Director presented evidence to show that flight was not accelerated from other cities which unilaterally adopted such legislation, and recommended the legislation as a way by which stabilization could be achieved in presently integrated neighborhoods while housing opportunities for Negroes would be extended throughout the city.

Support of the Ordinance from BNI Members. The entire bill needs the support of the voters NOW if it is to be passed. A final vote in the City Council will be taken before the Christmas holiday. All Newsletter readers should write, wire, phone or visit their Councilmen immediately urging them to vote for Ordinance #181.

FAIR HOUSING PLEDGE

BNI is undertaking a campaign to obtain pledges from suburban residents to support the principle of fair housing practices. Civic organizations will be asked to cooperate in securing signatures. We are enclosing a pledge card with this Newsletter for you to sign and return. Will you obtain pledges from friends and neighbors? We will send you more cards upon request.

QUESTIONNAIRE ON BROKERS' POLICIES

BNI, the Baltimore County League for Human Rights and the Real Estate Board of Greater Baltimore are cooperating in a survey of member firms of the Real Estate Board. Its purpose is to discover the policies and practices of these firms with regard to sale or rent of homes in white neighborhoods to Negro homeseekers. Nearly 600 questionnaires were sent to member firms in mid-November. The results will be tabulated and analyzed by BNI and the League for Human Rights.

DIRECTOR'S SPEAKING ENGAGEMENTS

The Executive Director has recently spoken to the following groups about the problems of changing neighborhoods:

1. The Baltimore County Human Relations Commission. The Commissioners requested information on the effects of racial change in the County.
2. The Scotts Hill Improvement Assn. at the October meeting of which Mr. Holmgren was one of a panel of speakers considering all of the implications of a free housing market.
3. The Education Committee of the League of Women Voters, regarding the relationship between racial changes in housing and the public school integration.
4. A study group of residents of the Edmondson Village area at St. Bartholomew's Episcopal Church, about new changes in their neighborhoods.
5. The Social Action Committee of the Towson Unitarian Church, as a part of its series on "The Shape of Conscience".
6. The Christian Family Movement of the Cathedral of Mary Our Queen, about the general problem of integrated neighborhoods.
7. The Student Planning Association of the University of Pennsylvania on the same subject.
8. The Triad Guild, a women's study group, also on general problems of integrated housing.
9. The Institute of Jewish Studies for Adults, as a part of an education series on contemporary social problems.
10. University of Maryland School of Social Work, on integration and social work.
11. The City Council Hearings (discussed above).

DESEGREGATION ~~IN~~ COMMUNITY DESIGN

A lecture by George Schermer, intergroup relations consultant, and formerly executive director of the Philadelphia Human Relations Commission; cosponsored by Neighbors, Inc., and the Washington Center for Metropolitan Studies
Washington, D. C., January 22, 1964.

I wrote an article a few years ago that was of the same title that I am using tonight, "Desegregation in Community Design." Margery Ware called me several weeks ago and asked me if I would give a talk based pretty much on that article.

Actually, an article doesn't make a good talk, and since then there was an arrangement made where my talk would be taped and then perhaps published. Well, I've seen some of the stuff that I've said in a speech, taped and run off on a typewriter. The syntax is worse than Eisenhower's and I won't permit it, but I will permit letting the taped copy come to me and taking certain liberties with the language and trying to read the substance as it was before. I mention this because there is a threat to have my talk published at a later date, and if you should see it and you should say, "Well, that isn't what he said at all," I am forewarning you.

There are a few copies of the article here, not by any means enough to go around, but a couple for the organization and if any of you are especially interested, I suppose whoever gets up here first can get them.

My talk tonight is based on a premise. If you agree with the premise I think you will go with me through the rest of my talk. If you disagree with it, everything that I say after that has no meaning, no value. Half-way through the talk I think you will understand why I make this point. It is based on the premise that massive racial concentration and segregation is bad. It is bad for the people who are segregated, and it is bad for our society, and that wholesome, racially inclusive, reasonably balanced patterns in neighborhoods, schools, cultural and religious institutions are good.

Practically all of the forces in the real estate market and in the whole of our society are working to extend the central Negro ghetto. The same set of forces operates to cause child-rearing white families, especially the economic middle-class and the outwardly mobile, to move to or remain in the suburbs. The main function of urban renewal to date has been to replace inner-city slum areas, Negro, white or mixed, with upper-middle-income and luxury housing. Technically, those developments are racially unrestricted. But they are priced beyond the reach of all but a few Negro families. Few child-rearing families, especially a few child-rearing white families, are attracted to those inner-city

urban renewal developments. I can imagine that there will be persons who will say, "Well, you are right, that if the forces in the real estate market were such as to extend the central city needs to the Negro ghetto and to cause child-rearing white families to go to the suburbs," but that's changing now. There is a reversal under way, some people say. I think that if we look at the data we will see that the reversal to date is so nominal, that the pace at which Negro families are moving to the suburbs is so nominal, that for all intents and purposes the same forces that have been operating for years continue to operate, to extend the Negro ghetto in the central city and to cause more and more of the child-rearing white families to bring their children up in the suburbs.

The "tipping point" hypothesis that we have heard a great deal about in recent years in my opinion has much less validity than many people have assumed. It has never been shown to operate automatically, exclusive of certain factors and conditions that tend to accelerate and force racial change. What I am saying is that the theory that "X" number of Negro families automatically creates a ghetto, is not a valid proposition -- that there are several factors which contribute to extending the ghetto and there are other

factors which can operate to prevent an area which is strongly Negro from becoming a ghetto. Some of the factors that tend to extend the ghetto, these are ghetto-producing factors, are, first, the area in question is in the pathway of the expanding ghetto and housing units are priced within the reach of a large Negro market. Two, the area is being abandoned by whites for reasons other than, or in addition to, race. Three, the area is being purposefully merchandised to Negroes by real estate operators. And, four, much of the rest of the housing market is closed to Negroes, thus limiting their choice to a relatively few neighborhoods.

I emphasize this here, because there is a kind of fatalistic assumption abroad that once Negroes have moved into a neighborhood, and once their numbers increase to a certain ratio, then, ipso facto, automatically, a force sets in (which is called the "tipping point"), which then causes that neighborhood to become all-Negro. This I am challenging. Now, Mr. Groton, who first used the term "tipping point," to my knowledge, might argue and say, "Well, the very factors that you have mentioned are the ones that built us up to the 'tipping point'." I may worry about this "tipping point" theory because there is something very fatalistic about it; but there is nothing you can do about it, you see, and I want

to challenge that whole proposition. I think that there is nothing automatic about the active merchandising of particular neighborhoods to Negroes and the non-merchandising of other neighborhoods to Negroes. This is something that real estate operators do purposefully, and since they do it purposefully, something presumably can be done about it, if we learn the devices for regulating real estate prices.

For, under present conditions, and in the absence of a broad and comprehensive strategy for desegregation, the areas that are in the pathway of the expanding ghetto will almost inevitably succumb to the ghetto unless certain stabilizing factors are operative. Such factors may be any one or a combination of the following:

One, the area may have a cohesive ethnic concentration of its own, with a social structure and institutions that have so much meaning in the lives of the people that the young people resettle in the area. The people in such an area are likely not to be upwardly mobile and the area is likely to be very resistant and hostile to outsiders, especially those who are visible. By way of illustration, perhaps all of us can in our experience point to neighborhoods that are predominantly Italian or predominantly Polish, with their own institutions. The young people are not necessarily upwardly mobile. By that

I mean they are not seeking to escape the old neighborhood and move to the suburbs for status reasons. They gain their status within the framework of those institutions rather than escaping from the area. This is not true of all ethnic groups. In some ethnic groups status is achieved by escape and establishing yourself in another upper-higher-class neighborhood somewhere else. Many cities have these islands, or these pockets of ethnic groups that are highly resentful of change. Usually, though, it isn't a case of their integrating and remaining, but it is a case of the group being so cohesive that it manages to exclude outsiders.

A second factor which may prevent a neighborhood from succumbing to the expanding ghetto is that the area constitutes a neighborhood of homes, institutions and people that collectively give to it a character that makes it highly desirable and competitive with the housing in suburban areas. I am assuming that that is one of the qualities that you have here.

Three, the housing is priced at a level that limits the Negro market, doesn't exclude the Negro market entirely, but limits it because the price of the house is just high enough so that a large part of the Negro market can't bid for the homes.

And, four, the neighborhood is blessed with an organizational structure and leadership that welds the property owners and residents together and can successfully combat harmful and deteriorating real estate prices, conversions, and the like.

These are the four factors which lead to stabilization. They are not necessarily all present. Usually, in fact, the latter three are not present if the first one is. But, you will have combinations of these four factors if a neighborhood is resisting a change in the pathway, a rapid change, in the pathway of the expanding ghetto.

Five, within the framework of the national scene or even that of a single metropolitan area, the successful integration of or stability of a single or several neighborhoods has relatively little significance except for the people who are residents and participants in the program, unless the success or failure of those neighborhoods has some bearing upon the total scene. What I am saying is that I do not see a great deal of intrinsic value in having an occasional island that is stable and integrated unless we can see that that part is related to a broader concept. Maybe it seems awfully important to people who live in the community, and I am not questioning the importance of that at

all. But from where I stand, as an observer of a larger metropolitan concern, I want to know whether these neighborhood stabilization efforts are part of a broader strategy.

The simple policy of non-discrimination and equal opportunity, as implied by the President's Order and by the Fair Housing laws now in force in a number of states, will not check the extension of the racial ghetto. These are essential preliminary steps, but they will not by themselves, or through merchandising techniques, or house-consumer behavior -- I am not questioning the importance of the President's Order or of the Fair Housing law -- I think it is naive to assume that the mere prohibition of overt refusal to sell or to lend or to rent will do the job. People buy houses largely in response to merchandising pressure. You buy cars, you buy clothes, and so forth, if you have got a salesman who wants to sell it to you, and if you have got competing salesmen who want to sell you the product. If the President's Order or the Fair Housing law does no more than to say you may not refuse to sell to a buyer, instead of saying, somehow, you must try to sell the good customer regardless of color, you must try to merchandise your product, then I am afraid there is not much going to happen unless we have a few other factors built into the situation, which I am going to get to next.

A comprehensive strategy designed to affirmatively encourage and implement racial desegregation is required if the ghetto pattern is ever to be altered. Such a comprehensive strategy would include several elements, some of which would be:

First, a strong conviction within the Negro community that residential segregation is harmful, coupled with a determination to plan realistically and to accept the risk and responsibility of getting out of the ghetto pattern. I have heard a great many Negro people say, "Well, all I want is the right to get a decent house. I don't really care whether I live in a neighborhood with white people or not." I don't blame them particularly. I don't think that there is anything so hot about living next to white people. I live next to some and I don't care about them, either. But, it isn't a question of whether people feel that they have just got to live with white people or that somehow there is something wrong with living with other Negroes and therefore they must escape. There is this whole question of whether there is a widespread conviction within the Negro community that living within the segregated pattern and permitting it to survive and to grow is good or not. Whether it is good for children to go to the one-group school and with all the

discussion and fussing and so forth that is going on these days, I doubt very much that we are going to integrate schools with busses. I think we are going to integrate with the moving van. But not with busses.

The second element for a comprehensive strategy for desegregation is widespread understanding among white people, particularly in the suburbs, that the segregation pattern is harmful, and a determination on their part to plan for and implement the development of racially-inclusive neighborhoods. I don't think the Negro people can do it alone, and I don't think the white people can do it alone, or perhaps instead of separating the Negro and white populations I might have put them into a single paragraph and said there must be this mutual conviction. But I think there is some special rule for each group -- I don't know that it is entirely something that you just glue together.

The third element for comprehensive stragegy are laws prohibiting discrimination in sale, rental, and financing of homes, and hopefully, if we can find out how to do this, and I am not sure we can, requiring certain affirmative measures in the merchandising of homes. I think some things can be required. Advertising, for instance: we have got to make it very clear that the homes are for sale to

everybody. This is one of the requirements, and second, perhaps, we can require that there be put into the laws provisions which enable the administering agency, the commission that administers the program, to require certain kinds of behavior in sales personnel.

The next element, incentives to developers and builders, to plan for, build and market homes for a broad spectrum of market in terms of prices, space requirements and racial inclusiveness. In other words, whether we can write into our federal programs for FHA and urban renewal and the various kinds of housing programs which use incentives to builders to make it especially desirable to build, that is to provide financial incentive, to those builders and developers who plan for a fairly broad segment of the market, price-wise, housing space, in terms of space needs, and design and in terms of rate.

A fifth element for such comprehensive strategy is positive commitment on the part of government, and I am talking now about local government, city and county, city planners, urban renewal authorities and the like, to use city planning, school planning, and school administration, urban renewal, housing code enforcement and the like, as instruments for implementing a process of desegregation.

A sixth element, exactly what you are doing here, a sound program for neighborhood stabilization.

And a seventh element -- if you can figure out a way to get this done, to inspire the real estate operators, brokers, to actively merchandise their houses to Negroes, throughout the metropolitan area, and to equally actively merchandise houses to whites in areas that are changing or are predominantly Negro.

My eighth point, neighborhood stabilization, is one element of the comprehensive strategy.

Remember, I had seven elements there. All of the elements are necessary. If any one is not developed the whole program will founder or be seriously hampered. Within the framework of a total strategy for desegregation, neighborhood stabilization is not only desirable, but absolutely essential. Unless whites can be attracted to racially-inclusive areas those areas must inevitably become Negro.

Until the comprehensive strategy has been implemented to such a degree that Negroes have become established in a great many areas and have a wide choice of housing, very active merchandising of houses in those neighborhoods peripheral to the ghetto, or subject to heavy market pressures from the Negroes, will be required. What I have said is that

it makes a lot of sense to have neighborhood stabilization programs within the framework of a broad strategy to desegregate our cities and to replace it with a broad redistribution of the population.

Quarrels: How important is neighborhood stabilization in the absence of a comprehensive strategy? Are we starting at the wrong end, stabilizing neighborhoods before we open up the suburbs? Under the conditions of restricted sales practiced in the suburbs, does neighborhood stabilization thus result in restricting the availability of housing to Negroes, without providing opportunities elsewhere?

My answer is, and this is loaded with my own value judgment, "Yes, it is very important," that in the arena of public policy, no comprehensive plan or strategy is ever first formulated, packaged, presented to the community, adopted and then put into force. It is always something that grows by fits and starts and the little crusading groups get started here and there and gradually the concepts spread and eventually over a period of time you get a public policy.

We have to build from what we have got. If a little bit of community organization is practiced -- and we can't afford to lose any of it, anywhere -- and we have got a little group working somewhere civilizing a neighborhood, we have got something to build on.

So, I would say that wherever people are working to do something about the process of altering our pattern of the expanding ghetto, that is a precious and important factor. However, I will say several times again before I am through, and I am to my last-named point now, that it ought to be done in such a way that it is tied in with at least the concept of the total strategy.

Having carried you through a logical process of arriving at the importance of what you are doing here, in this neighborhood, how can you do it better? Well, I should bring coals to Newcastle. I think Neighbors, Incorporated, is the organization that is quoted all over the country and pointed to as the example of "how you do it." So I don't know what I can tell you that you don't know already. I am wasting my time. You are wasting my time. Your time. I can go on and on. Because what we should do is have each of you make a speech somewhere else.

Well, doggone it, you brought me here, so I am going to tell you what are the elements for growth and success in the neighborhood stabilization program, even though you are doing it already.

First of all, foremost, I think, you have to have a community that gives you some hope of success. I indicated

what those factors were earlier. I must admit that there are areas where I have to say to people that, no matter what you try to do, you can't succeed. I don't know just what your price range would be in Washington, but if I were speaking in Philadelphia, if we had a row-house neighborhood, and Philadelphia is all row houses, priced anywhere from the range of $7,000.00 to $11,000.00, and it was not far from an existing ghetto, and there were sales moving in that direction, I would almost have to say to the group, "Don't try. It is going to go so fast you can't hold it." But we have neighborhoods in Philadelphia, and the most successful one and the only real competitor that Neighbors, Incorporated, has, is the Westmont area in Philadelphia (competitor in the sense of an equally successful program). I think, it's a neighborhood not different from what you have here. Many, many similarities. Houses that are priced high enough so that it doesn't get the full pressure; you see, the Negro housing market in Philadelphia thins out awfully fast above $13,000.00 and it is hard to find very many houses in the neighborhood that I am speaking of, at $13,000.00 or less, although there are some houses at that price. So that you don't get the full impact of the neighborhood market for one thing.

Secondly, the neighborhood has many attributes; it is attractive, well-located, good transportation, and local institutions which have value in the eyes of the community. These are the things which make it likely that you will get white customers while you are getting Negro customers and this is absolutely essential. You can't hold a community, if all you are trying to do is to keep white people from running away. Twenty per cent of the people move somewhere in the course of a year. We are becoming more and more a mobile society so that we have mobility in almost all neighborhoods. So that, merely to say to people that it is nice to have an integrated neighborhood, and don't run away, and stay here and we will have a nice integrated neighborhood, is not enough. You have to, somehow, attract white buyers into the neighborhood while Negroes are buying into the neighborhood. And you have to hope that the ratios will be such that over the long pull, you'll maintain something of a balance. I could give you a paragraph or two on what I think this word "balance" means, but perhaps we can go into that in our discussion later.

Now, next to these underlying factors which you have to have at the present time, and incidentally, these are factors which you have to have when you are within the

pathway of the expanding ghetto, many, many suburban communities where, after the first Negro family has moved in it is hard to find another Negro family. You do not have to worry about these, about this stabilization problem. Quite the contrary, you have to keep working at the opening up of the community.

Now, after you have got these factors, you have to have organization. The organization has to have a fairly broad base of membership and support. It has to have intelligent leadership. I told you I was going to tell you everything you have already. The organization, with presumably its structure of committees and so forth, needs to do a number of things. I think the most important is this business of developing neighborhood nests. You know there are an awful lot of what we call communities in our neighborhoods in our cities that really are not anything but areas; I mean they are geographical areas filled with houses. And people live in the houses, but there is no neighborhood there. Oftentimes people discover a neighborhood for the first time when the first Negro family moves in. And I always thought that was a very wholesome thing.

Well, you have to build a sense of "neighborhoodness," so that people have a feeling that living here carries

with it a sense a belonging, "at-homeness." Now, there are many ways that you develop this. Oftentimes it has existed before you were confronted with the problem, but in many areas it wasn't there and it had to be built. You do it by generating internal communication. You have to have people talking to each other much more than they have been accustomed to. You have to fill a kind of vacuum that had existed there before by, well, you can use newsletters, you hold meetings, you get publicity in the local community newspaper, you get the publicity in the metropolitan press when you can, and you create within the public mind the image of a community working in unison, working together, of a lot of people making common problems.

The next very important thing, and maybe in many respects the most important, is to strengthen your public schools so that you have schools that people want to send their children to. They must be high-quality schools and they must be schools that provide for every child in the school the kind of education that each individual needs. Now, in addition to strengthening the schools, it is important to strengthen all of the institutions, the churches, whatever other community organizations or institutions you have. I know of a few neighborhoods that have gone in for an art

center, and sometimes they have been great successes. In our Westmont neighborhood area in Philadelphia we built our neighborhood organization, we built separately, but as a part of the same effort, an art center which is really quite a going institution. It has art shows; it has generated a tremendous amount of local talent; we have classes in painting and some outstanding shows annually; painting and sculpture and so forth. We have a dramatics group, a dancing group, and the like. I mention that as against some of the kinds of "busy" activities that some community groups go into that have value in certain social classes and I think a lot of other people don't like; just pure neighborhood "busyness." You know, too many parties and picnics and block parties. I get sick and tired of block parties. I don't like them. But an art center activity is something else. It gives people a sense of creativity and wholesome activity.

Of course watchdogging is only in the conversions and real estate practices. If you have got spots, and my impression is (I don't know your neighborhood overly-well, I talked a little bit with Margery about this) that you do not have what I call "soft pockets" in your area. In the neighborhood that I am talking about we have many. We have got some big old mansions in there that nobody wants. And I

live next-door to one. And my special assignment in my community is to watch that place so that vandals don't get in there, and boy, have I gotten to be a nosey neighbor! Well, we are going to figure out a way to raise some capital and buy that house and convert it. Sometimes some of these houses need conversion to make them economically viable operations.

We have a few little incipient slums in our neighborhood, a half a block, or a block, where we need to do something and we need to encourage some small businessmen. In fact we have a few blocks where we have a number of little stores and so forth standing vacant. Something has to be done with those. And we have to see whether we can find a little tiny urban renewal program that we don't call urban renewal, because the moment we call it "urban renewal" everybody thinks it is us. And now you have a slum!

Finally, I think it is very important once more to cast this effort into the framework of a larger community. I think there is great danger of causing people to think that somehow you are just being a little snooty or exclusive and so forth by just wanting this lovely little island of integration here. I think that unless it is tied into this concept of the broader strategy, that idea loses its

meaning, both to you and to the larger community. Well, I think this should be one important demonstration program of a larger metropolitan program geared to the concept that segregation is very bad, and to a process of desegregation, of creating a new kind of cosmopolitan community pattern, which is open and inclusive, as big as the greater Washington area is.

January 1964

N E W S L E T T E R

With the holidays behind us, West Mt. Airy Neighbors is beginning to plan for a better-than-ever year. We hope to do our part in making 1964 a satisfying and worthwhile year for all of us in West Mt. Airy.

Social Activities Committee:

Mrs. Martin S. Barol, chairman, announces that the postponed Barn Dance, planned for last November, will be scheduled for this Spring. It will be an important part of our Second Foreign Students' Weekend.

Mrs. Donald Scott, 7205 Charlton Street, has accepted the chairmanship of this weekend affair, and you can expect a repeat of last year's successful event. Watch for further information in later editions of the newsletter.

Annual General Membership Meeting:

The enclosed flyer and ballot will fill you in on the why, wherefore and whos of the annual meeting. To make it have meaning, we need to see YOU there. Elections are held for the coming year, and the presentation of the WMAN Community Award is made. Please feel free to invite any friends and neighbors in the area who are not yet members of WMAN.

This newsletter will not contain the reports of the standing committees, because the chairman of each committee will make his annual report at the meeting. Won't you come and see for yourself how much work WMAN has been doing for you and our neighborhood during the past year?

The social hour afterward will give us one more opportunity to say hello to each other. See you at the meeting!

From the Desk of the Executive Secretary:

Fortune and misfortune seem to go hand in hand; Jane Tarin, our very capable Newsletter editor, has found it necessary to resign, but a new member, Miss Lawrie Hamilton, has consented to take on the writing of future newsletters. Miss Hamilton is a free lance writer and editor, and WMAN is once again fortunate in having a talented newcomer to our area take a vital interest in our affairs. Our thanks to Jane for her outstanding and thorough job as editor.

? ? ? ? HOW ARE THINGS IN . . . WEST MT. AIRY ? ? ?

- *FIRST-HAND REPORTS* on the latest developments in ZONING, SCHOOLS, HOUSING, COMMUNITY PROJECTS, etc., will be given at the—

Fifth Anniversary

⇨ GENERAL MEMBERSHIP MEETING ⇦

of WEST MT. AIRY NEIGHBORS, INC.

MONDAY, FEBRUARY 3rd, 1964 -- 8:00 P. M.

Epiphany Church of Germantown

LINCOLN DRIVE AND CARPENTER LANE

⬇

The Public Is Invited

In addition to year-end reports from Committee Chairmen, the program includes:

- **Presentation of WMAN's Annual Community Award** (recipient's identity secret until presentation).

To be presented jointly by:

HON. ABRAHAM L. FREEDMAN

Judge of the U. S. District Court for the Eastern District of Pennsylvania

who will address the meeting, and

Former City Councilman, **DONALD C. RUBEL,** who will read the citation.

- **Report of Nominating Committee** by JOSEPH P. McLAUGHLIN.

(Nominations also may be made from the floor)

- **Election of Officers,** Directors and Members of Advisory Committee, and

MOST IMPORTANT, *Open Discussion on Matters of Community Interest!*

ANYONE MAY PARTICIPATE

* INCUMBENT

-A

DESEGREGATION IN COMMUNITY DESIGN
Excerpt

Speech by George Schermer, Intergroup Relations Consultant and formerly Executive Director, Philadelphia Human Relations Commission, to the Board of Neighbors, Inc. - February, 1964

My talk tonight is based on a premise. If you agree with the premise I think you will go with me through the rest of my talk... The premise is that massive racial concentration and segregation is bad. It is bad for the people who are segregated, and it is bad for our society, and that wholesome, racially inclusive, reasonably balanced patterns in neighborhoods, schools, cultural and religious institutions is good.

Practically all of the forces in the real estate market in the whole of our society are working to extend the central Negro ghetto. (For example) the same set of forces operates to cause child-rearing white families, especially the economic middle-class and the outwardly mobile, to move to, or remain in, the suburbs...

I can imagine that there will be persons who will say..."but that's changing now. There is a reversal under way."

I think if we look at the data we will see that the reversal to date is so nominal that the pace at which Negro families are moving to the suburbs is so nominal, that for all intents and purposes the same forces that have been operating for years continue to operate, to extend the Negro ghetto in the central city and to cause more and more of the child-rearing white families to bring their children up in the suburbs.

(Mr. Schermer discounts the "tipping point" hypothesis on the ground that it does not operate automatically. However, there are several factors which contribute to extending the ghetto and there are other factors which can operate to prevent an area which is strongly Negro from becoming a ghetto.

Some of the factors which tend to extend the ghetto are:

1. the area in question is in the pathway of the expanding ghetto and housing units are priced within the reach of a large Negro market.

2. the area is being abandoned by white for reasons other than, or in addition to race.

3. the area is being purposefully merchandised to Negroes by real estate operators, and

4. much of the rest of the housing market is closed to Negroes, thus limiting their choice to a relatively few neighborhoods...

(Mr. Schermer worries about the "tipping point" theory because of its fatalistic implications that there is nothing you can do about racial change once it begins.) I want to challenge that whole proposition. I think there is nothing automatic about the active merchandising of particular neighborhoods to Negroes and non-merchandising of

(OVER)

other neighborhoods to whites. This is something that real estate operators do purposefully, and since they do it purposefully, something presumably can be done about it, if we learn the devices for regulating real estate practices.

For under present conditions, and in the absence of a broad and comprehensive strategy for desegregation, the areas that are in the pathway of the expanding ghetto will almost inevitably succumb to the ghetto unless certain stabilizing factors are operative. Such factors may be any one or a combination of the following:

1. the area may have a cohesive ethnic concentration of its own, with a social structure and institutions that have so much meaning in the lives of the people that the young people resettle in the area... (e.g. Italian, or Polish enclaves).

2. the area constitutes a neighborhood of homes, institutions and people which collectively give it a character that makes it highly desirable and competitive with the housing in suburban areas. I am assuming that this is one of the qualities that you have here.

3. the housing is priced at a level that limits the Negro market, doesn't exclude the Negro market entirely, but limits it because the price of the house is just high enough so that a large part of the Negro market can't bid for the homes.

4. the neighborhood is blessed with an organizational structure and leadership that welds the property owners and residents together and can successfully combat harmful and deteriorating real estate practices, conversions and the like.

(Mr. Schermer says the latter three are usually lacking if the first factor is present, but if a neighborhood in the pathway of an expanding ghetto is resisting change there will be a combination of factors present.)

The simple policy of non-discrimination and equal opportunity such as embodied by the Executive Order and state fair housing laws are essential preliminary steps, but they will not by themselves check extension of the racial ghetto.

A comprehensive strategy designed to affirmatively encourage and implement racial desegregation is required if the ghetto patterns is ever to be altered. Such a comprehensive strategy would include several elements, some of which would be:

1. a strong conviction within the Negro community that residential segregation is harmful, coupled with a determination to plan realistically and accept the risk and responsibility of getting out of the ghetto pattern.

> I have heard a great many Negro people say, "Well, all I want is the right to get a decent house. I don't really care whether I live in a neighborhood with white people or not." I don't blame them particularly. I don't think that there is anything so hot about living next to white people. I live next to some and I don't care about them, either.

> But, it isn't a question of whether people feel that they have just got to live with white people or that somehow there is something wrong with living with other Negroes and therefore they must escape. There is this whole question of whether there is a widespread conviction within the Negro community that living within the segregated pattern and permitting it to survive and to grow is good or not. Whether it is good for children to go to the one-group school and with all the discussion and fussing and so forth that is going on these days, I doubt very much that we are going to integrate schools with busses. I think we are going to integrate with the moving van. But not with busses.

2. There must be a widespread understanding among white people, particularly in the suburbs, that the segregation pattern is harmful. There must be a determination on their part to plan for and implement the development of racially-inclusive neighborhoods...

3. there must be laws prohibiting discrimination in sale, rental, and financing of homes, and hopefully... the requirement that certain affirmative measures in the merchandising of homes be followed, e.g. we have got to make it very clear (in advertisements) that homes are for sale to everybody. Perhaps we can secure legal provisions that the agency administering such laws can require certain kinds of behavior in sales personnel.

4. There must be incentives to developers and builders to plan for, build and market homes for a broad spectrum of the market in terms of price, space requirements and racial inclusiveness...

5. There must be a positive commitment on the part of local government to implement the process of desegregation. (City and county governments and their agencies must use city planning, school planning and administration, urban renewal, housing and zoning code enforcement and the like as their instruments.)

6. Real estate brokers must be inspired (if you can figure out how to do it) to actively merchandise their houses to Negroes and to equally actively merchandise houses to whites in areas that are changing or are predominantly Negro.

7. There must be a sound program for neighborhood stabilization.

All elements are necessary. If any one is not developed the whole program will founder or be seriously hampered.

Within the framework of a total strategy for desegregation, neighborhood stabilization is not only desirable, but absolutely essential. Unless whites can be attracted to racially-inclusive areas those areas must inevitably become Negro.

Until the comprehensive strategy has been implemented to such a degree that Negroes have become established in a great many areas and have a wide choice of housing, very active merchandising of houses will be required in those neighborhoods peripheral to the ghetto or subject to heavy market pressures from the Negroes.

(OVER)

What I have said is that it makes a lot of sense to have neighborhood stabilization programs within the framework of a broad strategy to desegregate our cities and to replace segregation with a broad redistribution of the population.

Quarrels: How important is neighborhood stabilization in the absence of a comprehensive strategy? Are we starting at the wrong end, stabilizing neighborhoods before we open up the suburbs? Under the conditions of restricted sales practiced in the suburbs, does neighborhood stabilization thus result in restricting the availability of housing to Negroes, without providing opportunities elsewhere?

My answer is, and this is loaded with my own value judgment, "Yes, it is very important." In the arena of public policy, no comprehensive plan or strategy is ever first formulated, packaged, presented to the community, adopted and then put into force.

We have to build from what we have got. If a little bit of community organization is practiced, and we have got a little group working somewhere civilizing a neighborhood, we have got something to build on.

So, I would say that wherever people are working to do something about the process of altering our pattern of the expanding ghetto, that is a precious and important factor. However, it ought to be done in such a way that it is tied in with at least the concept of the total strategy.

Having shown the importance of what you are doing here, the question is how can you do it better? Well, I should bring coals to Newcastle. I think Neighbors, Inc. is the organization that is quoted all over the country and pointed to as the example of "how you do it." You brought me here so I am going to tell you what the elements are for growth and success in the neighborhood stabilization program even though you are doing it already.

1. You have to have a community that gives you some hope of success in terms of the price range of the housing relative to the demand. (See earlier discussion. Illustrative material here omitted.)

2. The neighborhood must have many attributes - attractiveness, good location, good transportation and local institutions which have value in the eyes of the community.

These are the things which make it likely what you will get white customers while you are getting Negro customers and this is absolutely essential. You can't hold a community, if all you are trying to do is to keep white people from running away. Twenty per cent of the people move somewhere in the course of a year.

So, that merely to say to people that it is nice to have an integrated neighborhood, and don't run away, and stay here and we will have a nice integrated neighborhood, is not enough. You have to, somehow, attract white buyers into the neighborhood while Negroes are buying into the neighborhood. And you have to hope that the

ratios will be such that over the long pull, you'll maintain something of a balance.

These are the factors you have to have when you are within the pathway of the expanding ghetto. Next you have to have an organization with a fairly broad base of membership and support and intelligent leadership. It needs to do a number of things:

The most important is this business of developing "neighborhoodness," so that people have a feeling that living here carries with it a sense of belonging, "at-homeness." If you have to develop this, it can be built in many ways, chiefly by generating internal communication. Get people talking to each other. Use newsletters, meetings, publicity in the local newspapers. Radio · T.V. Create within the public mind the image of a community working together, or a lot of people making common cause. PUB RELATIONS

The next very important thing, and maybe in many respects the most important, is to strengthen your public schools so that you have schools that people want to send their children to. They must be high-quality schools and they must be schools that provide for every child in the school the kind of education that each individual needs.

In addition to strengthening the schools, it is important to strengthen all of the institutions, the churches, whatever other community organizations or institutions you have. I know of a few neighborhoods that have gone in for an art center, and sometimes they have been great successes. I get sick and tired of block parties. I don't like them. But an art center activity is something else. It gives people a sense of creativity and wholesome activity.

Of course, watchdogging against conversions and bad real estate practices is essential... We have a few little incipient slums in our neighborhood, a half block or a block, where we need to do something. Upgrading

We need to encourage some small businessmen. In fact we have a few blocks where we have a number of little stores and so forth standing vacant. Something has to be done with those. And we have to see whether we can find a little tiny urban renewal program that we don't call urban renewal, because the moment we call it "urban renewal" everybody thinks it is us. And now you have a slum!

Finally, I think it is very important once more to cast this effort into the framework of a larger community. I think there is great danger of causing people to think that somehow you are just being a little snooty or exclusive and so forth by just wanting this lovely little island of integration here. I think that unless it is tied into this concept of the broader strategy, that idea loses its meaning, both to you and to the larger community. Well, I think this should be one important demonstration program of a larger metropolitan program geared to the concept that segregation is very bad, and to a process of desegregation, of creating a new kind of cosmopolitan community pattern, which is open and inclusive, as big as the greater Washington area is.

There

Are

Houses...

...And

Houses

And

Houses...

BUT you'll see the loveliest homes in Brightwood, Manor Park, Shepherd Park and Takoma sections of D. C.

THE PLACE TO LIVE

- **In established residential neighborhoods near good schools, express buses, stores and parks.**
- **On tree-shaded, city-serviced streets of homes in almost any style and price range you might choose.**
- **In one of Washington's finest family neighborhoods—enriched by the diversity of its ethnic, religious, racial and cultural groups.**

NEIGHBORS, INC.

1964 Homes and Gardens Tour

SUNDAY APRIL 19, 1964* 1-5 PM

TICKET INFORMATION

Tour admission to all the gracious homes that will be open to the public and to the teas is only $1 for mother, father and the children. You may purchase tickets at the Neighbors, Inc., office in advance of the tour, or on the date of the tour, at any one of the homes on view.

* In the event of rain the tour will be held on April 26, same time, rain or shine.

Tour Homes

1. **1637 Madison St. NW:** Mr. and Mrs. Lawrence Pearl have lived in this semi-detached English Tudor home for two years. They are gradually remodeling it to fit the needs of a young and growing family. Their charming street places them almost in Rock Creek Park and lends beauty and privacy. The "close-in living" which Brightwood's excellent transportation provides, is a major attraction of the area. Mr. Pearl is a government attorney.

2. **1612 Manchester Lane NW:** If you're looking for a "little Skyline Drive" you'll see one at Mr. and Mrs. Victor Daly's home overlooking Rock Creek Park. The home, enhanced by its lovely surroundings, is perfect for two. Tastefully decorated in a combination of traditional and modern decor, it features unusual accent pieces set off against background tones of white, black and gold. Mr. Daly is Deputy Director of the U. S. Employment Service for the District, and Mrs. Daly is an assistant professor of Social Work at Howard University.

3. **6217 16th St. NW:** This Brightwood home is highlighted by a collection of picturesque items from all over the world, such as a Peruvian wall hanging fashioned from llama skins. Dr. and Mrs. Joseph Boschulte are particularly fond of their indoor arboretum which brings the greenery of outdoors inside. Dr. Boschulte is a research physician at Howard University's College of Medicine. Mrs. Boschulte practices under the professional name of Dr. Pearl Watson. She is an opthalmologist in Howard's Department of Surgery.

4. **247 Quackenbos St. NW:** Known as the "doll house" of Manor Park, this lovely white frame home hides a wealth of space with built-ins. Mr. and Mrs. Nelson McClung, coming from California to the Treasury Department two years ago, found it just right for

5. **6401 2nd Place NW:** Mr. and Mrs. Lucius Morris live in this fine English Tudor home—the first house built on Second Place in 1925. The Morrises, who have lived here two years, will be hosts at a tea to which all tour participants are invited. Mr. Morris is an electronics engineer in the Department of Defense, where Mrs. Morris is also employed.

YOUR GUIDE TO THE NEIGHBORS, INC.
1964 HOMES AND GARDENS TOUR

TOUR HOMES ARE LISTED by identifying number and described on pages 3, 6 and 7 of this program.

them. There is a fireplace in the oversized master bedroom. The paneled recreation room features a barbecue and an old-fashioned bread oven, and the rose garden, a lily pond.

5a. **417 Quackenbos St. NW:** Mr. and Mrs. James A. Mitchell have owned this attractive brick home for ten years. Woodwork on the living room fireplace was imported from France. The ultra-modern birch kitchen shows a skillful blending of colors. In the large yard are fruit trees, grape vines, a rose garden. Mr. Mitchell, an attorney, and his wife who is also his secretary, find the location convenient to schools, transportation and shopping.

6. **517 Cedar St. NW:** Built in the late Nineteenth Century, this "farmhouse Victorian" home is owned by Dr. and Mrs. David Robinson, who have modernized the kitchen and redecorated. Otherwise the house remains as it was after much of the gingerbread trim was removed in 1920. (A photo dated 1903 and a map from 1917 show details.) Danish modern furnishings suit the strong simple lines of the house. Dr. Robinson is a member of the President's Advisory Staff on Science.

7. **708 Highland Avenue NW:** One of the few "Grant Wood" style homes remaining in the area is owned by Mr. and Mrs. Sterling Ament who moved from the suburbs to their Takoma home. This interesting house, built on four levels in the 1880's, retains its unusual tower containing not a prison, but its bathrooms! Mr. Ament is an electronics engineer, Mrs. Ament a Spanish teacher.

8. **913 Aspen St. NW:** Captain and Mrs. Hugh Robinson's brick Tudor home demonstrates how the use of warm color can create a tranquil atmosphere. The Robinsons, new to the neighborhood, are already active in church and school affairs. Their home, which affords them privacy, also places them conveniently close to major D. C. transportation. Capt. Robinson is currently assigned to the U. S. Army Map Service.

9. **1310 Floral St. NW:** Mr. and Mrs. Leslie Ellis own this home remodeled by Georgetown decorator Eugene Bewley. It was changed from a traditional home to an ultra-modern show place complete with Japanese-styled garden, and won a *Better Homes and Gardens* award. The interior features an "inside garden" and charming decorations in the children's rooms. Mr. Ellis is in the insurance business and Mrs. Ellis practices internal medicine under her professional name, Dr. Jean Harris.

10. 7714 13th St. NW: City-wide interest has centered on the remodeling of this historic home which was owned by Washington's second and last Territorial governor, Alexander Shepherd. A fireplace that once served the White House is believed to have been a gift to Shepherd from President U. S. Grant. Other pieces of Nineteenth Century furniture should interest antique fans. Mr. and Mrs. Ralph Fertig, the present owners, are carefully restoring the home. Mr. Fertig is the Director of Southeast House, and Mrs. Fertig teaches in the District schools. Tea will be served on the mansion's grounds, and all tour participants are invited.

11. 1435 Roxanna Road NW: The art collection lining the walls of Mrs. Catherine Hurley's home contains paintings that have been on exhibition in Khartoum, Paris, London, Bonn, New York and Washington. Twelve are the work of internationally famous artist Ibrahim Salahi of Sudan. Art objects include a shield from Haile Selassie's Imperial Guard. Mrs. Hurley, an accomplished linguist, accompanies international visitors on State Department tours.

12. 1650 Jonquil Street NW: This house on the hill, with its many gables and fascinating solarium, has been a show place for years. It is now owned by Mr. and Mrs. Oliver Peterson and their four children. Mr. Peterson is a professor of International Labor Relations in American University's School of International Service; Mrs. (Esther) Peterson holds the newly created post of Special Assistant to the President for Consumer Affairs, as well as Assistant Secretary of Labor.

ABOUT NEIGHBORS, INC.

NEIGHBORS, INC. is a non-profit organization of residents in the Brightwood, Manor Park, Shepherd Park and Takoma areas of D. C., who are successfully demonstrating that stable property values and a cosmopolitan atmosphere can be maintained in integrated neighborhoods.

NEIGHBORS, INC.

- **maintains a free Housing Information Service to help both buyers and sellers in the area.**
- **works to see that area schools maintain their already high academic standards and constantly expand their curricula.**
- **organizes community activities for young people through Junior Neighbors, Community Singers and pre-school groups.**
- **sponsors activities like the Housing Tour and the now-annual Art and Book Festival, that help tell others in the Greater D. C. area about our community.**

NEIGHBORS, INC. raises its budget partly from these special activities and partly from foundation grants. But paid memberships provide the bulk of our funds—a further proof of broad community support and interest.

NEWSLETTER

WMAN Receives Brotherhood Award:

The Brotherhood Award of the National Council of Christians and Jews was given to WMAN at the 1964 Philadelphia Brotherhood Luncheon in February in recognition of WMAN's contribution to brotherhood in the city.

In accepting the award for WMAN, Mr. Matthew Bullock, Jr., new president of WMAN, gave the following speech, in which he describes the purposes of our group. He hopes that all of us share his feelings about WMAN as expressed in his speech.

"We, of the West Mt. Airy Neighbors, are indeed grateful for this award from the National Conference of Christians and Jews.

"The West Mt. Airy Neighbors is a civic association which is dedicated to the principle that human values are more important than property values. We believe that as human values are pursued, property values cease to be a problem. We believe, further, that in the pursuit of human values, problems of racial and religious differences disappear.

"What are these human values? The same values which your organization is committed to. Very simply, we believe in the democratic ideals for which our nation stands, but the full achievement of which is such an arduous struggle. We believe in the year-round practice of the brotherhood of man, to which this week and this program are dedicated. For us, living together in a community means mutual sharing and involvement with others. It means that personal differences are a source of interest and challenge, rather than a source of fear and animosity. We accept the fact that we are all concerned with the same basic human objectives: we want to live in comfortable and attractive homes and surroundings; we want good schools for our children; we want to be able to pursue our cultural interests and hobbies; we want the spiritual nourishment of warm human companionship; and we want to make our contribution, however small, to the cause of brotherly love in this world.

"It was both a Jew and a Christian who said, 'Love thy neighbor as thyself.' Whether we accept these simple words as they stand or prefer to couch the thought in contemporary psychiatric terminology is of little import. What is important is

that we know that we need each other in our personal struggles to become human beings who love both ourselves and our fellows. We in West Mt. Airy believe that we have created an organizational framework which offers us a wide range of personal contacts in which to grow personally and develop as loving human beings. We know that we have not 'arrived', but we have a positive sense of direction, a sense which has been stimulated by your organization and others like it. We are young and we are geographicall limited, but we hope that whenever we may be of service to your Conference in our common cause, you will not hesitate to call upon us. Thank you."

Goals for '64:

At the first Board of Directors meeting under his presidency, Mr. Bullock stressed that this year WMAN will work to strengthen the fellowship in the group by involving as many members as possible. New projects will be developed for inactive committees, the social program will be expanded, and we will try to get new ideas from members for improving WMAN's general program.

Six specific new projects were suggested by Mr. Bullock including a Womens Activites Committee and a Special Task Force Committee which would offer its services to explain our experience to other communities.

The community spirit evident at the annual meeting in January shows what WMAN has done and can do to strengthen the fellowship in our whole community.

Foreign Students' Weekend - May 2nd and 3rd:

Invitations are going out to several hundred foreign students attending colleges, universities and specialized schools in the Philadelphia area to attend the WMAN Foreign Students' Weekend, May 2nd and 3rd.

These students, who may never have visited in an American home before, will stay with WMAN families. Hosts are to call for their students Saturday, May 2nd at 1:30 PM. In past years, several host families have met to have dinner together. In the evening a Barn Dance is being given at the Pennsylvania School for the Deaf, sponsored by our Social Activities Committee, to which all students and families, along with the entire West Mt. Airy community are invited. Sunday is spent "at leisure" for the students who want to spend a typical Sunday afternoon with an American family. Some families tour local points of interest or take a walk in Fairmount Park.

All WMAN members are asked to consider being hosts for a foreign student for this weekend. Newspapers have reported that foreign students have lived in America for four years without ever visiting an American home. We have an opportunity to show these students what American family life is really like and to give them an opportunity to see the community of which we are so proud. Lasting friendships have developed between students and hosts, and everyone has enjoyed exchanging ideas with these students, and the watm fellowship of the whole weekend.

If you would like to be a host to a student, please fill out the enclosed questionaire.

WMAN to Co-Sponsor Town Meeting on Schools:

On Tuesday evening, April 14th, WMAN will co-sponsor a town meeting with the Citizens Committee on Public Education in Philadelphia at Germantown High School, Germantown Avenue and High Streets. Registration time is set for 7:30 PM. The keynote speaker for the meeting will be Mrs. Trude W. Lash, Executive Director of the Citizens Committee for Children of New York. The chairman for the evening will be Charles G. Simpson,chairman of the Council on Higher Education of the Pennsylvania State Board

of Education. Comments will be made by Isaiah Crippins, legal counsel for the Philadelphia Chapter of the NAACP and Dr John Marshall, Jr., president of the CCPEP. The purpose of the meeting, one of five such being sponsored by the CCPEP in various sections of the city, is to discuss school integration and quality education.

The Schools Committee, whose new chairman is William Moyer, has also been working on several other projects. Three new subcommittees have been appointed:

1. Committee on Educational Home Rule Charter Commission:
   Chairman - Michael Blum
   Purpose - to develop a WMAN statement on the selection of the Philadelphia School Board, said statement to be presented to the Home Rule Charter Commission at public hearings

2. Committee on Sites and Boundaries:
   Chairman - to be appointed
   Purpose - to update WMAN data on sites and boundaries

3. Committee on Standards and Quality Education:
   Chairman - William Johnstone
   Purpose - to develop a continuing program of WMAN support of our neighborhood schools

On other school business, the WMAN Board voted to "lend its moral support" to the Independent Campaign Committee Home and School Council election campaign, the support being recommended by Mr. Phil Turner. The board voted not to give financial support to the organization.

WMAN will be represented on the Co-Ordinating Council on School Integration by Mr. Joseph Cadbury. Mr. Michael Blum will act as his alternate.

WMAN Outreach:

A new membership from Urbana, Illinois, symbolizes WMAN's outreach to other communities.

At the request of the Commission on Human Relations, Mrs. Steele was a panel member at a discussion in the Northeast for leaders of the community who wished to become aware of the problems they may be facing with integration in housing. More than 250 people attended the panel. WMAN has offered the Commission its services wherever and whenever they are needed for further aid in the Leadership Program for the Northeast.

Mrs. Steele also addressed the Samuel Longfellow Alliance of the Germantown Unitarian Church recently on the acomplishments of WMAN.

A special committee is being formed to "spread the gospel" to other sections of the city regarding WMAN accomplishments. The chairman is Jerry Bernstein, who suggested the committee. The committee will discuss various approaches and make recommendations to the Board. Volunteers are welcome to serve on this committee.

WMAN has also offered to help in Folcroft in any way possible, but it seems that there is nothing we can do at this time. WMAN has sent a check to the Bakers, and members have also written to him and his family offering encouragement. Further contributions may be sent to Mrs. Steele at the office or directly to Mr. and Mrs. Horace Baker, Folcroft.

Mr. Bullock will take part in a panel discussion on Fair Housing at the Unitarian Church on Saturday, May 2.

We have also been asked to present the story of WMAN to the Federation of Community Councils.

3 New Committees Formed:

As part of achieving the new goals for '64, three new committees have been formed: Women's Activities Committee; The Library Series Committee, and a Problem Properties Committee. The work of all three groups is well under way.

The Women's Activities Committee is inviting all WMAN women to a tea on April 19 to discuss plans for the future to get to know each other better. Mrs. Juttee T. Garth is chairman and committee members are: Mrs. Wesley Allen, Mrs. Dennis Clark, Mrs. Maurice Clifford, Mrs. Edmund Crenshaw Jr., Mrs. Rudolf Eisenhardt, Mrs. Albert Ferguson, Mrs. Solis Kopeland, Mrs. John Reddick and Mrs. William Suckle. Watch for a letter marked FOR GIRLS ONLY.

The Library Series Committee is planning a Spring meeting and a regular Fall series of programs in co-operation with Lovett Library. All West Mt. Airy residents will be invited to these programs which will be on topics of general interest. Mr. Charles Beckett is chairman of the new committee and his members are: Laura Cousins, Miss Grace Slocum, Gloria Daniel, Betty Dyson, Thomas Harvey, Etta Bullock, Emanuel Whiting, Sam Polsky, Dr. Ruth Klein, Wallace Johnson, and Mrs. Ruth Ferguson, Lovett Librarian.

The Problem Properties Committee is surveying the entire West Mt. Airy neighborhood for problem properties and general neighborhood conditions. It is hoped that through this committee's work, WMAN will be able to make a substantial contribution to the city's Northwest Development Plan, which will be formulated in several years. The chairman of this new committee is Mr. David Randall. The committee members are: Nathaniel Bowditch, Frederick Herbine, Fred Fuges, George Drummond, T. Harold Fox, Jack Hornung, Irv Wasserman and Mark Karlen.

Addressograph Plates Given by Hamilton Savings:

Addressograph plates for the entire membership, along with the use of the Addressograph machine have been given to WMAN by The Hamilton Savings and Loan Association, 6782 Germantown Avenue. We thank Hamilton for this service, which makes our mailings much easier.

Block Watchers Society Announced:

"Block Watchers" have been chosen for the approximately 160 blocks in West Mt. Airy to watch for new neighbors so that they may be invited to join WMAN. Early contact with new residents has been an excellent source of new members in the past.

The Membership Committee, under the direction of Dr. Robert Anderson, also plans to recruit new members through block teas, block meetings, and canvassing of certain blocks where there are very few WMAN members.

Personnel Resources Committee Plans "Talent Pool":

Mrs. Leonard Learner, new chairman of the Personnel Resources Committee, is working on a "talent pool" for WMAN so that committee chairmen and others will be able to find out quickly who is interested in doing what and who has special skills needed for a particular project. A new questionaire on membership interest and skills is now

being written.

Have Squad -- Need Chairman:

The Telephone Squad is a group set up to contact the entire membership in case of changes in plans and to make other announcement that must be taken care of immediately. The squad is all organized; it only needs a chairman. If you are interested in the job, please call Mrs. Steele at the office.

City and Public Services Committee Represents Us:

WMAN was represented by the City and Public Services Committe at the Police Department's Community Relations meeting on helping young people develop respect for law. The Committee also represented WMAN at a public meeting on improvements to the Mt. Airy Playground at Sedgwick Street and Germantown Avenue. Mrs. Mary Chapman represented WMAN before the Public Utilities Commission and protested the proposed cutback in PTC service in this area.

WMAN Members in the News:

Mrs. Jessie Brown received the Legion of Honor Citation for her outstanding contributions to community life in a ceremony at the Chapel of the Four Chaplains.

Mrs. Fletcher Townsend,Sr., mother of a WMAN member, also received the Citation at the Chapel of the Four Chaplains.

Mr. Robert Williams is serving on the Warren Commission, investigating the assassination of John F. Kennedy.

Mr. Charles Beckett is the new President of the Urban League of Philadelphia,

Mr. Morris Shiffman is back from a World Health Organization trip to Africa.

Mrs. Maurice Clifford, with other members of the Citizens Committee for Foster Home Education, visited the Callowhill Child Center as part of the organization's new program to find foster parents for many Philadelphia children.

Dr. Robert Anderson and Mr. Matthew Bullock, Jr. have been appointed to the Executive Council of the Germantown Community Council.

Miss Miriam Lukwago, a student from Uganda who is staying with a WMAN family, has bee extended an honorary membership in WMAN.

We know we must have missed some WMAN members in the news and we apologize. Please send news items to Mrs. Steele. Everyone likes to know about his fellow members.

LET YOUR SENATORS KNOW HOW YOU FEEL ABOUT THE CIVIL RIGHTS BILL. WRITE TO THE HONORABLE JOSEPH CLARK AND THE HONORABLE HUGH SCOTT, THE UNITED STATES SENATE, WASHINGTON, D.C. TELL YOUR FRIENDS.

PRESIDENTIAL SCHOLAR
(cont. from p.1, col. 1)

people, and to encourage the pursuit of intellectual attainment by all of our young people. The scholars were selected by an independent commission headed by Milton S. Eisenhower. John Naisbitt, Takoma NI member, was Secretary to the Commission.

Baron ranks 3rd in his class at Coolidge, where he was a member of the golf, debating, and math teams. He plans to continue his education at Washington University in St. Louis.

PRESIDENT JOHNSON SAYS...

"I have long believed that true measure of progress that we make in interracial and interreligious understanding must be found at the level of day-to-day living and working...."

This was part of President Lyndon B. Johnson's message to NI head, Dr. Robert C. Good, in connection with the opening of the NI Art and Book Festival.

President Johnson's letter read at the ceremony by his Special Assistant, Charles Horsky, cited NI's "fine record of achievement" and expressed the hope that "you will have continued success."

NI "REC" COMMITTEE SCORES

Several new programs are now open in the NI area due to the efforts of the Recreation Committee and other volunteers. They include swimming, activities for preschoolers, and a music program.

The Swimming Pool Subcommittee, headed by Bill Peer and Naomi Caplan, was successful in getting the Takoma Pool open on two evenings a week, Tuesday and Thursday. (Ed. note: more swimmers are needed to boost attendance in order to keep these nights.)

The noon break on Saturdays and Sundays has been eliminated so morning swimmers can stay as long as they wish. Mrs. Margaret Burkett has successfully organized an adult swimming class on Thursday evening from 6 to 7 p.m.

The Sun-Dial program for pre-school children opened on June 22, with 29 children and 6 teen-age counselors. Nine more teen-agers serve as substitutes. This play-school program was organized by Clarice Rioux, with the help of Peachy Murry, Julie Boddy, Joanna Vogelsang, and Mrs. Golden Linkins. Ann Adams, director of the Spring Knolls Nursery School, conducted the training program for the teens. Mrs. Jane Evans at the Recreation Center has been very helpful.

A music instruction and recreation program for boys and girls from 4th - 9th grades has been started at the Whittier School and will continue for six weeks. Mrs. Rose Lewis and Elsie Reed helped recruit the children.

The Recreation committee is very appreciative of the help given to it by Mr. Tardugno, Reg. Dir., and Mrs. Tatum, Program Dir. They have attended committee meetings regularly, and have given our workers every assistance. Doris Jordan is NI staff member to the Recreation Committee. For information about any of these programs, call Mrs. Naisbitt, 829-4501.

FAIR HOUSING (cont.
from p. 1, col. 2)

reading: "I believe that every person has the moral right to purchase or rent a home anywhere without regard to race, religion or national origin," and urged the real estate industry to "do business without discrimination."

The pledges were obtained by volunteers from Suburban Maryland Fair Housing (SMFH), who visited an estimated 40,000 homes. The 15,000 signatures represent more than 40 per cent of homes contacted. In addition, a significant proportion of non-signers indicated sympathy with the aims of the drive.

No pattern of discrimination was disclosed in any large section of the county, but reluctance to sign was noted most often in expensive and low-priced areas. Pledges ran as high as 83 per cent in Bannockburn), and as low as 13 per cent in one high-income sub-division.

SMFH has helped about 40 Negro families move into previously all-white neighborhoods since its formation two years ago. It now lists 70 homes for sale or rent on an open-occupancy basis. Several real estate brokers are helping SMFH to locate Negro families in the County. Anyone interested in suburban housing information should call SMFH at 949-9040.

Open Housing in Prince Georges

More than 100 persons recently met to organize Prince Georges County Fair Housing. The new citizens' group is an offshoot of Suburban Maryland Fair Housing, Inc. It will be devoted to helping financially qualified families find suitable housing in the county, and to maintaining stable neighborhoods in the face of racial change. The initial projects of the group will be housing information and community relations service.

Desegregation in Virginia

Three northern Virginia neighborhoods have become racially integrated during the past six months - all of them quietly and without appreciable racial tension. This was reported by North Virginia Fair Housing, Inc., a new group formed a year ago to help establish open occupancy in Virginia.

ANNUAL MEETING REELECTS GOOD

The slate of officers presented by the Nominating Committee were elected unanimously by the members at the NI annual meeting, which was held on June 17 at Albright Memorial EUB Church. Bob Good headed the slate. Others are Charles Rodgers, Vice President; Barbara Simmons, Secretary and Dr. Helena Bailie, Treasurer.

Three members were elected to the Board of Directors: Mr. Good and Mr. Rodgers and also Mrs. Joan Stern.

Following a report by the President, Marvin Caplan, Mary Rodgers, Nan Robinson (standing in for her sister, Noel Naisbitt), and Norman Brown, reported on their respective committees - Neighborhood Commons, Education, Real Estate, and Recreation. The membership approved an amendment to the by laws which calls for five general meetings in addition to the annual meeting.

Following the business of the evening, members were royally entertained by a lively group of Bavarian Folk Dancers, introduced in glowing German by Hans Spiegel, new Board member from Takoma. They were followed by Millie Hatchcock, who sang a moving group of folk songs, and accompanied herself on the guitar. Gertrude White and Joet Thurber, both active in NI, each sang some lovely songs, and then joined forces to sing two duets. They were accompanied by Felice Kornberg on the piano. Odis von Blasingame was emcee for the evening. The meeting concluded with the showing of a film made by WTOP-TV of the Art and Book Festival.

Members of the Program Committee who made this delightful evening possible are: Mrs. Louise Perry, Mr. von Blasingame and Mrs. White.

WELCOME MAT

Takoma has two new families. Mr. and Mrs. Bud Emerson and their young daughter, Kristen are in the 7500 block of Eighth Street. He works for the Internal Revenue Service. Mr. and Mrs. Thomas McDad, formerly of Bethesda, have a sixth grader and also a son in Antioch College. Mr. McDad is Chief of Urban Studies at the Housing and Home Finance Agency.

Brightwood is also getting a new family. Mr. and Mrs. William Denham have two children. He works for the Center for Youth and Community Studies at Howard University.

JUNIOR NEIGHBORS NOW TWINS

Junior Neighbors has voted to divide into two groups - one for students of Junior High age and the other for Senior High students. New officers of the senior H.S. group are: Mary Ellinger, President; and Cheryl Daves, Vice-President. Mark Ellinger is President of the Junior High division.

NI BOARD ADOPTS INTEGRATION POLICY

The NI Board of Directors adopted a policy statement calling for racially integrated academic and administrative staffs of the public schools in the NI area. In letters to Mr. Wesley Williams, School Board President, and Superintendent Carl Hansen, informing them of the motion which was passed earlier this month, Robert Good, NI President, said "we believe it particularly appropriate that our schools leave no stone unturned in developing and maintaining integrated facilities of the highest qualification."

In other action the Board accepted with great regret the resignation of Warren K. Van Hook from the Board and as Vice President of NI. Adding the duties of board member of the newly opening United Community Bank made it impossible for him to give adequate service to NI. Mr. Van Hook was NI's first treasurer.

To fill Mr. Van Hook's unexpired term, the Board named Rev. Don Jones, minister of the Sixth Presbyterian Church, 16th and Kennedy Streets, N.W. Mr. Jones has just completed his first two-year term on the Board.

The next meeting of the Board will be on Wednesday, July 8 at 8 p.m. at the NI office. It is open to NI members.

KUDOS FOR NI MEMBERS

Congratulations to the PTA of Whittier Elementary School for the fine job its volunteers have done in collecting, cataloging, and staffing a 1,022 book library.

Dorothy B. Gilliam, NI member recently won second place in the Capital Press Club's "Journalist of the Year Award" contest. She is a reporter for the Post, and her series titled "Teens in Trouble" won the award.

The U. S. State Department recently gave its Superior Honor Award to NI President, Bob Good, for some work he did on the Congo situation.

Gilbert A. Diggs, NI Board member, has been promoted from Assistant Principal to Principal of Sousa Junior High School.

FLASHES!!!

Karen Edwards, formerly Junior Neighbors President, has been appointed page editor of the Coolidge Courrier.

Pam Thurber and Elizabeth Davenport, both daughters of active NI members, have been elected officers of the Student Council at Coolidge High School. Both girls are active in Junior Neighbors.

* * * * * * *

A recent photo-story in the Star featured a group of 40 Paul Junior High students having a question and answer session with Supreme Court Justice Brennan. The visit was part of Paul's unique Democracy in Action program.

* * * * * * *

NI's Executive Director Margery Ware was a speaker and consultant for a Workshop on Integrated Housing in Suburbia sponsored by the Ludlow (Ohio) Community Association last month. This month she spoke to the Benning Lions Club and the Southeast Neighbors, a stabilization group which complemented NI by copying our leaflet "Well, I'm NOT moving" with Whistler's mother on the cover.

* * * * * * *

Doris Jordan's, NI's Community Organization Assistant, spoke to Lycoming College students who visited Paul Junior High School as part of their field trip to Washington last month. Recently Mrs. Jordan also spoke to the Howard University Human Relations Workshop.

* * * * * * *

Sterling Tucker, executive director of the Washington Urban League, has been chosen "Outstanding Young Washingtonian" by the Downtown Junior Chamber of Commerce. He is a resident of the NI area.

* * * * * * *

"Prize Notifier of Houses of Sale" is Mr. John Heywood, NI member from Brightwood, -- many thinks for letting the office know what's going on in your neighborhood. Thanks also to Mr. Eli Frankfeld of Manor Park for his call to the office regarding a house for sale.

* * * * * * *

Children from the Military Road School recently rehearsed and produced a skit for their parents and friends at Trinity Episcopal Church in Takoma.

* * * * * * *

The Cub Scouting Pack and Boy Scouting Troop 316 of Albright Memorial EUB Church, 4th and Rittenhouse Street, participated in the 1964 Scouting Exposition at the D.C. Armory. The Pack won a merit award and Troop 316's project, won second place.

CAKE FOR THE PUPILS, NOT APPLE FOR TEACHER

The girls of Sigma Phi Epsilon baked cakes for the dozen boys being helped by the Area F Youth Council to improve their study habits, reading and class work in various subjects. Many boys passed subjects they had been failing thanks to the help of Arthur Weyman, Gary Garber, Henry Agusiewicz, Assistant Principal of Paul Junior High School, and several Paul teachers.

Paul's shot teacher, Joe Brown, Jr. is coaching the Takoma Spoilers, junior and senior high school boys who will be entered in the city-wide baseball league.

LOST AND FOUND AT THE ART AND BOOK FESTIVAL

LOST: A silver Spiegel lady's identification bracelet. Call Mrs. Simmons, TA 9-7903; and a rachet wrench belonging to Mr. Mickens, Smithsonian exhibit specialist. Call Mrs. Slaiman, 829-3410.
FOUND: an electric extension cord; a hand-loomed mat and loom; a black sweater, a ball-point pen; a necklace, and a key. Call the NI office to claim any of these.

M-Y-C -- MARK YOUR CALENDAR

SPLASH PARTY - JULY 7 from 7-9 p.m. at the Takoma Swimming Pool, 4th and Van Buren Streets, N.W. Come and bring your neighbors. Call NI office for information. In case of rain, splash will be held on Tuesday, July 14.

NI PICNIC - JULY 12 -- see enclosed flier. In case of rain, picnic will be July 19.

GARDEN CLUB SUPPER PARTY - Saturday, JULY 18 at Naomi Inge's, 314 Nicholson Street, N.W. Program: questions and answers on summer flower and vegetable gardens and potted plants. All welcome. For information, call Mrs. Blanche Bradley, President -- TA 9-2908.

BOYS' SWIMMING MEET - JULY 28 - TAKOMA POOL. 4th and Van Buren Streets, N.W. at 9:45. City-wide finals for regional winners in D.C. Recreation Dept. competition (boys 8 to 18 years). For information call RA 3-8222, Takoma Pool.

NEWSLETTER

Report Solicitations by Real Estate Agencies

Mass solicitations of entire streets by a few real estate agencies continued this summer. Residents of the 7100 block of Cresheim Road signed a "don't Call Us, We'll Call You" petition informing the soliciting agency, Potterton, that none of them were interested in selling their homes. For the first time an agency has repeated a mass solicitation of residents who had already requested no further contact. The WMAN Real Estate Practices Committee is handling this violation, which is an unethical practice according to the standards of the Pennsylvania Real Estate Practices Commission.

If you receive a post card or a phone call inviting you to sell your home ("now" as the caller usually says), call Mrs. Steele at CH 2-1196; she will help you and your neighbors circulate a petition.

Real estate values in West Mount Airy have increased in the last ten years according to the preliminary report by the Real Estate Practices Committee. Ed Lavin, chairman, reported to the Board this his committee is studying the sales of representative houses in the area to determine whether the properties have increased or decreased in value. The committee plans to extend its research to all sales in the area after completing its representative survey.

PRR Starts Painting

Over $800 was given by residents of West Mt. Airy to keep up the grounds of the three stations of the Pennsylvania Railroad, in a two-day station campaign and a mailing to WMANers. Coincidentally, the Pennsylvania Railroad started painting the three stations.

Tha landscaping work was let out on the basis of bids received from local landscapers. The cost for two cuttings at the three stations came to $500. Local garden clubs are now being asked to take charge of one station a piece next year to plant flowers and shrubs.

Contributions are still coming in and the money in the fund will be used for the first cutting next year. Mr. and Mrs. Donald Scott organized the campaign and negotiated with the landscapers

R-1 Zoning Bill Needs Neighborhood Pressure

The Bill before City Council to upgrade the zoning of an area of West Mt. Airy needs help from residents of the whole neighborhood. The Bill proposes to raise the zoning classification from partly Class R-2 Residential and partly R-4 Residential to a single designation of R-1 residential, which allows only single homes on fairly large lots. While the Bill primarily affects residents of the area to be rezoned, it also affects the entire area since improved zoning in a nearby area tends to increase surrounding property values. The City Planning Commission has already passed favorably on this proposed Bill. Write your views to Councilman Isadore Bellis, City Hall.

In other zoning matters, the WMAN Zoning Committee agreed to support an application for the rezoning of a triangular lot next door to Glen Food Markets, on Hortter Street between McCallum and Greene, for use as a storage area. The market has agreed to put a high fence around the area which will improve the looks of the former vacant lot.

A petition to enlarge the body shop of Maclean's auto repair shop at 20 W. Allens Lane was opposed by WMAN.

Neighbors in the 400 block of West Durham Street met to plan opposition to a request to rezone a residence in the block to allow a catering service to be operated legally on the property. The hearing was held on Tuesday, October 6 and WMAN represented the area residents in opposing this request.

Thirty New Families Join WMAN

Thirty new families joined WMAN during the last three months, and courtesey mailings are now going as far as Denver, Colorado. Invite your neighbors to join and send their names to Mrs. Steele, who will write them a personal invitation to become members.

Tot Lot in Use

Children on Good Street are now playing in the eight tons of sand in the new Tot Lot on their block, acquired by the City through its tax-delinquent properties program of the Department of Licenses and Inspections, and by the efforts of the neighbors. The West Sharpnack Street - WMAN Joint Committee raised the money to buy sand and other equipment. Much of the basic equipment (swings, monkey bars, back yard furniture) was donated by WMANers. All those who worked on the Tot Lot thank those who contributed to the fun the children are having.

Neighborhood Meetings Planned

During the coming year, area meetings to discuss local problems will be held in

in sections of West Mt. Airy, it was decided at the September Board meeting. All the neighbors, members and non-members, will be invited to attend and to discuss their ideas about neighborhood problems. It is hoped that through these meetings neighbors will get to know each other better and WMAN will find more ways to serve the community.

If you would like to take part in planning these meetings, or in planning the one in your neighborhood, call Mrs. Steele at CH 2-1196.

WMAN Goes to World's Fair

In August, Mrs. Anita Schiff organized a bus tour to the World's Fair. A group of 40 WMANers had a door-to-door trip to the Fair and reported back that it was a highly succesful trip.

New Personnel Resources Chairman Appointed

Mrs. Jack Guttentag is the new chairman of the Personnel Resources Committee, whose job is to match members' interests and talents with the work to be done.

New Youth Employment Bureau Director Appointed

Mrs. Jeanette De Vault has been appointed director of the Youth Employment Bureau, which helps WMANers find teenagers for a variety of jobs. For rates and additional information call Mrs. De Vault at CH 7-8402.

Two More Pre-Schoolers' Play Days Announced

On October 8 and October 22 two more pre-schoolers' play days in the series of play days held all summer in backyards and neighborhood parks have been planned. All mothers and their pre-school children in the area are invited to come. The October 8 play day was held at Mrs. Dovie Reiff's, 612 W. Upsal Street. The October 22 play day will be at Mrs. Gerrie Johnson's, 618 W. Sedgwick Street. Both begin at 10:30 AM and last until lunch time. For additional information call Mrs. Maxine Field, chairman of the activity, at GE 8-2106.

NCCJ Conference Great Success for WMAN

WMAN hostesses for the visitors attending the National Council of Christians and Jews Parents' Workshop session in West Mt. Airy report that they had a wonderful time meeting the conference members, sharing problems with them and telling them about West Mt. Airy. Many of the hostesses also attended a dinner and evening session at the Radnor headquarters of the Conference. We have received five requests since then from our guests asking for more information about WMAN. WMAN hostesses were: Mrs. Jessie Brown and Mrs. Ruth Lovald, Mrs. Lois Gross and Mrs. Ruth Steele, Mrs. Renee Berger and Mrs. Daisy Reddick, Mrs. Edna Smalls and Mrs. Linda Levy, Mrs. Shirley Bansen and Mrs. Cora MacNeil, and Mrs. Francis Emory and Mrs. Harriet Heaney.

Speakers Bureau Booming

Speakers from WMAN are "spreading the word" at meetings all over the city this month. Neighborhood groups in East Mt. Airy and West Oak Lane invited WMAN, as did a local group on Westview Street. WMAN speakers will also address a group of retired clothing workers in center city. The Universalist Church of the Restoration, Stenton Avenue and Gorgas Lane has asked our help in developing a strong Social Action Committee. Speaking for WMAN at these various meetings are: Matt Bullock, Mrs. Theresa Crown and Mrs. Ruth Steele.

WMANers in the News

Mrs. Florence Ramos who teaches at Douglas School, received a citation from the Chapel of the Four Chaplains for her community work.

Mr. William T. Coleman served the Warren Commission in charge of one of the six areas of the investigation of the death of John F. Kennedy. Mr. Coleman is a native of Germantown and a graduate of Germantown High and the University of Pennsylvania. He now lives at 612 W. Hortter Street.

Help Wanted

Wanted: Retired person to stay with handicapped elderly woman an occasional evening and/or one or two days a week. Call VI 8-9297.

A Controversy over the proposed sale of ten acres of land in Roxborough for the building of a Catholic High School affects the West Mt. Airy section. The heart of the problem is whether sections of the park should or should not be sold to private parties. Since the park adds greatly to the desirability of our neighborhood, the decision may affect us in the future.

The land is presently leased to the High School of Agriculture and Horticulture, a public high school, and has been used by them for twenty-three years. A request last year by the School Board to lease a piece of park land for a temporary public school was refused by the Fairmount Park Commission and the City Council.

A Catholic High School is needed in the area, but land other than park land must be found for the site. Your opinions on the problem would be welcomed by: The Board of Education, 21st and the Parkway; The Fairmount Park Commission, West River Dr. near Montgomery Drive; and local newspapers including the Germantown Courier.

Lawrie Hamilton, Editor

A plan for 500 apartment units to be built on the two tracts west of Wissahickon Avenue between Allens Lane and Blue Bell Terrace is being circulated in the neighborhood.

WMAN is opposed to the building of these apartments, which would require down-grading the present zoning. The area is presently zoned R - 2, which permits single and detached homes. Last spring, at the request of WMAN, Councilman Isadore Bellis introduced a bill to upgrade the zoning to R - 1, the top residential zoning. The City Planning Commission approved this plan.

If the neighbors in West Mt. Airy want to protect the residential character of the area, our councilman and the Mayor must be made aware that many neighbors want the area upgraded to R - 1 zoning. Write to: Councilman Isadore Bellis and Mayor James H. J. Tate, City Hall, Philadelphia.

NEWSLETTER

New Houses Going Up

The growing hole in the ground on the west side of Wissahickon Avenue south of Mt. Airy Avenue marks the beginning of five new houses to be built on the controversial parcel of land there, according to Jerry Balka, WMAN Zoning Committee member.

The ranch and split level modern homes will be on lots of approximately two-thirds of an acre each. Four will front on Mt. Airy Avenue and the other on Wissahickon Avenue. The builder is Felix Claus and Son.

The bill to upgrade the zoning of this tract from R-2 to R-1 is still pending in City Council. If the bill is passed, the new zoning would apply to the remaining vacant acres. The new houses, however, will conform closely to the specifications for R-1 zoning.

The builder has an option on the rest of the tract (known as the Horse Show tract). He may eventually build a total of eleven houses on the fifteen acres.

Schools Committee Gets New Chairmen

Ralph Bieber and Bennett Stalvey, Jr. have been appointed co-chairmen of the Schools Committee to replace Bill Moyer who resigned when he moved to Doylestown, where he is practicing law.

Mr. Bieber previously served as Schools Committee chairman and is familiar with the problems needing attention.

The Committee will be divided into three sub-committees:

1. City-wdie educational concerns: This group will work with other citizen organizations and will study and deal with current activities, such as the budget, home rule charter commission, etc.

2. Immediate local area schools: This group will try to aid the three local schools, Henry, Houston and Lingelbach, in their problems.
3. Secondary schools : This group will gather facts about conditions in the junior highs serving the area: Leeds and Roosevelt. Later they will suggest concrete proposals on any problems they discover.

Neighbors Oppose Magaziner Apartments

Forty neighbors in the Upsal-Emlen-Cliveden area attended a Zoning Board hearing on granting of zoning variances to build an apartment at Upsal and Emlen Streets, designed by Henry Magaziner, local architect.

The group, led by Charles Mitchell, gave a two hour presentation to the Zoning Board, which was listened to intently. The decision will be handed down by the Board in the near future. Louis Levy, chairman of WMAN Zoning Committee and Ed Lavin, chairman of WMAN Real Estate Practices Committee represented West Mt. Airy Neighbors in the fight to oppose this proposed construction.

The Word Spreads

A student from Bryn Mawr has elected to do a term paper in sociology using the West Mt. Airy Neighbors as her subject matter.

A Penn graduate student is planning to do a study of our organization for a Political Science paper.

Mrs Burt Dyson, recently moved to Wausau, Wisconsin, has written for the full WMAN story to tell to an adult study group in her new home town. Fred Gaines, an active WMANer, has generously offered his large collection of slides to Mrs. Dyson to help her spread the word.

Library Series Gets Rolling:

Doris Guttentag, acting chairman of the Library Series, requests suggestions from members for subject matter desired in a series of programs to be presented with the cooperation of the Lovett Branch of the Free Library. All suggestions will be gratefully accepted by Ruth Steele at our office, CH 2-1196.

Choral Singers: Attention

On Sunday evening, January 10, 1965 your voice is needed to add to the general fun of four part singing. A new group is meeting for the first time on that date at the home of Ruth Steele, 7139 Cresheim Road. Come at 8 PM and plan to lift your voice for two hours. Your friends are most welcome. WMAN hopes to provide a professional leader: so those that enjoy four-part choral music (from Palestrina to Vaughn Williams) are invited.

FLASH

Just prior to press time, WMAN was informed that the City Planning Commission made the following recommendation to the Zoning Board re: the Upsal-Emlen case noted on Page 2:

That the said variances not be granted.

The reasons for the Commission's recommendation are:

1. The immediate area surrounding this property is presently developed with detached and semi-detached dwellings.

2. The proposed development is not in keeping with either the existing surrounding development or the intent of the R-3 Residential classification.
